LITERATURE.

TWO TRANSLATIONS OF MODERN GREEK POETRY.

Greek Lays, Idylls, Legends, &c. A Selection from Recent and Contemporary Poets. Translated by E. M. Edmonds. (Trübner.)

Greek Folk-Songs from the Turkish Provinces of Greece. Literal and Metrical Translations. By Lucy M. J. Garnett. (Elliot Stock.)

THESE two volumes represent the two classes into which modern Greek poetry may be divided—the written and the unwritten, the cultivated and the uncultivated, the work of known and of unknown authors. Mrs. Edmonds gives us specimens of the former; Miss Garnett of the latter. There are, however, several features which are common to both, as might be expected in the poems of a people who recovered their nationality but half a century ago, and who during the previous period of servitude had been cut off from acquaintance with literature, and had developed a traditional poetry of their own in the shape of songs and ballads orally transmitted. These became the heritage of the race, and naturally influenced the poets of a later and more civilised period, especially as some of these took part themselves in the struggle for independence, in which—as in the great contest between the North and the South in America, and in the Franco-German war—these popular songs were a powerfully inspiring element. Thus the long ballad metre, in which they were mostly composed, has survived in modern Greek literature, and is still much employed, both on account of its familiarity, and because it is well adapted for the treatment of narrative and idyllic, and even, as Mr. Bikelas has shown in his translations from Shakspeare, of dramatic subjects. The exciting incidents, too, of the War of Independence continue to furnish themes for poetry; and the peculiar sympathy between man and external nature, whether animate or inanimate, which is of such frequent occurrence in the ballads, is reproduced in a variety of forms in the more polished compositions. Perhaps this is one reason why the use of allegory is of such common occurrence in modern Greek poetry.

Mrs. Edmonds's selection contains specimens from six recent and nine contemporary poets, and the richness and variety of these can hardly fail to delight her readers, and to those who are not already acquainted with modern Greek literature will, if we mistake not, cause a feeling of surprise. Of the poets no longer living the most fully represented is Valaorites, as from his great genius he deserves to be; next in honour to him comes Typaldos, and there are good examples of Zalakostas and Karasutzas. It is rather to be regretted that there is none from Solomos, who is

generally accounted the first poet of modern Greece. Two of the most powerful compositions in the volume—the one by Typaldos, the other by Valaorites—refer to the destruction of the village of Gardiki in Albania by Ali Pasha. The former describes the death-bed scene of Hamkos, Ali's mother, when she left to him as a legacy the duty of ruining that place in requital for an insult offered to her forty years previously. It is a finely dramatic representation of revenge and remorse. Valaorites' poem turns on the sequel of the story. Fifteen years after his mother's death, Ali, with whom revenge was the sweetest of pleasures, finding that circumstances were ripe for the fulfilment of his vow, ordered one after another of his regiments to undertake the massacre, but met with refusal, until Thanases Vagia, who was by birth a Greek, offered himself for the atrocious crime, and executed it. On the overthrow of Ali's power, this man fell into the depths of poverty, and when he died his wife became a destitute outcast. The poem describes her as being hospitably received one wild night in the cottage of a Christian woman; but, during the darkness, she is visited by the ghost of her husband, who had become a Vampire, and whose body, according to the Greek superstition, refused to decompose in its grave; and in the morning she reveals who she is, and departs on her homeless wanderings. Ghastly as the story is, yet the mode of treatment, the varied metres, and the element of pathos which is introduced into it, render the composition poetic, and its power is unquestionable. In many points it resembles passages in Southey's "Curse of Kehama." "John Galatos," by Alexander Soutsos, is the story of a Greek who, when pursued by the Turks, deserted his wife and daughter, and made his escape; but afterwards, when after long searching he finds the girl, he discovers that she has been forced to become a Mahometan, and is out of her mind. Another effective ballad is that of "Kleisova," which relates to events connected with the siege of Mesolonghi, at which its author, Zalakostas, was present. This writer, though a bard of war, could also sing of peaceful subjects; and in "The Poet" he has described with much delicacy the changed aspect that nature wears in happiness and in grief. Of half mystical, half mythological compositions there are two beautiful specimens by Typaldos—viz., "The Two Angels," and "The Child and Death." The former of these relates to the presence of the two powers of Life and Death, and their agency in the world; in the latter, Death parleys with the child on a river bank, trying to overcome its reluctance, and to persuade it to accompany him, until at last it expires in sleep. But the tendency towards allegorical treatment which we have already adverted to—or, rather, the disposition to trace a sympathetic analogy between man and nature—is more marked in the compositions of living poets, and especially in those of M. Vizyenos, whose volume of *Ἀρχαῖα ἀπαντα*, published in London, was noticed in the ACADEMY at the time of its appearance (vol. xxv., p. 182). As many as thirteen of his poems appear in an English dress among these translations, and there are nearly as many by Drosines. It is not surprising to find that the poetry of the later

school is lighter in its tone and less stern than that of its predecessors. As only brief poems can be quoted entire, we may give the following specimen from the last-named writer:

"When I tell thee on thy mouth, so small and sweet,
The hues, the scent, the dew of roses meet,
Thou tak'st it well and smil'st, Mary;
But when I would (a little dew to sip)
A bee become, and fly to thy red lip,
It angers thee; but why, Mary?"

We find here, also, a poem by M. Sp. Lambros, who, though he is now best known as a historian, cultivated verse in his earlier years. It is entitled "The Dance and the Grave," and its story bears some resemblance to that of Hero and Leander, only in this case the Leander, who crosses the sea on a wild night, is not requited in his affection; and the conclusion, with the contrast between his fate and the unsympathising merry-making of the dancers, among whom is his hard-hearted lady-love, recalls the terrible irony of Casimir Delavigne's poem "La Toilette de Constance." As regards the translation of these specimens, we may say that Mrs. Edmonds has successfully accomplished an arduous task. She has faced the serious difficulty of keeping as near as may be to the metre and form of the originals, and has overcome it. Her versions are characterised by simplicity and good taste, and read like English poetry, while they reproduce the spirit and flavour of the Greek.

Miss Garnett's folk-songs are drawn from the most part from the Greek-speaking provinces of European Turkey, and this limitation, while it restricts the area of choice, imparts a unity to the work. It has, at all events, the merit of introducing to the reader the important collection of the popular songs of Epirus by Aravantinos, from which the majority of the ballads which she has translated are taken. In the present volume the songs have been arranged, on the whole, on the same principle which has been adopted by Arnold Passow in his *Popularia Carmina Græciæ recentioris*, so that each class can be studied separately. Thus we find among them mythological poems, songs for Christian festivals, and dirges; love-songs, nursery rhymes, and others relating to married life; songs containing an element of humour; and historical ballads. The mythological poems turn mainly on the superstitions of the Modern Greeks, and would serve to illustrate the numerous references to these that are to be found in Mr. Bent's book on *The Cyclades*, which we lately reviewed, for the creatures of the imagination which occur in both are for the most part the same. Here we met with the Lamia, a malevolent goddess of the sea, who is described as beguiling a shepherd of his flocks, and other enchantresses who entice men to their ruin; the Στοιχία or Spirits, and the Drakos or Dragon, evil powers, which sometimes appear as monsters, but, like the Trolls and Giants of Northern mythology, are apt to be overcome by sharp-witted men; Charon or Death, whose fame, as the universal conqueror, is celebrated in numerous dirges; and the Vrykolakas or Vampire. Here, too, is the story of the "Bridge of Arta," one of many stories that Mr. Tylor refers to the "foundation-sacrifice" of barbarous times, which

describes how all attempts to construct the bridge were unavailing, until the master-mason's beautiful wife was immured in one of the piers; and that of the "Enchanted Deer" with a cross on his horns, whose death entails the death of the person who slays him, and the slayer, according to the legend, is none other than Digenes Akritas, the famous mediaeval hero of romance. The Christian ballads comprise carols and songs for Christmas, Epiphany, Palm Sunday, Good Friday and Easter; also for New Year's Day (St. Basil) and St. George. Some of these contain curious details. Thus the smith who made the nails for Our Lord's crucifixion is represented as having been a gipsy. St. George, when on his way from Cappadocia to rescue the king's daughter from the dragon, is described as having an interview with Satan. And the same saint is not always regarded as faithful to his worshippers, for in one song, after a promise of candles and incense had persuaded him to hide a Greek girl who was flying from a young Turk, he is prevailed upon to reveal her hiding-place by ampler gifts offered by her pursuer. The poems on married life, as arranged in this volume, are hardly complimentary to the estate of matrimony; for whereas those on "early married life" relate to happiness and faithfulness, those on "later married life" turn on quarrels and desertion. Of the historical ballads, two refer to the Child-Tax, the most obnoxious of all the inflictions of the Ottoman rule, in accordance with which a percentage of Christian children was delivered up yearly to be made Mahometans in order to swell the ranks of the Janissaries. The majority of them celebrate the deeds of local heroes, but a few are concerned with events known in history, such as the capture of Constantinople by the Turks, and of Prevesa by Ali Pasha, the cession of Parga, and the siege of Mesolonghi. Miss Garnett's translations of these are spirited, rhythmical, and well sustained, when she has to deal with the long and simple ballad metre; but she is not equally successful in some of the more elaborate lyric pieces, where rhyme is required. The following, however, is on the whole a felicitous rendering of a very pretty love-poem:

"I cannot live when absent thou,
Thou present, sickness lays me low;
'Tis thou my life art stealing,
'Tis thou who art my healing.

"I look on thee, I madly love—
I gaze, my pulses wildly move—
My heart doth faint within me,
No longer reason's in me.

"When absent, much I'd say to thee,
Naught can I say when thee I see;
My lips refuse their duty,
My tongue's tied by thy beauty.

"I look upon thee and I burn,
And when I see thee not, I mourn;
Though mad when I behold thee,
I die if thou withhold thee."

Both these volumes have introductions contributed by other hands than the translator's. That prefixed to Mrs. Edmonds's selection is by Mr. Matthias Jenkyns, and describes some of the leading incidents of the Greek War of Independence. That which accompanies Miss Garnett's Folk-songs is from the pen of Mr. Stuart Glennie, who has made himself responsible for the editing of the work. Its subject is the survival of paganism; and from this

the writer has diverged into speculations on mythology and controversial discussions of theological questions, which seem rather out of place when associated with a book of poems.

H. F. TOZER.

Under the Rays of the Aurora Borealis: in the Land of the Lapps and Kvaens. By Sophus Tromholt. Edited by Carl Siewers. In 2 vols. (Sampson Low.)

THE realisation of the late Lieut. Weyprecht's plan for girdling the North Pole with a belt of scientific observatories to investigate the laws which govern atmospheric and magnetic phenomena within the Polar regions ought by this time, according to the fashion which has prevailed of late years, to have produced a fairly well-stocked arctic library, for we are now quite accustomed to expect many books as the outcome of a single expedition. In this case, however, we have many expeditions, but, if we except the more or less incomplete and unofficial accounts of the Greeley disaster, only one book. This is the more remarkable in view of the fact that the number of scientific men employed at the various stations was not far short of two hundred. But, on the other hand, it should be borne in mind that their experiences in most cases must have been marked by a certain inevitable monotony; and it is probable that when the scientific work resulting from the enterprise is in a more advanced stage some of those engaged in it may find leisure to record the more popular features of their twelvemonths' exile. In the meantime Dr. Sophus Tromholt is to be congratulated on being first in the field, a circumstance no doubt partly due to the fact that his narrative has already appeared in a Norwegian journal in the form of "Letters from Koutokaeino." He was also in sole charge of one of the subsidiary circumpolar stations, his special task being to carry out auroral observations, and measure the height of the phenomenon above the earth, so that when the meteorological and other conditions were not favourable to his particular study, he was unfettered by the routine work of the principal stations, and was able to devote his attention to matters of more general interest. The result is a very instructive and entertaining combination of a specialist's observations and a traveller's experiences among the fast dying and only remaining nomads in Europe.

The chapter on the aurora borealis occupies nearly one hundred pages, and is very conveniently subdivided. It is also well and concisely written, and clearly illustrated. Altogether it forms a valuable, and perhaps the best popular scientific exposition, at least in the English language, of our present knowledge of this remarkable phenomenon. In fact, this part of the book, though perhaps the least attractive to general readers, is really the most important, and gives a permanent value to the whole work. It is too condensed to admit of anything like a detailed discussion in a short review, but one or two points of special interest may be just glanced at. After describing the exquisite colours and classifying the principal forms or types of the aurora, Dr. Tromholt observes that the amount of light emitted by this

wonderful display, intense as it sometimes appears to be, is really so small, and its chemical action so limited, that all attempts to obtain a photograph failed, and this in spite of using the most sensitive dry plates and exposing them from four to seven minutes. With regard to its geographical extension and its maximum zone, he agrees in the main with Prof. Fritz, and he is also disposed to support the electrical theory of Prof. Edlund. A preliminary examination of the observations made at Koutokaeino and Bossekop in 1882-3 "has led to the important discovery that the aurora borealis, at all events in this locality, lies in a plane about 50 to 100 miles above the earth." There is a wide difference between this estimate and the 825 miles of Boscovich, or even the 468 miles of Bergman; but it is nearly in accordance with the conclusions of Nordenskiöld, Fearnley, Backhouse, and others. And, as the measurements obtained by different observers vary from 0 to 1,000 miles, there is plenty of room for difference of opinion, while it must be admitted that Dr. Tromholt makes out a good case for his figures by means of diagrams and trigonometrical calculations. As to the much disputed question of the "sound," a belief in which is an orthodox article of faith among the Lapps, as well as the Eskimo and Chukches, few people who have been in the midst of the mysterious flickering sea of luminous forms, which sometimes appear to literally envelope the observer on the maximum zone of the aurora, will be inclined to demur to Dr. Tromholt's moderate suggestion that "there must be some acoustic deception or misunderstanding which has created this belief." Before taking leave of the northern lights, it may be mentioned that there is a very interesting description in the second volume of the author's journey to the Finnish Polar station at Sodankylä, where Prof. Lemström carried out the experiments which have attracted so much attention in the scientific world, and which may be popularly described as manufacturing an artificial aurora borealis. There is also a popular account of the ordinary work carried on at the principal stations.

Koutokaeino, the spot selected by Dr. Tromholt as being the most suitable for his researches, is a lonely Lapp settlement near the Russo-Norwegian frontier, and his year's residence in this desolate region gave him exceptional opportunities for becoming intimately acquainted with the domestic life and social condition of the Lapps. He acquired their language, drove with their reindeer, dressed in their clothes, slept in their tents, and learnt to consider forty degrees of frost quite a pleasant temperature, provided that there was no wind. In return for these advantages, he made kites for the amusement of his hosts, and increased their conception of wonders by displays of fireworks, balloons, and even the telephone. He also made a large collection of excellent photographs, which greatly enhance the interest of his spirited descriptions. If he has not added much to what is already known of these uncultured, but by no means unsophisticated children of nature, he has at least given us a more complete and life-like account of their peculiarities and mode of living at the present time than could be easily obtained by English readers elsewhere. Even those whose knowledge of the northern

languages enables them to study the excellent works of Prof. Friis and other Scandinavian writers will find much to interest them in Dr. Tromholt's numerous "Pulk" journeys in the heart of Lapland; and his entertaining remarks on the reindeer, "the camel of the arctic desert," will be duly appreciated by naturalists. The chapter on the extraordinary religious disturbances among the Lapps in 1852, which resulted from the teachings of the Swedish preacher Lästadius, is claimed by the author as "an unpublished leaf of modern history." This is going a little too far, as a full account of the "reign of terror in Lapland" was given in Pastor Stockfleth's journal; but it will be new to most people in this country, and will probably excite a good deal of attention. It seems, indeed, almost impossible to connect the good-natured, childlike little beings so familiar to summer tourists in Norway with such a horrible nightmare story; but though it certainly reads like "the ravings of a diseased mind," it is none the less an unembellished statement of dry facts, which may at any time be verified by a perusal of the Court Records of the Alten Assizes.

The numerous illustrations form a very attractive feature of these handsome volumes, and though they are unequal from a purely artistic point of view, all have the merit of absolute truthfulness, the portraits being especially characteristic. Each volume has a chromo-lithographic frontispiece, and there is a map showing the various routes taken by the author. Some of the illustrations of the aurora are photographic reproductions of plates in the famous work entitled *Voyages en Scandinavie*, and the text is further elucidated by useful diagrams.

It is far more pleasant to dwell upon the merits of such a sterling book as this than to point out its demerits; and it may seem a little ungracious to say that, though the editor's share of the work is decidedly creditable to him, there is plenty of room for improvement. His preface betrays at starting that his acquaintance with "the tongue of the Briton" is somewhat limited, and he has preserved the author's style, which is at times a little inflated, rather too faithfully. He has also adopted the English error of spelling Lofoten "Lofodden," and there are other slips, for which the printer may or may not be responsible. The author himself is a little out of his depth on the north coast of Norway, which is much better known than he seems to imagine. For instance, the fact that the North Cape is not the northernmost point of Europe can hardly be termed a "recent" discovery, having been "scientifically proved" for nearly half a century; and the whaling establishment at Vadsö is by no means unknown to fame. It is due, also, to the genial and most hospitable merchant who has welcomed so many travellers to Komag Fiord to observe that he spells his name "Fandrem," not "Frاندrem." These are, however, comparatively slight blemishes; and it may be safely predicted that all who appreciate a cheery temper and conscientious work, often carried out in the face of hardship and difficulty, will close this book on excellent terms with the author. GEORGE T. TEMPLE.

The Holy Bible: containing the Old and New Testaments translated out of the Original Tongues, being the Version set forth A.D. 1611 Revised. (Oxford: University Press.)

(Third Notice.)

To glance at another topic. Regret has been expressed by some critics at the retention of the imprecations in certain of the Psalms. It is, however, perfectly clear that a faithful translator has no choice in the matter. To make a sacrifice to the sensibilities of "enlightened morality" would be to depart from the plain significance of the Hebrew text. For instance, in Ps. lviii. 6 (cf. Ps. cix. 6) we have simple imperatives: "Break out their teeth, O God, in their mouths," &c., and this, of course, determines the precise nuance of the following imperatives: "Let them melt away like water," &c. "Let them be as a snail which melteth and passeth away" (why not rather, "As a snail which melteth, let him pass away"? The suffix in v. 9 is singular). "The righteous will rejoice, when he seeth the vengeance: he will wash his feet in the blood of the wicked." The expression here (v. 10) is savage to repulsiveness. But there is something more in these psalms than the utterance of an Oriental thirst for vengeance. It is evident from the next verse:

"So that men shall say, Verily there is a reward for the righteous:

Verily there is a God that judgeth the earth."

The poets of the Psalter are in ideal accord with the course of Iahweh's moral government. One of the issues of that government is the universal victory of righteousness, which involves the extirpation of antagonistic forces. At present they look upon the reverse picture: innocence abused, righteousness condemned, tyranny successful. They would be less than human did they not long for redress; and how can redress be dramatically portrayed, except in the way they have adopted—viz., by a complete reversal of the existing relations; by the representation of innocence trampling upon lust and treachery, and righteousness triumphing over fallen wrong? Where the Hebrew warranted it, the revisers have departed from the imprecatory style, as in Ps. cix. 17 18:

"Yea he loved cursing, and it came unto him;
And he delighted not in blessing, and it was far from him."

Here, as in multitudes of instances (see Exod. xv. 5-7; 14-16), they exhibit a correct appreciation of the essential difference of meaning conveyed by a change of tense-form. (In v. 20 "This *be* the reward of my enemies" seems right; for is it not easy to carry on רָוַי from v. 19; and is not v. 21 contrasted with v. 20?). The doubt is whether they have not too generally been over-cautious in respect of alterations necessary to bring out the force of the various modifications of the Hebrew verb (e.g., Gen. ii. 10; Job. i. 4-5; Isa. vi. 2-4); though in this matter too little is better than too much. It is a pity that in Amos v. 26—a passage of more than ordinary difficulty—the revisers have treated יִשְׁמְרוּ as a past tense. It is co-ordinate with וְיִזְכְּרוּ in v. 27. Iahweh says: Your sacrifices will not avert judgment; do not think it. "Was it sacrifices and a meat-offering that ye brought unto me in the wilderness, during forty years, O

house of Israel?" The answer expected is, No. (So LXX. *μη σφάγια . . . προσπνέγκαί μοι κτλ.*) The implication seems to be: Yet without them ye enjoyed my protection and favour (chap. ii. 10). Then, after due pause, follows the conclusion: "So ye shall carry the pavilion of Moloch (or, your King), and Caiwān your star-god, your images which ye have made to yourselves; and I will banish you beyond Damascus." The idols themselves must go into captivity (Isa. xli. 2; Hos. x. 5, 6; Amos v. 5). "Siccuth your king and Chiun your images the star of your god, which ye made to yourselves," is hardly clear English. It is natural to connect "your king" with "Siccuth," and "your images" with Chiun, which, however, is not plural but singular. If "your images" is meant to refer to both Siccuth and Chiun, there should at least be a comma after Chiun. Nor is "the star of your god" a pellucid phrase. Amos never can have written the words as they stand in the present Hebrew text. It makes no difference whether we translate *Siccuth* and *Chiun*, or treat either or both as proper names. "The booth of your king, and the stand of your images, the star of your god," makes but doubtful sense. Plainly the order of the words in the LXX. is original. And as to the proper names, Caiwān seems right, for the cuneiform Ca-ai-ma-nu shows that this name of Saturn is not of Persian origin; and the LXX. Παῖδων has at least preserved the proper vocalisation (cf. Arab. *Caiwān*; Syr. *Cēwān*). In translating *Siccuth*, I have followed the LXX. *τὴν σκηνὴν*, although we cannot tell how early the Hebrews may have been influenced by Assyrio-Babylonian superstition. Certainly, historical considerations do not force us to fix the prior limit in the time of Tiglath-Pileser II. The "Moloch" of the LXX. may be a correct gloss on מלכּח; or perhaps the original term was Milcom.

But I am lingering too long over a single text, when hundreds of others invite remark. In 1 Chron. xii. 18, Amasai's greeting of David is a little strophe of five lines, and should have been arrayed according to the parallelism, like other poetical utterances:

"Thine are we, David,
And on thy side, thou son of Jesse!
Peace, peace be unto thee,
And peace unto thine helpers;
For thy God hath holpen thee!"

Several alterations appear in the Ten Words (Exod. xx. 1-17); but the familiar phrase, "shewing mercy unto thousands of them that love me," remains in the text (v. 6). Yet it is quite clear from Deut. vii. 9 (לִאֱלֹהֵי דֹרֹר), and the parallelism of the verse itself, that the revisers' margin is right, and that the translation should have been, "shewing mercy unto the thousandth generation, toward them that love me." The great objection to these marginal corrections is that ordinary readers may naturally suppose that there is at least as much to be said for the retained as for the suggested rendering.

The marginal note upon the Third Commandment (v. 7) tells us that לִשְׁוֹא means "for vanity" or "falsehood"; but the uneducated reader will not therefore apprehend the precise significance of the prohibition. The sense is clear from Deut. v. 20 (עֵד שֶׁוֹא "a false witness"); it is, "Thou shalt not

pronounce the name of Iahweh thy God, to confirm a falsehood." It is perjury, not idle profanity, that is forbidden. Ps. xxiv. 4 admits of a similar sense. "Who," asks the poet, "may ascend the mount of Iahweh?" and Iahweh replies: "He that hath not taken Me [*Qri*, *nafshi*, "my soul," i.e., "Myself, or my Name"] for falsehood, nor sworn for fraud." Thus the second clause is exegetical of the first. The difficult words שָׁחַת לוֹ לֹא בְנֵי מוֹסֵם (Deut. xxxii. 5) are rendered, "They have dealt corruptly with him [?] toward him], they are not his children, it is their blemish." At the first glance one is tempted to suggest corruption of the Hebrew text; but if so, the corruption is older than the LXX. version. Two renderings may be offered as preferable to that of the revisers, in so far as they avoid making three sentences out of what is probably but one:

1. "Their blemish [or stain] hath destroyed Him his not-sons." With the expression "not-sons," i.e., estranged or unnatural sons, compare לֹא אֵל and לֹא עַם in v. 21 *infra*; and Lo-ruhamah, Lo-ammi, Hos. i. 6, 9, 10; ii. 23. The "Him" is an ethic dative.

2. "His estranged sons have corrupted toward Him their blemish." In this case שָׁחַת is used like הִשְׁחִיחַ in Ps. xiv. 1; lili. 1 (עוֹלָאֵלִיל). Hab. iii. 9 is a well-known *crux* of translators. The note in Drs. Cheyne and Driver's excellent *Teachers' Bible* says that there are more than a hundred supposed explanations. The revisers render:

"Thy bow was made quite bare;
The oaths to the tribes were a sure word."

Their margin gives, for the second line, "Sworn were the chastisements [Hebrew *rods*] of thy word." I have thought (I hope it is not one of the hundred explanations already given to the world) that the second line may be really parallel to the first, and that the reference in both is to the rainbow.

"All bared is thy bow;—
The sevenfold streaks of Promise."

Read שְׁבַעֲתָ שְׁבַעֲתָ—a very slight change. מִסֹּחַ "rods," may perhaps denote "bars," or "stripes," or "streaks" of colour; and אָמַר means the promise to Noah, Gen. ix. 13, *sqq.* (see Ps. lxxvii. 8 for this sense of the term). The idea is, at any rate, appropriate to the context, which describes a "storm of waters" (v. 10).

Theological bias has prevailed over language and context at Gen. iii. 15, vi. 3, xlix. 10. In the first instance, the Authorized Version is kept, even to retaining "his heel" after "it shall bruise." As usual, the margin suggests a more probable meaning of the verb ("lie in wait for"; LXX., ἐκκρήνη; Vulgate *insidiaberis*, second time). With Umbreit, the rare שָׁחַת, only occurring here and at Job ix. 17, is to be compared with שָׁחַת and נָשַׁח. Accordingly, it will mean *inhiare*, "to gape" or "pant after," and so "to aim at" or "attack." So in Job ix. 17 we may render the first line, "He that with storm falleth upon [or attacketh, cf. שָׁחַת, ch. v. 5] me." In Ps. cxxxix. 11, שְׁכַחֵנִי "will cover me," is probably right. It is clear, as Dillmann observes, that the reference in Gen. i. c. is not to a greater and a slighter hurt; a serpent's venomous bite would be as fatal in the heel as anywhere else. Moreover,

"bruising" is not the effect of a serpent's bite. The verse describes not the issues of the enmity, but the enmity itself, and the mode of its manifestation. The woman's seed will attack openly, aiming at the head; the serpent's brood will attack from behind, in accordance with the natural cunning of serpents, biting at the heel (cf. Gen. xlix. 17). In Gen. vi. 3, neither the "strive" of the text, nor the "rule in" or "abide in" of the margin expresses the most probable sense. The verb יָרִן is best explained from the Arabic *dāna*, "he was or became abased and submissive" (Lane); and what the verse says is—"My spirit [divine breath, Gen. ii. 7] shall not always be abased in man: because of their going astray they shall be mortal; and their days shall be one hundred and twenty years" (the plural suffix in בְּשָׁנָם is simply like לִיהֶם in v. 1). No other translation satisfies the context of this passage. At Gen. xlix. 10, again, the margin is right:

"Till he come [came] to Shiloh,
Having the obedience of peoples."

The other suggestions are invalid on various grounds. The pointing שָׁלֹחַ is anomalous in the Pentateuch, and would require at least the addition of הוּא to complete the sense. Moreover, the whole passage refers to a tribe, not to an individual. The "sceptre" need not point to the monarchy of David. The Hebrew term means a shepherd's crook (Ps. xxiii.) and a commander's rod of office (Judges v. 14); and the "staff" in the next line has a like import (Num. xxi. 18, Ps. lx. 7). The verbs should be rendered as aorists, "The chieftain's rod departed not from Judah," &c.; and the sense of the passage is that Judah, the lion or champion tribe, took the lead in the struggles of the conquest, until the meeting of the tribes at Shiloh, and the transfer of the Sacred Tent from Gilgal thither (Joshua xviii. 1 *sqq.*). Then follows, quite naturally (vv. 11-12), a metaphorical description of the peace and plenty which the tribe had won for itself.

In the first blessing, "beginning of my strength" is less forcible than "firstfruits of my manhood" (see Hos. xii. 3, Revised Version). The term רִאשִׁית, which means "beginning" in Deut. xi. 12, Jer. xxvi. 1, Job xlii. 12, is the regular term for "firstfruits," and so also expresses the "chief," "choicest," and "best" of things (Num. xxiv. 20, 1 Sam. xv. 21, Job xl. 19, Amos vi. 6). The phrase of the text recurs, Deut. xxi. 17, where the revisers give no marg. note, and in Ps. cv. 36, where it is rendered "the chief of all their strength," marg. "Hebrew beginning." "The fear of the Lord is the beginning of wisdom" (Ps. cxi. 10, Prov. i. 7, cf. iv. 7) may mean "The fear of the Lord is the chief or choicest wisdom." But what wisdom says of herself in Prov. 8, 22, expresses not the very obvious idea "The Lord possessed me in the beginning of his way," but the less familiar thought: "Iahweh made me as the firstling of his way" (i.e., of his creative energy); and possibly Gen. i. 1 should read: "As firstfruits (of his activity) Elohim created the heavens and the earth." Reuben's "blessing" may be rendered:

"Reuben, thou wast my firstborn;
My might, and the firstfruits of my manhood:
Preëminent in dignity, preëminent in power."

Thou walledest over like the waters Hold not
thou preëminence!
For thou wentest up thy father's bed:
Then defilest thou the couch thou wentest up."

It seems probable that the LXX. Samar. Symm. and Vulg. are right in reading פָּדוֹתָ for the isolated פָּדוֹתָ. Otherwise the term might be pointed as a participle (Judges ix. 4; Zeph. iii. 4). In the last line, a comparison of the LXX. τὸ ἐπιπλύναι τὴν σπονδύην οὐ ἀνέβη with 2 Chron. v. 1, suggests the reading יָצוּעַ עֹלָת. The term rendered "couch" is always a plural (Ps. cxxxii. 3, Job xvii. 14). The blessing of Naphtali is hardly intelligible, if the ordinary pointing is retained. Why is he called "a hind let loose," and why is the figure dropt at once in so brief a saying? Or must we think of an oracular hind? With a different vocalisation the words read:

"Naphtali is a spreading teil tree
(Ps. lxxx. 11)
That beareth goodly crests."
(Isa. xvii. 6: see Judges v. 18).

(I have supposed נִרְבָּה for נִרְבָּה.) This reading is supported by the LXX., and was accepted by our own Bishop Lowth from Bochart. It at least deserved notice in the margin. The "Out of Asher" (v. 20) is simply exasperating. The *mem* is wanted at the end of the preceding verse, and the "ancient versions," which omit it here (LXX., Vulg., Syr., Onk.) are undoubtedly right. Surely, so slight and so satisfying a change might have been hazarded in the text instead of being doubtfully indicated in the margin. And, finally, in the blessing of Joseph (v. 26), the imitation in Deut. xxxiii. 15 (הִרְרֵי קִדְרָה) taken along with the LXX. rendering (ὄρεων μονήμων) proves that הִרְרֵי עֵד (cf. Hab. iii. 6) is the true reading; quite apart from the fact that there is no word הִרְרֵי "progenitors," but only *hōrāh* "she that conceived," a poetical synonym of "mother": see Hosea ii. 7, Cant. iii. 4.

The revisers have made many trifling alterations, such as the substitution of "deep" for "depth," and *vice versa*, without preserving their consistency, as will be evident to any one who will look at Job. xxviii. 14, Ps. lxxi. 20, lxxvii. 16, Exod. xv. 5, Isa. lxiii. 13, Jon. ii. 3, Ps. cvii. 24, Mic. vii. 19, Ps. lxxviii. 22, lxxxviii. 7. Five different Hebrew words are represented by "flood" or "floods"—see Exod. xv. 8, Jon. ii. 3, Gen. vi. 17, Ps. xviii. 4, lxxiv. 15, lxxix. 15. At Exod. xi. 15, "the mighty men of Moab," is retained with margin, Heb. *rams*. But at 2 Kings xxiv. 15, the same term is rendered "The chief men of the land," with margin, or *mighty*; while at Ezek. xvii. 13, "The mighty of the land" occurs without a marginal note. This is somewhat fluctuating, to say the least. At Gen. iii. 6, the verb דָּשַׁח is rendered "to make one wise," a sense which it bears scarcely five times out of fifty-five (Dan. ix. 22, Neh. ix. 20). The term here means "to become wise." Sometimes the revisers have turned it by "to prosper," "to have good success," but that meaning can hardly be substantiated. "To deal or behave wisely," is its most usual sense (Josh. i. 7, 8, 1 Kings ii. 3, Isa. lii. 13, 1 Sam. xviii. 5, Deut. xxix. 9). Nor is the marginal "desirable to look upon" altogether correct. The verb is not used of simple looking at, but

of mental attention, giving heed, and so understanding (Ps. xli. 2, lxiv. 10, Job xxxiv. 27, Deut. xxxii. 29).

I must draw these remarks to a close, without even a pretence of having exhausted an inexhaustible subject. The eye of a critic naturally falls upon defects, and perhaps I have not said enough in recognition of the numberless places which have received skilful correction at the hands of the Revisers. "Ὁ γέγραφα, γέγραφα. I will only add that, if the Revision, as a whole, fails to satisfy the demands of exact scholarship, so much of it is of such admirable quality that whatever censure attaches to the general execution of it may be inferred to be a consequence of the untoward conditions imposed at the outset upon the revisers, and of the somewhat heterogeneous character of the committee itself. As a help to critical study, the Revised Version will not supplant the Variorum Teachers' Bible. None the less, it will powerfully conduce to the general advance in an enlightened knowledge of the Old Testament Scriptures. C. J. BALL.

History of England. For the Use of Middle Forms of Schools. By F. York Powell and J. M. Mackay. Part I. From the Earliest Times to the Death of Henry VII. By F. York Powell. (Rivington.)

To add another school history of England to the crowd of such books which have been published during the last few years is an act which requires some justification; but the merest glance at Mr. Powell's volume is sufficient to show that it is at any rate not to be confounded with the crowd. The first thing which will strike the reader on turning over a few pages of the book will probably be its extraordinary fulness of detail. Into an amount of space not exceeding that allotted to the same period in some of the ordinary school histories, the author has managed to compress an abundance of information which would be sought for in vain in many works of far greater size and intended for the use of older students. There are probably few persons among those whose knowledge of English history is derived solely from modern writers who could read any one of Mr. Powell's chapters without finding in it many incidents with which they were previously unacquainted. To say that an historical manual is unusually crowded with facts is, indeed, in itself no praise at all; but Mr. Powell never loses himself in details. Every fact which he introduces is made to contribute to the illustration of the character and circumstances of the English people during the period with which he deals, and of the causes which have been operative in the development of the history. The style is marked throughout by the freshness which is characteristic of a writer who has studied the original authorities for himself, and who possesses enough of historical imagination to realise distinctly the meaning of their statements.

Mr. Powell has had no easy task in attempting to give attractive literary form to his abundant mass of material, especially as he has chosen—perhaps not altogether wisely—to dispense entirely with the aid of footnotes. However, he has overcome the difficulty on the whole with remarkable success, though

here and there we meet with a paragraph in which the extreme condensation of the narrative interferes with the ready apprehension of the writer's meaning.

Although Mr. Powell's work will be read, and deserves to be read, by many others than schoolboys, the main question for the critic is that of its fitness for use as a class-book. The first impression of most readers will probably be that for this purpose it is too full of matter. Possibly the author may have gone somewhat to excess in this direction; but the error is a very venial one. There is no doubt that, in order to be successfully used, this volume requires, in a greater degree than most of its rivals, that the teacher should have a good knowledge of his subject and a genuine interest in it; but teachers who possess these qualifications will recognise the value of a text-book which is free from the delusive simplicity that is characteristic of the majority of school histories. It is of course better to teach a few facts distinctly than a multitude of facts confusedly; but the attempt to confine the learner's attention to what are called the main events of history usually results in giving misleading impressions of their character and mutual relations, which have afterwards to be laboriously unlearned. While Mr. Powell has avoided all appearance of "writing down" to the comprehension of young readers, his language is simple enough to be easily understood by any fairly intelligent schoolboy.

One valuable feature of the book is the care which has been bestowed on the accounts of the condition and habits of life of the English people at different periods. We have, for instance, a minute description of an English homestead before the Norman Conquest—its buildings and apartments, its furniture, and the dress and occupations of its inmates; and at the end of each great division of the history there is an outline of the principal facts which indicate the advance or decline of the prosperity of the people—the rate of wages, the prices of provisions, and the probable numbers of the population. The progress of the arts, and the changes in costume and manners, are briefly but effectively sketched. Especial praise is due to the account of the literature, which is probably more complete than in any other book of the same class, nearly every author of any importance being mentioned, with some indication of his literary rank and characteristics, while epoch-making writers, like Chaucer or Geoffrey of Monmouth, are treated at some length. The development of the language is illustrated by copious and well-chosen specimens. Mr. Powell, however, has not, after the fashion of some modern writers, given so much attention to the history of manners and social conditions as to neglect the political history, nor has he imitated the distinguished historian who is accused of "putting Crecy in a parenthesis." The principal battles are described in careful detail, plans of the battle-fields being in several cases furnished. The growth of civil and municipal institutions receives a fair share of attention, and the author's remarks on the characters of the sovereigns are interesting and original. Mr. Powell has introduced, with very happy effect, a large number of quotations from ballad poetry, in order to illustrate the state of popular feeling in

relation to various important events in the history.

The only considerable fault that I find in Mr. Powell's book is that there is too much of the fashionable affectation of disguising well-known persons and places under unfamiliar names. It may be picturesque to talk of "Eadric the Grasper," "Ranulf Torch," and "Malcolm Bighead"; but it would, at least, have been worth while to give the accustomed forms of these cognomina within brackets. Similarly, if "Mercia" is to be abolished in favour of "Marchland," the former name ought to have been mentioned, especially as Mr. Powell has found himself unable to dispense with the adjective Mercian. The famous word "viking" has been changed into "wicking"—an infelicitous coinage, for if *vicing* had survived to become modern English it would scarcely have assumed this form. I do not complain that the Maid of Orleans (in accordance with the probable suggestion of Hallam) has become plain Joan Darc, but why should the time-honoured "Joan of Arc" be altogether ignored? The spelling "Caratocos" looks like a motiveless piece of eccentricity; if the traditional form needs correction we ought surely to say Caratacos. Equally unreasonable seems the orthography "Brythnoth" for the name of the hero of Maldon; and the name of the "Hwiccsetas" is, so far as I know, unauthorised. It is a matter of course that Mr. Powell tells us nothing about "the Plantagenet kings," though even Mr. Freeman has somewhere reluctantly acknowledged the convenience of this quasi-surname in speaking of those later descendants of Henry II. who cannot be called Angevins. But Mr. Powell seems so much in dread of commonplace that he mentions the real owner of this designation only as "the Earl of Anjou."

The Index needs some revision. Under the word "population" there are only two references, although this important subject is dealt with in other places than those mentioned; and the reference for "Robin Hood" is wrong. The maps are badly printed, and contain some inaccuracies in the names. In Mr. Powell's text I have noticed only a few trifling errors, such as placing Bæda's death in 742 instead of 735. Critics who are better acquainted than I am with special periods of the history may possibly be able to point out many faults of detail, but the list of inaccuracies must be a long one if it seriously counterbalances the great positive merits of the book. HENRY BRADLEY.

THE SPEECHES OF MAITRE LACHAUD.

Plaidoyers de Charles Lachaud. Recueillis par F. Sangnier. (Paris: Charpentier.)

M. SANGNIER has discharged a pious duty towards the memory of his father-in-law in collecting and presenting to the public some of Maitre Lachaud's most important speeches. Unlike the great orators of antiquity, Lachaud never composed a speech. A few short notes and the stenographic reports, often curtailed by the necessities of journalism, were the sources which M. Sangnier has turned to the best account, aided by his intimate knowledge of the illustrious advocate, whom he assisted during some of the most active years of his life. Posterity must perhaps forego the

chance of comparing Lachaud on paper with Greek and Roman models; but, at least, it will never record against him the doubtful compliment of Milo, "My dear Cicero, if you had spoken before the judges as you have written, I should not be now enjoying the exquisite oysters of Marseilles." Maître Lachaud's courage and eloquence never betrayed him before any tribunal. The defence of Bazaine was a memorable instance of the fearlessness with which he stemmed the tide of popular resentment against a marshal who had been selected as the scapegoat of national disaster. Maître Lachaud never "held a brief." He defended a case according to his own view of the possibilities of defence. If a prisoner's guilt were admitted, or his innocence incompatible with any account of the evidence, Lachaud spoke as the advocate of mercy, and the force with which he urged this plea was irresistible: it came from the heart and went straight to the heart. An infinite pity for human frailties, springing from the depths of a loving and religious nature, gave him that power in which he was unrivalled, of revealing a human soul with whose woe sympathy was possible in the most inhuman wretch that appeared before a jury. He raised professional duty to the height of a special intercession on behalf of the degraded and oppressed; and the Court of Assizes, which he ennobled by the tone of his advocacy, recognised in him the St. Vincent of Paul of the bar. A commanding presence and rare personal beauty gave dignity to a delivery that was at once graceful and tender, grave and impassioned. The music of his voice persuaded without argument, and the saying has passed into a proverb that a letter read by Lachaud would convince a jury. With his perfect combination of mental and physical gifts, Lachaud realised the type of that ideal orator whom antiquity delighted in describing. Such was the opinion of no less a judge of oratory than Gambetta; and such, we may rest assured, will be the verdict of posterity.

WILLIAM MARKHEIM.

NEW NOVELS.

A Woman's Reputation. By Oswald Crawford. In 2 vols. (Chapman & Hall.)

The Sins of the Fathers. By Henry Cresswell. In 3 vols. (Hurst & Blackett.)

Who was then the Gentleman? By Compton Reade. In 3 vols. (Maxwell.)

Corinna. By Rita. In 3 vols. (Maxwell.)

The Dark House. By G. Manville Fenn. (Ward & Downey.)

No Medium. By Annie Thomas. (White.)

The Flower of Doom, &c. By M. Betham Edwards. (Ward & Downey.)

Wrong on Both Sides. By Vin Vincent. (Griffith, Farran & Co.)

MR. OSWALD CRAWFORD'S new story is extremely clever; indeed, the one fault to be found with it is that some of the cleverness is out of place, and interferes with the free action of the plot. Mr. Crawford might have dispensed with Alice Bopp, *alias* Prof. Peacocke, and formerly Mrs. Scatcherd. With her Yankee smartness and audacity, her uncontrollable temper, her note book, and her divided skirt, she looks like a sketch

for a comic opera by Messrs. Gilbert and Sullivan. A much simpler person would quite as effectually have come in between Viola Templeton and James Scatcherd and have completed the tragedy of their lives. Then we have a little too much of the talk of Giles Guffin, the loutish hanger-on at the kennels of Sir George Gooderich, and Mr. Cocker, who from being a London *gamin* develops into a "confidential valet and general law and theatrical adviser." We are reminded, too, rather painfully, of Sam Weller by such dialogue as this: "'You understand what a writ of *habeas corpus* is, I presume, sir?' 'Yes, Mr. Cocker, I know that, but don't do it now, there's a merciful soul.'" Otherwise, both as a study of character and as a story, *A Woman's Reputation* deserves nothing but praise. Viola Templeton, the actress whose reputation is at stake, is placed, very naturally, in a most difficult position. She allows herself to be betrothed to John Morland, who loves her with the whole strength of a loyal Saxon nature, while she herself loves a man whom she had married in America, but who had abruptly left her. Her husband turns up in the person of James Scatcherd, whose character and career are involved in mystery, and who at the time the story opens is land-agent to Sir George Gooderich, a country gentleman of the best sort, about whom there is no mystery at all. Obviously there can be nothing but misery for both Scatcherd and Viola. He commits suicide to prevent her from committing bigamy. She marries her second lover, but only to die and be buried by the side of her first. Scatcherd, unfortunate, resolute, magnanimous, misunderstood, is one of the most original characters in recent fiction. Very likeable, too, though in a different way, is Tom Rivers, Viola's artist-brother, who has no genius, but only "an eye," and who settles down with the sister of John Morland in "that hard-working literary and artistic London existence" which Mr. Crawford assures us is, "on the whole, the gayest and fullest and most enjoyable life there is."

Originality is the strength of *The Sins of the Fathers*; frequently it degenerates into eccentricity, and becomes a weakness. That Harry Curgeven, while passionately enamoured of Lady Nora Monat, should marry a girl whom he had never seen to save his father from public disgrace, is possible, though barely possible. But Mr. Cresswell neither gives nor suggests any adequate reason why Theodore Van Sluis should get rid of his illegitimate daughter Genevieve in this fashion. In his sketch of Van Sluis, indeed, he has missed an opportunity. He might have drawn a moral voluptuary of a rare type; instead of this he gives a blurred portrait of a moral coward. It must be allowed, however, that after bringing Genevieve Horst and Harry Curgeven together in this strange manner, Mr. Cresswell manages their married life with much skill. Harry falls back into dubious relations with Lady Nora Monat; Genevieve in her wrath, pique, and loneliness, submits to the questionable attentions of Michael Wyndham, another moral voluptuary, though quite unlike her unworthy father. Circumstances, however, including the poverty of the husband, cause Harry and Genevieve to draw towards each other, and the story

closes with a scene almost as good as the final incident in *Le Maître de Forges*. Mr. Cresswell does not succeed so well as he might and ought to have done with his portrait of Michael Wyndham. Apart from the fact of his having had a wife and child whose memory he adores, Wyndham has artistic sympathies, and ought to conduct even an amour like a gentleman. But when seeking to make Mrs. Curgeven, and failing her, Lady Nora Monat, his mistress, he speaks and acts with a brutality worthy of the plain-dealing heroes of the Restoration comedy. In spite of its faults, *The Sins of the Fathers* is a novel very much above the average.

Who was then the Gentleman? is full of rough power, but is very far from being a satisfactory story. In truth, Mr. Compton Reade attempts far too much, and endeavours to produce far too many strong situations. The substitution by a wet nurse of her own child for her employer's is a sufficiently common trick in fiction; and Mr. Reade would have been better advised had he thrown originality into the main lines of his plot, instead of introducing vivisection, poisoning, dynamite and wholesale massacre as a preliminary to placing Robert Marmyon and Plantagenet Hodge on a proper footing towards each other and towards society. There is hardly a character in *Who was then the Gentleman?* that is well drawn; even Ida Frank-almoign, who, when she first appears, is only a coquette, becomes frank almost to shamelessness at the end and when speaking of her parents. Some of the characters, especially Flaymar the demagogue, Dr. Lembie the vivisectionist, and an odious American, "Judge Potterer," are wretched caricatures. Altogether this is a very loosely constructed novel, and it leaves an unpleasant taste, as of some coarse liquor, in the mouth.

From the artistic, and perhaps even from the ethical, standpoint, Rita's new story is an advance on her previous works. The central incident in it is profoundly tragic, but not unwholesomely, hardly even unpleasantly, so. Corinna D'Avignone, an author, married to Boris Fedoroff, a Russian noble, is rudely awakened to the fact that her husband has another wife alive. The ordinary heroine of fiction would have turned from him with loathing, especially if, as in this instance, there happened to be a faithful Englishman waiting patiently to gain her heart by pity and service. But Fedoroff, though weak, is not altogether bad. His first wife is mad; and he had been practically forced into his marriage with Corinna, because in the opinion of his English rival, Gilbert Brandon, he had, owing to her simplicity, compromised her. He leaves her to do his duty as a landowner in Russia, where he is arrested as a conspirator against the Czar, and is only set free by the exertions of the Nihilists, in whose conspiracies he is falsely implicated. Meanwhile Corinna, after losing her child, has resumed her career as a novelist, the loyal Brandon continuing to hover round her. Fedoroff is discovered by Brandon in Paris, and through him offers to set free Corinna from his own influence. But the death of his mad wife has in turn set him free to marry her, and it is the fate of the unlucky Brandon to bring them together once more,

and this time irrevocably. This uncommon plot is skilfully worked out, and the continental "local colouring" of the story is good. A better sketch than even Corinna or Brandon is the lively Countess Nina, who, with her husband, supplies the needed relief of comedy to Corinna's tragedy.

The Dark House proves that Mr. Manville Fenn can give a pleasant, and even a genial, air to a shilling dreadful. That, however, is the most that can be said for it. The plot and the characters alike in *The Dark House* are so absurd and unreal as to suggest the idea that they are not of Mr. Fenn's creation, but that he has discharged towards them a duty similar to that of the poet who provides verses explanatory of a sketch that is placed before him. A mad Indian colonel leaves his property in an impossible fashion, but one eminently provocative of theft on the part of his servants and of quarrelling among his heirs expectant; and as they all live together, and in the company of the property and of the embalmed remains of the testator, a *Dark House* is a long series of conspiracies and murders. The faithful Indian servant kills a thieving English colleague, to be in turn chloroformed by a Creole airen. The Creole siren then endeavours to get hold of the colonel's banknotes herself, in the first instance by direct theft, while walking, or pretending to walk, in her sleep; and, in the second, by tempting the heir to fall a victim to her charms. In addition to the schemers indoors, some regular burglars from the outside endeavour to do a little business on their own account. After this, it is needless to say that the plot of *The Dark House* is not in Mr. Fenn's usual style, and yet there is nothing in it of interest but the plot. Miss Katrine D'Enghien, the murdering Creole enchantress, and her worthless tool and lover, Gerald Artis, look as if they had walked out of one of Miss Braddon's earlier works. Mr. Girtle, the good genius of the story, recalls the lawyer familiar to readers of the late Mr. Sheridan Le Fanu, for he is "a gentleman with a yellow face, dark restless eyes, and bright grey hair," who "takes a pinch of snuff from a handsome gold box, flecks a few grains from his white shirt," &c. Paul Capel and Lydia Lawrence, who from being the victims become the victors of the Creole and her lover, are sketches more in Mr. Fenn's style, and would have acted after the ordinary fashion of his heroes and heroines if circumstances had allowed them.

Mrs. Laura Chesterton is the redeeming character of Mrs. Cudlip's rather feeble story of *No Medium*, which is an attempt, if not to expose spiritualism, at least to make capital out of it for the purposes of fiction. She is a good example of the fussy, gushing, self-important, imaginative and not quite sincere women, who, being imperfectly occupied with social and domestic cares, take up the fad of the hour—be it aestheticism or spiritualism—and rides it to death. Her friend, Mrs. "Mab" St. Quentin, who, by following her advice, gets into the grotesque troubles that give to *No Medium* such interest as it possesses, is rather too colourless and spiritless a creature to make even a good foil. Mrs. Cudlip shows some skill of her own special kind in bringing together Mrs. St. Quentin's

brother, Graham Murray, and Lily Sherrock, whom the necessities of an *intrigante* and the credulity of her dupes convert into a heroine.

The longest and most ambitious story in the new volume which Miss Betham Edwards has published is also the least successful. In *The Flower of Doom* she has endeavoured to utilise the dynamite craze, as in *No Medium*, Mrs. Cudlip has endeavoured to utilise the *séance* mania. But Mr. R. L. Stevenson's method of doing this is very much to be preferred to Miss Edwards's. Edgeworth, the Irish patriot, who in her story plots destruction on a huge scale, is as unlike the dynamiter of fact as he can be; he is in reality a mouthing sentimentalist of the Bulwer Lytton pattern. Bernarda Burke, who marries Edgeworth and dies a martyr's death for his sake, is as unreal as himself. The hero and heroine with their "Flower of Doom," and "voice fatiloquent," and all the rest of it, are in fact only tolerable when they sit down to supper, though even then they are doomed to digest "a little lump of vermilion coloured jelly, clear as a sea anemone." Falsetto, in sentiment and style, is the bane of this volume. The best of the three stories in it—although even that is too long drawn out—is an account of the troubles of a magazine editor who loses the manuscript of a young lady who aims at supporting herself by means of her pen. Mr. Beauregard is an impossible editor, and Miss Lucy Carruthers is an equally impossible contributor. But they are placed in some laughable situations, and Miss Edwards's comedy is decidedly to be preferred to her tragedy, even when it amounts to farce, as it does in this case.

Wrong on Both Sides is a story in which the moral is intended to be everything, but which proves that its author could write a capital story in which the moral should be suggested rather than obtruded. Lord Grantown is a severe father of the Scotch rather than of the Roman variety. Lord Tempeston, his son, is a boy with an ungovernable temper. In *Wrong on Both Sides* Mr. Vincent cures the father of his severity, and the son—in this instance in rather too tragic a fashion—of his temper. Both father and son are, however, well drawn; and a still better sketch is poor little Lady Olga, who becomes Tempeston's good angel at the expense of her own life and of his happiness. *Wrong on Both Sides* is written with care and with spirit, and is full of promise.

WILLIAM WALLACE.

NEW EDITIONS.

THE latest volume in the "Parchment Library" (Kegan Paul, Trench, & Co.) is *The Confessions of an English Opium-Eater*, edited by Mr. Richard Garnett. The text chosen for reprint is the first edition, which De Quincey subsequently expanded to nearly threefold its original length. Concerning the date of this edition there seems some uncertainty. In the article "De Quincey" in the *Encyclopædia Britannica* it is given as 1820, which must be wrong. Mr. Garnett always writes of "the edition of 1821." De Quincey's "Notice to the Reader" undoubtedly bears date October 1, 1821. But Part III. of the *Confessions* (which was never written) was promised for the *London Magazine* of February 1822; and the appendix

apologising for the non-fulfilment of this promise is dated September 30, 1822. We shrewdly suspect that the first edition of the *Confessions* in volume form contained this appendix, and must therefore have appeared in 1822. This is just one of the bibliographical difficulties which no one is better able to clear up than Mr. Garnett himself. Besides an introduction and notes, the present volume contains two novel features of interest. One is an account of De Musset's translation of *The Confessions*, with a specimen of some dozen pages, containing the Ann episode continued as to suit the French taste. For more reasons than one the subject deserves a place among the curiosities of literature. Secondly, Mr. Garnett has been able to print for the first time a record of De Quincey's conversations, kept by Richard Woodhouse, of whom little apparently is known, except that he was an intimate friend of Keats and of Severn. The faithfulness of Woodhouse's record it is impossible to doubt, for there is abundant evidence that De Quincey spoke as he wrote, though we are not aware that anyone else has attempted to preserve his words. We have ourselves heard, from one who knew De Quincey well, that he reported at the time the incident of the Malay almost exactly as he afterwards described it in the *Confessions*. Nothing can be more characteristic than De Quincey's account—here reported *ex relatione* Woodhouse—of the reasons why he left Oxford; but we should like some better security for the assertion that the authorities had announced that "the answers in the Greek examination should be given in Greek." Equally characteristic is De Quincey's statement that he "always disliked in modern composition what is termed Ciceronian Latin—that style in which twenty or thirty words are used to express what might be as well, or better, given in five or ten."

The Cuneiform Inscriptions and the Old Testament. By Eberhard Schrader. Translated from the second enlarged German edition by Owen C. Whitehouse. Vol. I. (Williams & Norgate.) As the second edition of Dr. Schrader's important work has already been noticed in the ACADEMY, we need only call attention to the appearance of an English translation, which has been executed by a competent scholar, and will be cordially welcomed not only by all Hebrew students, but also by many other persons who take an interest in the history of the Old Testament. The translation has been revised by the author, who has furnished many corrections and improvements of the statements contained in the original work. The book has been rendered more readable by the removal of long parentheses to the footnotes. We regret that in quoting Hebrew proper names Prof. Whitehouse has not always given them in the forms adopted in the English Bible. In this respect his practice is inconsistent, the same name appearing variously as *Hizkia* (why not *Hizkijahu*?) and as *Hezekiah*. To write *Sanherib* instead of *Sennacherib* is especially objectionable in an English book, as the customary form happens to be more correct than the Masoretic one. Prof. Whitehouse has furnished a Preface, in which he gives an account of the present state of opinion regarding the composition of the Pentateuch, and dwells with satisfaction on the arguments which Schrader's Assyriological conclusions supply against the theories of Wellhausen and others of the same school. The volume has been printed in Germany: the foreign type is somewhat unpleasant to English eyes, but misprints are very rare.

Across Africa. By V. Lovett Cameron. (G. Philip & Son.) In a second edition of *Across Africa*, Commander Cameron summarises the results of exploration in the Dark Continent since his own expedition in 1876, and offers some valuable suggestions as to the future of

African travel and commerce. Subsequent discoveries, it is well known, have mainly gone to confirm Commander Cameron's anticipations, notably in the identification of the Lualaba and the Congo. The precise nature of the Lukuga river, or creek, is still, however, a battle-ground between geographers. Commander Cameron stoutly maintains his original position—that the Lukuga is the outlet of Lake Tanganyika, in spite of Mr. Stanley's experiments. He would explain both the cessation of a surface outflow apparently revealed by these, and also the rise of water in the lake by the formation of a temporary barrier like the *sûd* through which Sir Samuel Baker hewed a way at Gondokoro. Time must decide between the rival contentions. There are now opportunities for observing the phenomena, as the steam launch is already busy on the "mixing-place" of the waters. The great problem of commercial development in Africa is the vital necessity of supplementing the vast water systems by land carriage. To make a man a beast of burden is to put him to even a worse use than to hang him. Commander Cameron estimates that in Africa the average cost of carriage is about 3s. 6d. a ton per mile when porters are employed; with pack-animals it is something under 2s.; and with bullock-waggons ranges from 1s. to 1s. 4d. Light railways—and African exports only require light railways at present—would be an immense saving both in cost and time. With regard to the present constitution of the Congo state, Commander Cameron evidently does not see how bankruptcy can be avoided. Its endowment of £50,000 will hardly meet current expenses, which will tend to grow. Moreover, the amount of African labour suitable for factory and police purposes is limited; and, with the extension of colonial and commercial activity, it is continually demanding a higher price.

MESSRS. GEORGE BELL & SONS have published, in very attractive form, a new edition (being the third) of Dr. Alfred Gatty's *Key to "In Memoriam."* The substance of the "Key" has been largely revised and augmented. The Preface has been rewritten, so as to give many interesting details about the poet's home in Lincolnshire, as well as about Clevedon. Above all, a frontispiece has been added, consisting of an engraving of Arthur Hallam, after a bust by Chantrey, which originally appeared in the volume of *Remains in Verse and Prose*, printed for private circulation after his death. Among many Tennysonianas, we know none more to be desired than this.

The Life of Charles Lever. By W. J. Fitzpatrick. New Edition, revised. (Ward & Lock.) We are glad to see that this capital biography has reached a second edition. The work now appears in one volume instead of two. A large amount of new matter has been incorporated, and the whole has undergone careful revision, to the manifest improvement of the style. Most Englishmen are accustomed to consider Lever as, in all respects, the typical Irishman of genius. Dr. Fitzpatrick's biography will confirm this estimate; and, in its overflowing vivacity and its profusion of good stories, the book is worthy of its subject.

WE should have acknowledged earlier two more volumes (ix. and x.) of the fine edition of Scott's *Dryden*, which is being published by Mr. Paterson, of Edinburgh, under the editorship of Mr. G. Saintsbury. Though the volumes are lettered at the back "Dramatic Works," we have now reached the poems proper, in which it is permissible for one who is not a professional student of literature to feel more interest than in the plays. As before, the editor has acted upon the sound policy of subordinating himself to his author; some even may think his annotations too few and too curt.

WE have to thank Mr. B. Dobell, whose name is best known to us from his connection with the late James Thomson, for a reprint of the first edition of Shelley's *Alastor* (Reeves & Turner). The type, binding, &c., simulate the original; but it is going somewhat too far to call such a reprint a "facsimile." We hope that Mr. Dobell will be encouraged to carry out his design of reprinting others of Shelley's works. The price to subscribers is only 4s.

WE have also received: *Within the Precincts*, by Mrs. Oliphant (Smith, Elder & Co.); *Doris*, by the author of "Phyllis" (Smith, Elder & Co.); *Handbook to the Roman Wall*, by Dr. J. Collingwood Bruce, Third Edition (Longmans); *Extracts from the Coran*, in the Original, with English Rendering, compiled by Sir William Muir (Trübner); *Esoteric Buddhism*, by A. P. Sinnett, Fifth Edition, annotated and enlarged (Chapman and Hall); *A Glimpse behind the Curtain*; or, *Harem Life in Egypt*, being a New Edition of "Scenes from Life in Cairo," by Mary L. Whately, with a New Preface (Seeley); *The Student's Blackstone*, by R. M. N. Kerr, Ninth Edition, (Clowes); *The Student's Guide to the Medical Profession*, by C. B. Keetley and R. Wharry (Ballière, Tindall, & Cox); *Manual of Modern Geography*, Mathematical, Physical, and Political, by the Rev. Dr. Alex. Mackay, Eleventh Thousand, thoroughly revised (Blackwood); *The Elements of Inorganic Chemistry*, Part II., Advanced Stage, by J. C. Buckmaster, revised by C. A. Buckmaster and G. Jarman (Moffatt & Paige); *The Battle of Fontenoy: a Historical Poem*, by W. J. Corbet, Revised Edition (Simpkin, Marshall & Co.); &c., &c.

NOTES AND NEWS.

WE owe an apology to Dr. Schliemann for a false report concerning his future movements in the ACADEMY of June 13. After leaving London, he went to Paris for a short stay, and is now at St. Moritz in the Engadine. At no time did he contemplate a visit to America.

A WISH has been expressed by several friends of the Rev. Dr. Codrington that, before he returns to Norfolk Island in October, a portrait of him should be painted, as a memorial of his self-sacrificing labours as a missionary, and of the value of his contributions to the sciences of philology and anthropology. It is proposed that the picture should be offered to Wadham College, to be placed in the Hall, or the Fellows' Common Room. Subscriptions, which, for the present, it is proposed to limit to one guinea, may be sent to the Rev. H. H. Minchin, Little Bromley Rectory, Manningtree, Essex; Dr. E. B. Tylor, University Museum, Oxford; J. Wells, Esq., Wadham College, Oxford.

MR. J. R. OSGOOD, the head of the well-known publishing firm at Boston recently transformed into Messrs. Ticknor & Co., has joined Messrs. Harper Bros. of New York. We believe that he will shortly come to England as the permanent representative of Messrs. Harpers in this country.

THE dinner of the contributors to the *Dictionary of National Biography* will be held at the "Star and Garter," Richmond, on Saturday, July 11, at 6.30 p.m.

WE are glad to hear that Messrs. Macmillan have had placed in their hands for publication a volume of university and college sermons, preached by the late Rector of Lincoln.

UNDER the title of "Twelve English Statesmen" Messrs. Macmillan announce a series of short biographies, presenting in historic order the lives and work of those who have left an abiding mark on the policy, the institutions and the position of Great Britain among states,

and thus forming a continuous narrative of English freedom, order and power. The twelve names selected are William the Conqueror, Henry II., Edward I., Henry VII., Wolsey, Elizabeth, Oliver Cromwell, William III., Walpole, Chatham, Pitt, Peel. Among the writers will be Mr. E. A. Freeman, Mr. F. Pollock, Mr. J. Cotter Morison, the Rev. M. Creighton, the Dean of St. Paul's, Mr. Frederic Harrison, Mr. H. D. Traill, Mr. Leslie Stephen and Mr. John Morley.

WE hear also of another series of popular biographies of eminent Englishmen, to be issued by another publisher, which will not be confined either to men of letters or statesmen.

THE Bishop of Durham has nearly ready for publication an edition of the Ignatian Epistles, with revised text, introduction, notes, and dissertation. The volume will be published by Messrs. Macmillan.

MESSRS. MACMILLAN's other announcements include *The Paradiso of Dante*, with a prose translation and notes, by Mr. A. J. Butler; *The Life and Times of Peter Cooper*, by Mr. Thomas Hughes; *An Introduction to the Study of the Law of the Constitution*, by Prof. A. V. Dicey; and *Souvenirs of Some Continents*, by Mr. Archibald Forbes.

MESSRS. BLACKWOOD have in the press *Victor Hugo: a Memoir and a Study*, by Mr. James Cappon; and *Institutes of Logic*, by Prof. Veitch, of Glasgow.

MR. THOMAS J. WISE has in preparation a bibliography of Shelley, which will contain a list not only of the editions of the writings of the poet himself, but also of the books, pamphlets, magazine articles, &c., relating to him.

THE Folk-Lore Society have in the press, as one of their publications for 1885, *Folk-Lore and Provincial Names of Birds*, by the Rev. C. Swainson.

MESSRS. CHAPMAN & HALL will publish shortly, in two volumes, *Our South African Empire*, by Mr. William Greswell.

A NEW work on *Polynesia*, by the Rev. A. W. Murray, illustrated with woodcuts and maps, is announced by Mr. Elliot Stock.

THE next volume in the "English Citizen" series will be *The Penal System*, by Sir Edmund du Cane.

THE first edition of Prof. Ransome's little work, *Our Colonies and India, How we got them and Why we keep them*, was exhausted within a few days of its publication. A second edition is in the press, and will be published next week.

WE understand that Messrs. Sampson Low have suspended the publication in this country of Miss Oliver's *Life of Dean Stanley*, on the ground that it violates the copyright of Dean Bradley's book.

THE second number of the *Scottish Church*, the new magazine published in the interests of the church of Scotland, which we are glad to see deals with literary and social as well as with ecclesiastical subjects, will contain some verses by Mrs. Craik, and papers on "The Dwellings of the Poor," "The Revised Version," and "The Little Pilgrim in the Seen and the Unseen."

THE first instalment of a serial story by Major Arthur Griffiths, entitled "The Thin Red Line," appears in this week's number of *Cassell's Saturday Journal*.

MR. RICHARD G. MOULTON's new book, *Shakespeare as a Dramatic Artist*, has led to his being invited to join the committee of the New Shakespeare Society, and read a paper before the society next session. Mr. Moulton has accepted

the invitation, has joined the committee, and will, on January 15, 1886, read a paper on "Character Development in Shakspeare, as illustrated by 'Macbeth' and 'Henry V.'" Mr. Moulton has just put forth an interesting syllabus on "'The Tempest' as a Study of Enchantment," which deepens and widens the ordinary view of the play.

THE large collection of books forming the library of "The German Club of Glasgow" has lately been amalgamated with "The New Library" (Messrs. Wilson & M'Cormick's), and removed to their premises in 73 Saint Vincent Street.

DR. OLIVIERI, author of several works on Italian history and literature, and formerly a professor of literature in Italy, delivered a course of three lectures on "Italy and Italian Literature," at 7 Stanhope Terrace, Hyde Park Gardens, on the afternoons of June 25, 26, and 27. The lectures, which were delivered in English, gave a comprehensive sketch of the subject from Dante to Leopardi and Rossetti, father of the English writers of that name. In especial, Dr. Olivieri aimed at showing that Italy is not only the land of music, poetry, and the arts, but also the home of great mechanical inventions and material discoveries. It may be mentioned that the late Dante G. Rossetti was much interested in the work of Dr. Olivieri.

MR. ERNEST AXON, of Manchester, has reprinted for private circulation an article which he contributed to the *Palatine Note-Book* respecting the birthplace and the death of Henry Ainsworth the commentator. It seems probable that Ainsworth, instead of being a Lancashire man, was a native of Swanton Morley in Norfolk. Instead of being poisoned by the Jews, as sometimes stated, he died of the stone, and Mr. Axon has found a precise account of his disease in the writings of the famous Nicholas Tulpus.

THE London Institution proposes to enlarge its lecture programme by establishing courses of educational lectures on literature, science, art, &c.

NEXT week, from Tuesday to Saturday, Messrs. Sotheby will sell the library of Mr. Alexander Gardyne, which is particularly rich in Scotch books and in psalmody and hymnology. Among the rarities is a copy of the Kilmarnock edition of Burns (1786), in its original binding.

THE annual report of the Library Syndicate is printed in the current number of the *Cambridge University Reporter*. Among the most important accessions during the past year are a series of twenty-three volumes relating to Henry Nicholas and the Family of Love, printed between 1574 and 1606, and most of them extremely rare, which were presented by the master of Jesus; and a number of books printed in the Netherlands in the fifteenth century, which were purchased at the sale of the library of M. Fr. Vergauwen of Ghent.

THE New York *Independent* for June contains two articles on the Revised Version of the Old Testament in its bearings on theological doctrine, by Dr. T. K. Cheyne.

THE *Dietetic Reformer*, the organ of the Vegetarian Society (75 Prince's Street, Manchester), contains an obituary notice and bibliography of the writings of the Rev. Robert Bailey Walker, for the benefit of whose family it has been found necessary to make an appeal. Mr. Walker's latest publication, a little story called *The Squire of Ingleburn*, was printed in a reformed style of spelling.

AMONG the thirty life-peers nominated by the Crown, in consequence of the reform of the Hungarian House of Magnates, is M. Paul

Gyulai, the well-known critic, novelist, and poet.

DR. ALBRECHT WAGNER, of Erlangen, has just published (Heilbronn: Henninger) a fully collated and excellent edition of Marlowe's *Tamburlaine*. In his introduction he prints the sources of the play, which Mr. C. H. Herford pointed out in the *ACADEMY* of October 20, 1883, and discusses the editions, Marlowe's character, &c. The book is a scholarly one, and does credit to Prof. Vollmöller's series, in which it appears.

ONE advantage of publishing a novel, or a story, in serial form is that the author has the opportunity of considering criticisms. We beg, therefore, to make two suggestions to the anonymous author of "In the Lion's Den," which has appeared in the two last numbers of the *English Illustrated Magazine*. On p. 617, men are represented as showing their familiarity with horses by slapping them on the *pasterns*, the one part of the equine frame which men familiar with horses would certainly not slap. On p. 668, in the description of a visit to Wales, we read:—"It was too provoking to be at *Helvellyn*, and not to be able to ascend *Snowdon*." This last might, we think, have been corrected by the "reader."

THE Rev. J. Hoskyns-Abramhall writes thus: "I offer a supplement to the last paragraph of 'Notes and News' in the *ACADEMY* of June 27. In Canada (unless the law has recently enacted otherwise), if a newspaper-agent or a bookseller has gone on sending successive numbers of a newspaper or any periodical, the person to whom they have been sent must pay for them, unless he can prove that he has counterordered them. A man may thus be put to the cost and the trouble of counterordering ever so many publications, or find himself forced to pay for them."

ORIGINAL VERSE.

CALIBAN ON ARIEL.

"His backward voice is to utter foul speeches and to detract."

THE tongue is loosed of that most lying slave,
Whom stripes may move, not kindness. Listen:
"Lo,

The real god of song, Lord Stephano,
That's a brave god, if ever god were brave,
And bears celestial liquor: but," the knave
(A most ridiculous monster) howls, "we know
From Ariel's lips what springs of poison flow,
The chicken-heart blasphemer! Hear him rave!"

Thou poisonous slave, got by the devil himself
Upon thy wicked dam, the witch whose name
Is darkness, and the sun her eyes' offence,
Though hell's hot sewerage breed no loathlier elf,
Men cry not shame upon thee, seeing thy shame
So perfect: they but bid thee—"Hag-seed,
hence!"

A. C. SWINBURNE.

MAGAZINES AND REVIEWS.

THE July number of the *Expositor* is noticeable for the commencement of its series of articles on the Revised Version of the Old Testament, which will be as welcome to the special student as to the ordinary Bible reader, and to which we hope to return later.

THE *Revue de Droit International* for June contains several articles of present interest. The first is entitled "Le Congrès de Vienne et la Conférence de Berlin," and is from the pen of Sir Travers Twiss. It traces back to the Congress of Vienna the inauguration of a new era in the history of the public law of Europe, of which the distinctive character has been the subordination of the particular interests of individual states to the general welfare of the community of states, and this

more especially as regards the free navigation of rivers, which separate or traverse different states. The provisions of the final act of the Congress of Vienna limited the application of this principle to the great rivers of Western Europe. The Congress of Paris of 1856 extended its application to the Danube; and the main object of the Conference of Berlin was to extend its application still further, namely, to the two great arterial rivers of Western Africa—to wit the Niger and the Congo. Sir Travers, in tracing step by step the conclusions of the conference, points out how each proposition submitted to its consideration was carefully examined, and no conclusion in the interest of the community of states was adopted without the consent of the particular state affected by it. Further, on the proposition of Sir Edward Malet, the plenipotentiary of Great Britain, the conference has declared the slave trade to be an exception to the general liberty accorded to commerce in the conventional basin of the Congo; and the several states represented at the conference have engaged that the territories of that basin shall not be allowed to serve as a market for the slave-dealers. An article by Professor Catellani, of Padua, on "La Politique Coloniale de l'Italie," traces the origin of the Italian settlements on the shores of the Red Sea to the desire of Italy in 1869 to found a penal settlement at Assab, and subsequently to the attempt of the Rubattino Company to establish a commercial factory there in 1870. Both of these enterprises came to an untimely end, but in 1879 the Italian Government dispatched to Assab a scientific and military expedition. The professor traces the fortunes of this expedition, its absorption of the Rubattino Company, and its ultimate transformation into a sort of crown colony. Further, he justifies, upon various considerations of public law, the occupation of the island of Massowah, and the present attitude of the Italian government with regard to Turkey as the suzerain power. Dr. Van Swindeven contributes an article on "Le Projet du Code Pénal Anglais de 1870." Prof. Fusinato, of Macerata, treats of "Le Droit International de la République Romaine," more especially with reference to the "Fetiales" and the "Recuperatores." An obituary notice of Count Mamiani, by Prof. Rivier, of Brussels, and a "Chronicle of International Facts in regard to Italy," by Prof. Norsa, of Madrid, which is followed by a short "Bibliographie," complete the third number of the volume for the present year.

AN ENGLISH HISTORICAL REVIEW.

It is proposed to establish an English historical review, appearing quarterly, to be conducted somewhat after the model of the *Revue Historique* or Von Sybel's *Historische Zeitschrift*. It will deal with English, American and Colonial history, and with such other branches of history, ancient and modern, constitutional and ecclesiastical, as are likely to interest any considerable class of English students.

Its general arrangement will be according to the following plan: (1) Original papers on historical subjects; (2) unedited documents of special historical value; (3) full notices of the more important historical books appearing at home and abroad; (4) an historical bibliography giving briefer critical accounts of minor works, and a classified summary of articles in English, American and continental periodicals dealing with subjects that lie within the scope of the Review; (5) surveys by foreign scholars of the progress of historical literature in other countries, to be supplied from time to time; (6) communications from scholars connected with the great libraries, and with other store-houses of official information, in England and elsewhere; and (7) notes on subjects connected with his-

torical research. Present politics, as apart from history, will not enter the legitimate field of the Review.

The Review will not in any way come into rivalry with existing publications. The intention of the promoters is to establish for the first time a review in the English tongue dealing with strictly historical research, open to students in all fields of history, and at the same time addressing itself also to those who, while not professed historical scholars, interest themselves in historical inquiry. The Review will be under the editorship of the Rev. Mandell Creighton, Dixie Professor of Ecclesiastical History in the University of Cambridge, assisted by Mr. Reginald Lane Poole and a small committee of persons of known qualifications. To secure the due treatment of American history it is intended to have a corresponding editor in the United States. It is proposed that the first number should appear on January 1, 1886. The Review will be published by Messrs. Longmans.

SELECTED FOREIGN BOOKS.

GENERAL LITERATURE.

- BOHEM, F. *Ilias u. Nibelungenlied. Eine Parallele.* Znam: Fournier. 1 M. 60 Pf.
 OLADÉL, L., etc. *Le nouveau Décaméron. Quatrième journée: comme il vous plaira.* Paris: Dentu. 6 fr.

CORRESPONDENCE.

THE BARONS OF CRICKE.

6 King's Bench Walk, Temple: June 27, 1886.

Mr. Chester Waters may rest quite assured that I shall take his pleasantness in good part; indeed, I doubt whether anyone, owing to the semi-obscure of his witty utterances, can so fully comprehend and enjoy them as I do myself. I always read his communications with pleasure, for they are sure to be the result of much labour and research, and pretty certain to exhibit some new light; although I am afraid that—like himself in perusing my productions—though I value very greatly his premises, I cannot always assent to his conclusions or follow them—not that they are “rambling” (like my own, according to his view), but that they are but too often simple guesses, “mere assumptions” hammered into something like positive form by a surprising process of reiteration.

I cannot allow Mr. Waters to escape from the charge I half-insinuated against him of “dimidiating” (a good heraldic term) Edward, the Sheriff of Salisbury, to make his theories consistent with each other—I fear I used the vulgar word “fit.” I regret to see that Mr. Waters practically pleads guilty to the charge of having recorded the death of Edward of Salisbury without a shadow of proof to support him. “Oh, but,” says Mr. Waters, “if proof is wanting, I have the most convincing probabilities to suggest in its stead!” Let us test the value of these probabilities. “He signed no more charters, as Edward Vice-Comes, after 1090.” “In 1119 he appears in Normandy as a valiant warrior ‘fighting valiantly,’ and King Henry’s standard-bearer at the Battle of Brenmule”; in “1120 he attested the King’s grant to Robt. de Clare”; and “he died shortly before the year 1130, leaving a marriageable widow.” Let us take each fact separately. Together Mr. Waters thinks that they are so strong that the existence of more than one Edward of Salisbury “becomes a positive chronological necessity.” I do not say that there was but one Edward of Salisbury, I only deny Mr. Waters’s “necessity,” and I fear I scoff at his proofs. First, then, the fact that nothing is heard of the sheriff from 1090 to 1119 goes for nothing; he was evidently out of favour. He was of middle age in 1090, and for some reason he may have retired; and the fact that we know nothing of so great a personage (or of his son) till the latter period proves this and no more—that for some reason he (or his second son, if it was the case) was not a courtier during that period. Will Mr. Waters supply evidence of the presence at court of his son and heir, Walter de Salisbury, during this period? I have none. Well, Edward reappears in 1119 “fighting valiantly.” I should like to see the evidence of this activity. I fear this glowing

statement is a page taken from E. A. Freeman’s “Historical Romances.” It was no uncommon thing for very ancient knights to ride upon the battlefield, and if such a knight was appointed standard-bearer (vice the Toennis in disgrace) he would be so described till his death, for the office was hereditary. Ordericus relates that the old Earl of Montfort fought valiantly when he was about eighty, and it is by no means clear that the Domesday sheriff was much over seventy at this period. But supposing that he was nearly one hundred years old, what was to prevent him from marrying a young lady who ten years later would still be marriageable? Age was the last consideration in a marriage, either in husband or wife, at that period. The important point was the number of knights’ fees the lady could bring as her dowry; if that was satisfactory she might be two years old or two hundred. Besides, there is no evidence that the lady’s second marriage occurred so late as 1130. She may have married again in 1120, the last known date of Edward of Salisbury’s existence, or she might have remained a widow during the intervening period. Putting aside the marriageable-widow argument as utterly worthless, it simply comes to this—that a man of the highest rank who was old enough to be sheriff (i.e., over twenty-one in 1070) was on the battlefield forty-nine years later, when he was probably a little over seventy. This surely creates no positive chronological necessity. Lord Bramwell very recently, in the Lovat Peerage case—if his facts were accurate—was happy in producing such a necessity. But here there is not only no necessity, but absolutely there is nothing improbable in the survivorship—certainly nothing to justify this dimidiation.

Mr. Waters writes triumphantly that “if I seriously disbelieve in the existence of a second Edward of Salisbury I might well try to find some other name for the elder brother of Graelent de Taney.” In this I can readily accommodate him, for it is on record that Rainald de Taney was his elder brother, and so Dugdale asserts. Somehow this Rainald is transformed into Edward of Salisbury. Here is the mystery. It seems, therefore, that one of these records is inaccurate. Now two of the records which give the name as Edward of Salisbury differ materially from each other in their spelling: that of 1189—the Rotulus de Dominabus—is known to be untrustworthy in many respects, and to have been written for the purposes of the king’s exchequer at a time when many rightful heirs were wrongfully set aside, and their existence ignored. Is it too much to assume that these two inconsistent records are wrong, and that Dugdale’s authority is the correct one? I confess I am inclined to set off Dugdale against Mr. Waters’s “necessity”; and, at any rate, I feel bound to deplore the rashness of a grave genealogist in asserting the fact of the death of the Domesday sheriff on such very doubtful testimony. If I believed in ghosts (as Mr. Waters imagines), the shade of the dimidiated sheriff (had I acted so indiscreetly) would for ever haunt me.

I see Mr. Waters denies that Gracia (whom the printer has made Graecia) de Insula was ever called de Saleby, or belonged paternally to that family. Here Mr. Waters is absolutely wrong. There is a charter at the British Museum (Harleian Charters) in which this lady styles herself “Gracia de Saleby, widow of Brian de Insula”; and her seal of three crescents with a canton in chief bears upon it the legend, “Sigill Gracia de Lisle”; and in a Roll (de Banco) of July 15, John I., according to my note, William de Hardreshill and Adam de Nevil had in their custody a certain girl called Gracia, the daughter of Agneta, who was the wife of Thomas de Saleby. Agneta

may have been the heiress of Thomas fitz Haoc; but a very little consideration would have shown that in all probability more than one generation intervened between the lady of the time of Edward I. and the tenant of 1114. The Testa de Nevil records that Gracia de Insula held one fee in Saleby and in Ulceby. I may add that Mr. Greenstreet points out to me that the name Saleby is in several documents spelt "Salebury." I hope this is to the point.

PYM YEATMAN.

"OUTLINES OF THE WORLD'S HISTORY."

London: June 27, 1885.

I beg for a little space in reply to Mr. Peacock's criticism in the ACADEMY of June 20, on my modest volume *Outlines of the World's History*. I am obliged to my critic for his acknowledgment that the book has some "solid instructive reading," and that I am "well furnished with facts," and quite correct in my dates—things of no small importance in a historical work. I must contend, however, that—judged by its object, as avowed in the title-page and preface—the book contains nothing that is "out of place"; and I shall show that Mr. Peacock is wholly wrong in trying to convict me of "confusion," which he declares to "run through the whole book." If "erring words" and "inept phrases" are so abundant, I invite him to quotation in support of his random assertion. He begins by declaring that he does not know for what the book is intended—as a school-book, or for "self-help," or as a book of reference. I reply that its object is generally to instruct the ignorant on a subject deplorably neglected in our higher schools, a subject of vast importance, which men and women, even in the class we call "cultured," know very little about.

Mr. Peacock then falls foul of a sentence which he calls "not very intelligible"—to the effect that "history is the working-out of the divine plan in the government of the world." He gives me some needless instruction as to the meaning of the word "history," and points out that "a record of events" cannot be called "a working-out of a divine or any other plan." Most true. But still there is no "confusion," except in the mind of my critic, or of one determined to find or to make confusion. In the sentence attacked, "history" means, of course (as a moment's thought must show, without any great degree of intelligence in the thinker), not "a record of events," but the events themselves, and, from the point of view stated, the events recorded in history are literally the working out of a plan.

The next point is my assertion that the cause of Christianity was greatly aided by the fact that in the earlier ages of its promulgation mankind were, to a large extent, in a servile and miserable condition, and, being sorely in want of a religion, were "looking round the universe for a helper and a friend." This phrase excites Mr. Peacock's merriment, and he indulges his taste for sarcasm by wondering "What kind of an undertaking it may be to look round the universe." I shall not stop to inform him. I will only observe that a thinking being can, with the mind's eye, look round everywhere, and the universe is expressly mentioned in order to include regions beyond this little earth, where no helper or friend was to be found. It is somewhat strange, however, that, if Mr. Peacock does not know what "looking round the universe" means, he should pronounce it, in grandiloquent style, to be "one of the greatest intellectual efforts" to do so. I maintain, in every word, the view given as to the early days of Christianity. It is not strange at all that men and women sunk in misery and servitude should, in and by Christianity, rise to a higher condition. It is a glorious fact, which proves the divine origin of

that religion, that weakness, misery, dependence do become, for those who humbly receive the faith, strength, happiness, power—all given from above; and, as my critic is clearly a believer in a God, I am surprised that he does not see that the weakness and misery of mankind were the very things that excited the divine compassion, and fitted human beings to receive the new and heaven-born belief.

The rest of my task is easy. Mr. Peacock adduces, as an instance of my "perilous rashness" in historical speculation, the sentence about the divisions among Protestant sects, and the possibility (for nothing more is stated) of united effort against the common foe (Popery) bringing over Ireland to the new faith. It is a strange thing that a critic, one of those who sit in the seat of the scornful, who are supposed to know everything, and to look down from the heights of a vast superiority on us poor authors toiling and crawling below, should not be well acquainted with the contents of so common a work as Lord Macaulay's essays. Let Mr. Peacock turn to the paper on Von Ranke's *History of the Popes*, and he will find that (with acknowledgement) I have adopted the great historian's view, and ventured, on his authority, to express the belief that Ireland might have been brought over to Protestantism! Mr. Peacock is also (if Macaulay be right) entirely wrong in asserting that Protestant differences caused greater zeal in missionary efforts among the Celts of Ireland, for it happens that no Protestant efforts whatsoever were made in that direction.

I trust that I have succeeded in showing that, while I have nowhere in my little book claimed for myself the position of a philosophical historian, I have not, in my rare excursions from the region of pure narrative, been guilty of the "confusion" and "rashness" attributed to me by my critic.

EDGAR SANDERSON.

APPOINTMENTS FOR NEXT WEEK.

MONDAY, July 6, 8 p.m. Royal Institution: General Monthly Meeting.

THURSDAY, July 9, 5 p.m. Zoological: Davis Lecture, "The Ancestors of Birds," by Mr. F. E. Beddard.

FRIDAY, July 10, 8 p.m. Quekett Microscopical Club.

SCIENCE.

Life of Frank Buckland. By his Brother-in-Law, G. C. Bompas. (Smith, Elder & Co.)

THE chief facts in Frank Buckland's life are few and known to every one. His school days at Winchester, his connection as assistant surgeon with the Life Guards, his work as Inspector of Fisheries, and his genial writings, exhaust the incidents of an uneventful life. But his personal characteristics were most attractive. No one ever met him without longing to meet him again. His simple, earnest, humorous temperament reflected itself in all he wrote, so that no one read a book by him without also determining to read the next he should publish. Thus he had an enormous number of friends and acquaintances, from the highest in the land to the giants and dwarfs, and, lower still, the waifs and strays, of human life in London. Fifty-four years seem a short span in which to break down the apathy of Englishmen to the life and sufferings of the lower animals, to instil a love of natural history among the people, and to set on foot some of the most important enterprises in the way of acclimatisation and fish culture in order to benefit the economical condition of his country. Yet it is Buckland's merit to have succeeded in this. He

was able to die with the pleasant consciousness of having made no enemies, and of having by his teachings largely increased the happiness of his fellow-men by directing them to the practical study of nature. The life of such a man well deserved to be written. Buckland was a philanthropist of no ordinary kind. He strove to augment the sum of England's material resources, and he left men more cheerful, genial and friendly than he found them.

The portrait prefixed to this volume recalls the outward presentment of "poor Frank Buckland," as his friends still speak of him; and the memoir will give a stranger a fairly adequate notion of his versatility and yet his perseverance, of the friendly aid he rendered to all who sought him with any zoological difficulty, of his humorous conversation, his fun and abandon. No more unconventional naturalist ever lived. Thoreau cherished an eager love of nature, and loved to cast aside the restraints of civilised life in the woods or solitudes which he affected. Frank Buckland was genuine and unconventional even in the heart of London, among the best society of his day. Who does not remember him with his shirt sleeves tucked up, smoking a cigar as he fed his pet trout at South Kensington? Perhaps the reader was privileged to call upon him in Albany Street, which is so identified in many men's minds with the charming pets and conversation of Buckland. A huge sea-monster would probably be found lying in the passage waiting to be cast in plaster for the museum. Rats or hedgehogs, monkeys and suricates would beset the visitor as he entered. A laughing jackass, or a parrot, might regard him with airs of comical hostility. The master, again coatless, greeted him with a cigar, and led the way to the study, which often was literally a den. Birds, salmon or trout would then be discussed with such abundance of humorous illustration, such wealth of experience and insight, that the visitor felt on leaving that he had received a new impulse to study nature's wonders for himself. Buckland was nothing if not practical. For the determination of species, the cataloguing of varieties under long Latin names, and the like, he cared nothing. Not theory, but actual experience, was most to his mind, and the work to which he devoted his life yet flourishes and bears abundant fruit.

His school life at Winchester is told in an amusing fashion here. Few boys ever made better use of the liberty so wisely granted at this excellent school. All his play hours were given up to rats, snakes, slow-worms, and the like. Like St. John's, his "scob" must often have resembled a miniature menagerie rather than its orthodox use as a book box. The story of his first attempt at dissection in the hospital there is very characteristic. The reminiscences of the waterman, of the under porter (still called by the names of the minor prophets in regular succession), of the present Bishop of St. Andrew's and Dr. Gabell (not Galele, as here spelt) are sufficiently amusing. A perusal of them might convert many an anxious mother who fears the fagging system for her boy. Buckland's Oxford days are duly commemorated.

So early as 1846 the earnest view he took

of life may be discerned in his journal. He wrote there: "My object in studying medicine is not to gain a name, money, and high practice, but to do good to my fellow-creatures and assist them in the hour of need;" and again: "my object in life, to be a great high priest of nature and a great benefactor of mankind." Twenty years after, in 1865, we find him remembering the good works of the founder of Winchester College, William of Wykeham, and resolving in his own humble way to imitate him. Accordingly he at once erected a storm barometer for the use of the fishermen at Herne Bay. Greatly owing to his advocacy an international close time, prohibiting the killing of seals in the Arctic regions until after April 3, was established. This was a distinct work of humanity. The chief glory of his life, however, was his perseverance in overcoming the national want of enterprise in the acclimatisation of animals and birds which seemed likely to augment the economical resources of the country, and his exertions in artificial fish-hatching. Already we are so used to the regular addition of thousands of trout and salmon to those naturally bred in our rivers that there is a danger lest Buckland's zeal in the matter should be forgotten. Nobody ever consulted him on these subjects in vain. His kindness of heart was conspicuous. Every form of suffering, whether in mankind or animals, at once appealed to his help. His charity, if unostentatious, was large. Several striking instances are given by Mr. Bompas. The aim of his father in writing the celebrated *Bridgewater Treatise on Geology* was ever Frank's purpose in all his writings. He was never better pleased than when he had discovered some small, yet admirable, instance in nature showing the Creator's beneficence and design, and was ever an uncompromising opponent of Darwinian doctrines. To send men out into the open air to observe the marvels of nature for themselves was always his object, and to stimulate their curiosity towards this end was kept prominently in view in everything he wrote. His influence upon domestic natural history may be best estimated by considering the void which was caused by his death.

Many excellent stories will be found in this volume, than which no more interesting book for the young can be imagined. His humour transpires in every page to delight elder readers. We can only find room for two specimens: "It is believed that the instinct of the salmon leads it back to the place where it was bred;" "and I hope it is true," Frank Buckland used to say, "for many thousands have been hatched out in my kitchen." Again, when fishing with two of Capt. Salvin's cormorants in the Teme, he on one occasion jumped in and helped the birds to capture a fine grayling, weighing nearly three pounds. He writes of it: "the only person not pleased was the miller, who said, 'he never see'd three such poachers in his life in the water together as them long-necked birds with straps round their necks and the gent as ought to have a strap round his'n.'"

This book will have a large circulation among country book clubs and amateur naturalists. All Buckland's friends, indeed, will be thankful for so touching a memorial of a genuine man, whose example in devotion

to science and love to his neighbour is well worth bearing in mind. Mr. Bompas has grasped the true object of a biography in his treatment of his brother-in-law's life. He has everywhere as far as possible allowed Frank Buckland's *ipsissima verba*, his journals and articles, to speak for themselves. By this treatment a life-like portrait is secured. No higher praise can be bestowed upon it than to say that Frank's cheery accents seem to resound from every page.

M. G. WATKINS.

CORRESPONDENCE.

CERTAIN PREHISTORIC AND ANCIENT LINEAR MEASURES.

London: June 30, 1885.

I have for a considerable length of time been engaged on an investigation concerning the units of measure among certain ancient nations; and though there is not space, within the limits of a mere communication like the present, to enter upon the whole ground gone over, which would moreover entail a considerable number of figures and illustrations, I will, as briefly as possible, recapitulate some of the leading results, about which, I think, there is little reasonable ground for doubt, and which may lead to interesting results.

1. *Peru*.—From the measurements afforded, mostly by a number of small objects, it would appear that the ancient Peruvians of the time of the Incas employed the same inch and foot as did the Aztecs and Toltecs, and Central Americans: viz., a foot equal to $11\frac{1}{2}$ inches English, or say a fraction more than the old Roman or Solon's foot. This foot = $\cdot 298$ of a metre, and was divided into twelve equal parts. As with the Mexican foot, in reducing English foot measurements as given in books of travel and architecture, it is only necessary to add 2 per cent; 100 English feet equal 102 Mexican and Peruvian.

2. *Mexico and Central America*.—From measurements of many small objects again, as well as from various other confirmatory methods, it may be safely stated that the unit of measure employed by the ancient Mexicans was a foot of 12 inches, equal to $11\frac{1}{2}$ inches English. Since arriving at this conclusion, I have received a little pamphlet on the subject of ancient "American Linear Measures," by Dr. Daniel Brinton, of Philadelphia, in which he shows that the old Mexican *octacatl* was, "as deduced from the yard, or *Vara De Burgos*, equal to $9\cdot 84$ English feet, which would make the *octacatl* a 10 foot measure, and a multiple of the length of a foot; as is proved by an analysis of the word." That result, Dr. Brinton adds, "is as interesting as it is new, as it demonstrates that the metrical unit of ancient Mexico was the same as that of ancient Rome, i.e., the length of the foot print." Mr. H. Seeböhm says the Roman foot, or foot of Solon, was = $\cdot 296$ metre, consequently Dr. Brinton's calculation is almost identical with my own, viz., $\cdot 298$; which, moreover, is fairly deducible from the 4 palm foot of the Egyptian (royal) cubit of $\cdot 525$ metre. Mr. Petrie's reductions of the Mexican foot of $\cdot 260$, as well as of other old North American ones of $\cdot 170$, $\cdot 315$, and $\cdot 325$, seem to be incorrect. My correction of 2 per cent. added in fact to Dr. Brinton's $9\cdot 84$ 10-foot measure, would make the old *octacatl* almost precisely 10 old Mexican feet. The same correction also added to the 11-foot 9-inch diameter of the celebrated Mexican "Calendar" stone, would show that a precise diameter of 12 feet was intended. Moreover, on that very stone, round a portion of the outside or rim, are 18 square divisions or cartouches, representative of the months of the

Mexican year, each exactly a Mexican foot square. Curiously, the equally celebrated so-called "sacrificial" stone, probably once also a calendar, stated to be a few inches over 9 feet English in diameter, would, for 9 feet 5 inches, give 360 to 365 Mexican inches for circumference, probably intended as 1 inch for each day of the year. In Lady Brassey's fine collection of gold ornaments from graves in Antioquia, Northern South America, figured and described by Mr. Bryce Wright, there is a gold band $23\frac{1}{2}$ English inches long, evidently intended or cut off for 2 Mexican feet (= $23\frac{1}{2}$ inches). A number of articles in the same collection measure exactly 1, $1\frac{1}{2}$, 2, $2\frac{1}{2}$, and 3 inches Mexican. A flat jade object, like a paper-knife, with 2 holes for suspension, probably to a workman's belt, measures precisely 6 inches Mexican, and may have been a half-foot measure.

3. *Mound Builders of North America*.—Prof. Daniel Wilson, of Toronto, in his second edition of *Prehistoric Man*, p. 221, describes a curious stone tablet or implement, found in a grave mound at Cincinnati in 1841 (it is also figured or described in Squier and Davis, and other works). His figure is given $\frac{3}{4}$ size, but is not quite accurate, for I have since received a rubbing from a cast of the original in the Blackmore Museum at Salisbury, and do not find that Dr. Wilson's figure is correct, nor the description of some of the details. This tablet has never been thoroughly explained. Some have thought it to be a calendar, others a measure, and some a mere stamp for printing textile materials. The greater part of its upper surface is covered with a scroll-like pattern, but at each end are scales, containing each two sets of divisions, evidently intended for some special purpose. Describing it best from the tracing or rubbing sent me by Dr. Blackmore, of Salisbury, it has at one end a series of $23 + 1$ small nearly equal divisions, in connexion with 7 larger ones, say $3\frac{1}{2}$ small to each larger one; and at the opposite end a series of 6 larger divisions, in connexion with $20 + 4$ smaller ones, somewhat similarly disposed. The length of each scale is about $2\frac{1}{2}$ inches English. The longer sides of the tablet are curved to a 12 mound inch radius. The length and breadth of the stone tablet itself is very nearly 5 inches English by $2\frac{1}{2}$ at the narrower middle part; consequently almost exactly the same by Mexican measure. It struck me that this tablet looked very much as having something to do with a possible half-foot measure; and I further observed at each corner, not before noticed by any archaeologist, 2 straight lines, evidently not forming part of the general ornamental scroll pattern, which I guessed might possibly have been intended to represent the mound builders' standard inch, or finger breadth. On scaling this as a foot of 12 inches, I found I had obtained means of a measure for many North American things described in books and museums, which has, in other ways, been curiously confirmed. It is even a unit of measure for the stone tablet itself. This mound inch is shorter than the English inch, in the proportion of 10 to 12; and it is evident that the mound foot was one divided into 12 inches, for the tablet itself is exactly 6 of its own standard inches in length, i.e., doubtless half a foot, and exactly 3 inches in width at the middle or narrower part, and $3\frac{1}{2}$ across the wider ends. In Dr. C. Abbott's *Primitive Industry of America*, fig. 356, p. 375, there is figured and described what is called a "Slickstone"; and noticing a number of small notches (about 8 or 10 to an inch) on it, I tried the length, and found it to be $6\frac{1}{2}$ inches long, but with a large corrective notch right across near one end, at precisely the 6-inch length. With often equal success I applied this, my mound builder's foot-rule, to many objects described by Squier and Davis, and in

Dr. Abbott's book more particularly, which I have no space at present to go farther into, but refer to figs. 142, 192, 195, 362—particularly to fig. 365, p. 383, a fish-totem measure, of exactly 1 mound foot in length and nearly 3 inches in breadth. Also see fig. 43, p. 71, representing a flattish stone of about $7 \times 3\frac{1}{2}$ inches, whereon are scratched a series of 15 small notches exactly = $1\frac{1}{2}$ mound inch, showing a decimal division, with four other larger notches, showing some other inch. It would appear, then, that the length of the mound builders' foot was precisely 10 inches English = .254 metre, and that there would be 7 mound inches to 6 Mexican inches. Entirely independently of my own results, I have since found in Dr. Brinton's pamphlet, p. 11,

"Colonel C. Whittesley, of Cleveland, in 1883 analysed 87 measurements of these mound earthworks by the method of even division, and concluded that 30 inches (English) was about the length or was one of the multiples of their metrical standard;"

thus indirectly confirming my own discovery that the mound foot of 12 inches was precisely = 10 English inches, at least so far that 30 is a multiple of 10. From about 200 mound measurements I have found that 25 English, or 30 mound, feet is a probable standard unit for large measurements. Squier and Davis mention prehistoric North American garden plots $12\frac{1}{2}$ English feet wide, which would = 15 or $\frac{1}{2}$ mound feet.

Incidentally, I have also reason for supposing that the mound builders' acre, or larger unit of superficial measure, was equal to $1\frac{1}{2}$ to $1\frac{1}{4}$ English acre with square-side of 300 mound feet (30×10), equal to 250 English feet, and that the favourite square and circle areas of 20, 27, and 40 (or 41), acres English meant 15, 20 and 30 mound acres respectively.

If the mound builder's foot of 12 inches (finger breadths?) was equal to 10 English inches, it would follow that most mound measures expressed in English feet (as in Squier and Davis's *Monuments of the Mississippi Valley*) would give for 250 feet, say 300; for 750, 900; for 835, 1,000; for 920, 1,100; for 1,000, 1,200; for 1,080, 1,300; though it is not impossible that Mexican feet for large measures may have been sometimes also used, in proportion of about 12 to 13; when 930 feet would be = 1,000 feet, or side of a favourite square area of 15 mound acres or 20 English acres.

4. *Prehistoric Measures of North America.*—Besides many objects found in the mounds of Ohio and Tennessee evidently giving mound builders measure, as well as in New Jersey, Massachusetts and New Hampshire, I had been much puzzled by measurements, evidently intentional and rather regular in their discordance, showing reference to some other scale of linear measure, and giving apparently evidence of a near accordance with the English foot. In trying them with the old Mexican foot and inch scale I found some excellent accords; and it may turn out, remarkable as it may seem and bearing important results, that at the time of the mound builders, 1,000 to 2,000 years ago probably, there co-existed over large parts of North America at least two distinct sets of linear measures, probably used by different races of people; and that one of these was no other than the identical one we have shown to exist, probably at a somewhat later period, in Mexico and Peru. There is no space for me to go fully into this subject at the present time; but in part confirmation of it, I must go back to the Cincinnati stone tablet of measure, to which I have already referred. It struck me that the two sets of scales, one at each end of the tablet, might refer to these two scales, and prove to have been intended as a mode of comparison between them; and that solution of the question appears to be the correct

one, after a protracted investigation of that curious and puzzling instrument.

Without a figure or drawing of the tablet, it is not easy to give a very clear description of it; but it may be stated that the six larger divisions on the left hand are in length precisely equal to two Mexican inches, or $\frac{1}{2}$ of a foot, consequently each equal $\frac{1}{3}$ of that inch, and that they have attached to them a decimally divided scale of twenty smaller divisions, over and beyond which, at each end, are two more similar small ones, apparently so placed as a mere stop-gap, or for symmetry. On the opposite end are 7 larger divisions, each a trifle smaller than those on the other side, in connexion with 23 smaller sub-divisions and one over. The first 6 of these 7 are precisely 2 inches, and therefore also $\frac{1}{3}$ of what I have little doubt had reference to another co-existent unit of measure, which I call the North American prehistoric unit, and which I have likewise found to measure with great exactness several objects, notably several stone tubes, some objects in Squier and Davis's museum at Salisbury, and also certain figures given in Abbott's *Primitive Industry* and the Peabody Museum Reports, as gorgets, pendants, &c., &c. Of this measure there are as nearly as possible 13 to 12 Mexican, and 11 to 10 English, and 6 to $6\frac{1}{2}$ of the smaller or mound inches, while $6\frac{1}{2}$ of the larger divisions on this scale are equal to the 6 larger Mexican ones on the opposite or left-hand side of the tablet. This prehistoric inch is intermediate, in fact, between the mound inch, as indicated by the tablet itself, and the Mexican inch. Whether 11 or 12 of these inches made the foot, I cannot certainly say, though probably 11. That is, perhaps, a rather unusual multiple; but $5\frac{1}{2}$ inches exactly measure the tablet itself. Mr. Petrie gives 11.66 English inches as a Celtic and old Aryan prehistoric unit, also 22 inches, and I have found a unit pointing to 33 inches in Polynesia. There can be no reasonable doubt that this tablet was one of measure, and had reference to at least two distinct units of linear measure, used probably by the mound building workmen. The tablet itself, of course, representing another and different one, the mound builders' doubtless *par excellence*, with its own standard or unit inch, does not tally with the two scales referred to, engraved on its upper surface, one of which almost certainly represents the Mexican measure, the equivalent of the so-called Solon's foot. As 7 mound are just equal to 6 Mexican, it is not unlikely that reference was intended to that proportion; the 7 larger divisions (= $2\frac{3}{4}$ smaller) are as near as can be = $2\frac{1}{2}$ mound inches; but that multiplied by 2 or 3 does not, however, give an exact half-foot. It must be borne in mind, also, that as the mound builders were skilled in square and circle mensuration and circumvallation, it is possible some reference to the well-known ratio of 3 to 1 might even have been intended in connexion with circumferences of circles and their diameters, or possibly with diagonals and diameters; for opposite each of the larger divisions there are on an average $3\frac{1}{2}$ smaller ones. Supposing, say, that the 4th division meant 400 feet (of either scale), then $400 \times 3\frac{1}{2}$ might roughly have stood for the more exact 3 to 3.14. This is, however, a less likely explanation than the simpler one—viz., that the tablet was a half-foot measure, showing 2 or 3 different co-existing linear units of measure, used by several neighbouring or allied peoples. The whole of this tablet is most curious and important, and so far has never been explained. On the reverse side of the stone are three large rough grooves, evidently made by the sharpening of some pointed tool. Involved with the scroll pattern on the upper side may be noticed seventeen small bosses or centres, many of which give, very

exactly, distances apart of one inch, both mound and Mexican. The pattern itself may be semi-Mexican.

As no mound measures so far have been found in Central America, Peru, or Mexico, it would follow that in all probability the mound builders themselves neither migrated there nor came from thence; and it confirms the opinion that the Toltecs and ancient Mexicans came in all probability from the North, as has generally been indeed supposed; but what is most interesting would seem to follow, viz., that the mound builders, and the people allied to, or the ancestors of, the Toltecs, &c., must have, perhaps some two thousand years ago, co-existed and lived together in large parts of America, extending from New York to Ohio and Tennessee, and not been exclusively confined to the mound districts *par excellence*. In fact, objects giving mound measures seem to occur in New Jersey and the New England States, and each set of people used their own peculiar standard of linear measure, consisting of twelve smaller or larger inches to a corresponding smaller or larger foot, probably employing also a 10 or 30-foot measure, and having a fixed acre with side of 300 feet mound, or 250-260 feet Mexican: unless, indeed, they may possibly have had for larger measures one and the same standard. But that may require further investigation. For convenience, I here append the length of the inches I have been referring to, along with the English.

	Mound Inch, N. America,
	12 to foot = a fingerbreadth,
	or 1 digit. Foot = $\frac{1}{2}$ cubit(?).
	Prehistoric N. American
	Inch, 11 to foot(?).
	Mexican, Peruvian, and N.
	American Inch, 12 to foot
	= Solon's foot, or Roman.*
	English inch, 12 to foot.

I have a gorget from Ohio precisely six Mexican inches in length. A number of objects mentioned in Dr. Abbott's *Primitive Industry* appear to give excellent Mexican scale measurements—pp. 144, 374, 383, 381, 373, 352, 330, 71, &c. The notches and distances of holes in gorgets, pendants, &c., will, I believe, often give either mound or Mexican inches. And, in fact, I hope that by means of these three scales or systems of measure for ancient America, when fully worked out, a flood of light may be thrown upon the habits and implements of her ancient peoples, possibly indicating how they may have been related to each other or to the old world.

5. *China and Japan.*—There appear to be several different foot and inch measures in China and Japan. According to Mr. H. Seebohm, the Chinese and Japanese have a foot decimally divided, exactly equal to our English foot. According to Williams, a good authority, the *chi* = $13\frac{1}{2}$ English inches, but others also = 14.1, 14.62 to 14.81. He elsewhere gives also an inch = $1\frac{1}{2} \times 10 = 14.0$ inches English. On an old foot rule (of bamboo) measure in the British Museum I find it so divided; and on a new Japanese foot measure the inch = $1\frac{1}{2}$ English $\times 10 = 15$ inches. There can be little doubt, however, that the best and oldest measure in China is the foot = 12 English inches, .305 metre, decimally divided into 10 inches of 1.25 English. But what is of considerable interest, as showing that this unit was not recently borrowed direct from Europe, I have found that it must have been a measure employed without change two thousand years ago in the manufacture of what is called sword money! These appear generally to measure very

* The Mexican inch is exactly $\frac{1}{3}$ of the foot (4 palms) of .300 metre as derived from the Egyptian cubit of .525 metre.

precisely 6, 5, and $4\frac{1}{2}$ of these Chinese inches, and it is a point that will, I think, bear fuller investigation. The oldest round bronze *cash* that is in my own collection, said to be 200 B.C., measures precisely one old Chinese inch across. The old Chinese inch = 1.25 English; and Mr. Seebohm believes that this old Chinese, as well as perhaps the English foot itself, may be derived from an Assyrian or Babylonian cubit of .533, as given by Lepsius, thus:

$$\begin{array}{r} \text{(Royal cubit } 6+1) = 7 \cdot 533 \\ \quad \cdot 0761 = \text{palm.} \\ \quad \quad 4 \\ \quad \quad \cdot 3044 \end{array}$$

Anything throwing light on the early connexion between Babylonia and China or other countries cannot, at the present time, fail to bear good results.

6. *Mongol.*—At p. 316 of Col. Yule's *Travels of Marco Polo* is a description and figure half size of a most important specimen of what is called a "Table d'or de Commandment," the "Paiza" of the Mongols. It is of the fourteenth or fifteenth century, having engraved on it letters in the Baspa character. This is described by Schmidt as measuring 12.2 inches long, by 3.65 wide; and by Ramusio as a cubit in length and 5 fingers wide, and as weighing between 24-32 ounces. This tablet was found in the Government of Yenesei in Eastern Siberia; and being so important an object, perfectly finished and of solid silver gilt, and running so near the old Chinese foot, viz., .311 metre as against .305, it should receive some attention as having been possibly cut or cast by the measure of the then existing Mongol foot, or as part of some cubit. This tablet measures $8\frac{1}{4}$ inches of the newer and larger Chinese measure.

7. *Hittite.*—In looking over the plates in Dr. Wright's *Empire of the Hittites*, recently published, it struck me that the apparent regularity of the spaces and lines, which divided the rows or parallel series of enclosed hieroglyphs, might furnish indications of some fixed measure, possibly in connexion with the old Assyrian or Greek. Mr. W. H. Rylands, secretary of the Biblical Archaeological Society, kindly sent me a number of these measurements from the so-called Hamath stones; those of the Jerabis stones I have not yet received. The results are interesting; the average space, with a few very irregular exceptions, gives exactly $4\frac{1}{2}$ English inches. Multiplied by 3, this would give a foot of $12\frac{1}{2}$ English inches, or .323 metre, probably derived from one of the old Assyrian cubits. Mr. Seebohm, who has thoroughly gone into the question of ancient cubits and feet, informs me that this is almost identical with a foot derived from the Olympic cubit, say of .320 metre. The Hittite foot of $4\frac{1}{2} \times 3 = .320$, i.e., $\frac{8}{10}$ part of the Olympian stadium. Prof. Lepsius gives the Babylonian cubit = .5333

6 rods or reeds.

$3 \cdot 200 \times 60 = 192$ stadia, which, if treated as a decempepa, gives a foot of .320. This, if fully confirmed, is of singular interest in connexion with Babylonian, Assyrian, Hittite, and Greek civilisation and ancient inter-communication, a subject at the present time occupying considerable attention.

There was, I understand, from Mr. Seebohm (see also Mr. Petrie's *Inductive Metrology*), another old Assyrian cubit, equivalent to .560 (? = the modern Persian), which, treated as a decempepa, gives another foot of .325; and the same as what is called the Drusian, or Old Belgic, foot. Mr. Seebohm further alludes to Herodotus as stating that the foot = 4 palms out of the seven (i.e., $\frac{4}{7}$).

The cubit of $7 \cdot 560$ palms

$$\cdot 08 \times 4 = .320.$$

I hope at a future period to go more fully into these questions, and to give fuller illustra-

tions and figures. In the meantime, I content myself with stating what appear to me to be sufficiently well authenticated results on somewhat novel ground.

R. P. GREG.

"ARABIAN MATRIARCHATE."

London: June 29, 1885.

May I be permitted, with reference to the letter of Dr. E. B. Tylor in last week's ACADEMY, to refer such of your readers as may feel an interest in the subject to p. 275 of vol. xvii., New Series, of the *Journal of the Royal Asiatic Society*, where they will find quoted integrally the words of Dr. Tylor, as reported in the *Times* of August 30, 1884. In a subsequent quotation (*ib.* 291), I omitted the words italicised in his letter, because I had no objection to them, considering the erroneous part of the statement to be comprised in the words given as a concluding summary. I would wish also to be allowed to say that, in my view, I have not "served my writ on the wrong man." The Montreal speech contained the words I thought, and still think, erroneous. Dr. Tylor was the speaker, according to the *Times* report, and I have not seen them elsewhere. The question having now been fairly raised will probably be judged by the Orientalists of Europe. Thirdly, I must disclaim any pretension to having demolished arguments put forward by Prof. Robertson Smith, whose arguments I have never yet seen, and knew of at the time only from their being mentioned in Prof. Wilken's treatise. I would wish to repeat here the assurance of my admiration of, and gratitude to, each one of the three eminent men named above, as well as to many other workers like them, who devote their time to the storing up of information for the benefit of the many. Like a diamond, each piece of such information is of great value, even though a flaw may occasionally perchance be discovered in it.

J. W. REDHOUSE.

TORQUATUS GENNADIUS.

Jesus College, Oxford: June 25, 1885.

It may interest some readers of the ACADEMY to hear that there is a *scriptio* in a MS. of Martial in the British Museum (Arund. 136, the Codex Arondellianus or Q of Schneidewin) which throws some light on Torquatus Gennadius, the emendator of Martial. The *scriptio* in question is written in red letters on f. 123v. of the MS. before Ep. 4 of Lib. xiii.:

"In senatu uincit et frangit. cc.xv. Febr. Epigrammaton li. xiii. de Xenis M.V.M. emendauit ego Torquatus in f. diui augusti."

There are *subscriptions* at the end of all the books, the more noticeable of them being these: "Ego torquatus gennadius emendauit faelicer qui restorui" (at end of Lib. i.); "emendauit ego Torquatus Gennadius Constantine faelicer florens" (at end of Lib. iii.); "Emendauit ego Torquatus gennadius faelicer cum tuis Gennadi uatibus restorui" (at end of Lib. xiv.).

WALLACE M. LINDSAY.

SCIENCE NOTES.

THE prize of 20,000 frs. (£800), which is awarded every alternate year by one of the branches that compose the Institut, has this year been assigned by the Académie des Sciences to M. Brown Sequard.

MESSRS. MACMILLAN announce a *Treatise on Differential Equations*, by Mr. A. R. Forsyth, Fellow of Trinity College, Cambridge; and a *Class-book of Geology*, for the Use of Colleges and Schools, by Dr. Archibald Geikie, whose *Text-book of Geology* has now reached its fifth thousand.

READERS of the *Matériaux pour l'histoire de l'Homme* are just now being treated to an animated discussion on the famous tertiary flints of Thenay. In the June number M. G. de Mortillet attacks the views of M. Arcelin, who had argued in the previous number against the artificial character of the chippings on these flints. M. de Mortillet now reiterates his well-known views, and insists on referring the flints to the work of his hypothetical *homme-singe* or *anthropopithèque*. At the same time M. D'Ault-Dumesnil makes a valuable contribution to the discussion by describing in detail the section which was cut through the Thenay beds when the French Association visited the locality last autumn. The flint-bearing beds are placed in the Lower Aquitanian stage of the Miocene series.

PHILOLOGY NOTES.

THE India Office has made a grant of £200 from its literary fund towards the expenses involved in Mr. Stanley Lane-Poole's researches for his forthcoming *Fasti Arabici* or synopsis of Muhammadan coins. Christ Church, Oxford, had already granted a special subsidy of £50 towards the same object.

DR. WHITLEY STOKES's new edition of the Old Irish Glosses in the Augsburg Codex is at press for the Philological Societies of London and Cambridge.

THE new volumes in Messrs. Macmillan's "Classical Series" will be *Andocides*, *De Mysteriis*, edited by Mr. W. J. Hickie; *Livy*, Books xxiii. and xxiv., edited by Mr. G. C. Macaulay; *Plato, the Republic*, Books i. to v., edited by Mr. T. H. Warren, Fellow of Magdalen College, Oxford.

DR. P. VON BRADKE has just published an interesting and lucidly written monograph on *Dyāus Asura, Ahura-Mazdā and the Asuras* (Halle: Niemeyer), the aim of which is to show, by a collection of passages from the Rig-Veda, the Atharva-Veda, and the Brāhmanas, that Asura was a title originally applied to Dyāus or Zeus in the sense of "the highest God," that it gradually passed over to other gods, thus creating a class of "Asuras," and that eventually these Asuras became demons hostile to the gods. The Zend equivalent of Asura, Ahura, is used in the same way as is Asura in the oldest portions of the Rig-Veda, and thus presupposes a time when the ancestors of the Aryan Persians and Hindus alike worshipped the supreme deity of the sky, not only as a "father," but also as an "Asura." Dr. von Bradke believes that the transformation of the Asuras from gods into demons can only be explained in the same way as the transformation of the Vedic "gods" into the demons of the Avesta, namely, by the antagonism of the new religion of Zoroaster to the old Aryan faith. When the new religion changed the old deities into devils, the adherents of the ancient faith proscribed both the adorers of Ahura-Mazdā and the Ahuras or Asuras who were associated with him. The theory is ingenious, and finds a support in a passage in the Rig-Veda in which "godless (*adēva*) Aryans" are mentioned by the side of "godless barbarians." In his introductory matter, the author points out (1) that the Rig-Veda contains hymns, which consist in great measure of fragments of older lays, and (2) that these belong to a period when the language of the older poems was already beginning to be forgotten. As, perhaps, is natural in a Sanskritist, he will have nothing to say to the modern doctrine of comparative philology and ethnology, that the primitive home of the Aryan family was in Europe, and not in Asia. The arguments he alleges against it from the point of view of comparative theology are, however, not convincing. Indeed, the very

fact that the old supreme deity of the undivided Aryans came to be forgotten among both Indians and Persians (at all events so far as his name was concerned), while *Zeus* or *Jupiter* continued to the last to preside over the divine hierarchy of the Greeks and Latins, is of itself in favour of the new theory.

THE address of the president of the Philological Society, noticed in the *ACADEMY* last week, was delivered at the anniversary meeting in 1884.

MEETINGS OF SOCIETIES.

HELLENIC SOCIETY.—(*Annual Meeting, Thursday, June 25.*)

C. T. NEWTON, Esq., Vice-President, in the Chair.—The hon. secretary, Mr. George Macmillan, read the report of the council. After reference to the work of the past year in connexion with the *Journal of Hellenic Studies*, to the progress of the scheme for establishing a British School of Archaeology at Athens, to the just issued facsimile of the Laurentian MS. of Sophocles, and to the grant made by the society towards the recent excavation of Naukratis, the report went on to show that the financial position of the society was satisfactory, the balance in hand to meet the expenses of the coming year being about £880, while life subscriptions to the amount of £714 had been invested in Consols. In the past year there had been a net increase of forty-two members and subscribers, the present total of members being 595, and of subscribers (libraries) sixty-four. At the same time the council urged all members to do their utmost to secure fresh support for the society, that its field of work and its general efficiency might be yet further extended.—The adoption of the report was moved by Prof. G. Baldwin Brown, seconded by Mr. R. S. Poole, and carried unanimously.—In the usual address from the chair, Mr. Newton touched on the excavations at Naukratis, and showed their importance as throwing light on the development of pottery and on the position of Naukratis as a centre of trade. He then alluded to Mr. Bent's recent discoveries in Karpethos, and especially to a rude figure, which was the earliest specimen of an idol of any size that had been brought from the Greek islands. Referring next to Mr. Wood's work at Ephesus, Mr. Newton said that he wished he could see more active interest taken in it. He recommended the project to the favourable consideration of all members of the society. A proposal on the part of the council to raise the life subscription from £10 10s. to £15 15s. was put to the meeting and confirmed.—Mr. R. S. Poole, as hon. secretary of the Egypt Exploration Fund, stated that the exploration of the site of Naukratis was now practically complete. Forty-two cases of antiquities were on their way home, and many of them probably would go to the British Museum. Six important inscriptions had been found, the site of various temples had been established, and an enormous quantity of fragments of early pottery, identical in style with that found at Rhodes, had been discovered. The inscribed handles of amphorae were especially important as evidence of trade routes. Another important find had been about 500 weights of all the standards in use at Naukratis.—Mr. Theodore Bent communicated some of the results, linguistic and archaeological, of his recent visit to the island of Karpethos.—A ballot having been taken for the election of officers, the president and vice-presidents were re-elected, and the vacancies on the council were filled up by the election of Mr. Theodore Bent, Mr. Charles Elton and Prof. W. M. Ramsay.

BROWNING SOCIETY.—(*Fourth Annual Meeting, Friday, June 26.*)

DR. F. J. FURNIVALL in the Chair.—The Chairman summarised the committee's report, of which printed copies were laid on the table, and congratulated the meeting on the continued prosperity of the society. The report was adopted, the society's officers for next year elected, and thanks voted to University College for the use of its rooms. The Chairman then read a part of Mr. Leslie

Johnson's paper, "Browning as an Artist, considered in Relation to the Life of his Time." After some general considerations on the relation of a representative man to the life of his time—i.e., of the "Einzelgeist" to the "Zeitgeist"—Mr. Johnson stated that this was a relation which can only be traced in the ideal or spiritual region—i.e., in the quest for the Good, the Beautiful, and the True; and that the nineteenth century, like its representative men (Mr. Browning among them) was remarkable in its tendency towards all these ideals, in spite of criticism to the contrary. Also that Mr. Browning, though related to all phases of life, must be viewed first in relation to the second mentioned category, since he claims to be judged as an artist before all else. The aesthetic tendency of the age was then considered (a) on the side of life as a whole, (b) on the side of thought as a part of life, and Mr. Browning's relation to both. The next topic was the art development of the age, especially in relation to music, and to the great modern tendency, in practice and in theory alike, to recognise the unity of art in spite of the diversity of its forms. Mr. Browning, in conformity with this tendency, claims his position (as a poet) in the great company of artists, and views his own form of art in relation to other forms thereof. Lastly, the relation of Browning to Wagner was treated. The foregoing survey of the diverse forms of art leads with Browning, and with Wagner, to ends which are alike analogous and different. To Wagner, as to the older dramatists, art becomes the representation of human action. To Browning, art, like all else that is human, becomes the manifestation, the expression, the "clothes" of the thought and feeling on which are based all human action, and, indeed, all human life whatsoever. And with Browning the highest development of the universal quests for the Good, the Beautiful and the True, issues in Love.—A long and animated discussion followed on the original subject announced for Mr. Johnson's paper—"Browning in relation to his Time," in which the Chairman, Messrs. Revell, Berdoe, Rossiter, Slater, Wise, Dey, &c., and Miss Whitehead and Mrs. Revell took part: one set arguing that Browning's absorption in the treatment of the individual soul prevented his sympathising with the national, the political, the scientific, and the free-thinking instincts of his time; the other set contending that all these were included in his range by virtue of his penetration into the mind and soul of the unit, the man, who represented his time.

FINE ART.

The Nature of the Fine Arts. By H. Parker. (Macmillan.)

MR. PARKER'S essay is not so satisfactory as could be wished. He had a good opportunity. So much has been said and written lately against traditional art and the malign influence of academies in holding up to admiration false and conventional ideas, and in strangling by this means spontaneous artistic impulses, that a fair apology for the academic system would have been welcome. But Mr. Parker's method of sustaining his views appears to me to have two radical faults: he is always inclined to overstate the question at issue; and, in dealing with the arguments of others, he too often puts a forced construction upon their words, and then argues on his own paraphrase.

The whole volume seems to have had its origin in a fault of the former kind. At the end of his introduction he states that his essay is intended to examine the following view:

"Everywhere it is thought that if all academic authority could be swept away, some very perfect kind of painting might appear which the world has not yet seen."

Surely this is an exaggerated statement. The strongest opponent of academies, while bear-

ing in mind that some of the most original geniuses and most potent influencers of modern art, such as Delacroix, worked in the teeth of "academic authority," would not go the length of this statement. And it appears still more extravagant when taken in connexion with what Mr. Parker seems to mean by "academic authority." He ignores the accusations that academies have a tendency to fix conventional ideals, to narrow the aims of artists, and to make them take their inspiration from works of art instead of works of nature. He simply looks upon academies as schools of art where sound technical instruction can be obtained, and where artists draw from casts and the figure, instead of from engravings and twigs of laburnum. Such "academic authority" as this not even M. Eugène Véron would wish swept away. Moreover, if here and there you find a writer and an artist who seems to think that the art of painting comes naturally, no one can doubt that the thorough technical education of artists is at the present time deemed by most to be of the first importance. There would probably have been fewer dissentients from Mr. Parker's preliminary proposition if it had been as follows:

"Everywhere it is thought that without such technical training as is necessary to give the student perfect artistic facility no very perfect kind of painting can ever be expected to appear."

Throughout this volume Mr. Parker seems to me to be continually raising such giants in order to fight them. He says, for instance,

"the [realistic] theory is that painting is a purely imitative art, and is not in any way poetic or creative art."

If Mr. Parker meant by this that, according to the realistic theory, painting (considered as a means of expression) is a purely imitative art, his definition might go unchallenged; but if, as appears from the latter half of the sentence and from the context, he implies that realists hold that the only aim of the painter should be to produce as perfect as possible a representation of the material objects reflected on his retina, he states a theory which, if ever held by any "handler of the pen," is certainly not worth the powder and shot of so learned a writer as himself. But this is the theory he selects or creates to fight; and to do so he exerts a very needless amount of strength, and goes so far as to deny that there is a pleasure in the perception of resemblance. However much Mr. Parker may wish to elevate painting on the imaginative side of it, it is impossible to get away from the fact that it is fundamentally mimetic. It is as difficult to get away from imitation in painting as it is from your own shadow: it follows one from the mere transcript of nature to the most "ideal" composition. All attempts of Mr. Parker to minimise its importance fall before his own statement that "imagination is only a form of memory."

After reading through Mr. Parker's book (not only once) it is impossible for me not to regret that so much intellectual energy has been spent in combating the opinions of others. If he had sought for points of agreement between himself and previous writers, he would not have poured upon them so much scorn or have misrepresented them so frequently, and he would have written a more

useful as well as a more pleasant book. There is no space here to enter into what I cannot help thinking his unhandsome treatment of Alison and Macaulay and some others, but what he thinks just to say of Burke and Horace will be sufficient illustration of my meaning. He thinks that the former "bid adieu to common sense" on one occasion, and that the latter was "absurd" on another. Burke's dementia is shown in the following passage:

"When two distinct objects are unlike to each other, it is only what we expect: things are in their common way, and therefore they make no impression on the imagination. But when two distinct objects have a resemblance we are struck, we attend to them, and we are pleased."—(*Essay on Taste*).

On this Mr. Parker comments:

"A moment's thought shows that Burke had bid adieu to common sense when he wrote this. If it were true that objects which are unlike other objects make no impression, eclipses, meteors, the aurora borealis would be the most uninteresting of spectacles."

The rest of this paragraph equally ignores Burke's obvious meaning, but this fragment is sufficient for the present purpose. Burke, as the context in his introduction to his *Essay on Taste* shows, was quite alive to the pain or pleasure which a single object might give quite apart from the perception of its resemblance to another; and the plain sense of the passage quoted is not that objects unlike one another are incapable of giving pleasure, but that the fact of their being unlike does not tend to impress them on the imagination.

Horace's absurdity is our old friend *incredulus odi*, which Mr. Parker introduces to the reader without that context which he afterwards allows is necessary to understand it. This is not a very fair way of dealing with an author; but Mr. Parker seems to me to misstate the case entirely. He writes:

"He [Horace] said that Medea must not murder her infants on the stage, and he puts this as if it were an exception to the principle which he had previously laid down that sights (*quæ sunt oculis subjecta fidelibus*) have a greater effect on feeling than sounds (*demissa per aurem*). It is an example of, not an exception to, the rule. He says that if the spectacle is presented to him, he is disgusted, because he is incredulous (*incredulus odi*). This is absurd. The disgust would manifestly be greater if he were credulous, and took the make-believe murder for a real one."

Such criticism seems to me to be about as wrong as criticism can be. The fact that a man would be more disgusted with a real murder is no reason why he should not be disgusted with a fictitious one, because it is too palpably fictitious. Mr. Parker tries to make a point by interpreting "odi" as though Horace meant that he was disgusted at a sight which would be revolting if real, and he makes Horace appear to mean this by suppressing the context. *Incredulus odi* refers not only to the murder of Medea's children, but also and equally to the turning of Progne into a bird and Cadmus into a snake—events which, if actually seen, would not be disgusting, but yet events which cannot be represented on the stage without bringing home too closely the fact that the scene is not real. The "disgust" of Horace is a disgust of the imagination at the breaking of an illusion, not

a disgust of the real man at the commission of a bloody crime. The case of Medea is, equally with the other cases, an exception and not an example of the rule laid down by Horace. But this rule is wrongly stated by Mr. Parker. Horace does not say that sights have a greater effect on feeling than sounds, but that sights have a keener effect when beheld by the eyes than when reported by word of mouth. In other words the appeal to the actual eye is more stirring than that to the mental eye. If Horace had been writing of sounds, he would doubtless have drawn the same distinction, and said that a sound heard would have a more stirring effect than a sound described; but Mr. Parker, having translated *demissa per aurem* as sounds, goes on to illustrate the supposed fallacy of Horace by instancing the introduction in the "Traviata" of a cough as a symptom of illness. "This *demissum per aurem*," he says, "was found intolerable." The climax of injustice to Horace is reached when Mr. Parker adds:

"Horace in this passage was dragging in the realistic principle, and it is a very good test of its value, for the logical result is that which he here implies, that the play of "Medea" would be more agreeable if the spectator were persuaded that a murder is committed."

In this case, as I think in others, Mr. Parker is really in thorough accord with the writer he criticises, and he states admirably, and in his own words, the very point for which Horace is contending.

Besides the argumentative matter which forms the staple of the book, Mr. Parker advances some original theories of his own. With regard to colour, both his views and his arguments are especially remarkable. He thinks that the warmth of the sun is the determinant cause of the pleasure derived from single colours, and that the sense of colour-harmony is formed exclusively by an association of ideas. He thinks that the reason why some painters are bad colourists is not because they have a deficient sense of colour, but because they have a defective method of painting. Even if this could account for the production of bad colour by artists with fine colour-sense, it would not account for their being satisfied with it; and the theory would seem about as probable as that the want of grace in a sculptor's work could be accounted for by his defective method of manipulating clay. He thinks that green is not a very attractive colour, and that this fact is proved because some greens are called "coppery" and "raw" and "crude." To examine such views as these is impossible here, and would probably be vain, as argument about colour is generally fruitless, especially between individuals whose sensations differ perceptibly. To Mr. Parker the world would appear to be of two colours only when the sun shines. "The flag," he writes, "which the sun unfurls in the heavens is of azure blue, and at the same time the increase of light colours all visible objects orange."

I regret to have to add that the conclusion to which Mr. Parker arrives as to the nature of the fine arts scarcely seems to be an adequate result of the labour he has bestowed upon the discussion. It is as follows:

"The theory that academies exist in order to inculcate rules is the invention of the connoisseur, and their true end is to form artistic facility, leaving taste to form itself. It for ns

itself, as all other tastes do, and when the artificial nature joins hands with the inherited nature it rises to the rank of genius. . . . The Fine Arts owe their mysterious charm to this union. They are the wedding of the formed and the inherited nature."

This means simply that both genius and the fine arts are the result of the union of taste and skill.

COSMO MONKHOUSE.

EXHIBITION OF MEZZOTINTS.

MR. DUNTHORNE has collected in his gallery in Vigo Street a group of engravings intended to illustrate the invention and progress of the art of mezzotint. A somewhat similar exhibition was held a few years ago at the Burlington Fine Arts Club. That was interesting, and so is Mr. Dunthorne's, but neither, of course, could claim to be complete. Mr. Challoner Smith, an industrious student of the subject, and the author of a voluminous catalogue, has had a large share in arranging the Vigo Street selection; and, to judge from the examples exhibited, his preference would seem to be for the earlier rather than for the later work. From the collector's point of view that is not unnatural, perhaps. Siegen was the inventor of mezzotint, and he practised it very skilfully; and so did Prince Rupert, who until lately was even thought to have first introduced it. But neither practised it with quite the effectiveness of John Smith, an artist only a little later than these two; and John Smith himself came to be far outdone in the eighteenth century by J. R. Smith, his namesake, and by Ward and McArdell and Valentine Green, not to speak of such delicate performers on the copper as Dean and Jones. Of the work of all the men we have mentioned Mr. Dunthorne's little exhibition contains fair examples, most of them in fine condition, and belonging to good collectors; but the practice of the art of mezzotint did not cease with the eighteenth century, and the work of the present century is less adequately represented in the show. Most of the engravers of mezzotint were painters as well as engravers: painters not in frequent practice, but at least in knowledge and occasional practice. Hence, perhaps their adoption of a process of reproduction so painter-like. They were emphatically artists. It is remarkable not that the process approved itself to artists, but that it was ever allowed to fall into disuse; yet after the execution of the *Liber Studiorum* and of the *Rivers of England* and *Ports of England*, after Turner, and of David Lucas's series of mezzotints after Constable, the art was practically abandoned, and only now, thanks to the efforts of Mr. Seymour Haden, Mr. Slocombe, and others, is there a fair likelihood of its being re-introduced. The visitor to Mr. Dunthorne's gallery will see one or two interesting examples of the most recent work side by side with certain of the accepted masterpieces of eighteenth century labour.

NOTES ON ART AND ARCHAEOLOGY.

MR. C. T. NEWTON, C.B., has signified his intention of resigning at the end of this year the Keepership of Greek and Roman Antiquities at the British Museum. We have authority for stating that he has formed this intention quite independently of any refusal on the part of the trustees, or of the Treasury, to enlarge the accommodation for the sculptures under his charge. Mr. Newton has been in the public service for the period of forty-five years; and if he finds his strength no longer equal to the heavy duties and responsibilities of his present post, no one will grudge him the repose he has so well earned. University College, London,

is to be congratulated on the fact that he will still retain the professorship of archaeology.

THE Society of Antiquaries have now ready for issue to subscribers the *Prehistoric Stone Monuments of Cornwall*, by the Rev. W. C. Lukis. The volume, which it is hoped will be the first of a series, consists of (1) a map showing the sites; (2) a reproduction in chromolithography of forty drawings, exhibiting figures and plans of the objects to scale; and (3) letterpress of about thirty-six pages, giving Mr. Lukis's description of the plates, together with a table drawn up by Mr. W. C. Borlase of all the monuments surveyed, including those which it has not been thought necessary to figure.

THE famous series of Teniers's copies of Italian masters in Blenheim Palace have been lent by the Duke of Marlborough for exhibition on behalf of the Morley House Convalescent Home for Working Men. Beginning next week, they may be seen for the remainder of July, and during the whole of August, in Mr. Davis's galleries, 147 New Bond Street.

So much interest has been shown in the exhibition of Persian and Arabian art at the Burlington Fine Arts Club that it has been decided the collection shall remain on view until Saturday next, July 11.

THE holiday number (July) of the *Art Journal* seems to be specially designed to suggest pleasant excursions, or to provide imaginative solace for those unable to take them. Mr. A. Berens on "Knapsack Photography," Mr. M. Bourne on "Eastbourne," Mr. W. Sharp on the "Isle of Arran," Mr. Lewis Day on "Hildesheim," an "Old Coach Road," by Mr. F. G. Kilton, and especially Mr. J. A. Blaikie on "Dartmoor," are all imbued with the holiday sentiment, and afford pleasant reading. They are well illustrated also; and the number contains a charming etching by Mr. C. O. Murray, after a picture of "Evening on the South Downs," by Mr. Edwin Douglas.

THE *Magazine of Art* is, as usual, full of good matter, literary and artistic. The editor has done well in introducing some of Ringel's fine medallions to the English public; and in his animated review of "Current Art" he praises well and worthily the work of Messrs. Hennessy, Waterhouse, Richmond, and others. This article is well illustrated; the "St. Eulalia" of Mr. Waterhouse and Mr. Richmond's portrait of Mr. Andrew Lang are finely reproduced. The learned chat of Mr. Loftie on London churches and Mr. J. Blaikie's delightful description of the Dart and its scenery are charmingly illustrated by Mr. A. W. Henley and Mr. Allan Barraud. "A New Song of Spring Gardens," bright and light, by Mr. Austin Dobson, is the poem of the number, sympathetically illustrated by Mr. Caldecott.

IN the last part of *L'Art* will be found a careful account, by M. Charles Yriarte, of the new Chateau de Chantilly, constructed for the Duc d'Aumale after the plans of M. Dumat; a fine etching, by M. Théophile Chauvel, after a water-colour drawing of a Venetian canal, by Baroness Nathaniel de Rothschild; and a facsimile of M. Guillaumet's drawing of Victor Hugo after death.

THE *American Academy Notes* have reached us, edited by Mr. Kurtz, and published by Messrs. Cassell. It is their fifth year; and the volume is, as usual, well illustrated and admirably arranged. European editors of such catalogues might well take some hints from it, especially in regard to the concise and interesting information about the artists.

THE new museum at Amsterdam was opened on June 13.

M. HORACE DAILLON, sculptor of "Le Réveil d'Adam" (No. 3558), has been awarded the Prix de Salon.

ON the suggestion of M. Edmond Turquet, a gallery in the Louvre is to be set apart for a collection of portraits of artists like that at the Uffizi at Florence.

THE STAGE.

"THE SILVER SHIELD."

THE reputation of Mr. Sydney Grundy, made by more than one minor comedy, will be distinctly confirmed by the success of "The Silver Shield" in Panton-street. Like most of Mr. Grundy's work, "The Silver Shield" relies for its interest rather upon brilliance of dialogue than upon originality of characterisation. It introduces us to no new type, but the people we have often met before are more entertaining than they have sometimes been and behave with a more than wonted charm. And if the strength of the piece is not to be sought in originality of characterisation or delicacy of portrayal it will be also vain to seek it in intricacy or originality of story. The tale, to tell the truth, is somewhat improbable. It deals with certain crises in the lives of two married couples who were, on the whole, unfortunate. In one case the lady has separated from the gentleman through having misunderstood the contents of a letter; and in the other case the gentleman has separated from the lady on grounds equally sufficient—it has been his ill luck to discover, with apprehension, only the one-half of a document, the remaining half of which would have set his fears at rest. In so strange a coincidence some improbability may surely be seen, but it is heightened by the relations that are made to exist between the two couples: for the wife whose letter had been misunderstood by her husband is supposed to be enamoured of the gentleman whose letter had been misunderstood by his wife. The intrigue, such as it is, is ingenious, but the complications obtained are those proper to the theatre, and, to say the least, infrequent in the world. Nor, perhaps, are such deficiencies as the comedy displays the less observable because the dialogue is often conducted with genuine wit.

The principal part in "The Silver Shield"—a very strong comedy part, with just a touch of pathos and passion—is played by Miss Amy Roselle. It is that of the lady whose own letter was so unjustly misconceived. Weaker people might have been crushed by the consequences of that misconception; but Alma Blake was of energetic courage and buoyant temperament. She had the quality which Mr. Browning calls so well "right woman's manliness." She did not give up her life: she made herself a career; she took to the stage and she succeeded. The part allows to Miss Amy Roselle almost every opportunity which she can conveniently seize. The exhibition of tenderness or of a light grace—the speciality of Miss Ellen Terry—is not the speciality of this actress. She can be passionate, but even in passion she is not at her best. She is at her best in being what is commonly known as "fascinating": that is, as exercising a spell upon the persons of the drama, and presumably upon the audience, by a certain vigour and sunniness of presence; a self-confidence that does not go too far—that is founded upon the possession of genuine powers—a healthy and hearty appreciation of comic things in life, and a great ability to deliver with effect comic things in the drama. It is several years since Miss Roselle has been seen in a part so suited to her as that of Alma Blake. She plays it with what the French call "authority"—an authority which, in exactly such characters, belongs perhaps, on our

English stage, only to Miss Roselle and Mrs. Kendal. Mme. Fargueil had it to perfection. The other heroine's part—that of the young woman who misunderstood the letter of her husband, which was really a letter meant for a scene in a comedy, and not for any recipient in the actual world—is played by Miss Kate Rorke. She has the virtue of not being stagey, and some of her exhibitions of the vice of jealousy, though inevitably ugly, are not without force. But we cannot see in her performance—thoroughly intelligent as it is, and even elegant whenever it can be—adequate reason for quite the enthusiasm it has somehow evoked in more than one important newspaper. The third woman's part is that of the somewhat acrid and over punctilious spouse of a well-intentioned divine, who, though he would fain persuade himself that he is wholly engrossed in the functions of his profession, is yet singularly accessible to the charms of a fascinating woman. Alma Blake fascinates him, and he enjoys it very much. Miss Maria Davis plays the clergyman's wife. The clergyman is played—and played excellently—by Mr. Percy Compton. At times Mr. Compton reminds one a little of Mr. Arthur Cecil, but not in the way of an imitator. Tom Potter, who turns out to be Alma Blake's husband—under an assumed name—and who has suffered much from her absence, is played by Mr. Arthur Dacre, who gives to the first part of his representation the rather subdued and depressed air which the situation demands, but who rises on the right occasion to the expression of poignant emotion. Ned Chetwynd, the husband of the jealous young woman, and the author of the comedy which at last got acted, is impersonated by Mr. Percy Lyndal. We do not know his name. We never remember to have seen him before. But he has some good points, and some excellent moments. He wants distinction however. There is one very good piece of "character acting" in the play. For Sir Humphrey Chetwynd, the father of Ned, is really a "character" part quite as much as a "first old man's." Mr. John Beauchamp, who likewise is new to us, performs it with individuality, with delicacy, with infinite discretion. The part of Dodson Dick, the theatrical manager, is almost low comedy. The personage is very entertaining, but it is not by personages such as that that West End theatres are governed. He is of an old type, and might perhaps still be found in the provinces, directing the movements of a company of opera bouffe. Mr. Arthur Roberts plays the part with such conviction that we are forced to believe in it. He plays it, too, with an amount of comic force and ingenuity which do him great credit.

That is all we have to say about the acting. "The Silver Shield" is quite worth seeing. Brilliantly written as it is, we doubt if there is substance enough in the story, or originality enough in the characters, for it to last in literature; but it can hardly be denied a fair theatrical success, and such success will be thoroughly well deserved. It will amuse very much.

STAGE NOTE.

WE are glad to hear that Miss Alma Murray has promised to read to the London Branch of the United Wagner Society on Friday evening, July 17. Besides delivering certain scenes from the operas of Wagner she will read from Shelley's "Cenci," and from Mr. Browning's "Pippa Passes," which will be welcome intelligence to those who witnessed her magnificent performance in "In a Balcony," and who regret her too frequent absence from the London boards.

MUSIC.

BICENTENARY HANDEL FESTIVAL
AT THE CRYSTAL PALACE.

(Second Notice.)

LAST Friday week, the fourth day of the festival, the performance commenced with the favourite overture to the Occasional Oratorio. After this came "Israel in Egypt." It is only at the Crystal Palace that this sublime work can be properly heard, and so far as the singing was concerned we can scarcely hope to hear a finer rendering than this second one under Mr. Manns' direction. Two years ago, when Sir M. Costa was unable to occupy his accustomed seat, some people thought that the festival would have to be abandoned; but Mr. Manns came forward, and proved himself thoroughly equal to the task. And now he has again commanded the mighty forces under his control with the same tact and even greater ability. In two of the choruses of the second part there were doubtful moments, but the firm hand of the conductor soon restored order. The "Hailstone" chorus was vociferously encored. It is unnecessary to go through the chain of mighty choruses, for they were all given in a most impressive manner. The volume of sound was at times perfectly overwhelming. The solo vocalists were Madame Valleria, Miss Annie Marriott and Madame Patey, and Messrs. Lloyd, Bridson and King. Mr. Lloyd did his best to refuse the encore for "The enemy said," but what is one against more than twenty thousand? He had to yield with good grace, and repeat the air. Miss A. Marriott deserves a good word for her rendering of the difficult air "Thou didst blow."

We are glad to be able to speak highly of Mr. Manns' efforts as conductor, for we have a few things against him. Handel's trombone parts to "Israel," although printed by the German Handel Society, were not used. Sir M. Costa wrote his before those of Handel were discovered, and he obstinately, and perhaps somewhat naturally, stuck to his own to the last. Mr. Manns was perfectly free in the matter, and there surely cannot be two opinions as to the course he ought to have pursued. In the two choruses, "He spake the word" and "He smote all the first-born," Handel's employment of the trombones is particularly striking. In the Costa arrangement the instruments are silent in places where they are used by Handel, but still more often are heard where the composer evidently did not want them, as, for example, in the double chorus, "The people shall hear." Sir M. Costa could not have used Handel's parts without making other alterations in the score which he specially prepared, but Mr. Manns ought undoubtedly to have brought them to a hearing. Then, as to changes in the text. Sir M. Costa altered the rhythm in the last movement of the "Occasional" overture; he altered a bar in the "Hailstone" chorus; he added sustained chords for the wind at the end of "He smote all the first-born," weakening the effect of Handel's staccato chords for strings; he spoilt the bold close of "Thy right hand, O Lord," by adding a flourish of brass instruments, and made changes equally objectionable in other places. Mr. Manns wisely left out the flourish in "Thy right hand," but the other wilful and foolish emendations were repeated. Last week we mentioned other sins of Sir M. Costa which had not been washed away. The public, of course, care little about the matter. We should, however, fail in our duty as critics if we were to keep silent. It is unpleasant, of course, to find fault, but, in the interests of art, it is sometimes absolutely necessary to speak plainly. Never was the path of duty simpler or clearer, and Mr. Manns has only himself to thank for any harsh comments. He will probably see the error of his ways before the next festival, but he has

thrown away a grand opportunity of showing respect and honour to the music of the great Saxon master. When "Israel" is restored, we shall also need a different organ part. At present Handel's instructions are constantly disregarded. For this, perhaps, Mendelssohn is in some measure responsible. In his edition of "Israel," in spite of his professed veneration for the text of Handel, he ventured to leave out the organ when indicated by the composer, as, for example, in "He smote all the first-born," and "The Lord is a man of war," and to put it in when not wanted, as in the air "Thou shalt bring them in."

The audiences each day of the festival were very large, the total number of the four days being 85,476. At the close of "Israel," Mr. Manns was recalled and received with great enthusiasm.

J. S. SHEDLOCK.

MUSIC NOTES.

MR. C. HALLÉ gave his seventh chamber concert last Saturday week at the Prince's Hall. One interesting feature of the programme was Ph. E. Bach's Sonata for piano and violin in C minor, admirably played by M^{me}. Néruda and the concert-giver. Another was Schumann's piano Sonata in F sharp minor (op. ii.); but Mr. Hallé might, with advantage, imitate M^{me}. Schumann by leaving out repeat in Allegro, and by making a cut in Finale: for the work is long. Last Saturday, at the eighth and last concert, Brahms' fine quartet in C minor for strings received full justice at the hands of M^{me}. Néruda and Herran Ries, Straus and F. Néruda. Mr. Hallé's solo was Beethoven's Sonata in A flat (op. 110), which he gave in his best manner. The series just concluded has been in every way successful. Herr F. Néruda is an excellent violoncellist, and by his careful and artistic playing has been of great service in the ensemble music.

THE London Musical Society gave a concert at St. James's Hall last Tuesday evening. The programme commenced with a selection from the "Four Passions" of Heinrich Schütz, the celebrated church composer of the seventeenth century, the forerunner of Handel and Bach. The quaint, but interesting, music consists of recitatives and short choruses: the latter ought, we think, to have been sung without organ accompaniment. After a violin piece by Ernst, played by Herr Tivadar Nachès, came Bach's fine cantata, "Ich hatte viel Bekümmerniss." It was very foolish to give this work with only organ accompaniment, for in addition to that instrument Bach wrote parts for strings, wood-wind and brass. The performance was a mere caricature of the composer's intentions. In the second part of the concert the choir was heard to better advantage in some madrigals. Miss A. Goodwin was successful in three short piano solos. The Scarlatti Sonata was neatly and cleverly rendered. Herr Nachès, the Hungarian violinist, was much applauded for his solos. The vocalists were Miss A. Marriott, Miss Marian McKenzie, Mr. A. Kenningham and Mr. E. Birch. Mr. Barnby, as usual, was the conductor.

ON Wednesday afternoon the first of a short series of historic concerts was given at the Inventions Exhibition. Members and professors of the Royal Conservatoire of Brussels played on harpsichords, ancient flutes, and other obsolete instruments. The second and third concerts were announced for Thursday and Saturday, and next week we shall give an account of these interesting meetings. One gazes with a certain curiosity at these instruments of bygone days when exhibited, as they are now, at the Albert Hall, but it is far more satisfactory to have an opportunity of hearing them. The music room was crowded last Wednesday.

STEPHEN HELLER, now seventy-two years of age, has been overtaken by the terrible calamity of blindness. His name "is a household word to all lovers of music"; and it is hoped that a liberal response will be made to the appeal of Sir Frederic Leighton, Mr. Robert Browning, and Mr. Charles Hallé for funds to enable them to purchase a small annuity for the composer, so as to spare him from pecuniary troubles during his remaining years. Subscriptions to the "Heller Testimonial Fund" will be received by Messrs. Coutts, 59 Strand.

LAST Tuesday week, at Leinster Gardens, Mr. H. F. Frost read a paper on "Tristan und Isolde" at the third meeting of the London branch of the United Wagner Society. The *Leit-motive* and special passages referred to in the lecture were given on the pianoforte.

TRÜBNER & CO'S
LIST.

Now ready, crown 8vo, pp. xiv+174, cloth, 5s.

THE SONG CELESTIAL;

Or, Bhagavad-Gita. (From the Mahābhārata.)

Being a Discourse between Arjuna, Prince of India, and the Supreme Being under the Form of Krishna. Translated from the Sanskrit Text

By Edwin Arnold, M.A.,

Author of "The Light of Asia."

"All his volumes are among the most precious possessions of the students of modern poetry; and we feel convinced that none of the preceding volumes—not even the great 'Light of Asia' itself—will be dearer to its students and lovers than this magnificent 'Song Celestial.'"

Whitehall Review.

* * "THE LIGHT OF ASIA" has now reached its Twenty-sixth English Edition.

Now ready, Third Edition, crown 8vo, pp. viii+406, cloth, 7s. 6d.

THE SECRET OF DEATH.

(FROM THE SANSKRIT.)

With some Collected Poems.

By Edwin Arnold, M.A.

Author of 'The Light of Asia,' &c.

Now ready, post 8vo, pp. xii+334, cloth, 9s.

LIFE AND WORKS OF

ALEXANDER CSOMA DE KOROS.

A Biography compiled chiefly from hitherto Unpublished Data; with a brief notice of each of his Published Works and Essays, as well as of his still extant Manuscripts.

By Theodore Duka, M.D., F.R.C.S. (Eng.),

Surgeon-Major H.M.'s Bengal Medical Service, Retired, &c.

"As a Tibetan rebel he has never had, and probably will never have, a rival."—*Calcutta Englishman*.

Now ready, small 4to, pp. xii+144, with Facsimile Illustrations, in an appropriate binding, 7s. 6d.

AN ACCOUNT OF THE
GERMAN MORALITY-PLAY,
ENTITLED

DEPOSITIO CORNUTI TYPOGRAPHICI,

As performed in the Seventeenth and Eighteenth Centuries. With a Rhythmical Translation of the German Version of 1648.

By William Blades

(Typographer). To which is added a Literal Reprint of the unique Original Version, written in Platt Deutsch by PAUL DE WISE, and printed in 1651.

Now ready, demy 8vo, pp. viii+190, cloth, 6s.

LITERATURE.

CHINESE GORDON.

The Journals of Major-General C. G. Gordon, C.B., at Kartoum. Printed from the Original MSS. Introduction and Notes by A. Egmont Hake, author of "The Story of Chinese Gordon," &c. With Portrait, Two Maps, and Thirty Illustrations after sketches of General Gordon.* (Kegan Paul, Trench & Co.)

THIS portly volume contains so little for the reviewer proper that he must perforce adopt the pleasant modern fashion and review the writer. "Chinese Gordon," as his old friends preferred to call him, and as he is entitled in a host of books and papers between the days of Andrew Wilson and Samuel Mossman, has of late been the sport of fortune. Party spirit, which seems the only tangible trace of Old England now left to Young England, no longer finds a tool in him. His first silly little book on Palestine did no good to his great and glorious name; it proved his mastery of the tongue biblical, that Jacobian dialect which by a strange freak of fate still predominates in the English vocabulary; it showed that while most men read volumes of controversy he was satisfied to rest upon his instincts and to see in Jerusalem what no eye yet saw there; and it represented him suffering very severely from that curious complaint, "Holy Land on the Brain," which latterly took the form of "establishing the boundaries" of Ephraim, &c. Lastly, he has been "levelled down" by certain friends, fussily sympathetic, those burrs which cling to the skirts of a great man, and which rise, as Easterns say, like beetles borne in roses upon the heads of kings. In their thirst for notoriety they have managed to weary the public of his name—a fact made unpleasantly evident by the falling off of subscriptions. Who, in these times, has a right to more than the normal nine days? The *Journals*, however, will go far towards reviving general interest in a moribund theme. They are being extensively read and universally appreciated, because they show the writer not only *en deshabille*, but stark naked. They have the charm of certain confessional autobiographies lately published, and they enable the reader to take his own measure of a man whose perfect truthfulness and integrity, whose disinterested spirit and whose sys-

tematic suppression of miserable selfishness made him a phenomenon in the nineteenth century.

These *Ephemerides*, divided into six books, and covering only three months (Sept. 10–Dec. 14, 1884), are the jottings and scribbles of everyday life under the most peculiar and adverse circumstances. The writer had been implored to return to his old home, and his going had been incontinently deplored by those who forgot to support him, because he could not cope single-handed with a country fighting for a cause based upon religion and patriotism, however deformed by fanaticism and imposture. As might be expected the *Journals* are utterly deficient in the graces of literature. Their only ornaments are capitals and school-girl italics, and they are full of such mistakes as "Touran" for Imran (p. 19). Written on the spur of the moment they are contradictory in the extreme; they repeat the same words sometimes thrice, and even oftener; they heap commonplace upon commonplace; they show the hallucinations (*e.g.*, concerning M. Renan) to which all African travellers after a time become subject, *tests* Livingstone; and they trifle (twice) about a turkey-cock when the shells are sighing, and the Nordenfeldts are growling. They evidence the strangest temper in the world. With Gordon one never knew what would happen next; to-day your intimate, he would forget your name to-morrow. And this was no vulgar caprice, but thinking and acting under a Controul as peculiar as the daemon of Socrates. They preserve his Biblical phraseology (pp. 117, 173), about which he even "chaffs" himself (p. 216); and "the very feeblest of the conies" (p. 326) and "Shimei dusting David" (p. 376) contrast strangely with "a corker" and "black sluts" (*passim*). The natural querulousness bred by the situation (pp. 92, 112), the trenchant satire upon the crass ignorance of public offices (p. 201), and the most galling contempt of "the Dignities," whom he quizzes and caricatures with a humour often expanding into drollery, are curiously balanced by an insight of which few can boast, and by instincts which belong to himself. And the scratchy and sketchy, the blurred and blotted picture is lit up with a golden glory; the man is the very soul of honour, the embodiment of what every gentleman should strive to be.

I must be allowed a few words on these "instincts" and insight. The former are not unfrequently prophetic, *e.g.*, "Now MARK THIS" (the figures of print are not mine), "if the Expeditionary Force, and I ask for no more than 200 men, does not come in ten days, *the town may fall*; and I have done my best for the honour of our country. Good bye" (p. 395, dated December 14). His "insights" are too many for quotation; but here are a few. "Simmons and I agree on one subject—that Egypt is useless to us unless we have command of the seas; and if we have command of seas, Egypt is ours; therefore, it is not worth bothering about. We will [shall?] never be liked by its peoples, we do not go the right way to be liked" (p. 130). Quite true: we are not men enough to govern Egypt: our hands are tied. We must dance *en sabots* to the tune of progress, philanthropy and other *mauvaises plaisanteries*. The identity of "standing orders" and "dead letters" in

the East (p. 160), touches the thing with a needle-point. The uselessness of those wretched (Hindu) Sepoys, "Snake-like creatures whose faces show that they hate us" (p. 189), is an old truth told in a new way; and nothing can be better than the suggestion of garrisoning India by Chinese and Negroes. And mark this, "It is a great question of doubt to me if public officials ought to sink their personality" (p. 233). England is now ruled by the worst of bureaucracies, a permanent clerkery which openly declares that executives are made only to obey orders, that the most commanding mind must be directed by its diminutive, and that personal influence is an insult to the unimportant governing many-headed. But "England was made by adventurers," and is being rapidly unmade by offices. It will be a bitter pill for Englishmen to read touching France (p. 311), "If you can find no *chivalry* in your own house you had better borrow it from your neighbour." And it is bitterer still for Englishmen to realise the fact that England is the only place where they are not derided and despised, while minds like Gordon are beginning to despise England for her gross and abominable worship of the Golden Calf.

I am unwilling to touch upon such disputed points as introducing into Egypt the Turks whom Mohammed Ali the Great made the business of his life to expel; as admitting the French, whose government almost equals our own in energy and consistency; and as evacuating the Sudan, which we may abandon, but Europe will not, thereby preparing for ourselves not a nest but a hive of hornets. Nor can one discuss Gordon's strictures on the Intelligence Department (p. 154) without falling into personalities: I can only repeat my assertion that in the scandalous affairs with Osman Digna after Major Morice's death not an English officer could speak Arabic, and the most delicate work was entrusted to the most lying of men—hired dragomans. But however invidious the task, every reviewer must be prepared to quote the weighty words in p. 284, easily supplying the hiatuses:

"There are times when men like . . . ought to obey, and there are times when they ought to disobey or to resign. Now, if . . . had only hinted his resignation, the Governments were so placed as to be obliged to listen to him. I have a strong suspicion . . . did know how to act. It was . . . and a wish to be agreeable to Her Majesty's Government, which prevented him acting according to his own ideas. His amiability did for him."

What a commentary upon our present national motto "Too late"—ever too late!

And now for a few personal details. Shortly after Gordon was appointed to the Sudan in 1874 he consulted me about an Eastern harbour of export. I suggested one north of the equator, which should separate Egypt from Zanzibar: my advice was disregarded and poor Admiral McKillop brought upon himself much trouble. In 1876 my correspondent offered me command of the Eastern Sudan with £1,500 per annum; but as I asked £2,000 he was nettled, and wrote that he hardly expected so much devotion to £ s. d. My answer was that every farthing (and something more) would be spent in the country; but the amount to spend would represent the measure of my power and influence. This satisfied him; and yet I could not accept the offer. We were at once

* Pp. lxxv and 587, including an excellent Index. Notes sometimes pointed and sometimes not. Physically too fat: should have been split into vol. i. *Journals* and vol. ii. *Appendices*. Portrait most unlike original yet seen. Fair sketch map at end, and at beginning of "Kartoum" (=Khartoum; the elephant's trunk—*i.e.*, the Raas, or nose of the Doab). The normal blunder "Blue Nile" (repeated in text) a wilful falsification by Bruce of Bahr al-Azrak—Blue River.

too like and too unlike to act together without jarring. We did not meet till 1879 at Cairo, and I was astonished to find how unlike were all his portraits. No photograph had represented those calm benevolent blue eyes and that modest reserved and even shy expression, blent with simple dignity, which, where he was intimate, changed to the sympathetic frankness of a child's face.

His letters to me show a many-sided man utterly unlike the mere puritan, the bibliolator of popular belief. In predestinarianism he was more fatalistic (not Calvinistic) than any Moslem; and, as the *Journals* show, a transition to El-Islam would not have been violent. Having prayed and taken counsel with his soul and his Guide, he acted unreservedly, and he often wrote: "Anyone could do this as well as I can: I am a mere machine in the hands of God." He appeared by no means surprised when I told him he was a rank Spiritualist, a tool in the hands of his Controul. Hence, it appears to me, the curious changes of policy and conduct which perplexed his best friends, such as his slavery-proclamation at Khartum after his hanging the unfortunate slave-dealers, a measure which I, not being a "Christian hero," never would have taken had they not actually committed murder. Hence his fury against Zubayr Pasha, and then his extreme anxiety to re-employ him; also his convicting an employé of deliberate money-theft and promoting the same man to a Pashalik a few months afterwards. Hence, apparently, he forgot to insist at headquarters upon his being followed at once by a body of English troops—500 or 5,000 bayonets mattered but little—and his stinging sense of being deserted till they were sent up under General Too Late. And so in minor matters; for months he would drink nothing but water, and then prefer, very decidedly, water with whisky. Thus, finally, I explain a host of seeming contradictions, which to him (and to none other) seemed natural and consequent.

I have lately been asked, Are you sure of his death? and I answer, No. All accounts of his being killed are so discrepant, so *louches*, that I should not be surprised to hear of him somewhere in the direction of the Congo slowly making his way south. Of course, every week without intelligence dims our hopes; but I cannot yet persuade myself to despair of shaking hands once more with Chinese Gordon, and of congratulating upon another quasi-miraculous escape the man I have ever looked upon as the Soul of Honour.

RICHARD F. BURTON.

Carlyle, Personally and in his Writings. By David Masson. (Macmillan.)

THERE is about this little book an odour of stale surprise, of what its author terms "belatedness," which is not quite explained by the circumstance of its original form having been that of lectures to Edinburgh audiences. If any living man of letters has been influenced for good by Carlyle in his career and in the general tendency of his labours—perhaps also for evil in his style—it is Prof. Masson. He was personally acquainted with his master for thirty-seven years, and can say with perfect truth and without any false modesty, "All in all, few persons now

living can have seen more of Carlyle than I did, or can have known him better." That, on seeing the popular portraits of Carlyle as "the whining sage" and "the jealous sans-culotte" drawn with such freedom, after the publication of Mr. Froude's portentous biographical performance, Prof. Masson should have put his hand to his head in amazement and indignation, and have said, "Neither of these hideous daubs is the Carlyle of my acquaintance," was natural enough. But such a protest or corrective as this, being largely of a personal character, ought to have appeared a little sooner. As it stands, however, it must be regarded as one of the most important of recent contributions to the now formidable literature which has for its object the vindication of Carlyle's memory, if not the rehabilitation of Carlyle's character. It is cordial, good-natured, unaffected, and transparently sincere. Above all things, it is valuable as a view of Carlyle, expressed after much deliberation, by a man who, obviously the reverse of a pessimist, yet "loves him, on this side idolatry, as much as any."

Prof. Masson's criticism of Carlyle, as revealed in his writings, does not call for much comment, for it contains no element of novelty. That Carlyle was "a natural theist" and "a transcendental realist" or "a realistic transcendentalist," that his weakness lay in "his contentedness to remain always within the region of the dynamical generalities and refusal to concern himself with the specific practical problems of the when, the where, and the how"—all this we have heard before. It is an old story couched in the language of the metaphysical school to which Prof. Masson belongs. To the bulk of it, the thick-and-thin Carlylian, the disciple who is a Carlylian in creed and not merely like Prof. Masson in spirit, may reply that his master was a preacher who left to others the duty of putting his doctrines into practice. The more successful and interesting of the two lectures is that which tells of Prof. Masson's own experiences of Carlyle. By means of these he disputes Mr. Froude's representation of Carlyle as perpetually sunk in gloom. Thus referring to the week spent by Carlyle in Edinburgh on the occasion of the Rectorial Address, which closed so tragically with the news of Mrs. Carlyle's death, he tells how, at a social gathering in his own house,

"Carlyle was in the best of possible spirits, courteous in manner and in speech to all, and throwing himself heartily into whatever turned up. At the dinner table I remember Lord Neaves favoured us with one or two of his humorous songs or recitatives, including his clever quiz called 'Stuart Mill on Mind and Matter,' written to the tune of 'Roy's Wife of Aldivalloch.' No one enjoyed the thing more than Carlyle; and he surprised me by doing what I had never heard him do before—actually joining with his own voice in the chorus.

'Stuart Mill on Mind and Matter,
Stuart Mill on Mind and Matter,'

he chaunted, laughingly, along with Lord Neaves, every time the chorus came round, beating time in the air emphatically with his fist. It was hardly otherwise, or only otherwise inasmuch as the affair was more ceremonious and stately, at the dinner given to him in the Douglas Hotel by the Senatus

Academicus, and at which his old friend Sir David Brewster presided. There, too, while dignified and serene, Carlyle was thoroughly sympathetic and convivial. Especially I remember how he relished and applauded the songs of our academic laureate and matchless chief in such things, Prof. Douglas MacLagan, and how, before we broke up, he expressly complimented Prof. MacLagan on having contributed so greatly to the hilarity of the evening."

The truth is that Mr. Froude has been weighed down by Carlyle's pessimistic creed, and has not sufficiently allowed for the fact that, like every man of genius, he had many moods. In all probability Carlyle had as great a share as other people of the happiness which comes of mood, and which is one half of life.

Prof. Masson does good service in exposing some of the mistakes into which Mr. Froude has fallen from his ignorance of the social conditions of life in Scotland. Thus he proves that

"there was nothing extraordinary whatever in the match between the educated son of a Scottish peasant and the daughter of a Scottish provincial surgeon; and that if Jane Welsh had not married Carlyle, and been promoted by that marriage to a sphere far higher in the world's affairs than would otherwise have been within her reach, she would probably have lived and died the equally drudging wife of some professional Scotch nobody."

Prof. Masson misrepresents Mr. Froude's offence—if it be an offence—in revealing the dissensions in the Carlyle household, and in making free with "those most secret self-communings of Mrs. Carlyle's spirit in its hours of solitude, which she had kept under lock and key." The story would certainly have found its way to the public in any case, and in a less accurate and more disagreeable version than Mr. Froude's. The true error which Mr. Froude has committed is an artistic one. He ought to have let his revelations, "Mrs. Carlyle's self-communings" and all, speak for themselves, and refrained from saying that either Carlyle or his wife "should" have done this, that, or the other thing. Still more ought Mr. Froude to have done just ice not only to the domestic showers in Cheyne Row, but to the sunshine that succeeded them.

WILLIAM WALLACE.

A Historical Introduction to the Study of the Books of the New Testament: being an Expansion of Lectures delivered in the Divinity School of the University of Dublin. By George Salmon. (John Murray.)

THIS work, as the author explains in his preface, does not embrace all the subjects that are generally supposed to be included under the title of an Introduction to the New Testament. It does not enter on the criticism of the text, nor offer any analysis of the contents of the New Testament writings; but as an investigation into the origin and authorship of those writings, and a discussion of the various theories which have been propounded regarding them, it is sufficiently full, while at the same time it is thoroughly informed and overflowing with sense and learning. Prof. Salmon undertakes to deal with the books of the New Testament as he would with any ordinary writings, and in the general tone and spirit of his work it must

be admitted that he has succeeded. He makes no assumptions, sets out, so far as can be seen, from no foregone conclusions. He pursues a method which has a fair claim to be called historical, but always with this happy result, that, in the great majority of cases, he finds himself driven to accept the traditional view, if indeed it may not be said that he is sometimes more orthodox than tradition itself. Thus he believes our Matthew, notwithstanding the testimony of Papias and the Fathers, to be the original Matthew. The second epistle of Peter, he thinks, may have been written by Peter himself, while for the first the apostle employed an amanuensis, thus making the second epistle more authentic than the first. And here I may say that Dr. Salmon completely demolishes—so, I think, anyone will admit who fairly considers his argument—Dr. Abbott's theory of the indebtedness of 2 Peter to Josephus. I must also hasten to add that on these and some other points Dr. Salmon does not pretend to have absolute certainty. It is, indeed, one great merit of his work that it never puts on airs of infallibility, but frankly admits that in these matters there is room for difference of opinion, and that some questions are open. In words that ought to be golden for all Biblical students he repeats (p. 590) that "the ordinary condition of historical inquiry is to arrive at results which must be accepted with unequal confidence."

It may be doubted whether there is a single theory of the origin of the gospels which could not be made to look plausible in the hands of a skilful advocate; and it would be strange if the traditional view, with only such modifications as a due regard for the results of criticism renders imperative, did not make a fair show as presented by Prof. Salmon. After all, in literary matters possession is nine points of the law; and it is but right that those who impugn the authenticity of the New Testament writings should be reminded, as they constantly are, that the burden of proof rests on their shoulders. In dealing with the gospel question Dr. Salmon makes full use of this advantage; but, while discussing most ably the verbal relations of the Synoptics, he neglects altogether—not, of course, in ignorance, but presumably because he declines to recognise them—those deeper and much more important relations which they have to one another as representing different tendencies and different forms of Christian thought. Here, indeed, from the point of view of the more advanced criticism, is the original sin, if I may so say, of this work. In his second lecture Prof. Salmon discusses Baur's theory of early Church history; and both here and elsewhere endeavours to minimise the opposition between the Pauline and Jewish Christian parties, the traces of which are to some eyes so apparent in the pages of the New Testament. Having thus deliberately thrown away the key, it is not, of course, to be expected that he should succeed in unfastening the lock. But on its own ground, and assuming that the gospels are the product of genuine historical investigation, his treatment of the subject, if not leading to any novel result, is still clear, full and logical. Rightly maintaining that a common document is the only thing that will account

not only for the verbal coincidences of the synoptics (which oral tradition might explain), but for their agreement as to the order of events, and relying on the signs of "autopsy" in Mark, as well as on the evidence of Papias, he acquiesces at last in the view which finds this earliest written narrative in the Petrine tradition incorporated in our second gospel. And here Prof. Salmon naturally comes across Dr. Abbott and his "triple tradition." He sees, of course, that the triple tradition is really only a single tradition, and that precisely where it fails, as in the narrative of the Passion, there may be reason for believing in more traditions than one. But he does not, I think, explain how it was that the other evangelists dropped, as if they were ashamed of them, all the graphic touches by which Mark is distinguished, or, indeed, why Matthew, who was himself an eye-witness, had recourse to documentary evidence at all.

Prof. Salmon is fond of drawing illustrations from profane literature, but it is clear that these are in many cases illusory. It is quite true, for example, that there are few classical works for which such early testimony can be adduced as for the gospels; but, then, where is there a literary phenomenon in the least comparable to the gospels? If two poems had come down to us on the same subject, bearing the names of Virgil and Horace, but in which one-third of the matter was common to both, no one surely would believe that Virgil or Horace was the author of either. Again, in his lecture on the Johannine books, we find Prof. Salmon rejecting what may be called the now accepted interpretation of the Apocalypse, though unable to offer any better solution of his own, on the ground that, if written in the reign of Nero, its predictions were so immediately falsified that its credit must have been destroyed once and for ever. "For a parallel case," he says,

"we should imagine Victor Hugo or some other French prophet in Christmas, 1870, issuing a prediction that Paris should to a certain extent be taken, and a third part of the city burnt, but that the Germans should not get the mastery over the whole; for that there would be an uprising of the other German nations against the Prussians, ending with the total destruction of the city of Berlin, to the great joy of Europe. We can imagine some one mad enough to make such a prophecy as this; but, if so, can we imagine that a prediction so wild and so unfortunate should make the reputation of the prophet, and that the book which contained it should live for generations as an inspired document?"

Of course, the cases are not really parallel; but, granting that they are, it may be answered, in the first place, that, seeing that a considerable part of a century lies between the reign of Nero and the first mention of the Apocalypse, we have no evidence as to its immediate reception; and, secondly, that when people have once committed themselves to the acceptance of a prophecy they do not so easily abandon their belief. The entire failure of the prediction of the speedy coming of the Son of man in the "little Apocalypse" in Matthew xxiv. has not stood in the way of that gospel gaining acceptance as an inspired writing.

Prof. Salmon handles the question of the Johannine authorship of the fourth gospel

with considerable fulness, dwelling particularly on the internal evidences of "autopsy"; but where he seems to me to be most successful is in showing that the author was himself acquainted with the Synoptics, and presumed a knowledge of them in his readers, and also in refuting the argument against its genuineness derived from the Quartodeciman controversy. His treatment of the Book of Acts cannot be pronounced satisfactory. While arguing ingeniously, if not convincingly, that the work must have been written by a companion of Paul, he does little towards establishing its historical character, especially in the earlier chapters; and many points of importance he either passes over or touches very lightly. Prof. Salmon is hardly entitled to say that one of the motives for rejecting the Acts is "its irreconcilable opposition to the Tübingen theory of the mutual hostility of Paul and the original Apostles." Rather it is the "irreconcilable opposition" of the Book of Acts to the Pauline Epistles which has suggested doubts as to its historical credibility. But then, of course, contradictions between authorities are not to be suspected as not coming from eye-witnesses until they reach "a high point in number and amount" (p. 4). On the speeches reported in the Acts Prof. Salmon makes many ingenious remarks which are well deserving of consideration, but certainly does not prove that they are not more Luke's than Paul's. How he can say that Paul's speech at Athens (Acts xvii.), with its *δευδαίμονες τέρους, θεωρά, χειροποιήτους, ψηλαφήρειαν, οἰκουμένην*, &c., "contains none of Luke's characteristic phrases," unless he has simply followed Alford without verifying his statement, I do not understand. Dr. Salmon is also very strong on the "we" passages, which, he contends, could not have been written by anyone but the author of the entire work. This he infers, among other reasons, from such references as that in Acts xxi. 8, compared with vi. 5 and viii. 40. Yet two verses further on we find "a certain prophet, named Agabus," introduced (xxi. 10) as if for the first time, though he has already appeared, Acts xi. 28. Here there is clearly a lapse of some kind, but it may have been merely in the memory of the writer. Prof. Salmon refuses to believe that so skilled a literary artist as the author of the Acts, having got possession of the memoranda of one of Paul's companions, would "shovel them into his book pell-mell, without even taking the trouble to hide the discontinuity of his work by turning the first person into the third." It must be owned this does not seem probable; and, in fact, the only imaginable reason for his doing so is that that might happen which has actually come to pass, viz., that he might be taken for that companion. For my own part, however, I have no difficulty in believing that the Book of Acts, notwithstanding its evident *Tendenz* and its partly unhistorical character, was actually written, in advanced life, by one who in more youthful days had been an occasional companion of St. Paul.

But I must not permit myself to go into further detail. I have said, adopting his own word, that Prof. Salmon's method is historical; but perhaps a word of explanation may be required here. Many at least would say that

that is not a strictly historical method which does not assume, to begin with, that the supernatural is impossible; and it is difficult to think that, if Prof. Salmon were approaching the history of Livy, he would not make this assumption. On the other hand, he consistently puts aside every idea of inspiration; and not only so, but much of his reasoning, so it appears to me, takes it for granted that the documents in question are positively not inspired, and would be totally misapplied on any other assumption. Be that, however, as it may, it will hardly be denied that Prof. Salmon has made some very effective points in reply to the "sceptical" writers, and occasionally succeeded in turning their arguments against themselves. His work will be found, if I mistake not, to be, in point of information, quite abreast of the scholarship of the day, and perhaps special attention should be called to the Lectures on Apocryphal and Heretical Gospels and Apocryphal Acts of the Apostles, as embodying the results of the latest investigations. Moreover, in going over well-beaten ground, he has made the way pleasant by the freshness and vivacity of his style; and, if it may be at all doubted how far his work is a solid contribution to the scientific study of the New Testament, it is certainly an extremely able defence of the views of the English apologetical school.

ROBERT B. DRUMMOND.

Advance Australia! an Account of Eight Years' Work, Wandering, and Amusement in Queensland, New South Wales, and Victoria. By the Hon. Harold Finch-Hatton. (W. H. Allen.)

Accounts of life in the bush and gold diggings of Australia are apt to be much alike. Mr. Finch-Hatton has, however, succeeded in producing out of somewhat worn materials a very lively and amusing book. He is a shrewd observer, and a sharp and caustic critic both of colonial and home politics. About nine or ten years ago he went to Queensland to join a brother at a cattle run in the Mackay district. This he left for the Mount Britten gold fields, where he worked hard and laid out much capital, but his mining was not a success. He gives us a capital account of every thing and every sort of person connected with both these occupations.

"The true professional gold digger," he says, "passes his life in wandering about from one new rush to another. Any regular employment he considers beneath him; and except for the purpose of raising sufficient money to carry him on to the next diggings, he will never work for wages. No class of men work so hard; as soon as it is light in the morning he is off, and seldom knocks off before dark. That a man should work so hard to get gold is not in the least odd, but it is odd that the value he sets on it should be in exactly inverse proportion to the trouble it costs him to get it. And yet such is the case. As long as he is at work no miser could be more careful than a real digger in the actual process of collecting gold. When he has got it no spendthrift could be more reckless in flinging it away. Whether up to his knees in the freezing waters of the Snowy river, or grilling under the fires of a Queensland sun, no day is too long for him while he is on gold. Not a crevice of his claim is unexplored, not a particle of dirt likely to contain

gold is wasted; and he will spend as much time and trouble in collecting the finest particles of gold in his dish, as if he were an analytical chemist making an experiment in weights and measures. He toils patiently on, day after day, week after week, undismayed by failure, and quite unrelayed by success, until the moment comes when something impels him irresistibly to squander all that he has collected."

At least ninety per cent., we are told, of the earnings of the diggers go in drink, and the remainder in good living, when it is to be had. And numerous as are the instances of enormous fortunes made in mining, almost all of them do more harm than good. Their possessors are smitten with an incurable mania for wild speculation, and as a rule end in being utterly ruined. Mr. Finch-Hatton remarks that besides the fatality that apparently attends all profits made from mining, statistics show it to be the least remunerative of all professions. The value of an ounce of gold is £3 10s., but it costs nearly £5 to raise an ounce.

"In Victoria, where mining is more economically and profitably worked than in any of the other colonies, the average earnings of every man connected with it in 1873 were only £98 per head, considerably less than he could have made at the lowest wages work in the colony. When we consider that every year some few individuals make enormous fortunes at it, the balance of loss to be distributed amongst the remainder is considerable."

One of the most interesting chapters in Mr. Finch-Hatton's book is the one on drink, and it is a sad one:

"The amount of hard steady drinking that goes on in all the towns of Queensland is astonishing. Brisbane is no exception to the rule. Bankers and business men, legislators and lawyers, doctors and tradesmen, they all make a practice of every now and then deserting their business and sallying forth to the nearest bar for a drink. Brandy and whisky are the favourite drinks, and the amount a man consumes in the twenty-four hours by this habit of *nipping* without ever getting quite drunk is surprising. No *habitué* of a Queensland town who wishes to find a business man ever goes to look for him first in his office. If he knows the run of the town, he will start the reverse way round the various public-houses, and if he fails to run the man he is looking for to ground, he will then go to his office, in hopes of catching him before he starts round for another series of drinks. At whatever hour of the day a man meets another whom he has not seen for, say, twelve hours, etiquette requires that he shall incontinently invite him to come and drink. This is the custom that pervades every class in the colony, and cannot be departed from without something more than a breach of good manners."

The system in the bush is totally different, and goes by the name of *knocking down one's cheque*. The bushman, while at work, is, as a rule, a sober man, drinking nothing but tea; but when he receives his wages (which, it would seem, are only paid at the end of long intervals) an irresistible impulse drives him to a public-house, he hands the money over to the publican, and drinks and drinks till the publican chooses to consider the money exhausted, when his victim is turned out of doors to recover as best he may. We have heard of this before, but it has certainly

never before been put in so telling a way as it now is by Mr. Finch-Hatton, who says,

"Of course, the man never gets a tithe of his money's worth in any shape or way—indeed, the kindest thing a publican can possibly do is to refuse him any more liquor at a very early stage of the proceedings; for cheques for enormous amounts are frequently *knocked down* in this way. A quarter of the worth of them, if honestly drunk out in bush liquor, would inevitably kill a whole regiment. I remember a man who for years had been a hard drinker. He went on the square—that is, he kept perfectly sober—for five years, during which time he raised a cheque of £600. With this he started down to the coast, intending to go home to the old country. On the way he was persuaded to have a drink. The old madness came over him, and in three weeks he had drunk out every penny of his cheque. At one of the public-houses at which he stayed he had champagne at a guinea a bottle in a bath in front of the house, with a pannikin by the side for all comers to help themselves."

The author thinks that most of the working men in Queensland spend the whole of their earnings in drink. Yet these poor men are not habitual drunkards. The extreme monotony of their lives makes some excitement at times necessary. And their usual diet, consisting of tea, beef and damper, renders a change of living indispensable to ward off scurvy and other diseases. Were the public houses decently managed and the liquor sold in them tolerably pure, much of the evil would be avoided. Mr. Finch-Hatton looks on the publicans as little better than murderers. He asserts that they habitually adulterate their liquor with the most violent poisons to an extent which renders a very moderate consumption sufficient to destroy life. Bluestone and tobacco are the favourite drugs in use, the effect of which is to cause temporary insanity, accompanied by raging thirst. He has seen a strong sober man driven perfectly mad by two glasses of so-called rum. They had not the slightest appearance of being drunk, but every appearance of having been poisoned, and did not recover from the effects for a fortnight. The legislature of Queensland, with a speaker who has thrice been convicted of felony, is too much occupied with intrigue and party contests to attend to such questions, and doubtless the publicans would bring sufficient pressure to avert any legislation against their evil practices.

Mr. Finch-Hatton has some pages on the subject of Federation, and he is guided in this, as in his severe strictures on the government and legislature of Victoria, by much sound sense. We have seen his name among the candidates for the next Parliament, and we hope he will succeed, and have an opportunity of bringing before the House his views, backed as they will be by knowledge and experience gained in the colonies, on a subject which is of vital importance to the empire.

We cannot say much for the illustrations, and the map is quite unworthy of the book.

WILLIAM WICKHAM.

History of Ireland for Schools. By William Francis Collier. (Dublin.)

IN the discussion of educational questions, whether in England or Ireland, the study of history of course takes a prominent position. It is agreed on all hands that to teach the bare facts in the biographies of kings, though useful as an exercise of what may be called chronological memory, is useless for anything like a cultivation of the reasoning faculties of the mind or the creation of an intelligent interest in the great world of humanity—past, present, and to come. But it does not yet seem to have occurred, even to the enlightened, that in Irish schools and Irish families the philosophical study of history—history in the general and, above all, history in the particular—is of more importance to the young than can be estimated. It has been argued that Ireland has no history; and it is certainly true that the story of English interests in Ireland form the staple of what is taught as Irish history to classes in schools. But to understand these very interests, to realise distinctly that after the twelfth century the history of Ireland becomes the story of an actual fusion of races in Ireland, and the fierce struggle of the Anglo-Irish against the mother-country, when Geraldines, De Burghs, and O'Neills often joined forces and interests against a common foe, is to have made no small step in Irish history, and to have arrived at a dim perception of some, at least, of the causes of Irish woes. And then to bring Irish children to the fountain-head for information concerning facts, which they hear daily so hotly, and often, alas! so ignorantly and disloyally discussed, might surely do something to stem the future tide of obstruction and outrage. But is this to be done by text-books? Scarcely, we fear.

Dr. Collier's manuals of history and literature are so widely used in schools and families that we have the less compunction in discussing the probable usefulness of the one before us. It bears "For Schools" on its title-page; "For Teachers" we should think the better title. For schools, its probable fate (we have known much of Dr. Collier's manuals, and speak of them with all respect) will be to be learnt by heart with much difficulty—the names and facts are so strangely unfamiliar to Irish children—and then elaborately forgotten. For teachers, the facts, clearly and, as far as we have been able to judge, accurately given, will render the book valuable as a reference to ensure accuracy in their own commentaries on the philosophical, or, rather, truly historical, bearing of the facts. But where is this intelligent commentary to come from, when the Irish assistant-master or mistress has no more philosophical idea concerning Ireland than a frantic impression that the "hated Saxon" is at the bottom of all her varied woes, or an equally frantic desire, on the other side, that the whole Irish race might be extirpated at one blow?

Dr. Collier begins with a sufficiently interesting account of Ireland before the Conquest, detailed enough, we fear, to puzzle young learners, yet with no special mention of a subject without which there can be no true comprehension of Irish history—viz., the tribal system, the system on which Ireland was governed and divided. A clear account of the working of this system, together with

its after influence on many a "land question," would be worth many names of mythical Irish chiefs. When Dermot M'Morrough, for instance, parted so lightly with lands to the Norman adventurers, a notable point in the transaction was that the Irishman, with his tribal views of land, was as wholly ignorant of what he was granting as the Norman, holding by feudal tenure, was of what he was demanding. This is a typical instance of English misunderstanding of Irish circumstances, and explains much that follows. In Church matters, again, unless Church organisation in Ireland can be distinctly seen to be as entirely different from the English and continental system as the tribal system was from the feudal, no true idea can be obtained of the differing characteristics and consequent needs of the country. Henry II. had no idea of these things, neither, we fear, have modern Irish schools, to say nothing of their teachers. They will not learn very distinctly from this little book that the so-called conquest of Ireland was but a fierce struggle between the king of England and certain disaffected nobles of his, who had lost their own lands in England, and were in danger of acquiring too many in Ireland. The long years of oppression and misrule that followed were due to England's weakness rather than to her wickedness, to the impossibility of establishing a feudal system in Ireland, where the king, though feudal lord, had no lands at all, and those who held under him had far more extensive estates than were ever granted to barons in England. Thus the necessary binding together was wanting, and the inevitable contact with the Irish tribal system did the rest.

Certain vivid touches, we think, are wanting in Dr. Collier's manual, as in many another. St. Patrick working a social as well as religious reform, and the after aspect of Ireland, with its towns of schools, always at the entrances of the rivers, thus falling an easy prey to Danish invaders; O'Neill, with his dream of uniting racked and divided Ireland under one head, Edward Bruce (a dream not so faithless to Irish interests as might at first appear) and his earnest and pathetic appeal to Pope John XXII.; the Red Earl, type of the turbulent Norman adventurers whom Henry II. had dreaded; the picturesque Art M'Morrough and his meeting with the Earl of Gloucester in the Vale of Ovoca—all these are named, but their significance scarcely indicated with sufficient force.

But space fails us; and over the burning ground of later Irish history we are not disposed to walk. It is to the right understanding of earlier times that we must look to form the Irish judgments of later events. And if children in Ireland continue only to learn dry historical facts by heart, where is this understanding to come from? A history of Ireland for scholars may exist; but the ideal history of Ireland for schools, with simple and vivid description, and clear, impartial, yet philosophical setting forth of cause and effect, physical and spiritual, so to speak, has yet to be written. KATHLEEN KNOX.

La Poésie du Moyen-âge: Leçons et Lectures. Par Gaston Paris. (Paris: Hachette.)

WE are very glad to see that M. Gaston Paris has collected in volume form some of his essays on mediæval literature; and the only fault we have to find with the book is that it might have held still more. Thus, not to speak of articles in *Romania*, there is, if our memory does not play us tricks, an admirable protest against the strange depreciation of French mediæval literature common with certain French critics, which is buried somewhere in the *Bulletins* of the Société des Anciens Textes. However, perhaps M. Paris may be keeping this and other work for another volume, which will in its turn be welcome.

The present contains seven articles or papers, all of which seem to have been either delivered at the Collège de France or read at the Académie des Inscriptions. Four of the papers—on the *Chanson de Roland*, from a patriotic and historical point of view chiefly; on that curious "comedy-sister" of *Roland*, the *chanson* of Charlemagne's Eastern pilgrimage; on the Hermit story, known to all Englishmen through Parnell's version and its transformations; and on old French versions of the *Ars Amoris*—are all valuable and interesting papers of their kind. They are, however, both shorter and, on the whole, less important than the two first and the last papers, dealing respectively with "La Poésie du Moyen-âge," "Les Origines de la Littérature française," and, lastly, with the author's father, Paulin Paris. This last, with its vivid sketch of a singularly useful, distinguished, and happy career, is, perhaps, the most likely to please the general reader. The fact that the devotion of father and son to French literature, though equally strong and equally fruitful, differs a little in the manner of its expression, gives a precision and savour to the panegyric which is sometimes wanting in similar work. It is, however, upon the two first essays that we should specially rest the claims of the book. On such subjects every literary man knows how easy it is to generalise (even to generalise with a certain amount of brilliancy) at the expense of very slight erudition, and with the result of little or no benefit, sometimes of positive harm, to the reader. The solid learning which underlies M. Gaston Paris's bold and steady outline sketches can perhaps only be appreciated by one who has (to however much less an extent) some learning of the same kind. No part of political or literary history has suffered more than the history of the Middle Ages from the habit which men of genius have of taking partial views and generalising from them. And it is difficult to say whether the rosy-coloured Middle Age of the early romantic writers in England and Germany or the pitch-black Middle Age of Michelet is farther from the truth.

M. Gaston Paris is always sober, though never dull: he is always prepared with the sufficient particular instances, though never afraid to lay down the general law. It is not often that a single volume of literary essays contains at once examples of such breadth of outline as these two papers, and of such accuracy of detail as the papers mentioned above. GEORGE SAINTSBURY.

NEW NOVELS.

Entangled. By E. Fairfax Byrrne. In 3 vols. (Hurst & Blackett.)

A Second Life. By Mrs. Alexander. In 3 vols. (Bentley.)

The Chronicles of Castle Cloyne; or, Pictures of the Munster People. By M. W. Brew. In 3 vols. (Chapman & Hall.)

Zig-Zag: a Quiet Story. By Gertrude M. Ireland Blackburne. (London Literary Society.)

Lanherst: a Story of Sixty Years Ago. By Mrs. Essell. (Elliot Stock.)

Kamēhamēha: A Romance of Hawāii. By C. M. Newell. (Putnam's Sons.)

The Story of Denise. (Maxwell.)

Under the Snow. By Catherine Macquoid. (S. P. C. K.)

THERE cannot, we think, be any doubt in the mind of a competent reader that *Entangled* is a story of real genius. I do not mean genius of that highest and most commanding order which takes us captive in such books as *Jane Eyre*, or *Vanity Fair*, or *Adam Bede*, but genius nevertheless—that fine masterliness of handling which comes of the union of veracious imaginative vision with the power of rendering it, or one might say of vision alone, for the rendering is in comparison a subsidiary thing, a matter of acquirement and culture. Miss Byrrne shows her full powers not in creation of character or invention of incident, for her personages in repose do not specially impress us, and her incidents have no great artistic value; but in her marvellously vivid and impressive treatment of strong or delicate situations. Many an inferior novelist makes us feel more deeply interested in A. or B. as a mere man or woman; it is only when Miss Byrrne has brought A. and B. to a point where their lives intersect in some fine crisis of emotion that we come really under the spell of her imaginative enchantments. But when once we are subjugated there is no escape. The writer holds us as the ancient mariner held his listener, and for the time we live only in the lives which are acting or agonising before us. Undoubtedly, the most interesting person in Miss Byrrne's story is Aurelius Brackenbay, the half-lost soul to whom comes one neglected impulse which might have been his final redemption; but even Brackenbay, interesting as he is in himself, does not take our imaginative sympathy by storm until we reach that profoundly and terribly impressive scene in which he confesses to the wife who has ceased to trust him the horrible story of how his dull-witted brother has expiated upon the scaffold the crime for which he himself ought to have suffered, and points out how she herself has unwittingly set the hounds of justice upon his track. I can remember nothing of the same kind in the fiction of the last few years which in intensity of powerful realisation can be set by the side of this chapter. The criminal, who has been something much worse than a mere criminal, brings his crushing misery so intimately home to us that for a moment we actually feel tempted to set ourselves on his side and join in his fierce impeachment of the stainless, generous, selfless wife whom he has wronged

so cruelly. The feeling is but momentary: we set it aside with a thrill of shame; but to have induced such a feeling even for one brief instant is nothing less than a triumph. There is another conversation between Heloise and Jasper Warrenne which, in a much quieter way, is equally memorable; but the book abounds in these things, and they suffice to make its impression sharp, deep and enduring. Those who read *Entangled* a second time (and with one perusal no reader ought to be satisfied) will have time to note something that they may miss at first—the intellectual penetration and fine literary finish of some of those reflective passages which are sacrificed so remorselessly in the fatal facility of skipping, but which cannot be skipped without serious loss, for they have both pregnancy and point. As a last word upon a noble novel, I must endeavour to vindicate my judicial discrimination by the critical observation that Jasper bears far too strong a likeness to Daniel Deronda.

MRS. Alexander is an approved manufacturer of fiction, and her wares have found such favour with the ordinary circulating library novel-reader that serious criticism of them, whether favourable or the reverse, would probably be as ineffectual as criticism of Pears' Soap or Eno's Fruit Salt. A novel, like a moulding, can be produced either artistically or mechanically; and, as in both cases, there are numbers of people who are quite satisfied with the machine-made product, it would be unfair to deal very severely with Mrs. Alexander because she prefers the method of manufacture to the method of art. Her characters, like certain designs, have no special resemblance to any living or possible original, but they are so familiar that their want of lifelikeness does not strike us until we begin to examine them. Her incidents are the somewhat dingy "properties" of generations of novelists, but they have gained the charm of custom; and as she can weave her hackneyed materials into a fabric which at first sight has a look of novelty, the subscriber to Mudie's is satisfied, and perhaps the critic has no right to complain. In opening *A Second Life* we know at once that we are on well-trodden ground. When in the first chapters of a novel we read of the sudden death of a reputedly wealthy man, who leaves behind him a widow and a beautiful daughter, we do not need to be told that the daughter is found to be penniless; and when the unpleasant but wealthy suitor puts in an appearance we are quite sure that the new heroine will follow the example of scores of predecessors by marrying him in order to ensure comfort for her mother. Of course the wealthy suitor turns out to be a brute of a husband, and in devising a plan of escape for the heroine there is at least some room for original ingenuity on the part of the novelist. Mrs. Alexander has really hit upon something new. The ill-used wife, with her husband and a party of friends, are engaged in an Alpine climb. She lingers behind the rest of the party with one of the guides, who has been well bribed to play his part, and at a convenient moment she slips away and hides behind a rock. The guide raises a cry and says that he has seen her fall down a crevasse; and, though of course her body cannot be seen, no one thinks of doubting his statement, and her death is taken for

granted by everybody. Then she re-appears and lives the "second life" which gives the book its title, until we are half way through the third volume, when the exigencies of novel manufacture compel the author to set things in train for a comfortable conclusion. Everything is managed in a most satisfactory manner; and so we reach the end of a novel which, though as unnatural and improbable as a story well can be, is really not destitute of a certain kind of entertainment.

IRIsh novels have gone somewhat out of fashion, but if we have many such stories as good as *The Chronicles of Castle Cloyne* there is certain to be a revival of a once popular vogue. The author has such intimate knowledge of the life with which she deals, such fine observation, such facility in vivid portraiture, such command of unforced humour, and of pathos which touches us intimately without harrowing us painfully, that we are led along from the first page of her novel to the last with no abatement of sympathetic interest. This certainly is not a machine-made story; it reads rather like a transcript from life, and has the charm which belongs to all work which is the outcome of creative enjoyment. There is a fine combination of realisable detail with panoramic breadth, and the story is successful alike as a study of individual character and as a picture of the larger aspects of life in Munster in the years immediately preceding and succeeding the terrible potato famine. Oonagh MacDermott is not only a sweet and winning heroine, but a strong and noble one; and the author has showed both courage and originality in refraining from making her either one of a pair of happy lovers or the broken-hearted damsel who is favoured by some modern feminine novelists. Most writers of fiction seem to take for granted Byron's dictum that love is "woman's sole existence," whereas the truth is that it is nothing of the kind; and a work of imagination which does something to weaken the force of a sentimental falsehood is worth something, if only on that account. It will, however, be justly inferred from what has been said that *The Chronicles of Castle Cloyne* has other and even more important claims to the consideration of those who can appreciate a story which is at once good in itself and admirably told.

MISS Ireland Blackburne's *Zig-Zag* is written in accordance with a certain theory of the art of fiction. It is, therefore, difficult, almost impossible, to estimate her novel adequately without discussing her theory exhaustively, and for such discussion space is wanting. "It was," we learn from the preface,

"a fancy of the writer's to see whether anything could be done by drawing every-day characters in every-day life, without any attempt at introducing the atmosphere of glamour and sensation which belong to those whom children call 'people in books';"

and it need hardly be remarked that the artistic value of this "fancy" depends entirely upon the meaning attached to the words "glamour" and "sensation." If Miss Ireland Blackburne uses them as equivalents for any kind of unreality, it is clear that it is well to avoid them; but, if I may judge from her practice, I should infer that when she declares against "glamour" and "sensation" she is indulging in a veiled impeachment of that process of selection which is adopted not deliberately,

but instinctively, by every true artist. *Zig-Zag* is a clever book, but it is not so good a book as it would have been if it had been written independently of a theory. There are too many people in it to begin with; and even the interesting people are portrayed photographically rather than artistically, so that our interest is lost in a crowd of details that make no appeal to the imagination. Miss Ireland Blackburne has learned the truth that fiction is a mirror of life; but she has yet to learn that it is a magic mirror which reflects only its essential and characteristic elements.

Lanherst is a readable story, not in any way noteworthy, but carefully and pleasantly written. Mrs. Ensell is probably a warm admirer of Mr. George MacDonald, for many of the reflections made by herself and her characters are very much in his peculiar manner, and they occasionally betray some of his fine and penetrating insight. It must, however, be added that the construction of *Lanherst* is exceedingly loose, and that the young men and maidens are decidedly disappointing.

It is possible, indeed probable, that out of the materials at his disposal Mr. Newell might have made a very interesting book on the history and folklore of Hawâii; but it is painfully clear that he has been unable to weave them into an interesting romance. As I have to admit that I have found it impossible to read *Kaméhaméha* I have hardly the right to criticise it, though it may be that a certain measure of criticism is involved in this admission.

The Story of Denise bases its claim to consideration on the fact of its being "founded upon the celebrated comedy drama by Alexander Dumas." Without passing any opinion upon the foundation, it may be said that the superstructure is of rubbish all compact. As a column of comment would only be a dilution of this statement why should it be written?

Mrs. Macquoid always writes charmingly, and the two prettily told and prettily illustrated stories in her latest little volume may be heartily commended to the young readers for whom they have been written.

JAMES ASHCROFT NOBLE.

CURRENT LITERATURE.

The Wise Women of Inverness, and other Miscellanies. By William Black. (Macmillan.) There is not much substance in these "miscellanies"; but, as we have read most of them with a good deal of pleasure, we are not disposed to find fault with Mr. Black for collecting them into a volume. "The Wise Women of Inverness" is a story of an old farmer who has defrauded his niece of her property, and, when her lover threatens him with "the lawyers," has recourse to supernatural aid for the purpose of causing the young man's death. The "wise women" play him false, and the tragedy ends in rather commonplace farce—the uncle, while engaged in his incantations, receiving a terrible fright from the apparition of a gallows (drawn in phosphorus), after which he returns to the path of honesty, and the course of true love thenceforward runs smooth. The character of the old scoundrel, with its mixture of abject superstition and malignant cunning, is admirably depicted. The "Rhymes by a Deer-

stalker" are, as the author honestly states, "reprinted chiefly from the novel entitled 'White Heather,'" which is now appearing in *Longman's Magazine*. We cannot say that they show signs of any original poetic gift, but some of the songs are pleasing. The best of them, perhaps, are the imitations of the manner of the old Scotch ballads. "A Gossip about the West Highlanders" is a disappointingly slight sketch of the characteristics of the people whom the author has portrayed so well in more than one of his novels. In "A Few Days more Driving" Mr. Black introduces once more some of the personages familiar to us in *The Strange Adventures of a Phaeton*; and there is something of the charm of that agreeable book in his account of a coaching excursion to Guildford, Winchester, and Salisbury—founded, it would seem, on the real experiences of a company of travellers whose doings, if we are not mistaken, have already been related in print. "The Supernatural Experiences of Patsy Cong," which concludes the volume, we had read before in a magazine. It was scarcely worth reprinting.

Imperial Federation. By the Marquis of Lorne. (Sonnenschein.) This is a valuable treatise from a very competent authority. Lord Lorne's experience as Governor General of Canada entitles him to be listened to with respect. And he puts forward his own views with a moderation which must commend itself to all thoughtful and sensible men. He shows very conclusively how all important their connexion with the Mother Country is to our most thriving colonies, and how thoroughly they are aware of it. Our present system is capable both of improvement and development, but he warns his readers that it is far too early to have any out-and-dried schemes as to the best manner in which closer union may be effected. The idea of "Imperial Federation" has already been received with anything but favour in some of the colonies, no doubt principally from a fear lest it should affect their pockets. One great difficulty is to form a scheme which shall reconcile the varied interests of every colony. This may seem to some insuperable, and Lord Lorne is against proposing any changes unless we first find that the colonies desire them. He takes as his motto "Go slow."

The Connection between England and Scotland. "Highways of History." By Ella S. Armitage. (Rivingtons.) The history of the relations between England and Scotland, from the Teutonic conquest of Northumbria down to the Act of Union, is a subject which might well afford material for a bulky volume. Mrs. Armitage has attempted the difficult task of giving an outline of this history in the compass of 162 small pages. While free from confusing minuteness of detail, the book shows competent knowledge of the subject, and the style is throughout lucid and agreeable. The difficult question of the cession of Lothian, and its causes and consequences, is treated with a correctness of appreciation which is wanting in some works of much greater size and pretension. We would suggest that, if a second edition should be called for, the author should append a chronological table, showing in parallel columns the principal events in the history of the English and Scottish kingdoms.

The Chinese painted by Themselves. By Col. Tchong-Ki-Tong, Military Attaché of China at Paris. Translated from the French by James Millington. (Field & Tuer.) This little book is very good reading even in its English form, though we rather fancy that the French original, which we have not seen, has not quite received justice from the translator. If it is really the unassisted production of the Chinese gentleman whose "childlike and bland" coun-

tenance is presented to us in the frontispiece, he deserves great credit for his mastery of European modes of expression, and for his keen insight into the peculiarities of European society. It is evident that the faculty of humour is not exclusively a Western possession. Nothing could be neater than the following remark, which the writer appends to his chapter on Chinese proverbs:

"These maxims have no known author; they live in memory, and often occur in conversation and writing. They are habits of the mind. There are also others with an odour of realism inadmissible by delicate tastes, and which I pass over in silence, not knowing Latin enough to translate them, and brave—my own scruples. But, perhaps, one day I may speak of them again, when I have studied Rabelais."

The book contains abundance of good-humoured sarcasm about the blunders made by European travellers in their descriptions of China; and the author's reply to the charge of "suspiciousness" brought against his countrymen is particularly happy. He says that he finds the society of the artistic classes more to his liking than that of any other class among Europeans. With a good deal of archness, he confesses his inability to see the use of the legal profession, which, it seems, has nothing corresponding to it in his own country. On the subject of education, Col. Tchong observes:—

"I have noticed that in Europe the State is more particularly pre-occupied with making programmes than in teaching methods. I confess this appears to me logically faulty, and there are many chances that instruction thus presented, whatever the spirit of it may be, will bear but little fruit. Only the spirit of the instruction is, in truth, attended to; and it is considered satisfactory, and the end attained, if the masters leave off drawing their examples from religious morality, and select them from a manual of Positivist philosophy. In fact, the Government concerns itself in the system of instruction with a certain number of details which concern opinions, and the system is imagined to be perfect if it contains some of the high-sounding fashionable phrases."

Although the interest of the volume, perhaps, consists chiefly in its revelation of the aspects in which European life presents itself to a stranger from the far East, the author's account of the institutions and manners of his native land is well worth reading, and will considerably astonish those who are accustomed to regard the Chinese as a nation of semi-barbarians.

Introduction to our Earliest English Literature, from the Earliest Times to the Norman Conquest. By W. Clarke Robinson. (Simpkin, Marshall & Co.) This book, notwithstanding its comprehensive title, deals solely with the Anglo-Saxon poetical literature, giving short extracts from the original texts, accompanied by translations and introductory remarks. Nearly every existing Anglo-Saxon poem of importance is represented in the specimens. In the extracts Dr. Robinson has adopted the orthography given in the various editions from which his selections were taken. There is something to be said for this practice, but the result is a curious medley. Some of the versions are very good, but others betray extreme carelessness. In one instance ("Finnesburg," line 5) Dr. Robinson has actually adopted in his translation (without any note of the fact) a reading totally different from that shown in his text. Neither of these readings is that of the MS., the one being a conjecture of Thorpe, the other of Ettmüller. The outline of Anglo-Saxon grammar would have been better omitted, as it is too meagre to be of any practical use. The Introduction, containing a sketch of the early history of the English race, and of its relation to the other branches of the Teutonic family, will be instructive to readers to whom the subject is new, but shows an unscholarly

inexactness of statement. In a foot-note Dr. Robinson makes the strange remark that "perhaps Mannus had something to do, as well as the Moon, with the naming of Monday"! He also adopts Grimm's exploded suggestion that the words "Goth" and "God" are etymologically allied, and seems to look with favour on the identification of the names "Goth" and "Jute." At the end of the volume (in order, as the author ingenuously observes, "to justify the title of the book") there is appended a "List of Anglo-Saxon Prose Writings," in which, by an extraordinary blunder, the Blickling Homilies are said to be in the Northumbrian dialect. The Rushworth Gospels are also classed as Northumbrian, although the language of the greater part of the version is Mercian. With careful revision the work might be rendered very valuable, but it is a pity for Dr. Robinson's reputation that he has allowed himself to publish so hasty and inaccurate a production.

"For Good Consideration." By Edward Butler. (Elliot Stock.) The author of this little volume of essays, or his publisher for him, has adopted a means of "squaring the critics" which is not only legitimate, but laudable. Until tastefully got up books are much more common than they are at present, no book-loving reviewer can have the heart to be very cruel to a volume which is printed in such excellent old-face type, and so perfect in its form of page, disposition of margins, and bevelled cloth binding. We have nothing worse to say of Mr. Butler's essays than that they will be highly acceptable to the many readers who delight in amiable moral and religious commonplace. The author seems to be an elderly Nonconformist solicitor, with the mildest of sentiments on all subjects except church establishments, to which he entertains a strong antipathy. The first essay, "A New Exercise for Legal Maxims," consists of twenty-five little sermons on such texts as "Qui facit per alium facit per se," "Caveat emptor," "Lex non cogit ad impossibile," and so forth. Probably these venerable maxims were never before turned to purposes of religious edification, and the effect is decidedly funny. The writer tells one or two good stories from his professional experience—one of them relating to a lawyer's bill, the last item in which was, "To attending upon you when I found you were dead, 6s. 8d."

The Training of the Instinct of Love. By Francis Burdett Money Coutts. With a preface by Rev. Edward Thring. (Kegan Paul, Trench & Co.) Some time ago, Mr. Coutts published a reprint of Jeremy Taylor's *Marriage Ring*, one of the most poetical works of the man who has been said to have possessed "the richest imagination of any divine of the Reformed Episcopal Communion." Mr. Coutts's own book is written much on the same lines. Its direct object is to improve his readers, but we doubt whether the poetical diction which was found useful in the seventeenth century is the best vehicle in which grave truths can be communicated in the nineteenth. There is a discursiveness in Mr. Coutts's style which takes away the mind from the main object of the book, and causes the many true and wise things he says to lose their effect. The author of the *Anatomy of Melancholy* himself was not more fond of making quotations. We are in substantial agreement with very much that Mr. Coutts says, and are fully aware that the subjects he touches upon require searching treatment: the need is pressing, these are not times for delay. We believe, however, that the scientific aspects of the subject are, at present, more important than the imaginative. All sensible people, we should imagine, now concede that ethics is a science,

and that therefore, all our instincts demand logical as well as imaginative treatment.

Elf Island: a Fairy Tale. By Capt. T. Preston Battersby. (Griffith, Farran & Co.) This is a thoroughly good tale for children—pure and innocent in tone, without being charged with the twaddle which, with some persons, passes for religion. Holy things are spoken of as holy, but the reader is not at the same time informed that wicked actions are natural, and good ones the result of some special supernatural grace. Many persons who have long passed out of the mystic realm of childhood will be pleased by the wilder parts of the narrative. If we were in a mood for fault-finding, which we are not, we might remark that the points of junction between those things which might have happened and those things which, according to our present lights, are impossible, are not sufficiently hidden. Capt. Battersby evidently possesses the faculty for writing books which will stimulate the imagination of children. It is a gift much to be envied. We trust that he will not permit it to remain uncultivated.

The Life and Speeches of the Marquis of Salisbury. By F. S. Pulling. In 2 vols. (Sampson Low.) Mr. Pulling is to be congratulated on two accounts: first, for the opportuneness of his publication; and, second, for being able to fill his two volumes with so much excellent literary matter not of his own composition. But we must be allowed to add that a "some-time professor of modern history" might have been expected to show a little more impartiality, if not in praising his hero, at least in vilipending his political opponents.

Our Cruise to New Guinea. By Arthur Keyser. (Ridgway.) This pleasant little narrative might have appeared more advantageously as a magazine article. We can hardly agree with the author, or with the friends who suggested its publication, that it "contains several facts about New Guinea that are little known"; but it gives a lively picture of the ceremonies connected with the proclamation of the British Protectorate, the reception and appearance of the chiefs, shooting excursions on shore, and the lighter incidents of the expedition generally.

NOTES AND NEWS.

A SUBSCRIPTION-LIST is being formed in England with a view to presenting a free-will offering to the American poet, Walt Whitman. The poet is in his sixty-seventh year, and has—since his enforced retirement, some years ago, from official work in Washington, owing to an attack of paralysis—maintained himself precariously by the sale of his works in poetry and prose, and by occasional contributions to magazines. Mr. W. M. Rossetti, 5 Endsleigh Gardens, Euston Square, acts as treasurer, and Mr. Herbert H. Gilchrist, 12 Well Road, Hampstead, as hon. secretary for this scheme.

UNDER the title of *Bibliographia Liturgica: Missalia Ecclesiarum et Ordinum*, Mr. W. H. James Weale has in the press a catalogue of books in use in the offices of the Church. It will give, under the name of every church, whether cathedral or collegiate, and of every religious order in the enjoyment of a special use, a list of its printed Missals. The description of these, based on personal collation, is accompanied by a reference to the works in which information relating to them is to be found, and the libraries in which copies are preserved, thus affording the means of following the history of the use from the earliest-printed edition down to the present time, or to the introduction of the Tridentine Books. The catalogue will be preceded by a list of the works

consulted, and followed by three appendices containing: (1) A chronological list of all missals printed prior to the year 1531; (2) An alphabetical list of liturgical printers and publishers, with the missals issued by them; and (3) A list of all places in which missals have been printed. The work will be published by subscription, through Mr. Quaritch; and the edition will be strictly limited to three hundred copies.

WE hear that a memoir of Hugh Conway is in preparation, to be published as a volume of Arrowsmith's "Bristol Library," which was inaugurated by *Called Back*. It will be based largely upon his letters, and will contain several of his early unpublished writings, together with an account of his later works. The first book he ever published, we may add, was a collection of songs and verses entitled *A Life's Idylls, and Other Poems* (1879).

THREE short stories by Hugh Conway were found by his widow among his papers after her return to England, and have been secured by Messrs. Tillotson & Son, of Bolton, who will, in the first instance, issue them serially in newspapers published simultaneously in all quarters of the world, in conjunction with their Octave of Short Stories, by Mr. William Black, Miss Braddon, Miss Rhoda Broughton, Mr. Wilkie Collins, Mr. T. Hardy, Mr. Joseph Hatton, Mrs. Oliphant, and "Ouida." "Ouida's" contribution, "A Rainy June," was the first story she ever wrote for newspaper publication; and these short stories by Hugh Conway will be the first from his pen to appear in this form, the longest, entitled "The Story of a Sculptor," being a sketch in three numbers. We believe that these are the only short complete tales the author left in MS.

FOR the next volume of the new edition of the *Encyclopædia Britannica*, Mr. Theodore Watts has written on "Rossetti," Mr. H. M. Stephens on "Robespierre," and Mr. W. E. A. Axon on "William Roscoe."

WE understand that more than 50,000 copies of Dr. W. W. Hunter's *Brief History of the Indian People* have been issued in England and in India, including translations in the vernacular languages. A Burmese translation has been published at Rangoon within the last two months.

The Parliamentary History of the Last Half Century is the title of a work by Mr. John Raven announced for immediate publication by Mr. Elliot Stock.

MR. E. L. ARNOLD, son of Mr. Edwin Arnold, and author of a book entitled *On the Indian Hills* (1881), has in preparation a work on *Coffee: its Cultivation and Profit*, which will be published by Messrs. W. B. Whittingham & Co.

MESSRS. CASSELL & Co. have purchased the entire stock, copyright and plates, of the series of "Miniature Poets" hitherto published by Messrs. Kent & Co.; and the books in future will be issued under the title of "Cassell's Miniature Library of the Poets."

MR. ELLIOT STOCK is about to issue a cheap edition of Mr. Birrell's *Obiter Dicta*, which seems to have met with as cordial a reception in America as in this country.

MESSRS. RIVINGTONS have published a second edition of Canon Liddon's sermon, *A Father in Christ*, to which is prefixed a rejoinder, slightly longer than the original sermon, to Dr. Hatch's criticism in the June number of the *Contemporary Review*.

MR. RALSTON'S "Story-telling to Children of All Ages" at St. James's Hall last Tuesday was a charming entertainment, of which the worst that can be said is that the elder "children" predominated unduly over the younger. The

pleasure which it is Mr. Ralston's delight to give was enhanced by his generous consideration for those little matters that young people most appreciate.

MESSRS. CASSELL & Co. will issue next week a new edition of their *Handbook of the New Code*, by Mr. J. F. Moss, clerk to the Sheffield School Board, containing the latest instructions to inspectors, the new syllabus on drawing, &c., as recently issued by the Education Department.

MESSRS. SIMPKIN, MARSHALL & Co. announce a second edition of the Rev. T. Campbell Finlayson's criticism of Prof. Drummond's *Natural Law in the Spiritual World*, entitled *Biological Religion*.

It seems that the practice of publishing novels as *feuilletons* in newspapers is becoming firmly established in this country, though still confined to the provincial press. Messrs. Tillotson & Son, of Bolton, who claim to be the originators of the practice, have certainly carried it to an extraordinary development. They have on their list some dozen novelists, including the names of Mrs. Oliphant, Miss Braddon, Mr. Wilkie Collins, Mr. William Black, and Mr. Walter Besant, who have promised to supply them with stories for serial publication in newspapers for the next two years. We are assured that publication in this form does not injure the subsequent circulation of the book in the orthodox three volumes, which shows that an entirely new class of readers has thus been found for writers who are already popular.

THE last issue of Mr. Quaritch's catalogues deals with the history, ethnology, and philology of America. Among the rarities included are several Aztec painted records; copies of Lord Kingsborough's *Antiquities of Mexico* and of Audubon's *Birds of America*; a large number of MSS., treating of the early Spanish settlements, from the collection of the late Don J. F. Ramirez; and a series of autograph letters of American statesmen between 1796 and 1821.

To the notice in the ACADEMY of last week of the new Hungarian life peers should be added the names of M. Paul Hunfalvy, the philologist, and of Prof. Stoczek, the mathematician.

WITH reference to the notice in the ACADEMY of last week of *The Confessions of an English Opium Eater* in the "Parchment Library" series, which purports to be reprinted from the first edition of 1821, Mr. Bertram Dobell writes to us that he has a copy of the book, and that the date on the title-page is 1822, thus confirming our conjecture.

AMERICAN JOTTINGS.

It is interesting to find that Gordon's *Journals at Kartoum*, which are published in this country for one guinea, are issued in America from advance sheets, and therefore by consent of the English publishers, at two dollars (8s.).

A CURIOUS question concerning the new edition of the *Encyclopaedia Britannica* is reported from America. It is said that the proprietors—presumably the English proprietors—have sold the original plates to Messrs. Scribners, who intend to bring out a cheap edition for circulation in the United States and also in Canada. But when Messrs. Scribners sent to Canada a large consignment of unbound copies, the Customs authorities at Montreal demanded that the *ad valorem* import duty should be determined not by the price proposed to be asked for the cheap edition, but by the price charged in England.

ANOTHER firm of American publishers, Messrs. Hubbard Bros., of Philadelphia, announce a series of supplementary volumes to the *Encyclopaedia Britannica*, intended to supply omis-

sions and to give biographies not only of persons who have died since their place in the alphabet was passed, but also of persons still living.

MESSRS. D. LOTHROP & Co., of Boston, announce a volume by Miss Rose Kingsley, entitled *The Children of Westminster Abbey*, which will be abundantly illustrated.

THE American Dante Society announces that Prof. E. A. Fay's concordance to the *Divina Commedia* will probably be finished by the end of next year.

MR. FRANCIS PARKMAN, the historian, has written an *Historic Handbook of the Northern Tour*, including Lakes George and Champlain, Niagara, Montreal, and Quebec.

THE second volume has just appeared of Prof. McMaster's *History of the People of the United States*, covering the period from 1790 to 1804.

THE Boston *Literary World* of June 13 contains the first part of a Ruskin bibliography, based to a large extent upon that of Mr. Shepherd.

WHEN the tablet erected to commemorate the life and services of Louis Agassiz was unveiled at Cornell University last month, the following letter from Dr. Oliver Wendell Holmes was read:—

"I regret that it will not be in my power to visit Ithaca, and be present at the unveiling of the tablet in memory of Louis Agassiz. My relations with the illustrious professor were of long standing and always most cordial, and to me delightful. It would be a great pleasure to me if I could be with the friends who are to do honour to his memory. We have borrowed distinguished men from the old world before his day. France lent us Lafayette. Germany spared us Steuben to lead and to discipline our armies. Switzerland has already sent us Albert Gallatin, the counsellor of Washington, the statesman identified with the history of the Government for more than half-a-century. He was still living when his fellow-countryman, Agassiz, reached our shore to blend his life with our American civilisation as unreservedly as did the great financier, diplomatist and scholar who had preceded him. The special work of Agassiz was to establish the scientific independence of his adopted country. The dream of his ambition was to make the favoured centres of the New World strong enough in their attractions to draw students from the older schools of Europe. No pent-up Utica could limit his aspirations. No, not even your wide-margined and wide-minded Ithaca could have filled the large measure of his magnificent ideals. 'How much money would you really like for your museum?' I once asked him. 'Ten millions,' was his instant answer. This enthusiasm spread among all with whom he came in contact. Students followed in his steps as the disciples of a new religion tread in the tracks of their teacher. This eloquence led captive the most obtuse assemblies, the least tractable of listeners. The purses of rich men opened like the mouths of his cyclostomata. The hard-featured country representatives flocked about him as the fishes gathered to listen to Saint Antony, as the birds flocked to hear the sermons of Saint Francis. It is vain that we should try to describe his fascinating personality, the memory of which must fade away with this passing generation. But his noble contributions to science will keep his name in lasting honour, and the vast museum which he founded will be his proud monument as long as science has its altars and its priesthood in our Western hemisphere."

ACKNOWLEDGMENTS.

WE have on our table:—*The Country Banker*: his Clients, Cares, and Work, after an Experience of Forty Years, by George Rae (John Murray); *The Ways of Women*: a Study of their Virtues and Vices, their Charms and their Caprices, by Sidney Yorke (Maxwell); *The Purpose of Theosophy*, by Mrs. A. P. Sinnett (Chapman & Hall); *Hereditary Peers and Here-*

ditary Paupers: the two Extremes of English Society, by Samuel Hughan (Sonnenschein); *The Greater Origins and Issues of Life and Death*, by J. J. G. Wilkinson (James Speirs); *The Gordon Birthday Book*, edited by M. F. Billington (Remington); "Men Worth Remembering," *John Knox*, by Dr. W. M. Taylor (Hodder & Stoughton); *Champions of the Right*, by E. Gilliatt (S. P. C. K.); *One Hundred and Sixty Culinary Dainties*: for the Epicure, the Invalid, and the Dyspeptic, by Samuel Hobbs (Dean & Son); *The Reporter's Handbook and Vade Mecum*, by a Reporter, revised by T. A. Reed (F. Pitman); *Recollections of Woolwich during the Crimean War and Indian Mutiny, and of the Ordnance and War Departments*, together with a complete List of Past and Present Officials of the Royal Arsenal, by R. E. White (Kegan Paul, Trench & Co.); *Forests and Forestry in Poland, Lithuania, the Ukraine, and the Baltic Provinces of Russia*, with Notices of the Export of Timber from Memel, Dantzic, and Riga, compiled by Dr. J. C. Brown (Edinburgh: Oliver & Boyd); *Handbook of the New Code, 1885*, by J. F. Moss (Cassells); *What to do with our Girls*; or, *Employments for Women*, being a Complete and Authentic Handbook of all Employments obtained from Government, Official, and other Sources, by A. T. Vanderbilt (Houlston & Sons); *Go West*, by Percy Taylor (Wyman & Sons); *Italy Revisited*: a Series of Pictures, Sequel to "Italy and her Capital," by E. S. G. S. (City of London Publishing Company); *Analytical Questions on English History*, by Dr. T. M. Maguire (Harmsworth); *Ye Gesses of y^e Lady Anne*: a Marvellous, Plessant, and Comfortable Tayle, edited by Evelyn Forsyth, illustrated by A. Hennen Broadwood (Field & Tuer); *Life in the Ranks of the British Army, in India and on Board a Troopship*, by J. Brunlees Patterson (Maxwell); *Amateur Tommy Atkins*: being a Volunteer's Experiences, related in the Letters of Private Samuel Bagshaw to his Mother (Field & Tuer); *A Round Dozen*: Character Sketches, by Robert Overton (Dean & Son); *Spring Mornings in the East, 1884*, by P. A. W. (Kent); *Fair Representation*: an Essay, by Walter E. Smith (Kegan Paul, Trench & Co.); *The Secret of Plato's Atlantis*, by Lord Arundell of Wardour (Burns & Oates); *The Squires*: a First-Classical and Im-Political Burlesque, by Aston Ryot (Chapman & Hall); *Second Best*: a Tale, by F. Bayford Harrison (Griffith, Farran & Co.); *The Decline and Fall of Whist*: an Old-fashioned View of a New-fangled Play, by the author of "Whist, or Bumblepuppy" (Simpkin, Marshall & Co.); *A Fortnight in a Waggonette*: Amusing Experiences by "One of the Party" (Field & Tuer); *Manitoba Described*: being a Series of General Observations upon the Farming, Climate, Sport, Natural History, and Future Prospects of the Country, by R. M. Christy, with Maps (Wyman & Sons); *Three Apostles of Quakerism*: Popular Sketches of Fox, Penn, and Barclay, by B. Rhodes, with Introduction by Dr. J. Stoughton (Nisbet); *Our Foreign Mission Work*: a Lecture on Foreign Missions, with Special Reference to those of the Baptist Society, by T. A. Penny (Alexander & Shephard); *Number One Brighton Street*; or, "When we assemble and meet together," by C. M. Macsorley (S. P. C. K.); *The Russian Revolt*: its Causes, Condition, and Prospects, by Edmund Noble (Boston, U.S.: Houghton, Mifflin & Co.); *Goose-Quill Papers*, by Louise Imogen Guiney (Boston, U.S.: Roberts Bros.); *Man's Birthright*; or, the Higher Law of Property, by E. H. G. Clark (New York: Putnam's Sons); *Plutarch on the Delay of the Divine Justice*, Translated with an Introduction and Notes, by Andrew P. Peabody (Boston, U.S.: Little, Brown & Co.); *Hegel's Aesthetics*: a Critical Exposition, by J. S. Kedney (Chicago: Griggs); &c., &c.

ORIGINAL VERSE.

KALANOS TO ALEXANDER.

... φάναι γὰρ ὅτι ἐν Βαβυλῶνι αὐτῷ
ἐντυχὼν ἀσπάζεταιται.—*Arrian.*

My life is lived. . . . What else? Why should I stay,
A burden unto all my friends, and thee,
Languishing slow in helpless pain away?
Why not return into the Outer Sea—
The Quiet that encircles thee and me?

Life—what is Life? I've thought upon it long—
I've found the best of Life is—Not to Be.
Gall in the honey; discord in the song;
And the red roses fade upon the tree—
No joy of Life that lasts: thus much know we.

And most to those who rightly strive to live
Is life a pain—to those athirst to know
Of Truth, and do it. The gods no answer give—
Knowledge is vain—man blind and weak—
and so,
Thinkest thou not, 'tis better that I go?

'Tis well that I have looked upon thy face,
O Beautiful, and heard thy voice, and known
The glory of man's spirit, and the grace.
Nay—no, farewell! Ere many weeks be flown
We two shall meet and greet in Babylon.

A. WERNER.

OBITUARY.

DR. GEORGE MOBERLY, bishop of Salisbury and formerly head master of Winchester, died on July 4 at the ripe age of eighty-two years. The period of his headmastership was in length just double the period of his episcopate; and it is by his connection with Winchester that his name will always be best known. He was a headmaster of a type now old-fashioned—a scholar, a gentleman, and an ecclesiastic, rather than an administrator. Himself a Winchester boy, and the father of Winchester boys, he helped to preserve the traditions of the school unimpaired through several generations. If he was not a great teacher, he exercised a permanent influence on his pupils by reason of his personal character and the wide range of his sympathies. Most of his published works are sermons, but while a tutor at Oxford he wrote an *Introduction to Logic*.

MAGAZINES AND REVIEWS.

THE *Revista Contemporanea* for June contains a review of Spanish contemporary novelists, giving the highest place to Perez Galdos, Juan Valera, and Alarcon among the older, and to Pereda, Doña E. Pardo Bazan, and Palacio Valdés among more recent living writers. The realism of these last is said to be quite independent of the French naturalistic school, and to be a legitimate descendant of the Picaresque novel. A notice of Fernández Duro's "La Armada invencible" is taken up with a narrative by Don Francisco de Cuellar of his shipwreck on the west coast of Ireland, and his subsequent adventures. His account of the native Irish agrees in many respects with Spenser's: he always speaks of them as "salvajes." In the last number D. Chaulié begins a welcome addition to his "Cosas de Madrid," with a notice of the popular and political songs and couplets of the last and present centuries. Rodriguez Mourello brings to a close his "Horas de Trabajo"; the condition of the mercantile marine and of the agricultural labourers in Galicia is very bad. The "Guide to Simancas," by F. Díez Sanchez, and the sharp polemic of Miguel Sanchez with Señor Montaña are also concluded in these numbers.

THE papers of the most general interest in the *Boletín de la Real Academia de la Historia* for June are some fine inedited hymns by Gil

de Zamora (Sæc. XIII.) in honour of the Blessed Virgin; the inventory of the household effects of a Morisco lady of Teruel, arrested by the Inquisition in 1583; and some copies of Roman inscriptions and remains in Catalonia.

ORTHOGRAPHY FOR NATIVE NAMES OF PLACES.

THE Council of the Royal Geographical Society have adopted the following rules for such geographical names as are not, in the countries to which they belong, written in the Roman character. These rules are identical with those adopted for the Admiralty charts, and will henceforth be used in all publications of the society.

1. No change will be made in the orthography of foreign names in countries which use Roman letters: thus Spanish, Portuguese, Dutch, &c., names will be spelt as by the respective nations.

2. Neither will any change be made in the spelling of such names in languages which are not written in Roman character as have become by long usage familiar to English readers: thus Calcutta, Cutch, Celebes, Mecca, &c., will be retained in their present form.

3. The true sound of the word, as locally pronounced, will be taken as the basis of the spelling.

4. An approximation, however, to the sound is alone aimed at. A system which would attempt to represent the more delicate inflections of sound and accent would be so complicated as only to defeat itself.

5. The broad features of the system are that vowels are pronounced as in Italian and consonants as in English.

6. One accent only is used—the acute—to denote the syllable on which stress is laid.

7. Every letter is pronounced. When two vowels come together each one is sounded, though the result, when spoken quickly, is sometimes scarcely to be distinguished from a single sound, as in *ai*, *au*, &c.

8. Indian names are accepted as spelt in *Hunter's Gazetteer*.

The amplification of the rules is given below:

Letters	Pronunciation and Remarks	Examples
a .	ah, a as in <i>father</i> ...	Java, Banána
o	oh, e as in <i>benefit</i> ...	Tel-el-Kebir, Olé-leh, Yezo, Medina, Leváka, Peru
i	English e; i as in <i>ravine</i> ; the sound of <i>ee</i> in <i>beet</i> . Thus, not <i>Feejee</i> , but	Fiji, Hindi
o	o as in <i>mote</i> ...	Tokio
u	long u as in <i>mute</i> ; the sound of <i>oo</i> in <i>boot</i> . Thus, not <i>Zooloo</i> , but	Zulu, Sumatra
	All vowels are shortened in sound by doubling the following consonant	Yarra, Tanna, Mecca, Jidda, Bonny
	Doubling of a vowel is only necessary where there is a distinct repetition of the single sound	Nuuláa, Oosima
ai	English i as in <i>ice</i> ...	Shanghai
au	ow as in <i>how</i> . Thus, not <i>Foochow</i> , but	Fuchau
ao	is slightly different from above	Macao
ei	is the sound of the two Italian vowels, but is frequently slurred over, when it is scarcely to be distinguished from <i>ey</i> in the English <i>they</i>	Beirút, Beilál
b	English b	
c	is always soft, but is so nearly the sound of s that it should be seldom used. (If <i>Celebes</i> were not already recognised it would be written <i>Selebes</i> .)	Celebes

Letters	Pronunciation and Remarks	Examples
ch	is always soft as in <i>church</i>	Chingchin
d	English d	
f	English f. <i>ph</i> should not be used for the sound of f. Thus, not <i>Haiphong</i> , but	Haifong, Nafa
g	is always hard. (Soft g is given by j)	Gallápagos
h	is always pronounced when inserted	
j	English j. <i>Dj</i> should never be put for this sound	Japan, Jinchuen
k	English k. It should always be put for the hard c. Thus, not <i>Corea</i> , but	Korea
kh	The Oriental guttural ...	Khan
gh	is another guttural, as in the Turkish	Dagh, Ghazi
l	As in English	
m	As in English	
n	As in English	
ng	has two separate sounds, the one hard as in the English word <i>finger</i> , the other as in <i>singer</i> . As these two sounds are rarely employed in the same locality, no attempt is made to distinguish between them	
p	As in English	
q	should never be employed; <i>qu</i> is given as <i>kw</i>	Kwangtung
r	As in English	
s	As in English	
t	As in English	
v	As in English	
w	As in English	Sawákin
x	As in English	
y	is always a consonant, as in <i>yard</i> , and therefore should never be used as a terminal, i or e being substituted. Thus, not <i>Mikindány</i> , but	Kikáyu
	not <i>Kwa'y</i> , but	Mikindani
z	English z ...	Kwale
	Accents should not generally be used, but where there is a very decided emphatic syllable or stress, which affects the sound of the word, it should be marked by an acute accent	Zulu
		Tongatábu, Gálápagos, Paláwan, Saráwak

CORRESPONDENCE.

A CORRECTION.

Trinity College, Dublin: July 4, 1885.

May I be allowed space in the ACADEMY to correct an *erratum* (mine, not the printer's) in my article on Political Economy in the recently published volume of the new edition of the *Encyclopaedia Britannica*? In the remarks there made on Jevons I attribute to him the proposition that "in every case of exchange the quantity of each of the articles concerned, multiplied by its utility, is the same." This is, of course, as it stands, unmeaning. Any one who understands the subject will perceive that what was intended was not utility in its ordinary sense, but what Jevons called "final utility," of which the preceding sentence had spoken, and which alone is peculiar to his theory. I request such of your readers as may occupy themselves with my article to supply before "utility," in the sentence above quoted, the word "final," which was omitted by inadvertence.

JOHN K. INGRAM.

ERRORS IN ANGLO-SAXON NAMES.

Nottingham: July 6, 1885.

May I, under the pretext of Mr. Bradley's review of Mr. F. York Powell's *History of England*, enter an humble protest against the grammatical blunders and groundless guesses on the subject of Anglo-Saxon names that still pass current in our literature? Mr. Bradley rightly objects to "Hwiccas" as the name of the "Hwiccan" or "Hwiccas," for, if there be any authority for this compound, there can be none for the ungrammatical "setas." Every Anglo-Saxon noun does not form its plural in *as*, though this seems to be a current delusion. The tribe names in "sætan" or "sæte," nom. pl., have suffered singularly in our histories. The unauthorised pl. "sætas," "setas," is used by Freeman, Stubbs, and Green, although Kemble, *Saxons in England*, i. 78, employs the correct form. Green goes even further than this, for he uses, evidently quite unconsciously, the gen. pl. form "sætna" in Elmedsætna, Elmedsetna (*Making of England*, 257 n. 1, 155), Pecssetna (*Id.*, p. 155), Chilternsetna (*Id.*, 155).^{*} Mr. De Gray Birch has even another form of this word. In his *Cartularium Saxonicum*, i. p. 462, note 1, he speaks of the "Magasætæ." I am afraid many such errors arise from the current delusion that Anglo-Saxon may be

studied without bothering with the grammar. Reinhold Schmid found that he was "durch die Leichtigkeit getäuscht, mit der man sich das erste Verständniss der angelsächsischen Sprache eröffnet" (Preface to first edition of the Anglo-Saxon laws). He accordingly devoted several years to the close study of Anglo-Saxon, an example too seldom followed in England.

With regard to the name Eadric Stréona, Mr. Bradley is quite right in objecting to his being called "Eadric the Grasper." First of all, it is very misleading, for there are already three different translations of "Stréona" in the field. Prof. Freeman translates it by "the Gainer" (*Norman Conquest*, i. 354); Lappenberg by "der Erwerber" (i. 436); and "der Emporkömmling" (i. 460); A. D. Jørgensen as "the Strong" (*Den nordiske Kirkes Grundlæggelse*, p. 432). There is no evidence of the existence of an Anglo-Saxon word with any of these meanings. They seem to be all founded upon the derivative verb "stréonan" or (with *Umlaut*) "strienan." I believe that "Stréona" is not a nickname at all, but a second name.

It is certain that about Eadric's time the Anglo-Saxons began to find their single names insufficient for the purpose of identification. Hence we find the use of nicknames beginning to be common. Whether this was a result of Scandinavian influence or not we need not here inquire. There are also traces of another system of giving the requisite identification to a man. This was by giving him two names, both of which were proper Teutonic full-names. Thus the Abbot of Abingdon, at the time of the Norman Conquest, was named "Eald-réd-Beorht-wine" ("abbatem Ealdredum qui et Brichwinus dictus est: binomius [sic] enim erat."—*Hist. Mon. de Abingdon*, i. 486). Again, in the Domesday Survey an "Eduinus-Alfered" occurs at p. 234 b, col. 2. The recently-published Ramsey Chartulary has a "Koleman-Burred" (Burh-réd), A.D. 1153-1160 (i. 253); a "Godricus Raven," A.D. 1153-1160 (i. p. 255), and many similar examples of later date. Ælfric Bata and Ælfric Puttoc are apparently further instances of this custom.† Probably it is this custom that has caused so many Anglo-Saxon and Old-Norse names to be preserved as modern surnames.

Although I cannot adduce an instance of "Stréona" as a personal name, there can be no doubt that it existed. The typical Aryan name is composed of two members, such as Ead-ric. This is the full-name, which may be reduced to a pet name by the addition, to the first member, of different Aryan particles. One of these particles is represented by the Greek *-ov*, gen. *-ovos*, *-ovos* (see the numerous examples in Fick, *Die Griechischen Personennamen*, p. xxiv.); in Gothic by *-a* (often Latinised as *-o*); in Old-High German by *-o*; and in Anglo-Saxon by *-a*. Thus, men named Ead-ric, Ead-gár, Ead-wulf, Ead-weard, or any other compound of Ead-, would be known familiarly as Ead-a. If we possess the full-name we can assume this pet form with absolute certainty, but we cannot learn from the pet form what was the full name. So that if we can prove the existence of full-names compounded with

* There is possibly an earlier instance of this usage in Gregory of Tours, *Historia Francorum*, ed. Arndt and Krusch, 220, 3, "Gunthramus Boso," compared with the "Boso" of 201, 19. Cf. "Bos-a" in Beda.

† Mr. Hunt, in the *Diet. of National Biography*, says "Bata" means "the bat," and "Puttoc" "the kite." There is no trace of either word in Anglo-Saxon. "Bat-a" is, in all probability, a pet form of a name in "Beadu-" and "Puttoc" may be compared with the pet form "Putt-a." There is an Anglo-Saxon pet particle *-uca*, occasionally *-we*, so Puttoc=Putta.

"Stréon," we can confidently predicate a pet form "Stréon-a." Now "Stréon" did exist as a name particle. In that invaluable list of Anglo-Saxon (or, rather, Old-Northumbrian) names, the *Liber Vitae Dunelmensis*, which dates from the ninth century, I find the name "Streonberct" (p. 11, col. 1) and "Streon-wulf" (p. 29, col. 3). Florence of Worcester records the death of "Strenwoldus, miles fortissimus" in 987, and this is also recorded in the *Vita S. Oswaldi*, p. 456, where the name occurs as "Strenwold." Here we have "Stréon-" in combination with *-beorht*, *-wulf*, *-weald*. If any further proof of the existence of this name particle were wanted, it might be found in the Anglo-Saxon name of Whitby—"Stréon-es-health," where "Stréon" is another pet name formed by the first member of the full-name—a practice common to the Aryan name system. Compare also *Strensall*, near York.

There is at least one instance in Anglo-Saxon where *stréon* means bodily strength. It is King Alfred's translation of Boethius, 32, 2: "þonne magon ge sweetole ongeotan þæt þæs lichoman fæger (?) and his *stréon* magon beon afeorred mid þreora daga fefre." This, or the more usual meaning of treasure, riches, would be in harmony with the Teutonic name system.

It is very singular that the Anglo-Saxon and Scandinavian name systems have received so very little attention in England. The consequence of this neglect is that our histories and chronicles teem with erroneous forms of these names, while our books on this subject are a disgrace to the age. The importance of the study of these names cannot be exaggerated. It is necessary that personal and place names should be studied together for the great light they shed upon one another. This has been done in Germany by Förstemann and is being done for Denmark by Nielsen. We can never hope for anything like accuracy until we have an English "name book" that can worthily compare with Förstemann's great German work. But such an undertaking in England would be even more laborious than in Germany. For the editor of such a work would have to deal with the Scandinavian names more fully than has yet been done, in spite of the researches of Munch, Aasen, and Nielsen, and the great light thrown on their grammatical structure by Wimmer and Noreen.

W. H. STEVENSON.

"ASASEL."

Leipzig: June 29, 1885.

In Mr. Ball's review of the Revised Version of the Old Testament in the ACADEMY of June 27 he offers an etymological explanation of the above word, which may or may not be the correct one. But he either was not aware of, or did not choose to mention, a most ingenious one brought forward by M. Driefuss so far back as 1846 in the *Orient*, edited by Dr. J. Fürst (No. 39-40), or, in reality, of even far older date, seeing that it is based on the Talmud itself and the Midrash. According to this explanation "Asasel" would imply the Goddess Isis, whose worship was to be disavowed and atoned for by the "scapegoat" (Levit. xvi. 7-8) on the Day of Atonement (see Joma 62a, and Midrash Jalkut § 144 and § 241). In the former of these passages it is distinctly stated that "Asasel" is intended as an atonement for the worship of Isis, and in the latter it is related that Rabbi Joseph's disciples asked him what was the meaning of "Asasel," whereupon he replied שלמצי שר זרעו, the first of these words being evidently, as M. Driefuss says, = Isis. He likewise explains in a note that the vocalisation of the Hebrew text of the Sacred Scriptures being a production of later times, the difference

* This error has arisen from the well-known list of Anglo-Saxon territorial names, wherein the names are put in the gen. pl., since there is an ellipsis of "mægð" or "land."

in the vowel points between "Asasel" and Isis is of no moment, while the *ṣ* may have taken its place after the *t* by metathesis, and the Hebrew word for scapegoat should in reality be *ṣṣṣṣ* or *ṣṣṣṣ*. Isis being the goddess of the fertile earth, or of plenty and abundance, M. Dreifuss would in this way account for the strict fasting prescribed for the Day of Atonement, by way of expiating any excess committed by indulging in the gifts of the prolific earth, thus expressing a disdain of the gifts of Isis and a negation of her essence. The whole ceremony he would therefore look upon in the light of a symbolic act, perfectly in accordance with the spirit of Mosaicism, and having for its object a complete disavowal and negation of the worship of Isis so widely spread in Egypt, and, doubtless, among the Israelites from their residence there.

DAVID ASHER.

APPOINTMENTS FOR NEXT WEEK.

THURSDAY, July 16, 5 p.m. Zoological: Davis Lecture, "The Animals of New Guinea," by Mr. F. L. Schöler.

SCIENCE.

A Compendious Sanskrit Grammar. By Hjalmar Edgren. (Trübner.)

It may safely be stated as a general principle that the shorter and simpler, within certain limits, a grammar is, the more serviceable it is likely to prove to the beginner. This is especially the case with Sanskrit, in learning which many are disheartened at the very outset by the mass of matter presented to them by all the grammars hitherto accessible to English students. The exclusive aim of an elementary grammar should be to afford just sufficient material to enable the beginner to read with facility the easiest books, omitting as superfluous exceptions and difficult forms not to be met with in them. A grammar of this kind would at the same time be the most useful one to the philological student; for the only way to make the knowledge of this, the most important language, linguistically, of the Aryan family, fruitful for comparative purposes, is to learn it practically. There is no other method of acquiring familiarity with Sanskrit words and grammatical forms. After proficiency has been thus acquired, the student may with advantage turn to a more exhaustive and scientific treatise.

Now Prof. Edgren's book, which is one of Trübner's series of "Simplified Grammars," is certainly not very long, for it comprises altogether only 178 small octavo pages. But its simplicity and clearness are considerably detracted from by the fact that it has been written with a view to the "large body of students" who "take up Sanskrit mainly on account of the important relation it sustains to Indo-European philology," and therefore aims at giving "a nice analysis of its structure." Hence it contains much in the way of terminology, classification, and preliminary remarks, that might with advantage have been omitted, tending as it does only to perplex the learner and divert his attention from what to him is of much greater importance—the practical part. This is true only of the first half of the book, which treats of the phonetic laws and of nominal inflexion. Unfortunately this is the very part beginners will have to deal with at the outset.

The formidable character of the phonetic laws is not likely to be mitigated to the student who is informed that they are to be divided into functional changes, and formal and combinatory changes, the latter being internal and external, while under functional changes are to be considered vowel changes, nasal increment and loss, and last, reduplication. It would have been far better to dismiss with a few words what is discussed in four pages (pp. 10 to 13). Similarly, instead of a page as an introduction to the rules of Sandhi, much greater clearness would have been attained by half a dozen lines emphasising the difference between external and internal Sandhi, and stating that all its rules are based on two principles—viz., the avoidance of hiatus in the case of vowels and assimilation in the case of consonants.

Again, in treating of the rules of combination, nothing is more certain to make confusion worse confounded in the mind of the beginner than to present to him the rules of external and internal Sandhi side by side. Internal Sandhi can only be acquired by learning paradigms; and beginners should, therefore, be supplied at most with only a few important rules, treated separately, chiefly for the sake of reference after a practical knowledge of them has been acquired. Experience shows that two of the most difficult, though most important, rules of Sandhi, on the change of the dental *n* and *s* to the lingual, having several points in common, should be formulated as nearly alike as possible. This is not done here. As it is, the former might be more simply expressed, while the latter is inaccurate, being stated thus: "The dental *s*, if followed by any other sound than *r*, is lingualised by a preceding vowel, save *a* or *ā*, even if anusvāra intervene, and by *k* and *r*." *L* should be added to *k* and *r*, and other letters besides *r* prevent the change of *s* to *ś*.

To enumerate the primary and secondary nominal suffixes in an elementary book is surely waste of space. On the other hand, it is a distinct omission to ignore the important practical distinction between radical and derivative *as*, *is*, and *us*, and to say nothing, for instance, about the radical *s* in the latter two cases not changing to *ś* when a vowel follows.

It is rather startling to read, on p. 56, the statement that "*mahārjan* is inflected like *rājan*." This is in direct contravention of the well-known rule that *rājan* at the end of compounds becomes *rāja* (Pān. V. iv. 91).

Passing over points of minor importance, we come to the assertion, on p. 86, that "the imperfect, perfect, and aorist are used without any definite distinction." It may be true that these tenses are frequently confused by Sanskrit writers; but Pāṇini at least gives very definite rules distinguishing their uses (Pān. III. ii. 111, 115, &c.) In § 205 it is said that strong forms appear "in the singular active (except in the optative and second imperative) and in the first dual and plural imperative, both active and middle." This is wrong, because it excludes the first singular middle. Moreover, the rule would be much more easily remembered if stated thus: "the singular present and imperfect active, and all first persons imperative, active and middle, besides the third singular active, are strong."

The primary conjugation is said in § 203 to be divided into eight groups, while in § 207 it is said to contain nine. In § 242 among the verbs not taking intermediate *i*, *aru* to flow, is omitted. The rules are often worded with an obscurity which in some cases might lead to error. A beginner would, for example, certainly gather from the note to § 188 B. that causal verbs take reduplication before adding the suffix *aya*. In some instances the phraseology is un-English, as: "by intervening sounds others than," p. 23; "cannot all be in dictionaries reported," p. 31; "only scattering examples of forms outside the Pres.-system occur," p. 144. I have noted the following misprints: p. 14, *urk*, read *ūr*; p. 22, *rog*, read *rogi*; p. 45, *pratyān*, read *pratyān*; p. 46, *finā*, read *final*; p. 105, those in *ar* written with *̄*, read written with *̄*; p. 123, *as*, to sit, read *ās*, to sit; 149, *rajāyate*, read *rājāyate*. It is hard to see what is the value of such ugly abbreviations as: conj'n, ext'l, comb'n, esp'ly, opt'ly, acc'g, g'ly, lry' (= primary), since taken altogether they would not make more than a difference of half a page in the length of the book, unless, indeed, the author wishes to emulate the ancient Hindu grammarians, of whom it is reported that their joy in saving a single *mora* was greater than in the birth of a son.

The second half of the book, apart from the slight defects that have been noted above, is free from the blemishes of the first half. It is really, on the whole, as simple and practical as could be wished. Especially good is the section on the aorist, with its table, as well as the treatment of the participles. The synopsis of the verbs, which are arranged alphabetically, admirably supplements the irregularities noted under each conjugational class. The section on versification contains just about as much as a beginner wants, while the sketch of scenic Prakrit, comprising eight pages, will be found very serviceable by those who have advanced sufficiently to commence reading the plays.

In conclusion, I feel bound to say that Prof. Edgren's grammar, while containing much that is of value to the more advanced student, is, in spite of its drawbacks, likely to be more serviceable to beginners, owing to its comparative shortness and the general excellence of its second half, than most of the large grammars can be.

A. A. MACDONELL.

MATHEMATICAL BOOKS.

American Journal of Mathematics. Vol. VII. No. 3. (Baltimore.) The number opens with the closing pages of Mr. C. S. Peirce's paper on "The Algebra of Logic." In these are discussed some examples of De Morgan's:

"De Morgan was one of the best logicians that ever lived and unquestionably the father of the logic of relatives. Owing, however, to the imperfection of his theory of relatives, the new form, as he enunciated it, was a down-right paralogism, one of the premises being omitted. But this being supplied, the form furnishes a good test of the efficacy of a logical notation."

The next article, which occupies fifty-six pages, is by M. Poincaré, a mathematician who has recently come to the front, and is entitled "Sur les Equations Linéaires aux Différentielles ordinaires et aux Différences finies." It gives an account of results published in a memoir

presented to the Academy of Sciences in competition for the Grand Prix des Sciences Mathématiques (June, 1880), which are as yet unpublished, and of other results stated in a verbal communication to the Mathematical Society of France (November, 1882). A second paper on "Perpetuants" continues the investigation commenced by Capt. P. A. Macmahon in vol. vii., no. 1. The next article, by P. Seelhoff, is "Prüfung Grösserer Zahlen auf ihre Eigenschaft als Primzahlen" (with tables). This is to be supplemented by tables employed by the author in the calculation of the examples, and by further matter in a future number. G. P. Young contributes "Solvable Irreducible Equations of Prime Degrees." Use is made of a previous article (vol. vi.), "Principles of the Solution of Equations of the Higher Degrees," and among other results is deduced Galois's Theorem. T. Craig writes on "A Certain Class of Linear Differential Equations," in which he determines the conditions which are necessary in order that a linear differential equation shall admit of an integral which is a periodic function of the third kind—at the outset limiting himself to singly periodic functions. F. Gomes-Teixeira's "Note sur les Nombres de Bernoulli" gives results in continuation of those arrived at in G. S. Ely's "Some Notes on the Numbers of Bernoulli and Euler" (see vol. v.).

Euclid. Book I. With Notes and Exercises, by Braithwaite Arnett. (Cambridge: Deighton Bell.) This compilation and edition is intended "for the use of preparatory schools and candidates preparing for naval cadetship and Sandhurst preliminary examinations." It appears to be well adapted for the classes named. Everything is done to make the labour of "learning Euclid" as small as possible, and yet to ensure an intelligent appreciation of the subject so far as a book can do. On the left, when the book is opened, lies the proposition and figure, all on the one page; on the right come first the "references," that is all the definitions, postulates, &c., which are required in the proposition, printed in full, and then a capital collection of admirably graduated exercises (this is the crowning excellence). A "fellow" who could not pass an examination in book i., after going carefully through this edition of it, must be a "duffer" indeed.

Supplement to "Euclid and his Modern Rivals." Containing a notice of Henrici's Geometry together with Selections from the Reviews. (Macmillan.) Mr. Dodgson herein advances his second act by scene vi., headed "Treatment of Parallels by Revolving Lines." In this scene Herr Niemand submits to Minos a copy of Henrici's "Elementary Geometry: Congruent Figures." As before, after a faint show of defence, Niemand scuttles off and leaves Minos in possession of the field, as Euclid's champion, bursting his sides over the definition of a square: "A quadrilateral which is a kite, a symmetrical trapezium, and a parallelogram is a square." In an Appendix are the "Selections," (taking up twenty-six pages) with a few comments introduced here and there. A second edition of the original book is promised shortly.

Algebra for Beginners. Part I. By C. Smith. (Blackwood.) It is stated on the title-page that this manual is "specially adapted to the requirements of the Mundella Code, and for junior pupils of middle-class schools, and for pupil teachers." Not knowing the requirements of the Code we cannot say if they are met by this book; but we can say that it contains a full and clear account of the first four rules, accompanied by a very great number of good illustrative exercises. Further than this we have sections on division by detached co-efficients (Horner's), with fractional co-efficients, and there is a chapter on elementary factors.

The publishers contribute good type, good paper, and a capital "knock-about" cover. The book merits use by other junior pupils besides those mentioned above.

A Collection of Arithmetical Exercises. Progressively arranged by A. E. Donkin and C. H. Hodges. (Rivingtons.) This is a handy book of exercises drawn up on the plan of Jones and Cheyne's *Examples in Algebra*. The examples are very diversified, and appear (to a reader) to be arranged in order of difficulty. They will afford ample scope for testing a boy's acquaintance with the subject. There are a hundred exercises in all: of these the first thirty-eight contain an average of eight questions each, the remaining exercises an average of ten questions. Answers are given at the end, and to the examples we have worked out these are correctly given. We can recommend the "collection" for use in other schools than that of Rugby, for which, in the first place, it was compiled.

Elements of Plane Trigonometry: for the Use of Schools and Students in Universities. By Rev. Isaac Warren. (Dublin: Thorn.) This little book, very nicely got up, by the way, calls for no special comment. We do not look for novelty in such a treatise, but for soundness and fitness for the end in view. These we have, it being borne in mind that the book is more especially drawn up to meet the requirements of junior students who are preparing for the Dublin examinations. Specimen papers, examples in the text, tables of natural sines, cosines, &c. (for degrees only), and answers, complete the work. We should state that the "Circular Measure" is very fully treated, and the author (as Mr. Lock has done in his work) adopts the term "Radian" for "Angular Unit." The introduction of this word he ascribes to Prof. James Thompson. We have before referred to Jevons's *Principles of Science*, (p. 306, ed. 1879), who says "a more convenient name for common use would be *radian* as suggested by Prof. Everett." Who shall decide the conflicting claims?

SCIENCE NOTES.

MR. QUARITCH has now ready for issue a third edition of Dr. Balfour's *Cyclopaedia of India*, upon the preparation of which the author has been engaged for several years. The first edition was published as long ago as 1858, and has remained to this day a standard book of reference. The present edition is in three volumes of 3,628 pages, and contains about 35,000 articles.

THE Essex Field Club, which is doing excellent work in the domain of local natural history, has just issued a new part of its *Transactions*. This contains, among other communications, an address by Prof. Boulger, the late president, in which he discusses, with much learning, the influence of man on the flora of Essex. We are glad to learn from the accompanying *Journal of Proceedings*, now issued for the first time in a separate form, that a scheme for founding a local museum has been under discussion; but it appears that a proposition to locate it in Queen Elizabeth's Lodge at Chingford was thwarted by "the opposition of a high official of the Corporation."

THE last two numbers of the botanical section of the *Encyklopädia der Wissenschaften* (Schenk's "Handbuch der Botanik") contains an important monograph on the Myxomycetes by Zopf. In consequence, however, of its partaking to so large an extent of an animal nature, he prefers for the group De Bary's name of Mycetozoa; and regards them as occupying an intermediate position between the animal and vegetable kingdom, rather than

as a section of the Fungi properly so-called. Their want of chlorophyll causes them, like true Fungi, to be necessarily either parasites or saprophytes. A full account is given of the various points in the structure of this interesting group, together with a description of all known species. The work is illustrated by a number of excellent woodcuts.

THE first part of vol. iv. of Cohn's *Beiträge zur Biologie der Pflanzen* contains three papers: "On the Movements of Water in Mosses," by F. Oltmanns; "On *Stephanosphaera pluvialis*," by Prof. Hieronymus; and "On The Development of the Cell-nucleus after Division," by Dr. F. Schwarz. In the first paper the author shows that the rise of water in bog-mosses, which is so important a factor in the formation of peat, does not take place so much within the stem as in the capillary tubes formed outside the stem between it and the leaves. The paper on the rare and beautiful *Stephanosphaera* (illustrated by two excellent plates) has its special interest in describing for the first time the existence of conjugation between the smaller zoospores or microgonidia. The main object of Dr. Schwarz's paper is to show that in a growing tissue, after cell-division has taken place, certain regular changes take place in the size of the nucleus and of the nucleoli, depending on an interchange of nutrient material, on the one hand between the nucleus and the cell-protoplasm, on the other hand between the nucleus and the nucleoli.

PHILOLOGY NOTES.

PROF. BHANDARKAR, of the Deccan College, Bombay, who was recently elected an honorary member of the Royal Asiatic Society, has still more recently received the honorary degree of Doctor from the University of Göttingen. It may be interesting to quote from the Latin diploma, which bears date June 29, the following record of his work as a scholar:

"grammaticae et philosophiae indorum inter primos gnarissimum inscriptionum in patria superstitum interpretem fidum doctum ingeniosum rerum in india meridionali gestarum enarratorem prae ceteris diligentem magistratum prisca literarum bharatavarshicarum monumenta provida cura undique conquirentium adiutorem sollicitissimum librorum publicis sumptibus ab interitu servatorum indicatorem ita circumspicuum sagacem luculentum ut summos viros summi pretii voluminibus colligendis jure merito operam dare et in asia et in europa eruditissimi quique mirabundi gratique quotannis fateantur disciplinae germanicae alumnum adeo et docilem et strenuum et felicem ut se vel praeceptores quorum in veritate quaerenda socius factus est docere posse uno exemplo comprobaverit."

THE Académie des Inscriptions has made the following awards: the prix Jean Reynaud to M. Aymonier, for his archaeological discoveries in Cochinchina; the prix Stanislas Julien to M. Léon de Rosny, for his *Histoire des dynasties divines*; the prize for an essay upon translations into Hebrew of philosophical or scientific works in the middle ages to Dr. Moritz Steinschneider, of Berlin.

WE have received Nos. 20 and 21 of *Nyare Bidrag till Kännedom af de Svenska Landsmålen ock Svenskt Folkklif*, the journal published by the Swedish Dialect Societies of Upsala, Helsingfors and Lund. (Stockholm: Samson & Wallin.) The former contains the general report of the work of the societies for the ten years from 1872 to 1881. The large number of glossaries and essays on points of dialect which are announced as in preparation shows the extraordinary zeal and energy with which the study of local idioms is pursued in Sweden, though the zeal is sometimes misapplied, as when we have rival alphabets for the expression of dialectal sounds, most of them involving the use of many new types.

The latter number has a certain degree of interest for students of English literature. It consists of a paper by R. Bergström, giving the original text, with literal Swedish translations and metrical versions in several languages, of the two striking Lapp popular songs which are known to English readers through the poetical versions (from the Latin of Scheffer) published in the *Spectator*, Nos. 366 and 406. The English versions are commonly ascribed severally to Ambrose Phillips and Tickell. Judging from Herr Bergström's literal rendering, the original songs seem to be really charming examples of genuine rustic poetry.

BESIDES his little book on the Mahdi, which has already been translated into English, M. James Darmesteter has also published (Paris: Leroux) his inaugural lecture at the Collège de France, entitled *Coup d'œil sur la histoire de la Perse*. Both form volumes, at 2frs. 50c. in the "bibliothèque orientale elzevirienne."

MEETINGS OF SOCIETIES.

FOLK-LORE SOCIETY.—(Annual Meeting, Saturday, June 27).

LORD ENFIELD, President, in the Chair. Among the members present were the Rev. C. Swainson, the Rev. J. Long, Dr. R. Morris, Messrs. Ralston, Stephenson, Clodd, Wheatley, Hutt, and Gomme. Lord Enfield was elected president in the place of Lord Beauchamp, who had held the office for five years. The sad death of Mr. Vaux was referred to, and a vote of condolence was passed. The report of the council contained the following definitions of folk-lore by different members, with suggested divisions of the subject:—Mr. Nutt, "anthropology dealing with primitive man"; Mr. Hartland, "anthropology dealing with the psychological phenomena of uncivilised man"; Mr. Gomme, "the science which treats of the survivals of archaic beliefs and customs in modern ages"; Miss Burne, "the science which treats of all that the folk believe or practice on the authority of inherited tradition, and not on the authority of written records"; Señor Machado y Alvarez, "(1) demo-psychology, or the science which studies the spirit of the people; and (2) demo-biography, which is the description of the mode of life of the people taken in the aggregate." The council also brought forward several suggestions made by Don Machado y Alvarez, (1) that an international congress of folk-lorists should be held in London in June 1888, being the tenth anniversary of the foundation of the society; (2) that a committee should be appointed to study children's games and the language of children, for which the lady members might lend their assistance; (3) that photography should be applied to the games, festivals and popular types of all the districts of England. In moving the adoption of the report, Mr. Ralston recommended carrying out what was being done by the folk-lorists of Paris, namely, a concert of peasant songs, sung to their popular tunes by peasants selected for the purpose.

ROYAL ARCHAEOLOGICAL INSTITUTE.—(Thursday, July 2.)

T. H. BAYLIS, Esq., in the Chair.—Prof. Bunnell Lewis read a paper on "Langres and Besançon," pointing out the interesting Roman and other remains which exist in those seldom visited towns.—Dr. M. W. Taylor described and exhibited a pair of stone moulds, for casting bronze spear-heads, recently found in Cumberland.—Mr. Park Harrison made some further remarks on beads in continuation of his former paper. He exhibited coloured drawings of chevron and aggrary beads found in Roman London.

INDEX SOCIETY.—(Annual Meeting, Tuesday, July 7.)

ROBERT HARRISON, Esq., in the Chair.—The Report of the council began by expressing satisfaction at the fact that, during the past year, a successful effort had been made towards the accomplishment of one of the great tasks which the society set itself at the beginning of its career, namely, the publication of the index to the obituary notices in

the *Gentleman's Magazine*. The MS. of this index was now finished for the first fifty years of the magazine. The council had issued a prospectus of it, together with a specimen page, and the response had been so cordial that they no longer hesitated to go to press. In addition to this, the council had proceeded with the publication of the annual volumes of obituaries, which now formed a permanent branch of the society's work. Several other indexes were actually ready, and only a want of funds prevented them from being published. The list of members did not contain the names of so many public libraries as should be there, and a circular had, therefore, been sent out to about a thousand libraries at home and abroad, with what result remained to be seen. Mr. Harrison, in moving the adoption of the report, remarked that without indexes literature was a chaos; and he was rather grieved, therefore, that the Index Society, which proposed to reduce this chaos to order, had not, during the six years of its existence, made more progress in public estimation.

FINE ART.

GREAT SALE of PICTURES, at reduced prices (Engravings, Chromos, and Olographs), handsomely framed. Everyone about to purchase pictures should pay a visit. Very suitable for wedding and Christmas presents.—GEO. REES, 115, Strand, near Waterloo-bridge.

PROF. RYGH'S NORSE ANTIQUITIES.

Norske Oldsager. Ordne og forklarede af O. Rygh. 2 og 3 Hefte. [*Antiquités Norvégiennes*. Arrangées et Décrites par O. Rygh. Avec figures sur bois par C. F. Lindberg. 2 et 3 partie]. 4to. (Christiania: Cammermeyer; London: Sampson Low.)

HAPPILY the great work of Prof. Olaf Rygh, the keeper of the Christiania Museum, is now complete. Norwegian pre-Christian antiquities can at last be systematically examined under the guidance of a solid and learned archaeologist, and in a work illustrated by no fewer than 732 excellent engravings. Each section has its own careful introduction, while in the third part each piece and its locality is separately described, the types classified, and, where necessary, the whole find-board given. In addition to these advantages, the text is in both Norse and French, so that the work is accessible to all. On the excellence of the printing, &c., and the low price I need not dwell.

Still another peculiarity must be pointed out. It takes up little space, but has cost the author great labour, and is an enormous boon to the student. Prof. Rygh has added the whole number known to exist of each type or object, so far as Norway is concerned. All can see the use of this. Should a tool or ornament or weapon have been found only once or twice, or up to 100 or 1,000 times, fresh light is thrown upon it. Often, also, we are told whether the piece comes from North or South, East or West Norway. So we can connect these facts with similar details in neighbouring countries, following the stream from Norway outwards, or from the outland into Norway.

For instance, of the famous small "symbolical swords" from the Bronze Age, only two are known in Norway, both from the same grave. The accomplished writer thinks they were not "symbolical," but real knives in the shape of a sword, and adds that only eighteen bronze knives proper have turned up in Norway. We also get a good idea of the extreme paucity of the Bronze Age objects when we are told that of so common a thing as the tweezer (see the specimen

No. 121), only five Norse examples are as yet known. Prof. Rygh takes them to have been used for drawing the thread when sewing skin. But of course all this scarcity, in both the Stone and the Bronze Age, has already been shown by the gifted author, in his Introduction, largely to depend on the late settlement and small population of Norway in those periods, in comparison with lands farther south. We must also remember—besides what has been lost or destroyed—the great number of objects constantly carried away by tourists and dealers, European and American, as "curiosities." The moment we come to the Iron Age we see how population and culture rapidly increase, the finds multiplying in proportion.

It is impossible to dwell on many things, however new or interesting; but, as to the Early Iron Age, specially remarkable is No. 388, a scissors of the modern type, as distinguished from the older wool-shear type (Worsaae, *Nord. Olds.* second ed. No. 362, 3)—unique in Norway, and the oldest example known to me in Europe. In the Later Iron Age we must point out Nos. 410, 411, plane-irons, the only two found in Norway; also No. 426, the orthodox old steel for striking a light—fifty finds, usually with a piece of flint—now extinct in Europe, driven out by the lucifer match. So No. 429, a rare gridiron, and No. 430, a practical frying-pan, of which forty specimens have turned up. Very curious are the hitherto unexplained iron pieces with many rings, of which about one hundred have been found in Norway, but, apparently, in no other country. Nos. 460-4 give a good idea of their construction. The Danish archaeologist, Herbst, tells me that he has heard some Norwegians explain them as having been used to drive the cattle to and from the mountain pastures. Possibly; we know nothing for sure. To this period belong the highly interesting types of swords and sword-hilts figured under Nos. 492-515, no fewer than 1,470 in number, mostly of the double-edged kind. Some of them, as well as of the spear and javelin heads (970 specimens), are richly decorated. Very remarkable are Nos. 616-37 (and Nos. 482, 697-8), pieces of Celtic origin, brought back by Vikings from Ireland and Scotland. Many of them are masterpieces of Celtic art. Prof. Rygh says hereon (p. 32 of text): "The Norse owners of some of these pieces have certainly used them in a way never dreamt of by their makers. For instance, Nos. 616 and 628 must have been fittings on Irish Reliquaries." Lastly, charming is the roll of brooches, of various shapes and schools (Nos. 640-57), numbering 824 pieces. Most of them (666) belong to the well-known Scandinavian oval type, so instructively handled by Dr. Joseph Anderson, of Edinburgh, in his admirable *Scotland in Pagan Times*, pp. 34-48, where he thus sums up:

"The range of these burials, distinguished (among other features peculiar to themselves), by the presence of this peculiar type of sword and this remarkable type of brooch [the oval-shaped], has thus been traced through the western and northern isles from Islay to Unst in Shetland, touching the mainland only in the counties of Sutherland and Caithness. This area, established on archaeological evidence, coincides exactly with the area established by

historical record as that which was colonised and possessed by the Norwegians in the time of their heathenism."

Referring to my notice of Part I. in the *ACADEMY* for August 14, 1880, I again warmly recommend this valuable work to all Scando-Gothic students, especially to those interested in the real life of our Scandinavian forefathers.

GEORGE STEPHENS.

EXHIBITION OF HOME ARTS.

THE very modesty of the little exhibition held during the early days of this week at Lord Brownlow's house in Carlton House Terrace is a good augury for its future. The absence of anything like over-ambition, the good taste in the designs, the carefulness and soundness of the execution of the different products of the country art classes, testify to the genuineness of the efforts already made by the Home Arts and Industries Association. To this praiseworthy undertaking we have already called the attention of our readers, but it may be as well to repeat that the object of it is not to turn the children of the poor into professional artists, but to make the production of articles of beauty an employment for their leisure. Out of this it is expected and even hoped that some local industries may be in due time established; but this is a development which the association do not desire to force. To teach the bedridden child to carve wood and to give the healthy youth a taste to gratify in his spare moments so that he may prefer to spend them at the work bench or the easel rather than at the public house is in short the primary motive; and from the specimens shown at Carlton House Terrace, shoulders have evidently been set in earnest, and with good result, to this good work.

It is in wood-carving that this result is best seen. From Ellesmere, and Ashridge, and Lincoln, some very creditable and encouraging examples were sent testifying at once to the aptness of the pupils and the taste of the ladies—Mrs. Jebb, Miss Noyes and Miss Venables—who have organised the classes. The bog oak found near Ellesmere is remarkable for the beauty of its colour and texture, and of this delightful material several articles were shown, including a corner cupboard with a well-carved panel for its door. This was, perhaps, the most attractive of the "exhibits"; but finer and cleaner carving was shown in a panel of bramble leaves and berries which decorated a hanging shelf and cupboard. Another admirable example of carved wood was a mantelpiece painted white and executed after a design by Lord Brownlow.

At Belton a new and successful "minor art" has been started by Lord Brownlow and Miss Woolward—the carving of tiles in indurated chalk. Some of these, with Spanish and Italian designs, coloured and uncoloured, produced a novel and charming effect. Other very promising industries are the *repoussée* brasswork from Keswick, and the pretty and quaint pottery made by children at Abbots Kerswell, in Devonshire.

Besides the articles exhibited by the Association there were some beautiful articles on loan and products of well-deserving local industries. The most interesting, perhaps, of the latter were the specimens of Langdale linen, products of the spinning-wheels and looms which have been started by Mr. Albert Fleming in the dales of Westmoreland.

NOTES ON ART AND ARCHAEOLOGY.

MR. CECIL TORE has in hand a monograph on the ancient history of Rhodes, which will shortly be issued by the Cambridge University Press. There is at present no work on the sub-

ject in English; and the inscriptions and other materials discovered in the island during the last fifty years have not yet been utilised for a complete review of the subject in any language. Illustrations will be given of two important painted vases, and of a gold box with reliefs, all found at Camiros, but hitherto unpublished.

THE Boston exhibition of English water-colour drawings will open in October, and will be, no doubt, by far the most important English picture-show which the inhabitants of the United States will have seen. Mr. Henry Blackburn is the hon. secretary, and has made many arrangements here in England connected with the exhibition, among which is an arrangement by which the Cunard Company undertake, free of charge to the artists, to convey the exhibits which may be intended for the Boston gallery. The Old Society and the Institute will, we hear, be richly represented at Boston.

THE annual meeting of the Archaeological Institute will be held at Derby from July 28 to August 5, under the presidency of the Earl of Carnarvon. The presidents of sections are—Antiquarian, the Rev. Dr. J. C. Cox; Historical, the Dean of Lichfield; Architectural, Mr. A. J. Beresford Hope. Among the papers promised are "Anglian Stones," by the Rev. G. F. Browne; "Mediaeval Chalcices and Patens," by Messrs. W. H. St. John Hope and T. M. Fallow; and "Military Effigies, &c., of Derbyshire," by Baron de Cosson. Excursions have been planned for each day to view the antiquarian and architectural objects of interest in the Peak district.

MR. TINWORTH'S latest bas-reliefs, now on view at Messrs. Doulton's, are characteristic examples of his special gift. The panel of Sampson seized in the toils is a design already familiar in smaller size, and we doubt if the enlargement is beneficial, but it remains a vigorous and vivid presentment of the scene. Great ingenuity and dramatic power is also shown in the casting of the three men into the fiery furnace. The qualities of life and energy, and clever disposition of numerous figures are also displayed in the alto-relief of Saul casting his spear at Saul. Humanity, not without a touch of humour, marks all Mr. Tinworth's conceptions, and in his latest he has not fallen below himself.

AFTER the death of the late Princess Charles of Hesse-Darmstadt it was reported that the Holbein Madonna in her possession had been sold to an English purchaser. A Darmstadt correspondent gives an express denial to this statement. The late princess stipulated in her will that the picture should remain in possession of the grand-ducal family, adding that if its sale should be at any time necessary it should be offered first to the Gemäldegalerie in Darmstadt, and next to the galleries in Berlin or Basel, but in no case to England, France, or Russia.

THE best plate in the *Portfolio* is an etching by Mr. S. Myers, after a drawing by David Cox, of "Bolton Abbey." It interprets both the manner and the feeling of the great water-colourist. The continuation of Mr. J. Henry Middleton's study of "S. Maria del Popolo and its Works of Art," is the most noteworthy article in the number.

An excellent etching, by L. Schultz, of Albrecht Dürer's portrait of himself in 1493, in the possession of Herr Eug. Felix, of Leipsic, appears in the *Zeitschrift für bildende Kunst* for June, accompanied by a paper upon the portrait by Herm. Lücke. *Kunstgewerbeblatt* is as usual full of interest, and contains an article by G. Wustmann on the elder and younger Hans Reinhardt, goldsmiths of Leipsic.

An interesting "find" was made a few days ago by the workmen engaged on the railway-

line Bellegarde-Evian-Bouveret in Canton Valais. While excavating the soil at the back of the church of St. Gingolph, they opened a grave in which two small silver coins were found, which proved upon inspection to be *abolis* of Louis le Débonnaire, the son and successor of Charles the Great. They bear on one side a cross, and the words "LUDOVICUS IMP." on the other side an altar with the words "XRICTIANA RELIG'IO." The discovery has settled the vexed question as to the age of the so-called "Burgundian graves," proving that they are not older than the ninth century.

THE STAGE.

THE novelty of the week is "The Great Pink Pearl" at the Prince's Theatre, where Mrs. Langtry has finished a very successful season. We said "novelty," but the farcical piece by Mr. Cecil Raleigh and Mr. Carton had already been performed once before last Monday. That, however, was only at a *matinée*; but, as theatrical people attended it in considerable numbers, the approval then vouchsafed counted for something. Nor was the verdict reversed on Monday night, nor was there any reason why it should be. If people like a farce that has three acts instead of one, and lasts the whole evening instead of half an hour, "The Great Pink Pearl" will be eminently satisfactory. We will point out, nevertheless, one disadvantage attending either the class of piece now in question or this particular example of the class of piece. The old-fashioned farce—the farce of brevity—used to begin to be amusing at once if it was going to be amusing at all. The modern farce—the farce of a couple of hours—often begins and continues for a while with unspeakable flatness. It is so with "The Great Pink Pearl." You have to get into the third act and be taken to the Grand Hotel in Paris—away from Mr. Sheen's squalid lodgings and all their associations—before you begin to be really entertained. It is true that Mr. Garden, Mr. Groves, Mr. Harcourt and Miss Clara Jecks do their best from the first, but not much is possible to their best. Fully half an hour passes before one hears anything at all of the precious stone which gives a name to the play; and almost all that one does hear in the first half hour is that Mr. Sheen, the journalist, is in uncommonly low water, and has to suffer the visit of more than one person who would seem an undesirable guest. Afterwards the action becomes brisker, and gradually a good deal of fun is developed. The pink pearl—it may be said here, shortly—is the property of a Russian lady, who seeks to "realise." To that and she puts herself into communication with a millionaire, as she supposes, but somehow or other the missive intended for his benefit gets into the hands of a humble namesake, the impecunious journalist. Why, we may ask in parenthesis, is the journalist still always singled out as the type of impecuniosity in the open professions? In the open professions we should have thought it was the painter, in these bad times—and especially the painter who lives in a red house—who was the type of impecuniosity. But let that pass: we will return to the story of the pearl. The hungry newspaper man, consorting—after the fashion of journalistic stage heroes—with an Irish conspirator, sees an opportunity in the accident which has made it possible for him to be represented as the millionaire; for the real millionaire, he has ascertained, desires to buy the pearl as much as the Russian lady desires to sell it. Many difficulties ensue. The Irishman gets into his proper share of trouble, and the needy journalist is once or twice in danger of arrest for debt, and then the officer of the court charged with the business of effecting his

capture is himself arrested in turn. Further than this we shall not pursue the story. It is not of a kind to tell upon paper. The story of a farce never is—even when it is in three acts, and would like to be called a comedy. The piece has no substantial value that we know of. But it will entertain for a period. It will be a success, we surmise, in its own light way.

At the Gaiety Theatre we have seen the last of that most sympathetic actress, and calmly beautiful person, Mdme. Jane Hading, the first woman who has enabled the experienced playgoer to allow that the rôle of Frou-frou can be played agreeably now that Desclée is no more. To this admittedly delightful and still improving artist—of whose performance in Jules Claretie's newer stage work we have given some account—there succeeds Sarah Bernhardt, who comes to us with her last great triumph, the rôle of Théodora. It is the peculiarity of one or two of the later parts in which the witch of the French stage has lately appeared—notably in "Fédora" and "Théodora"—that they display, within the limits of a single character, nearly the whole of Mdme. Bernhardt's art. They are parts for which she has been measured: parts fitted to her. There is here both advantage and disadvantage; but we are inclined to consider that the disadvantage is the greater—that the loss outweighs the gain. It may be, however, that for the merely fashionable or curiosity-loving London public, the attractiveness of the old *répertoire* has ceased, and that recourse must be had here, as indeed in Paris itself, to plays in which sensational displays of energy, violence, and passion, take the place more properly filled of old by the charm of literary work, and of a poetic conception carefully and delicately carried out. Still, the unfavourable and often undesirable character of the pieces in which Mdme. Bernhardt too often appears has not been suffered by her to interfere too largely with the merits of her own performance; and the words which she was so bold as to employ to the Blackpool manager, when he wanted her to go on to the stage at a moment when she was voiceless, might yet be used by her, on like occasion, with truth. "I am an artist," said Sarah Bernhardt: "I am not an exhibition." But if she is "not an exhibition," that is not the fault of the managers.

MUSIC.

MUSIC AT THE INVENTIONS EXHIBITION.

SINCE the opening of the Exhibition there has been plenty of music; but until last week nothing had been done of special moment. Pianoforte and organ recitals, brass bands, the court band of the King of Siam, and the Strauss orchestra, are all very well in their way, but we looked for something more instructive and of higher purpose. The announcement that M. Victor Mahillon, director of the Museum of the Conservatoire Royal of Brussels, intended to give a few concerts of ancient music promised well, and we are glad to say that they proved most interesting, and drew large crowds. The first was given on July 1, in the small music-room of the Exhibition, and many were unable to gain entrance. The two double-keyboard harpsichords on the platform attracted special notice: one bore the date 1679, the other 1734. M. E. Jacobs, an excellent player, performed an aria of Bach and a minuet of Boccherini on the viola da gamba, an instrument much used in the seventeenth and eighteenth centuries; it was in fact the predecessor of the violoncello. The tone is somewhat nasal, but at times rich and expressive. The two pieces were accompanied on a harpsichord by M. A. Wouters.

With eyes shut one could almost imagine oneself transported back nearly two centuries, and listening to a performance before the Prince of Anhalt-Cöthen by the viol-digambist, C. F. Abel, and the cembalist, J. S. Bach. M. J. Dumon, also accompanied on the harpsichord by M. Wouters, gave a movement of a flute concerto by Quantz, the teacher of Frederic the Great. The music is very old-fashioned, and contains some showy and not over difficult passages, which were probably duly appreciated by the royal pupil. Quantz wrote no less than 300 concertos for the flute, and of these 277 are preserved in the library at Potsdam. M. Dumon played on a single-keyed ivory instrument of the period, and his performance was much applauded. After this came some songs of the fourteenth, sixteenth, and seventeenth centuries, effectively sung by Mdme. Ely Warnots. Mdme. Ulmann, a pupil of M. A. Dupont, professor of the Belgian Conservatoire, then played on one of the harpsichords three short solos by De Chambonnières, Rameau and Bach. This young lady showed skill, taste and intelligence. The effect produced by these pieces was singularly quaint. The short and delicate tone of the instrument helped one to realise the necessity for the trills and ornaments with which the music of that period is loaded. They were then real helps, but on modern grand pianofortes they often appear fidgetty and meaningless. Mdme. Ulmann, so far as we can judge of her as a pianoforte player, gives good promise. The next item on the programme, a piece for eight flutes, was more curious than pleasing. M. Dumon and eight of his pupils came on to the platform. They were followed by a man bearing a leather case. To M. Dumon he handed a tiny instrument, to the pupil next him one of larger size; and so on to the eighth, who received a formidable looking flute. They played the Sinfonia Pastorale from Peri's "Eurydice," the opera performed in 1600 on the occasion of the marriage of Henry IV. with Marie de Medici. Later in the programme this flute band gave the March of the Lansquenets of the time of the Peace of Cambrai, 1519. Besides the pieces mentioned there were others by Tartini, Handel, Couperin, &c., played and sung by the performers mentioned. At the second concert we heard M. Wouters accompany a viola di gamba solo and a chorale of Luther on a regal, or small organ: for the first he used a very primitive instrument of the fifteenth century, for the second, one of the sixteenth. The third and last concert took place last Saturday. Miss Warnots sang at all three. The able professors, on their return to Brussels, will be able to render to their director, M. F. A. Gevaert, a thoroughly satisfactory account of their visit to London.

Last Wednesday afternoon a large audience assembled in the Albert Hall to hear the Bristol Madrigal Society. The choir consists of 120 voices, the treble parts being sustained by boys. The voices are of good quality and well balanced; and, under their experienced conductor, they interpret with great skill and effect the fine madrigals of the English and Italian schools. After singing the National Anthem, they commenced with "Summer is y-coming in," that old part-song dating from the thirteenth century. This was followed by a series of madrigals of the sixteenth, eighteenth, and nineteenth centuries, by Marenzio, Wilbye, Morley Gibbons, Pearse, and others; and it was a pleasure not only to hear these fine works, some of which reminded us of a time when English composers could more than hold their own against the best foreigners, but also to see how thoroughly the performances were enjoyed, for we hear too little of this class of music in London. J. S. SHEDLOCK.

MUSIC NOTES.

MR. JOHN THOMAS gave a harp concert last Saturday afternoon at St. James's Hall. The arrangement of Mendelssohn's Prelude in B flat (op. 35, no. 6) as a trio for violin, harp, and organ, and the arpeggios introduced into the accompaniment of Schubert's "Ave Maria" must be condemned; but the clever solo playing of Mr. J. Thomas, the interesting selection of Welsh songs sung by Mdme. Edith Wynne, Miss Mary Davies, and Messrs. L. Williams and D. Lewis, with harp accompaniment, made amends for these unpleasant features. There was a band of harps, which played various pieces by the concert-giver. Besides the vocalists named, Mdme. Hersee, Miss Hope Glenn, and Mr. H. Reeves took part in the concert.

MISS MEREDITH BROWN gave a concert last Saturday at 35 Great Cumberland Place, by permission of the Bishop of Gloucester and Bristol. She sang with artistic taste Lieder by Schubert and Massenet, but was most successful in songs by Mr. Malcolm Lawson, especially in the quaint and effective "Passionate Shepherd." There was much vocal music, in which Miss Ellicott, Mdme. de Fonblanque, Miss Hope Glenn, Mr. H. Reeves, and others, took part. The room was crowded.

MR. F. PRAEGER, who has long been established as teacher in London, gave a concert last Wednesday at Collard & Collard's rooms. The programme consisted entirely of pieces of his own composition. Besides two stringed quartets and a sonata for piano and violin, there were songs and solos for piano and for violin. The quartet party was led by Herr J. Ludvig. Mdme. Frickenhaus was the pianist, and Miss Aylward and Herr Höfler were the vocalists. There was a good attendance, and the concert was very successful.

ROBERT FRANZ, of Halle, the song writer, celebrated on June 28 his seventieth birthday. This fact deserves notice, for he stands as the most important living representative of the German Lied, and as song-writer ranks next to the illustrious Schubert and Schumann. He has spent much of his time in editing and arranging the works of Bach and Handel; and his "Offener Brief" to E. Hanalich, published at Leipzig in 1871, and his "Bearbeitungen," show in how reverent and artistic a spirit he approached his difficult task.

LITERATURE.

Discourses in America. By Matthew Arnold. (Macmillan.)

THE three discourses printed here have done service in the pages of magazines as well as on lecture platforms, and already on those occasions have been subjected to criticism and comment. Their titles are "Numbers," "Literature and Science," and "Emerson." They have no connexion with each other beyond the fact that they were all delivered before American audiences. The whole 206 pages contain less letterpress than fifteen pages of the ACADEMY; thick paper, large type, excessive leading and extravagant margins (not well apportioned) do the rest. The publishers have evidently experienced much difficulty in making up the book; but perhaps they are not to blame, for buyers insist on bulk, and if this book had been half the thickness they would have called it expensive. So, when letterpress is scanty, blank paper must take its place.

The new matter is a short preface, as good as Mr. Arnold's prefaces usually are. Of the discourses themselves, that on "Numbers" is the longest, and that on "Emerson" by far the best. It is well worthy of the author of the *Essays in Criticism*. On the other hand, in "Numbers" Mr. Arnold excels even himself in prolixity. Comparing its style with that of the book just named, it is painful to see how greatly Mr. Arnold's besetting weakness has gained upon him, and to reflect what his readers will have to endure when garrulous old age sets in.

Mr. Arnold in this discourse seeks to show that "moral causes govern the standing and the falling of states"—a proposition excellent in itself, but not of necessity conjoined to his fantastic theory of numbers. He takes the New Testament passage, "Many are called, few chosen," to mean much the same thing as "The majority are bad"; and if anyone suggests that "the majority is, sometimes, good; that its impulses are good generally, and its action is good occasionally," he would answer "Yes, but it lacks principle, it lacks persistence; if to-day its good impulses prevail, they succumb to-morrow. Sometimes it goes right, but it is very apt to go wrong." The salvation of the state is in the few—the "remnant." Doubtless it is true that the active and intelligent few guide the unthinking masses, for good or for evil, and, furthermore, that the thinkers are the persons who ultimately give direction to affairs. The ideas put forward to-day by "impracticable" men and women will hereafter become policy for statesmen. "Every society, every polity," said Carlyle, "has a spiritual principle; [is the embodiment, tentative and more or less complete, of an idea." Truly, the nation is guided by the few—by the remnant,

if you will—to its salvation or to its ruin. Mr. Arnold proceeds to say that "numbers afford a very real and important ground of satisfaction," for the reason that the "remnant" in a small community is too small to be efficient:

"The grave thing for states like Judah and Athens is that the remnant must in positive bulk be so small, and, therefore, so powerless for reform. To be a voice outside the state, speaking to mankind or to the future, perhaps shaking the actual state to pieces in doing so, one man will suffice. But to reform the state in order to save it, to preserve it by changing it, a body of workers is needed as well as a leader; a considerable body of workers, placed at many points, and operating in many directions."

That Judah and Athens did finally collapse is all the evidence Mr. Arnold produces in support of his doctrines, and against this he himself points out that "numbers" did not save Assyria and Rome. Where there is collapse, as in the cases of Judah and Athens, the remnant, he says, may influence the future, "may transcend the state and survive it, but it cannot possibly transform the state and perpetuate the state." A remnant, whether large or small, is powerless to perpetuate any state, for, whether in the individual or the nation, no given condition can be perpetual. Growth is the law of their being. "The old order changeth, giving place to the new." If Mr. Arnold only means that great masses of men change more slowly than small masses, and that sudden shocks are not so likely to upset them, then the mountain has been in labour and brought forth a mouse.

In the second discourse Mr. Arnold argues the case for what has been termed "mere literary instruction and education" against the "sound, extensive and practical scientific knowledge" which has come into fashion:

"I am going to ask whether the present movement for ousting letters from their predominance in education and for transferring the predominance in education to the natural sciences . . . ought to prevail, and whether it is likely that in the end it really will prevail."

"Let us not underrate the value of a fact, it will one day flower into a truth," said Thoreau. Mr. Arnold's plea is that the mind shall be educated in such a way that facts presented to it shall not remain as facts, but shall flower into truths.

I discussed the lecture on "Emerson" pretty fully in these columns at the time of its appearance in *Macmillan's Magazine* (ACADEMY, August 16, 1884). I thought then, and on careful re-reading still think, that Mr. Arnold has merely proved an absurdity when from Milton's dictum about poetry, or rather from his version of Milton's dictum, he deduces that Emerson was not a poet. Dr. Holmes came much nearer to the truth when he said Emerson, "though a born poet, was not a born singer." It is the distinction between poet and singer which Mr. Arnold has failed to make.

It has all along seemed to me that Mr. Arnold must have been a good deal disappointed at the reception accorded to his lecture on "Emerson," for while he considered he was giving to Emerson the highest of high praise, his audience and readers fell upon him as one who had unduly depreciated

the great American. While declining to admit his special merit on minor points he freely accorded to him rank and station among the supreme souls who have dwelt on earth. He said Emerson was not a man of letters, not a philosophy maker, and not a legitimate poet, but then he was much more than any of these, being nothing less than one of the world's Seers. The fault was Mr. Arnold's own. His art in that discourse was defective, for he dwelt so long on the negative points that his audience and readers became not only depressed but disappointed and vexed, and could not be aroused again when at length the climax was reached.

From the present preface it appears that this view of the case was correct. Mr. Arnold admits that the impression he made, not only in this discourse, but also in the discourse on "Numbers," was not the impression he intended to make:

"I am glad of every opportunity of thanking my American audiences for the unfailing attention and kindness with which they listened to a speaker who did not flatter them, who would have flattered them ill, but who yet felt, and in fact expressed, more esteem and admiration than his words were sometimes, at a hasty first hearing, supposed to convey. I cannot think that what I have said of Emerson will finally be accounted scant praise, although praise universal and unmixed it certainly is not. What high esteem I felt for the suitability and easy play of American institutions I have had occasion, since my return home, to say publicly and emphatically. But nothing in the discourse on "Numbers" was at variance with this high esteem, although a caution certainly was suggested. But then some caution or other, to be drawn from the inexhaustibly fruitful truth that moral causes govern the standing or falling of states, who is there that can be said not to need?"

Admiration for Mr. Arnold's writings does not imply agreement with his opinions. Even where intellectual assent is possible, his method is so ruffling that the reader finds himself always in an attitude of protest. He said to his American audience:

"No one will accuse me of having flattered the patriotism of that great country of English people on the other side of the Atlantic among whom I was born. Here, so many miles from home, I begin to reflect with tender contrition that perhaps I have not, I will not say flattered the patriotism of my own countrymen enough, but regarded it enough."

Truly no one who knows Mr. Arnold will accuse him of flattering anything or anyone. He is stimulating always; but he stimulates not as wine, but as a cold shower bath in winter stimulates. The benefit he gives is not in the present refreshment, but in the after-glow. He chills our enthusiasms; but in the end our minds, if they are robust, gain in health. For this reason, and because though often wordy he is never trivial, everything from Mr. Arnold's pen is welcome.

WALTER LEWIN.

Central Asian Questions: Essays on Afghanistan, China, and Central Asia. By Demetrius C. Boulger. (Fisher Unwin.)

MR. BOULGER's literary activity reminds me of the words that Timur Leng is reported by his biographer to have said before starting on the conquest of China: "China and Turkestan

cannot be separated from each other; in order to secure the latter I must get possession of the former." I suppose it is in this sense that Mr. Boulger has coupled the study of Chinese and Central-Asian affairs. And, without inquiring into the appropriateness of such a connexion, I must say that, from a literary point of view, he has acted very wisely, for the English public has decidedly benefited by his twofold studies, and the papers published by him during the last few years in sundry periodicals and newspapers have greatly contributed to the enlightenment of the British public, so persistently indifferent towards the political affairs of Central Asia.

But periodicals and newspapers are a wide field; and the writer who has scattered about the products of his pen does a good work in gathering together the loose leaves, and in presenting to the public a collected and a well-sifted exposition of his views expressed at various times on questions that have become of national importance. I cannot refrain from remarking that the first nine essays published in the present book ought to be read by everybody interested in the Central Asian question. In the first paper, entitled "Russia's Empire in Central Asia," the author gives in a nutshell the history of Russian conquests in that part of the world in clear, well-defined language, affording to the reader an insight not only into the political affairs, but also into the commercial and industrial life, as well as the military and civil administration of the country. There are plenty of conclusions to be drawn from this paper; but I suppose that the single one, that the financial deficit of Turkestan has amounted hitherto to eighty million roubles, will convince our optimist politicians that Russia does not expect to find her reward in the three Khanates, but that her undoubted object is a more lucrative goal in the South of Asia—namely, India. A good map, showing the gradual advance of the Russian Empire from 1762 until recent times, greatly enhances the value of this paper.

Similar remarks may be applied to Mr. Boulger's essays on Afghanistan, particularly to the essay which treats of England's policy towards that State. Here, too, the reader gets a good historical summary of the relations between India and the country beyond the Suleiman range. The diplomatic transactions carried on between Calcutta and Kabul are well sketched, and the author gives abundant proof not only of his extensive information, but also of his sound judgment and political sagacity. The decent, but decided language shown in his criticism of the ruinous school of "Masterly Inactivity," to which England owes her present discomfiture on the skirts of the Paropamisus, is an admirable specimen of political controversy, and will convey to the reader an idea of the mischief of which party politicians are capable. I fully agree with him when he says, "The policy of 'Masterly Inactivity' has never been carried by Lord Lawrence to the pass that it was by Lord Northbrook and the Duke of Argyll in 1873." Assuredly not. In a private conversation I had recently with a political writer, who was intimately associated with Lord Lawrence in India, I gathered that that statesman, fully aware

of the intrigues of Russia, would have greatly differed from those who pretend to be the heirs of his political doctrines. Lord Lawrence would never have sullied his well-deserved name by the ignominious surrender at Pendjeh.

In the two essays dealing with the question whether Kandahar should have been retained or not after the conclusion of the second Afghan war, the reader will find all the arguments which speak, to use the words of Gen. Hamley, not for an annexation, but for an occupation, of this important place—an eventuality which, sooner or later, will be realised, although now too late for securing the effects it could have had four years ago. Here, as everywhere, the style of Mr. Boulger is conspicuous for its clearness; and I do not exaggerate in saying that the paper entitled "Why Candahar should be retained" is about the best I have read on that question, in which the Liberal Government has been so sadly misled by its advisers. Now that seven millions have been granted for the completion of the railway and for necessary fortifications, we may well ask whether Mr. Boulger is not right in saying:—

"Lord Hartington computed the cost of the occupation of Candahar under the present conditions at the rate of one million and a half sterling per annum; but, when allowance is made for the facts stated, it will be seen that this outlay is quite of our own seeking, because we are maintaining a garrison there under abnormal conditions, wholly unnecessary and inexcusable. I do not think I am demanding anything from general credulity in saying that, with the proclamation of British authority, the completion of a railway, and the organisation of the adjoining district to as far as the Helmund, Candahar would produce a revenue easily capable of defraying all the expenses incidental both to its military occupation and civil government."

But why should we enter into recriminations about facts which cannot now be undone? Suffice to say that Mr. Boulger's essays are a magazine of information relating to the people and country of Central Asia, Afghanistan and China; and as the importance of those countries to England's foreign policy is daily increasing, it is inevitable that such a book should attract the attention of the English reading public. A. VAMBERY.

History of the Irish Confederation and the War in Ireland. Vol. III. 1643-1644. Edited by J. T. Gilbert. (Dublin: Gill.)

THE effect of the events which took place in Ireland during the Great Civil War has had but little attention paid to it. Probably there are many Englishmen possessed of fair historical knowledge who know no more about the matter than the author of *John Inglesant*, and are content with a vague belief that there was a very wicked transaction known as the Glamorgan Treaty somewhere between a massacre in Ulster and a massacre at Drogheda.

In reality the course of Irish affairs was watched with intense interest in England. Every step of the contest, and of the negotiation which sometimes interrupted it, was narrated in countless newspapers and pamphlets; and the information contained in them, though sometimes tainted with exaggeration, and always overlaid by party com-

ments, was not very wide of the truth. At all events, it is probable that it did more to steel the heart of the Parliamentary party against Charles I. than all the plunderings of Rupert's Cavaliers.

It is, therefore, with great satisfaction that those who are mainly concerned with English history note the progress made by Mr. Gilbert in his publication of documents connected with the Confederate Catholics. His present instalment reaches from October, 1643, to September, 1644. Of the volume only twenty pages are taken up by the portion of the work of Richard Bellings relating to those months, and this short extract is not of any great interest. The remainder is given to a series of illustrative letters and documents, from which the history of the time is to be gathered far better than from any narrative written many years after the events occurred.

The documents printed by Mr. Gilbert are mainly, though by no means exclusively, taken from that amazing treasury of the Irish history of the seventeenth century, the Carte MSS. in the Bodleian Library. It must be remembered that the editor does not republish documents which have already been printed in Carte's life of Ormond, and also that his subject is limited to the war in Ireland. Those who wish to investigate the policy—if it can be called by that name—of Charles I. with respect to the Irish war will still have to look for it in the Carte MSS., except so far as the documents are already in print. The history, for instance, of the supply of soldiers from Ireland to serve Charles in England is, from one point of view, of great interest; but while Mr. Gilbert's documents give us the negotiation relating to the levy of an army of native Irish, they only incidentally notice the sending over of detachments of the English troops which had hitherto been serving against the Confederate Catholics.

To say this, however, is only to remind residents in Oxford, who are eager for work, that there is plenty still to be done with the Carte MSS. Mr. Gilbert has properly defined the scope of his own labours, and the work which he has done will be valued most by those who, like himself, are real workers at the history of the seventeenth century.

SAMUEL R. GARDINER.

MICHAEL FIELD'S NEW VOLUME.

The Father's Tragedy; William Rufus; Loyalty or Love? By Michael Field. (Bell.)

WHATEVER may once have been the case, a new writer now has no reason to complain that he cannot find an audience. A poem has only to show its head to be rushed at by critics, who are but too anxious to discover its excellence, and to point out the qualities which it has in common with Shakspeare. But when a second work from the same hand appears, the criticism of many waxes cold.

Mr. Field—for so it appears simplest to call him, without inquiring too curiously into details of number or gender—made a name last year with his plays of "Callirrhoe" and "Fair Rosamund"; and the plays—the former of the two, at least—did show a somewhat remarkable, though an uncertain, promise. The book owed much of its success to one episode

of singular force and beauty. But though the scene between Machaon and the Faun was a long way in advance of anything else in the book, the rest of the play had quality enough to make one hope for better work from the same hand. This promise is not well borne out. The later plays have the same defects as the earlier in even a more marked degree. One is glad to recognise their merits; in skilful choice of subject, in unity and force of motive, in freshness and vigour of language, they are much beyond the ordinary level. But these merits are not sufficient to counter-balance the feebleness of plot, the total absence of humour and of lyrical faculty; and, what is worse, or, at all events, more annoying than all, the hopeless vice of style which seems to have its origin in the idea that dialogue cannot be dramatic unless it is almost wholly conducted in sustained metaphor. Take one or two instances of this irritating habit:

"That yellow sheaf of hair
That's ripe upon his brow,—I'll beat it down
Beneath the flail of Misery!"

Or again—

"You've stripped me of my child; 'twere modesty
To hide my naked motherhood."

Or again—

"The halcyon Sleep
Hath made a blessed calm. O safest hour
To turn her with the helm of my desire
From anchor'd port to Love's free waves."

This is an old vice of style that creeps again and again over poetry—an abuse of metaphor that in the newest modern writing has become as mechanical and conventional as it was in the days of "Pizarro" and "Caractacus."

"No more! the freshening breath of thy rebuke
Hath filled the swelling canvas of our souls;
And thus, tho' fate should cut the cable of
Our topmost hopes, in friendship's closing line
We'll grapple with despair, and if we fall
We'll fall in glory's wake!"

This is the final and conclusive criticism on a dramatic style like this, that makes "tropes as plenty as noun-substantives."

It would not, however, be fair to judge Mr. Field entirely by such passages as these. Let us take an instance of a different manner. The following is from a scene in "The Father's Tragedy" between the Earl of March and his daughter, who was betrothed to Prince David of Scotland, and has been cast off to make room for a new alliance between the Prince and the daughter of the Earl of Douglas:

"Earl of March. My daughter! God!
Her wraith!—I come to find the king.—Art sick?
It cannot speak. She's mad.
Elizabeth Dunbar. Fath—er.

[Falls on his neck.

Earl of March. My child,
What is't? Oh, tell me you are sane, not sick,
Nor supernatural. I feel your tears
Scalding from life's red fires. These raging
drops!

Oh, what an ocean swells!—You'd have mine
ear?

Elizabeth Dunbar. Re—ven—ge me!

Earl of March. That I will, and to the death.
On whom?—Not yet! I'll wait. Within her
throat

The child of anguish labours.

[Re-enter Women with flowers.]

Elizabeth Dunbar. Oh! [Faints.

Earl of March. She'll die."

Here is passion! The scene recalls another passage in "The Critic," though it falls short of the inimitable

"Who says
A whale's a bird?"

Whether such writing be sane or sick, it is certainly far from supernatural.

Of the three plays in this volume the best, to my mind, is the last, the one with the unfortunate title. It was written, as the author says in the preface, three years ago; and, whether for that reason or for others, it keeps itself more within bounds, and has less of that perpetual dazzle and tangle of metaphor and personification which becomes so wearisome in the other plays. The scene where the young prince renounces claim to the crown of Sicily, and the last scene of all, have dramatic quality of a high rank. In the latter the same note recurs which gave such charm to the episode of the Faun in "Callirrhoe," a sort of speaking straight out, as it were, which, in its delicate and pathetic cadence, goes far to redeem the faults of the play.

"He does not claim," Mr. Field says of himself in the preface, "to have reached the severe beauty of art; his endeavour has been rather to touch with sympathy the impotence of human effort." It is no discredit to any poet that he has not reached the ideal of poetry; our complaint rather is that Mr. Field has made no serious and self-denying attempt to reach it. Simplicity, lucidity, sanity—these are the qualities that his work does not possess, and they are the qualities which alone can give poetry high or enduring value. One may be allowed to hope that experience and study of the best models may tone down his present extravagancies. Better results ought to come of natural powers which are, perhaps, as great as those of any of our younger poets.

J. W. MACKAIL.

*An Account of the German Morality-Play
entitled "Depositio Cornuti Typographici."*
By William Blades, Typographer. (Trübner.)

THE origin and growth of the ceremony of "Depositio" are to this day involved in much obscurity, which it would undoubtedly be worth the while of a patient investigator to dispel. Of one fact we can, however, be quite certain—that the academic deposition is of much older origin than that of the journey-men printers, and that the whole substance of the very late printer's deposition with which Mr. Blades has favoured us is drawn from the *Manuale Scholarium* of the fifteenth century. His criticism of Oscar Schade, who held the printers' *depositio* to be borrowed from the academic, falls entirely to the ground when we compare the *Manuale* with De Vise's version of 1621. In order to explain this connexion so clearly as the present state of our knowledge on the subject permits, it may not be out of place to preface a few remarks on the academic *depositio*.

In the fifteenth century, and probably earlier, the scholar who had not commenced his university career was termed a *Bacchant* or *Beanus*. Various not very satisfactory derivations have been given for these words; but the most suggestive, if not the most scientific, for the latter is certainly the acrostic, *Beanus est animal nesciens Vitam Studiosorum*. This animal is elsewhere termed a *bestia cornigera*; and it would seem that a trace of this phrase has survived in Cambridge to this day, where a student who has not come into residence,

and thus has no claim to be called a 'varsity man, is, therefore, of necessity a *beast*. The Bacchant or Beanus usually wandered about Europe from one school to another in search of a good master, a vacant bursary, a gullible peasant, or a charitable burgher. On his wanderings he was generally accompanied by one or two smaller boys, termed in Germany A.B.C.-*Schützen*, who were committed to his charge, and who were obliged in return to "fag" for him. The extreme cruelties which these *Schützentoos* often experienced from their youthful masters are vividly described in the autobiographies of Butzbach and Platter. But the day of vengeance for the Bacchant came with his admission to university life. Then arrived the *depositio* with its instruments of torture: the horned hat, the *Bacchantensahn*, the axe and plane, the comb, scissors, razor, and *Ohrloffel*. It must not be supposed that these were merely for display. In the *examen patientias* which preceded the *depositio* proper the Beani were subjected to extremely coarse treatment. Thus the authorities of Prag University found it necessary to decree for the Beania that: "Omnes illi foetores veribus scatentium pulmouum, foedationes ac deturpationes oris aut aliarum partium corporis cum pice liquida, facibus vel aliis putridis ac impuris rebus quae nauseam ciere . . . inhibita sunt." Martin Luther, who, like other university magnates, occasionally presided at such ceremonies, finds in the *depositio* a figure of human life with all its misfortunes, troubles, and annoyances. He tells the Beani to learn patience, for their later lives will be one long deposition: even their wives will "depose" and plague them. He concludes by bidding the depositor, "Pour wine upon their heads, and absolve them from Beani and Bacchantes." This baptism of wine, water, or occasionally filth, followed by the absolution, was essentially the crowning act of the ceremony. It survives almost to the present day in the *Fuchstauf*, and possibly the slightest trace of the deposition might still be found in the ceremonial conversion of a *krasser Fuchs* into a *Brand-Fuchs*.

The age of the academic deposition—that "ancient custom of our high schools," as Luther terms it—is best evidenced by the *Manuale Scholarium* before referred to. This little work, written to introduce students to the language and habits of university life, was probably composed about 1496 with special reference to Heidelberg. The first dated edition is due to Martin Flach, Strassburg, 1481; but there is an undoubtedly earlier one, which Hain attributes to Dinckmut—and Ulm, 1476-80, would for more than one reason be a suitable place and date for the work. Numerous editions appeared during the last quarter of the fifteenth century. The *Manuale* contains, I believe, the earliest known account of the deposition, and its form points to its having existed long previously. The first two chapters only are concerned with our present subject. The first treats of how a *discipulus* arranges with a *magister* that the deposition shall take place under his presidency, and how the guests shall be limited on account of the Bacchant's poverty. The second chapters give us the deposition in the form of a dialogue between Bartoldus the Depositor and a fellow-student Camillus. The play, for so it may be called, took place

while the *magister* and guests were drinking at the unfortunate Bacchant's expense. The various steps of the *depositio*, as given in the *Manuale*, have been closely followed by de Vise in his *Depositio Cornuti*, printed by Mr. Blades in an appendix, and by Johann Rist in his rather washy version of de Vise, the translation of which forms the body of Mr. Blades's work. The steps are briefly as follows: the discovery of a strangely disagreeable smell, the search for its cause, its explanation when the *bestia cornigera* or *beanus* is found, the description of the extremely repulsive character of that animal, the determination to free the creature from its deformities and make a decent student out of it.

"Ha, quid dixerim? Tu in medicinis praeclarus es et apprime eruditus, mi Camille. Nosti probe, qui bachantibus insaniamque habentibus cornua deponantur ac postea dentes illi eruantur. Aures vero, quemadmodum cultellis fieri consuetum est, abbreviantur, caliginem oculorum amovemus. Et cerne pilos illos de naso progredientes! fac in primis extrahas. Sed laboriosum erit tam longam tamque horrendam barbam tondere; cum vero tibi rillum sit acutissimum, lignis de quercinis factum, elaborare cum exornabis. Tum scelera sua confitetur. Postremo a magistris venerabilibus a foetore illo deponetur copuleturque consortio nostro."

Then follow the various processes of horn and tooth drawing, hair and beard cutting, smearing with black or foul ointment, and the confession. The poor cornute on bended knees is made to confess the most terrible sins, and to do penance by paying for the supper and wine. Then the ceremony concludes with absolution, and doubtless the wine baptism referred to by Luther and others. Such, then, is the academic deposition as it existed in the fifteenth century—an old and time-honoured custom.

Let us now consider what form the deposition took among the journeymen of the various handicrafts. We must here note two facts which bear closely on this matter: first, that the deposition was a ceremony essentially connected with the reception of the journeyman into the club or association of journeymen, it had nothing to do with his membership of the guild; secondly, that these journeymen clubs were only struggling into existence in the second half of the fifteenth century, at a time when the deposition was an established academic custom. Finally, let us notice that we have no account whatever of any journeyman deposition before the seventeenth century; and, as Mr. Blades puts it before us, it was then a very feeble reflex of what had been current at Heidelberg two centuries previously. It is a post-Reformation institution, and as such the historian can lay but small weight on the probability of its being connected with any initiatory rites of the early craft-guilds. As for Oscar Schade's idea that the deposition was related to old mediæval festivities, such as the Feast of Asses, there is no evidence in the least to support it; and to talk, like Mr. Blades does, of the printer's deposition being a ceremony "lost in the gloom of antiquity," seems quite unjustifiable till some evidence of the pre-Reformation existence of these journeyman customs is produced.

Mr. Blades does not always appear to

distinguish between the craft-guild and the journeyman-brotherhood or club. Before the latter came into existence the ceremony by which the apprentice became a journeyman took place before the whole guild. It was very far from being a deposition. It was a very solemn ceremony indeed, and the master of the guild declared the apprentice free of his years of tuition in the name of the Holy Trinity and of the craft. When the oppression of the masters led to the establishment of journeyman-brotherhoods, these were at first essentially religious. They might, under the cloak of religion, or as friendly societies, carry on a disguised opposition to the masters, the heads of the craft-guild; but it is hard to conceive any ceremony like the deposition being connected with them, until with the Reformation they lost entirely their religious character. At any rate it rests with those who assert the antiquity of the printer's deposition to produce evidence of its pre-Reformation existence. I, for one, doubt if any can be found. The earliest journeyman ceremonies of the kind with which we are acquainted are those of the farriers and armourers on the one hand, and those of the coopers on the other. These date from the eighteenth century, and may be a century older, but I find absolutely no internal evidence that would lead me to believe they "belong to a period centuries earlier." They appear to me in every sense post-Reformation. The journeyman books of the farriers and coopers have nothing to do with the craft-guilds. They contain those customs which were communicated to the apprentice on his being admitted to the association of journeymen. With much coarse humour they give some practical advice as to what conduct the novice should adopt in his journeyings, and describe the ceremony during which this advice was given to him—a ceremony resembling to some extent the deposition. The initiatory rites were not peculiar to the journeyman printers, but probably belonged to all associations. What we do know with regard to the printers is far less than what we know about the farriers, armourers, and coopers; and that little does not concern the early printers, but is a seventeenth century reflex of an early academic custom. This seems to me all that can be said historically on the matter till further evidence is collected. I may, however, remark that in the statutes of the Frankfort union of journeymen tailors from 1452, and in those of the Freiburg union of journeymen locksmiths from 1544, I find no trace of any ceremony corresponding to the deposition, notwithstanding there is much information with regard to the convivial meetings of members. This is some, although negative, evidence of the late date of the initiatory rites of the journeyman associations.

Although I feel compelled to take up a very different historical view of the matter from that adopted by Mr. Blades, I do not think his book will lose much of its interest owing to what seems to me a want of historical and literary completeness. Typographically and bibliographically the work possesses all the excellence which the author's name warrants us in expecting, while throughout a keen desire to see the printer's art raised to its old position is manifest. If we hardly know why the author should have translated Rist's somewhat bald version of de Vise, instead of the

latter work itself, we can still allow that his translation—although not very literal, and occasionally missing the point to avoid the coarseness of the original—is undoubtedly readable. With his literary remarks we are not always quite satisfied. Thus, his statement that the printers were not drawn into close connexion with the universities before the Reformation needs considerable qualification, and, again, the statement that Til Ulenspiegel first appeared in Low German is rather misleading. There is only a statement of the eleventh edition to this effect—namely, that it had been translated out of Low Saxon. The two earliest known editions, the unique copy of the 1517 edition in the British Museum and the unique copy of the 1519 edition at Gotha are both in High German. Till a previous Low German version is found it is premature to state that the book first appeared in "plaat-deutsche" (*sic*). The reproductions are well done and well chosen. We hope some day Mr. Blades may throw a little more light on the early customs of the printer's craft; but so far as Germany is concerned, the great source must be the town archives of the end of the fifteenth century, and not printed books of the seventeenth.

KARL PEARSON.

THE VISIGOTHS IN SPAIN.

Die Könige der Germanen. By Felix Dahn. Sixth Volume. Second edition. (Leipzig.)

THE name of Prof. Dahn, of Königsberg, is well known by all students of the period of the great barbarian migrations; and for their sakes we call attention to the fact that a new and revised edition of the sixth volume of his great work on "The Kings of the Germans" has just issued from the press.

This volume deals with the laws and institutions of the Visigoths during the three centuries of their dominion in Southern Gaul and Spain. How interesting, yet how perplexing is this portion of the history of the early Middle Ages, how great the need of a really scientific treatment of a period in which romance has hitherto had unusual success in passing itself off as history, none know better than those who have attempted to study the subject for themselves; and we believe it will be the general verdict of these students that, after Prof. Dozy, Felix Dahn has done most towards bringing order out of this chaos.

The additions which Dahn has made to the second edition appear to be not numerous but interesting. He has carefully examined the *usus loquendi* of Ulfilas with reference to all words bearing on political or social life. And this inquiry, while throwing an interesting light on Dahn's main subject, indirectly furnishes valuable evidence of the conscientiousness and the delicate accuracy with which the first Teutonic author fulfilled his self-imposed task of the translation of the Scriptures into the language of his countrymen.

Prof. Dahn has also in an Appendix carefully examined the documents recently published by Padre Fita under the title *Suplementos al Concilio Nacional Toledano VI.*, which throw a curious light on the ecclesiastical and social condition of Spain in the early part of the seventh century. (The Sixth Council of Toledo was held in 638, or seventy-three years before the Moorish inva-

sion.) We find in these documents a long and elaborate judgment, subscribed by fifty-two bishops of Spain and Gallia Narbonensis, in the cause of Martianus and Aventius, competitors for the see of Astigi. Nineteen years before the date of the council, Martianus, having been accused of sundry acts of immorality, of treason, and of consulting a woman possessed of a spirit of divination in order to learn the time of the king's death, was deposed, and Aventius was consecrated bishop in his stead. Martianus, however, had never ceased to expostulate against the injustice of the sentence, and now, after the lapse of so long a time, the prelates of the council review the proceedings at the original trial. They admit the validity of the objections taken against some of the evidence, and especially they find that some of the most damaging charges were brought by persons who had bound themselves by a solemn league and covenant ("perpetuâ societate mancipati") to Aventius that they would not rest till they had hunted Martianus out of the dignity which his rival coveted. Released by the Fathers of the Council from the religious sanction of this immoral oath, the conspirators now give their testimony in favour of the unjustly accused Martianus, who is thereupon reinstated in his see. Aventius is, however, suffered to retain the titular rank of bishop, and both the competitors are forbidden, under penalty of anathema, to raise any future question concerning the affair which is thus decided.

In another of the documents here published the bishops of Spain remonstrate with courtesy, but with considerable freedom, against an imputation which has been passed upon them by Pope Honorius, that they are remiss in the punishment of heresy. They have certainly thought that mild measures were for the time the best calculated to attain the desired end; but they indignantly deny that to them can be fairly applied the language of the prophet, "They are dumb dogs: they cannot bark." This text, they remark by the way, is not to be found in the Book of Ezekiel (from which Honorius had apparently quoted it), but in that of Isaiah, "though [as they add, in order to lessen the importance of this lapse] all the Prophets spake by the same Spirit." However, they are sure that the Devil has employed some persons to propagate this slander against them, to which they regret that the pope should have given such easy credence. They will not follow his example by accepting a report which has reached their ears that "the venerable Roman prince" (it is not quite clear whether they mean the pope or the emperor) permits Jews who have been once baptized to return to their old superstition. So the document flows on, with many expressions of deference for the authority of St. Peter's chair, but with a good deal of self-assertion and scarcely veiled recrimination against the actual occupant of that chair.

A curious comment on this epistle is furnished by the document which comes next in order, and which is entitled "Confessio vel professio Judaeorum civitatis Toletanae." In this paper, which is dated December 1, 637, the "ex-Hebraei" (that is, the Jews who have already undergone a compulsory conversion to Christianity) are made to declare that on account of their "well-known perfidy and

prevarication"—in other words, their tendency to relapse into Judaism—they have, by the civil and canon law, justly merited death, but that, touched by the exhortations of the most holy council, they spontaneously return to the path of safety. They therefore make a fresh profession of their faith in the Trinity and in the Divine and human nature of Christ whom their fathers crucified. They promise to renounce all Jewish rites and observances: the keeping of the Sabbath, circumcision and abstinence from particular kinds of meat, "except those which nature, and not superstition, rejects," to hold no sort of intercourse with those Hebrews who have not been baptized, and to produce all their Scriptures—both those read in the synagogues and the Apocrypha—that it might be seen that they are not tampering with the sacred text. In words, which are quoted almost literally from chap. xiii. of Deuteronomy (6-10), they promise that if one of their number, his wife, his son, or his daughter, shall fall from the Catholic faith, they will, at their own peril, lay hands on the perpetrator of such wickedness and stone him with stones till he die. Thus (as Prof. Dahn remarks), with a refinement of Christian charity, the very provisions of the Mosaic law against apostasy from Judaism are made use of to prevent the possibility of the Jewish renegade relapsing into Judaism.

The whole document certainly shows that the pope had little reason to complain of the lukewarmness of the Visigothic bishops; and passages of it remind one in a curious way of Browning's poem, "The Sermon on Holy-Cross Day."

The heavy hand which the Gothic kings of Spain undoubtedly brought to bear upon the Jewish race during the last century of their dominion must have been the more bitterly resented, because in the hundred years from Euric to Recared that race had been treated with marked favour by the Arian sovereigns who reigned at Toulouse and Toledo. It seems to have been the great increase in their numbers and wealth resulting from this century of peace which caused the terrific persecution to break forth against them under King Sisibut (612-620)—a persecution in the course of which, according to the probably exaggerated estimates of later writers, 90,000 Jews were forced to submit to Christian baptism. No doubt some of the compulsory converts of that terrible time figured among the "ex-Hebraei," whose confession of faith we have just been perusing.

We have not space to refer as we should like to Prof. Dahn's analysis of the current stories as to the fall of the Gothic monarchy in Spain, but must content ourselves with referring our readers to pp. 671-693, in which, breaking a lance with a Spanish writer who, poorly armed with the weapons of criticism, had come forth to do battle on behalf of the old legends, he shows that we really know little more than the names of the two last Gothic kings of Spain, Witika and Roderic. The vices of the one, the virtues and heroism of the other, are both really unvouched for by any contemporary authority. The greater part of the romantic details of the Moorish conquest which have passed into history are due to Moorish historians of the ninth century, partly also to Christian chroniclers of

the same date, but preeminently to King Alfonso III., who died in 912, two centuries after the defeat of King Roderic. Some grains of historical truth may be preserved by these writers; but anyone who has studied the growth of legend in the Middle Ages will readily admit how large may have been the admixture of that which is merely fabulous.

We heartily recommend this as well as the other volumes of Prof. Dahn's "epoch-making" work to the attention of all students of early mediæval history. T. HODGKIN.

NEW NOVELS.

Taken to Heart. By the Hon. F. Plunket. (Maxwell.)

Dr. Grattan. By W. A. Hammond. (Bentley.)

A Marriage of Convenience. By Harriet Jay. In 3 vols. (White.)

The Mistress of Tayne Court. By Mrs. Marshall. (Seeley.)

Thompson Hall. By Anthony Trollope. (Sampson Low.)

Short Flights. By A. E. I. (Simpkin, Marshall & Co.)

Struck Down. By Hawley Smart. (Warne.)

By Shore and Sedge. By Bret Harte. (Longmans.)

Taken to Heart has all the excellences and few of the defects of its class. Men rarely succeed in catching the delicate lights and shades of refined home life; ladies seldom fail, but they are prone to mar the picture either by feminine frivolity or maudlin pietism. Of these there is no trace in Miss Plunket's agreeable work. She errs only from distrust of her own powers. Doubtless fearing that her pretty and wholesome little domestic story would be thought too tame, she assigns a mysterious past and a sensation murder story to Miss Smith. But they are quite incidental, are merely narrated hurriedly by Miss Smith at the clearing up; and, as the author evidently takes no interest in them herself, we may eliminate them from the story, which they do nothing to improve. The main plot is simplicity itself. The master of Beechwood, a quiet, sensible, chivalrous old bachelor, offers a home to his friend's orphan—a girl of seventeen, an impulsive, honest, loving girl, hitherto pining in a poverty-stricken London lodging. Nothing could be sweeter or more affecting than the perfect freedom and transparent camaraderie between the guardian and ward, as they lay their heads together to puzzle out the proprieties and cope with the local Mrs. Grundies. Their conversations are curiously natural; indeed, Miss Plunket seems to have the unusual power of making the dialogue help on the story without becoming wooden. The heroine has a passing love for a flirting deceiver, and then a serious and successful affair with a proper young gentleman. But these love affairs do not interest us much. Meanwhile, a companion is engaged—one Miss Smith—a mysterious and splendid woman; and very delicately does the author trace the growing friendship and love between Mr. Vaughan and Miss Smith in the years while his home is brightened by the presence of the happy, grateful girl and the

noble cultivated woman. Those who care to note the superlative touches of a real artist should examine the (p. 212) little home picture—a wet afternoon, the girl at her fancy work, Miss Smith reading, and Mr. Vaughan edging up to the fire for a cosy chat; but we must quote:

"The lady, who had scarcely raised her eyes before, now closed her book, and laying it down on her knee, turned to him with the quiet confidence of habit, and said, 'Well, did you go down to the village as you intended?' And then began one of those commonplace dialogues of every-day life, which, utterly uninteresting to all outside, form an element of happiness to those within the magic home-circle, and keep ever weaving their threads harmoniously together, the warp and woof of domestic intercourse."

How strikingly and gracefully the thought is expressed in this sentence, which, indeed, gives the keynote of the book! Little touches of ripe humour occur everywhere; especially when Miss Grimes, the professional scandal-monger, comes on the scene. She is worthy of Cranford, but Mrs. Gaskell would never have brought out her full grimness. The ridiculous collapse of her mystery about the scandalous widow we will not reveal, amusing as it is; but rather recommend the book to those who care for something pure, sensible, graceful, and comfortable.

In *Dr. Grattan* the ambitious dramatic element is more pronounced, but not more successful. The plot rolls on a strange confession of Mr. Lamar that he had been a slaver and pirate during his fourteen years absence from his family. Was it true, or was it a hallucination? Dr. Grattan, who loves the daughter, has to find out. The plot promises well, but is huddled up, probably through inexperience. Many of its meshes are tangled, if not broken. The usual tiresome testamentary complications arise; and in the end, of course, the wealth of Louise Lamar disappears, and the Doctor's rather stupid scruples are satisfied. All this let us leave aside, for the domestic element is as charming as in *Taken to Heart*, though less finished. The Doctor is a fine fellow—an American Mr. Vaughan—for both are middle-aged lovers. His views are eccentric, like his library, which in his horror of symmetry he had reconstructed into an irregular pentagon. There is something Shandean in his ruminating pipes under the porch, with his theory of the contemplative influence of the surrounding mountains. He had a different mountain for each train of thought, and consulted them in his medical and religious difficulties. But the time came when he had to struggle against his love—he a village doctor—with a lovely princess, and then there was none of his meantains which could help him in the novel predicament. The love between him and his daughter Cynthia is delightful to read about, as are all these simple, harmless sayings and doings of a little New England village. Mr. Hammond's heart is in the right place, nor is his head far wrong, and we thank him for his pleasant and improving entertainment.

A Marriage of Convenience calls for no remark. It is a dull, exaggerated fashionable novel of the fashion of the last generation, made up of the usual elements—a lovely

Lady Constance, a diabolical foreign duke, miserable marriage, handsome lover, "like a young Adonis in his elegant evening dress," spies, mysteries, &c. Constance addresses her spouse as "My Lord Duke," and he is always prating to people about "My Duchess." The proposal scene is comical. "Constance, I love you—be my wife!" My lord I—I do not love you! "Become my Duchess." She looked at him with dazed amazement."

Mrs. Marshall's new story is not an improvement on her *Colston Days*. The story is conventional and uninteresting. Gwendoline is a stupid, mulish little heroine, even if "her hair rolled down almost to her feet." She is under the influence of an old man named Thorne, who slips in and out of the book with snatches of that meaningless, ignoble "personal piety" cultivated by consumptive mammas of the Riviera—Mrs. Hemans' school. The hero is a highly proper hero; and as he always takes home-made biscuits and cocoa for supper, and is mighty particular about the exact proportions of milk and sugar, it may easily be guessed that he is far from impious. The best thing is the life-like sketch of the Elliot family, a mother and girls spoiled by the fussy influence of the university extension. This is quite life-like, but almost cruel in its unsparing truth. Otherwise the book is mere nothingness.

There remain four of the shilling story-books now so popular, or rather bidding for popularity. First comes a little after-dinner—and by no means refined—story which was probably told in three minutes, but which Mr. Trollope has drearily expanded into 127 pages. A lady bringing a mustard plaster up to her husband mistakes her room in the hotel, and in the dark puts it on a strange gentleman. That is positively all. The padding is clumsy, vulgar, and tiresome.

The cover of *Short Flights* presents a flock of swallows fluttering round some telegraph wires. The only short flights these leaden stories remind us of are those which our old gander and his ladies used to laboriously make between the prosaic poultry-yard and the stagnant duck-pond. We have not patience to say more about them. They must have been written and published by mistake somehow. The very first sentence is as follows: "I had meant to entitle this sketch 'Raised Up,' but, reflecting that after all 'Cast Down' would better indicate its nature, I abandoned the idea and named it as above." Which, of all things, is "Yellow Roses"!

And now it seems that Hawley Smart has hit upon a *via media*, and calls his treatise *Struck Down*. The key to these mysteries is the frantic longing to snatch at the mantle of *Called Back*. *Struck Down* is at least brisk—as a police report—but it is miserable stuff. Never having read any of this author's works, we were unprepared for the shock. A couple of lines introducing one Dave Skirling convinced us that if a murder were contemplated he would be the man. A conventional detective takes the whole volume to come to the same conclusion—a most insufferable prating old idiot. There is nothing like a character in this mere expanded police report, and the farrago of

slang and fine language is what one would have thought no man of the world would put into the mouths of uneducated sailors and policemen.

We keep Mr. Bret Harte's book to the last, for true genius should not be confounded among Grub Street incompetence. We need say little about what everyone will read. The first story is, in its way, a magnificent piece of human knowledge and human feeling. How small and paltry all Mrs. Marshall's well-meant fatalisms—the "leaning upon Him," the "holding fast to the Anchorage," &c.—seem beside this profound insight into the strength and weakness of religious sensations as shown in the Californian camp-meeting. The

"actors themselves, hard and aggressive through practical struggles, often warped and twisted with chronic forms of smaller diseases, or malformed and crippled through carelessness and neglect, and restless and weary through some vague mental distress and inquietude that they had added to their burdens," the object being "to seek and obtain an exaltation of feeling vaguely known as 'It,' or less vaguely veiling a sacred name." Pitiful as is this picture of degraded humanity cowering under the old spell of fetish, Obi medicine—call it anything but Christianity—its bright side is brought into a contrast all the more striking. No heroism could be more fantastic or more touching than this of the young apostle, who, resigning his wealthy pretty sweetheart to the unctuous deacon, in whom he humbly believed, goes forth to marry the ill-favoured widow Hiler and her brats, because "the Lord had called him to watch over the widow and the fatherless." The second story is a mere clever sketch of a naughty little girl, and the last a curious story of curious people, with whose simplicity and involved reasoning processes no one but the author could cope. We advise the reader not to peep beforehand at the last page, for it contains a piquant surprise in store.

E. PURCELL.

CURRENT LITERATURE.

Souvenirs of Some Continents. By Archibald Forbes. (Macmillan.) We cannot think the title of this volume happily chosen. Out of some thirteen papers of which it consists, no less than eight have to do with war correspondence; and the remainder would never have been written if the author had not travelled far and wide to lecture about what he had seen as a war correspondent. "A Poet Waif" is the only one that has a special interest of its own. The descriptions of social life in Australia and the United States are clever enough, but they could have been written by many another journalist. The war correspondence proper stands in a different category. Here Mr. Archibald Forbes (does the title-page imply that we ought now to call him Dr. Archibald Forbes?) holds a position as unique as that of Miss Thompson among painters. Whatever may be our course of life or our political professions, none of us can boast that he has altogether cast out the fighting instinct. Does any wish in his inmost heart to read without a thrill "Chevy Chase," or Drayton's story of Agincourt, or the ballad of "The Revenge"? We are not ashamed, then, to confess our interest in Skobeloff and Wolseley and Bazaine, nor to surrender ourselves to the fascination of a writer who has been an eye-witness—nay, often a

sharer—in many of the events that have made history during the past fifteen years. Our only regret is that Mr. Forbes has not found the leisure to combine some of his disconnected sketches into a regular narrative. For this single defect we suppose that the demands of magazines and of lecture audiences are responsible. Take it as it is, the book is no unworthy memorial of a busy life and a brave man.

MR. AND MRS. PENNELL have written a most pleasant account of the *Canterbury Pilgrimage* (Seeley) which they went last year on a Rudge tandem tricycle, instead of the faster Humber which they put on their title-page. They have illustrated their little book with some charming woodcuts, and have taken their drawings of Chaucer characters, including the monk's "grehounds . . . as swift as fowl in flight," on p. 17, from the only true source—the fine Ellesmere MS., as drawn for the Chaucer Society. It is mighty pleasant for any Chaucer lover who, in "pre-bike" and "pre-trike" days, has tramped his old master's dusty road to turn over the pages in which his later cultured fellow pilgrims from across the ocean have chronicled the course and incidents of their shrine-ward journey, to see again the hills and vales of Kent, the winding Thames and Medway, the swaying hop-bines, Blean forest, and the grand cathedral; to rest again in the Falstaffe Inn. And though the British Philistine who doesn't like tandems—and thinks Canterbury a "rotten" place—is met, and the loathsome product of the London slums among the hop-pickers, yet Mr. and Mrs. Pennell's book is redolent of the breeze from English fields, full of kindly feeling for English folk, and makes one realise how truly the reverence for our great writers binds into one people the nations whom leagues of ocean seem to sever.

Historical Richmond. By Edwin Beresford Chancellor. Illustrated. (Bell.) When the writer of a book which involves extensive research tells us, as Mr. Chancellor does, that, in consequence of his youth, he was debarred access to our greatest public library, we cannot help feeling very indulgently towards him. He has certainly done all that he could, if not all that he would; and the results of his industry are far from being insignificant, although they do not appear to have led to the discovery of any new facts. For Mr. Chancellor's correction of a statement made by the county historian Manning (p. 205) is itself incorrect; and it may be of use to him to be put right upon a point with reference to which he has been at some trouble to go wrong. The name of the first ranger of the park appointed by Charles II. was Sir Daniel Harvey, of Coomb, who was knighted at Canterbury, May 26, 1660, as recorded by Peter Le Neve. Of course the chief historical associations of Richmond belong to the royal palace there, which was the favourite residence of Edward III., and was reconstructed for the second time by Henry VII., who died within its walls. When Henry VIII. acquired Hampton Court—a far more stately palace—Richmond fell into the shade; and, although it enjoyed a renewal of brightness when Queen Elizabeth held her court there, the Stuarts cared little for it, and it never recovered the dismantling which took place in 1650. A good idea of the character of the buildings may be gained from Van der Gucht's view, engraved for Aubrey's *Surrey*, and published also in Lysons' *Environs*. The illustrations of it which form the frontispiece of Mr. Chancellor's book are hazy, and we cannot say that the other "ink-photographs" are very successful. We hope the young author will be encouraged to pursue his antiquarian researches, and that access to ampler stores will lead to still more satisfactory results.

Arthur Penrhyn Stanley: his Life, Work and Teachings. By Grace A. Oliver. (The English publisher, for manifest reasons, has withdrawn his name from the title-page.) It is quite possible that the future historian of the English Church during this century may regard Stanley as really a more important figure than many far greater men; and the singular charm of his personal character was acknowledged by his keenest controversial opponents. Mrs. Oliver has written principally for American readers; and most of the information contained in this volume will be familiar to all in this country who take an interest in its subject. Much of it may be found in the articles published in the newspapers and magazines at the time of Stanley's death. Mr. Augustus Hare's *Memorials of a Quiet Life* has been drawn upon for anecdotes of Stanley's childhood and of his family, and *Tom Brown's School-days* and Stanley's *Life of Arnold* for the account of his life at Rugby. The material, however, has been skilfully and agreeably worked up, and there is some little new matter from unpublished letters and recollections of friends. The etched portrait by Mr. J. W. Robbins, which is prefixed to the book, we cannot praise.

A Battling Life, chiefly in the Civil Service: an Autobiography, with Fugitive Papers on Subjects of Public Importance. By Thomas Baker. (Kegan Paul, Trench & Co.) Mr. Baker's life has not, in the ordinary sense, been eventful; and as he has avoided giving "minute details of family and domestic concerns," some of the charm of autobiographical writing is absent from this record. He was born at Ilminster in 1819, and educated for the legal profession. He entered the office of the General Board of Health in 1849, and his descriptions of the methods of the Civil Service are the most important parts of his book. The glimpses behind the scenes of official life are at once instructive and entertaining. In the Ilminster Grammar School case he was instrumental in defeating an attempt to make it an exclusively Church of England charity; and the consequence of the subsequent legislation arising from it was very far-reaching. The Endowed Schools Act, 1860, embodied the principle of what is now known as the "Conscience Clause," and its inclusion illustrates the haphazard character of a great deal of English legislation. Mr. Baker has something to say of interest on smoking carriages (which he suggested); official indexes and *précis* (in which he is an expert); temperance and vegetarianism (which he advocates); and vaccination (which he reprobates). Like some other opponents of the theory of contagion, he is a strong advocate of sanitation.

If the English citizen possesses the wisdom with which he is credited he will have as little as possible to do with the subject (*Justice and Police*) of the last volume of the "English Citizen Series" (Macmillan.) A familiar intercourse with either branch of Mr. Maitland's treatise will undoubtedly subject the ordinary householder to vexation, from which he will be long in freeing himself. As a guide to the domain of English justice (for everything outside England and Wales is rigidly and judiciously excluded from his ken), the task could not have been better executed than it has been by Mr. Maitland. The chapter which deals with the intricate question of "civil execution and bankruptcy," though necessarily much condensed is an admirable illustration of the skill with which the whole work has been compiled. An excellent and impartial summary is given of the provisions of the new Bankruptcy Act generally associated with the name of Mr. Chamberlain, and the question of its success is easily left to be answered in later years. As a

matter of strict accuracy we may venture to doubt the correctness of the statement in a footnote on page 112 that "St. Ives, without a commission of the peace, police, or lately policed, itself." Mr. Maitland will, we think, discover on further examination that his little borough rejoices in the possession of a separate magistracy. Some of the vagaries of its rulers attracted the attention, if we remember aright, of the newspaper world of England a few years ago. In the paragraphs which deal with the duties of a grand jury (p. 137) the words *former* and *latter* have by a curious accident been transposed. The mention of these slight *incuriae* will serve to show the interest with which we have perused the chapter of Mr. Maitland's handbook to two subjects which, like the poor, are ever with us.

THE chapters of *Launceston Past and Present*, by Alfred F. Robbins (Launceston: Cornish & Devon Printing Co.) abound in new information, the fruits of diligent perusal of the volumes of Domestic State papers and of the Reports of the Historical Manuscripts Commission. Rarely indeed has the history of a single town showed greater research than has been displayed by Mr. Robbins in his description of his native place. The attraction of Launceston lies in the past; its future will probably be as dull as that of any other decaying town in the west of England. Its priory has long been dissolved, the castle which dominates the little town is but a picturesque ruin, no relic of antiquity remains uninjured at Launceston save the gorgeous church which the munificence of a neighbouring squire erected just before the sweeping away of the Roman rite. In the pages of history the gaol in Launceston castle stands out in colours darker than those of Rembrandt. Thirty-four priests were detained therein in 1297. Cuthbert Maine, the first martyr in England for the ancient creed of Roman Catholicism, was imprisoned in this "loathsome dungeon" in 1577, and George Fox, though one of the earliest, was not the last of the Quakers to sicken within its walls. During the civil war the din of battle raged around Launceston; and when the victory was on the side of the Parliament, two of the neighbouring gentry, Thomas Gewen and Robert Bennett, figured among the chief adherents of that cause at Westminster. This section of the work of Mr. Robbins is more than a contribution to local history; it throws light on the character of the struggle in which the best blood of the whole country was engaged. The two boroughs of Launceston and Newport, the latter being practically a mere suburb of its wealthier neighbour, returned between them down to the passing of the Reform Bill, four members, and among their representatives were several names never to be effaced from the records of the House of Commons. To their career and to the contests in which they were engaged Mr. Robbins has devoted especial attention, and the narrative of the Parliamentary life of these two constituencies is told with greater minuteness than in any similar volume which has come under our notice. An ample index of more than fifty pages completes his labours.

Thoughts on Science, Theology, and Ethics. By John Wilson. (Trübner.) "The object of this little book is to give a correct sketch of the main lines of modern thought in small compass, and in language simple enough to be easily understood." This object seems to be fairly well attained as to two at least of the author's subjects—Science and Ethics. The style, free from the academic severity of a text-book, is suited to the general reader. Nor is there wanting an attraction for the student of philosophy. It is not indeed new light upon old problems, such as that of freewill, which our author dismisses as "simply an unthinkable expression, totally devoid of any intelligible

meaning." It is not subtlety of analysis. We look in vain for a clear demarcation between the different kinds of Utilitarianism and that ethical standard which is not inelegantly described as "the aim to keep in step with the evolutionary march of our race." The philosophical interest of the book lies not so much in its originality as in its representative character. It is a typical example of speculative matter assimilated by common sense. It shows the current philosophical doctrines not fresh from the mint, but in the form which they are apt to assume after entering into circulation. Thus it is significant that, while we read much about "function" and "organism" and the "adjustment of the internal relations of each individual to the external relations," only half a page is devoted to what the writer calls the "subjective sanction"—that is, the benevolence of Hume and Butler, the golden rule of Christianity. We do not feel called upon to discuss Mr. Wilson's opinions about theology. Our readers must judge for themselves concerning the justice and good taste of his polemic against the national creed. Those who agree in the main with him will perhaps regard the violence of his expressions as unnecessary. Those who differ from him may at least allow him the one virtue he is good enough to leave to St. Paul—"truthfulness."

UNDER the title of *Readable Readers* Messrs. Cassells have added another series of Reading-Books to the many which have been called into existence by the requirements of the Code. Without presuming to deliver a comparative verdict, we may say that they are distinguished by several praiseworthy features. To begin with, they are bound in a hue of red that succeeds in being alluring without being gaudy. The illustrations are both more numerous and on a larger scale than usual; and many of them have apparently been specially drawn for the series. The passages selected likewise show originality. We have been particularly pleased with the extracts from *Eothen* (would that we ourselves had been introduced to this still unrivalled book of travel at so early an age!) and from Darwin's descriptions of earth-worms and slave-ants, as well as with Miss Buckland's paraphrase of *The Vicar of Wakefield*. In the poetry Mr. Matthew Arnold and Archbishop Trench have a conspicuous place. Finally, the explanatory notes are conveniently placed at the end of each volume, followed by short biographical notices of the authors. Thrice happy, if they only knew it, are the present generation of school children.

MR. ARROWSMITH, of Bristol, has issued an illustrated edition of *Called Back*, with a short sketch of the early life of "Hugh Conway." The illustrations, six in number, are by Mr. Fred Barnard. The life is chiefly noticeable for some letters written from on board the *Conway* training-ship, at the age of about fifteen, which had better not have been published. The book is handsomely got up, but the sheets have been very badly stitched together. The portrait that forms the frontispiece is as good as a photograph can be.

The Hartz Mountains, a further instalment of the "Holiday Handbooks" edited by Percy Lindley, indicates in most attractive fashion how at small cost one may explore a region often heard of, but little visited by the British tourist. Under the heading "Dull Useful Information" there is much that will be of service to the traveller, and the margin of each page contains a column for memoranda. The descriptions of such old-world nooks as Soest and Geslar are liberally supplemented by excellent illustrations. A chatty account is given of all kinds of places and all sorts of men. The pamphlet of thirty-two pages costs only a penny, while the presentment of the German eagle of Geslar fountain is of itself worth many pennies.

NOTES AND NEWS.

MESSRS. LONGMANS have in preparation a series of volumes dealing with field sports and national games, to be called "The Badminton Library." The general editors of the series are the Duke of Beaufort and Mr. Alfred E. T. Watson. The first volume, announced for October, will treat of *Hunting*. It will be written by the Duke of Beaufort and Mr. Mowbray Morris, with contributions from other pens; and it will be illustrated by Messrs. J. Sturges and J. Charlton. *Fishing*, written by Mr. H. Cholmondeley-Pennell, will follow in November. It will be in two parts, one dealing with salmon and trout, the other with coarse fish. Other volumes already arranged for are *Shooting*, by Lord Walsingham; *Boating*, by Mr. W. B. Woodgate; *Cycling*, by Lord Bury; and *Cricket*, by Mr. W. Yardley.

PROF. VAMBERY's new work, *The Coming Struggle for India*, will be published by Cassell & Company in about a week.

MESSRS. KNIGHT & Co., publishers to the Local Government Board, have in the press a work by Miss Mason, called *The Education of Pauper Children: the Systems, Regulations, and Laws explained*. It will contain chapters explaining the Local Government Board; the guardians; Poor Law officials; regulations as to religion; the workhouse; district and separate schools; cottage homes; training ships and the sea service, both navy and merchant; boarding out, both within and beyond the union; emigration; voluntary certified schools; industrial schools; children in service, &c.

Frederick Lucas's Mission to Rome in 1855, edited by Sir Charles Gavan Duffy, is the title of a book about to appear which will excite keen interest among those to whom the relations of England and Ireland, and of Ireland and Rome, are subjects of reflection. Mr. Lucas, though an Englishman, was M.P. for County Meath, and was thoroughly acquainted with all the secret springs of Irish political movements in his day.

MESSRS. HURST & BLACKETT will publish during August two new novels: *The Verge of Night*, by Mr. Percy Greg, and *What's His Offence?* by the author of "The Two Miss Flemings," &c., each in three volumes.

The Record of Ruth is the title of a new book by the author of the "Cheveley Novels," which will be issued by Mr. Elliot Stock. The same publisher announces a volume of one hundred sonnets by Mr. E. C. Lefroy.

MESSRS. WARD & DOWNEY will publish next week a new novel, by Mr. W. Outram Tristram, entitled *Comedies from a Country Side*.

MESSRS. F. V. WHITE & Co. will issue immediately a new novel, by Miss Florence Marryat, entitled *The Heir Presumptive*, to be followed by *Hearts or Diamonds*, by Miss Iza Duffus Hardy; *In a Grass Country*, by Mrs. Lovett Cameron; and a cheap edition of *Keith's Wife*, by Lady Violet Greville.

IN a special "Holiday Edition" of Mr. Francis George Heath's *Burnham Beeches*, to be published immediately by Messrs. Rider & Son, will be given a portrait of the author, upon whose suggestion this tract of forest was secured for public use by the Corporation of London.

THE idea which has long prevailed concerning the obsolescence of old English divinity receives a striking contradiction from the fact that "an important MS." is now being offered for purchase which contains a complete English translation of Pole's *Synopsis*. The devotion and self-sacrifice of the translator are beyond praise; it were perhaps idle to wish that he may live to see them appreciated.

THE July number of the *Journal* of the National Indian Association contains the first of a series of papers by the Rev. J. Long, formerly well known at Calcutta, in which he describes the conditions of English life in India two centuries ago from original documents at the India Office. We are glad to learn that Mr. Long is to edit for the Hakluyt Society a MS. diary of Sir W. Hedges, Governor of Bengal from 1681 to 1684, before Calcutta was founded. We know no one better qualified for the work.

ON Monday, July 27, and the remaining days of the week, Messrs. Sotheby will sell the large collection of autograph letters and other literary documents formed by the late F. Naylor. Among the chief rarities are a holograph letter of Catharine of Aragon to Cardinal Santa Cruz; a long letter of Queen Elizabeth to Henri IV., referring to recent attempts on his life and her own; several letters of Nelson to Lady Hamilton and others; and a letter of Oliver Goldsmith to Garrick, referring to the rejection of his play, "She Stoops to Conquer." The original MS. of Byron's "Siege of Corinth," belonging to another collection, will also be sold at the same time.

AT the annual meeting of the Index Society, held on July 7, Mr. W. T. Riseley was elected hon. secretary in the place of Mr. Fenton; and among the new members announced was Lord Coleridge. Besides the first volume of the Index to obituary notices in the *Gentleman's Magazine*, and an Index to Archaeological Journals and Transactions compiled by Mr. Gomme, the MS. of the five following indexes is actually ready:—Household Books, by Mr. W. Payne; Travels of Foreigners, by Mr. E. Smith; English Topographical Literature, by Mr. R. Harrison; Works on Horses and Riding, by Capt. Huth; Plates in the *Gentleman's Magazine*, by Mr. E. Peacock. Nothing but a larger number of subscribers prevents these Indexes from being at once put into type. The address of the society is 8, John Street, Adelphi.

WE have received the first number of a new weekly newspaper entitled *Gaiety: the Journal of Pleasure*. Its chief object is to record the several entertainments, public and private, that take place in London or the neighbourhood of London; and it contains numerous illustrations. So far as we can judge from a single issue, it seems to have escaped the dangers to which society papers are especially exposed.

PROF. LUDWIG GEIGER, of Berlin, has reprinted from the *Deutsche Literaturzeitung* a paper describing the Goethe Society which it is proposed to found at Weimar. The Grand Duke has given his patronage to the scheme, and has promised to open to the society the Goethe Museum, which contains a large body of MSS. relating to the poet, including early drafts of some of his works, letters, and diaries. It is intended to hold meetings at Weimar for the reading of papers and discussion, and to publish at some future time a critical edition of the complete works of Goethe.

M. FUSTEL DE COULANGES has just published (Paris: Hachette) a new work, entitled *Recherches sur quelques problèmes d'histoire*. It consists of four chapters, which deal with the Roman colonies, property in land among the early Germans, the German Mark, and the judicial system in the Frank Monarchy.

ERNST ECKSTEIN's new romance, *Aphrodite*, is to be published in the autumn. The scenery and characters belong to remote Greek antiquity.

THE historical and literary branch of the Vogesenklub has published (Strassburg: Heitz) the first annual volume, *Jahrgang für Geschichte*

Sprache, und Literatur Elsass - Löhrringens, which it is hoped may occupy the place vacated by the cessation of the late August Stöber's *Alsatia*. It begins with a memoir of Stöber as poet and scholar, by E. Martin, and contains a number of dialectic specimens from different districts of Elsass, and old and new local poetry. There is also a full catalogue of works relating to Elsass and Löhrringen which appeared during the years 1883 and 1884.

DR. COLLIER'S *History of Ireland for Schools*, reviewed in the ACADEMY of last week, is not published at Dublin, but by Messrs. Marcus Ward, of London and Belfast.

AMERICAN JOTTINGS.

TEN copies of Miss Cleveland's *George Eliot's Poetry, and other Studies*, are being specially bound for presentation to Queen Victoria and the surviving former "ladies of the White House"—Mrs. James K. Polk, Mrs. Phillips (formerly Mrs. Betty Taylor Bliss), Mrs. John Tyler, Mrs. Harriet Lane Johnson, Mrs. Martha Johnson Patterson, Mrs. Grant, Mrs. Garfield, and Mrs. McElroy.

MR. E. C. STEDMAN has ready for publication a companion volume to his *Victorian Poets*, to be entitled *Poetry of America*. He is also engaged in editing, with Miss Ellen Hutchinson, a "Library of American Literature," in ten volumes.

AT the Class Day Dinner at Harvard College, Dr. Holmes read a poem complimentary to Mr. Lowell, one verse of which has been given to the press. It runs as follows:

"By what deep magic, what alluring arts,
Our truthful James led captive British hearts;
Whether his shrewdness made their statesmen halt,
Or, if his learning found their dons at fault,
Or, if his virtue was a strange surprise,
Like honest Yankees we can simply guess;
England herself will be the first to claim
Her only conqueror since the Normans came."

THE seventh summer session of the Concord School of Philosophy was to open on July 16, and to last probably for three weeks. The subjects to be discussed are "Goethe's Genius and Work," and "Is Pantheism the Legitimate Outcome of Modern Science?" Among the lecturers on Goethe are Dr. W. T. Harris, Mrs. Julia Ward Howe, Mr. Julian Hawthorne, and Mr. F. B. Sanborn.

THE New York *Critic* contains an interesting paper by Mr. W. J. Rolfe, the Shakspeare editor, headed "More Tennysonian Trifles." It is suggested by the Laureate's latest effusion on "The Fleet," and gives an account of various other pieces contributed by him years ago to the newspapers. Among other things, the original version of "Hands all Round" is quoted, as it appeared in the *Examiner* of February 7, 1852, signed "Merlin." Mr. Rolfe goes on to ascribe to Lord Tennyson, upon internal evidence, a poem of some length in the *Examiner* of February 14, 1852, signed "Taliessin," which purported to be suggested by the poems of "Merlin." In the next number of the *Critic* are printed the two following stanzas from a poem entitled "The Penny Wise," which appeared in the *Morning Chronicle* of January 24, 1852:

"You—sleepy Lords of Admiralty,
Your errors are too grievous;
See that your work be workman-like,
Or else go out and leave us.

"And you, ye brawlers penny-wise,
Through you the land is cheated,
Till by barbarians better-arm'd
Our greatness is defeated."

THE *Literary World* of Boston welcomes Mr. Lowell home with a number specially devoted to him. There are poems in his honour by Mr. Whittier and Dr. Holmes; letters from Mr. George Bancroft, Dr. Noah Porter, Messrs. C. D. Warner, E. C. Stedman, F. B. Sanborn, &c.; and articles on his literary position and his career as minister in England.

IN the *New England Historical and Genealogical Register* for July, Mr. H. F. Waters publishes, for the first time, the true history of John Harvard, the founder of Harvard University in 1636. He prints ten wills and a few other documents, in which the family name appears as Harvy, Harvy, Harwar, Harward, Harverd, Harverde, and Harbert. John Harvard himself was baptised on November 29, 1607, in the parish of St. Saviour's, Southwark, where the entry runs "John Harvy s. of Robt. a Butcher." He was the fourth of nine children, and his mother was three times married. He was executor of his mother's will, which bears date July 2, 1635; and in February 1636-7 he joined in a conveyance of some property left by her in Southwark. But he did not prove the will of an elder brother, in which he was also named executor, and which was proved by his co-executor (with a reservation in his favour) on May 5, 1637. He is known to have arrived at Charlestown, Massachusetts, some time in 1637. The whole paper, though brief, forms a model of genealogical research, worthy of the late Col. J. L. Chester.

ACKNOWLEDGEMENTS.

WE have received:—*Les Catholiques Libéraux*: L'Eglise et le Liberalisme de 1830 à nos jours, par Anatole Leroy-Beaulieu (Paris: Plon); *Une Mésalliance dans la Maison du Brunswick*, 1665-1725: Eléonore Desmier d'Olbreuz, Duchesse de Zell, par le Vicomte Horric de Beaucaire (Paris: Oudin); *La Philosophie en France au XIX^e Siècle*, Deuxième Edition, suivie du Rapport sur le prix Victor Cousin, 1884, par Félix Ravaisson (Paris: Hachette); *Leçons de Philosophie*, par Elie Rabier. Bande (Leipzig: Twietmeyer; London: Trübner).

A TRANSLATION.

(From the Anglo-Saxon of the so-called *Cædmon*.)

"Why should I toil?" he said; "what need that I should serve a King? I with my hands can work As many wonders, and great power I wield To rear a goodlier throne higher in heaven. Why should I seek God's favour, cringe, and do Him homage? I can be a god like Him. Round me, their chosen lord, brave comrades stand, Stout-hearted warriors of heroic mould, Who will not fail me in the strife; with such Associates I may plan and work my will. These are my faithful friends, and I, their King, May rule this realm; so 'tis not meet that I, By servile flattery, from God should win Aught good, and God I will no longer serve." All this the Almighty heard the Archangel say, For he, in scornful pride against his lord, Spake like a foolish braggart, and for this He must atone, share strife, and woe endure, Woe of all woes, the worst that men must bear Who war with dread Omnipotence; in wrath Heaven's sovran ruler hurled him from his throne.

GEORGE R. MERRY.

OBITUARY.

DR. W. VEITCH.

DR. WILLIAM VEITCH, the distinguished Greek scholar, died at Edinburgh on July 8 at the ripe age of ninety-one years. Born in Teviotdale he received his early education in Jedburgh, at a school which numbered among its pupils Samuel Rutherford and Sir David Brewster. He afterwards proceeded to the University of Edinburgh, where he studied divinity, and was licensed as a minister of the Church of Scotland. From an early period, however, he devoted himself to the study of Greek, and began to collect materials for his work on *Greek Verbs, Irregular and Defective*, which has given him a European reputation. When Dr. Veitch was preparing for the publication of a new and enlarged edition, the attention of the delegates of the Clarendon Press was directed to the great value of the work in the field of Greek scholarship, and they at once

consented to publish it. While reading the proofs of the new edition Dr. Scott recognised the wide and exact scholarship of the author, and invited him to take part in revising the sixth edition of Liddell and Scott's Greek Lexicon. Many Scotsmen, also, who were reading for honours at the English universities, became his private pupils; and the hours spent with the genial old Grecian are still recalled by them as among the happiest and most profitable in their lifetime.

Dr. Veitch was a man of great geniality, and entirely devoid of pedantry. In Edinburgh he formed a wide circle of friends, attracted as much by his racy humour and his never-failing store of anecdote about old Edinburgh and the Border as by his learning. In this circle there were none whose friendship he so much prized as that of his old pupils who had returned with honours from Oxford or Cambridge to achieve distinction at the Scottish Bar; and there were none who were more deeply attached to their old tutor.

Dr. Veitch was a severe, though just, critic; and while not slow to express his contempt for those who (particularly in his own field) laid claim to a reputation for scholarship which they did not deserve, he was ever ready to give the benefit of his learning and his experience to the young scholar or author who, like himself, was prepared to devote his life to learning for learning's sake. It was hardly to be expected that a scholar of this type of mind would set much value on mere academical honours. We venture to think that the presentation of his portrait a few years ago by his old pupils and friends was a source of more genuine delight to him than the honorary degree of LL.D. which his Alma Mater conferred upon him in recognition of his great services to Greek learning.

KARL MORITZ ARNDT, the last surviving son of the patriot and poet Ernst Moritz Arndt, has just died at Biebrich on the Rhine, in his eighty-fourth year.

MAGAZINES AND REVIEWS.

THERE is very little in the July number of the *Antiquary* that adds to our knowledge or stimulates our desire to accumulate or co-ordinate facts, but we have read it with pleasure. Mr. T. Fairman Ordish has given us a very good paper on "Early English Inventions." It appears that the first patent for an English invention was in the time of Edward III., when we are told

"that some alchemists persuaded the king that a philosopher's stone might be made; that the king granted a commission to two friars and two aldermen to inquire if it were feasible, who certified that it was; and that the king granted to the two aldermen a patent privilege that they and their assigns should have the sole making of the philosopher's stone."

We are not calling this statement in question; but, if it be accurate, the patent must exist on the patent roll of some year of Edward III.'s reign. The patent rolls are all preserved in the Public Record Office. It is much to be wished that some antiquary would print the document entire. Mr. W. Carew Hazlitt contributes some curious "Uncollected Tenures and Manorial Customs." No single fragment is of much interest, but they are all useful as materials for building up that history of manorial customs, or, as we should prefer to call it, English land right, which is so much wanted. Mr. Wheatly furnishes a paper on English mystery plays, and Mr. Israel Gilchrist one on "the Countess of Shrewsbury." The writer does not hold so high an opinion of his heroine as we are disposed to take. It should be remembered in judging women of her times that social life among the

higher classes was so different from what it is at present that much that seems strange to us in Bess of Hardwicke would appear quite natural to her contemporaries.

CORRESPONDENCE.

"SUMORSAETAN," &C.

Somerleaze, Wells: July 14, 1885.

Mr. W. H. Stevenson is quite right in what he says about the "Sumorsætas" and the like, which I am sorry to say that he will find as late as the third edition of the first two volumes of the *Norman Conquest*. But if he will be good enough to turn to page 122 of *English Towns and Districts*, he will see that I had mended my ways of my own accord. I cannot

think how so many of us came to use a clearly inaccurate form.

But I have it on my conscience that I have somewhere or other, since the appearance of the third edition of the first two volumes of the *Norman Conquest*, allowed the form *Defnsætas*, or *Defnsætan*, to stay somewhere. In vol. ii., p. 710, I hope I showed that there is no reason to think that any such form existed; it was a misreading of Sir Francis Palgrave out of *Dunsætan*. Yet I am afraid that I somewhere (though I cannot find the place) forgot to strike out the name where I had used it before I came to that conclusion.

I wish Mr. Stevenson would tell us something more about the double names, of which I know a good many, both in England and elsewhere (see *Norman Conquest*, i. 228, ii. 682, Ed. 3). Does he think both were given in baptism? I had always fancied that, in England at least, one was of the nature of a nickname or personal surname.

Frederick the Second is said to have been christened "Frederick-Roger," but I cannot at this moment lay my hand on the authority.

EDWARD A. FREEMAN.

PREHISTORIC MEASURES.

Bromley, Kent: July 14, 1885.

It is always encouraging to find an out-of-the-way subject taken up with such energy as in Mr. Greg's letter on Prehistoric Measures. There are a few points, however, which I may be expected to explain, as he refers to my work. Treating the class of small American antiquities he deduces a unit by the rather perilous process of trying whether a thing will fit; such a method requires an almost superhuman impartiality, and I venture to think that a purely inductive process of comparison is a safer instrument of research. This unit which he has found will not explain, however, the continually recurring dimensions of American earthworks in simple numbers; hence perhaps the difference between his conclusions and my own, which were obtained inductively from the measurements of those earthworks. My results can hardly be said to "seem to be incorrect" when the data on which they were founded are not made use of. That there were several different standards of measure in use at different times in North America and Mexico is very probable; and the more data are collected, tabulated, and published the better it will be for all workers on the subject.

The great test of the reality of a unit of measure is whether it will explain a class of dimensions with far less mean error than any other unit that can be proposed; comparisons that are said to be "precise" and "almost precise" might be more satisfactory, from a mathematical point of view, if reduced to decimals of an inch.

As it is impossible to work up all the results of my Egyptian work in the time available in England, I must leave this subject alone for the present with this brief explanation of a difference between Mr. Greg's conclusions and my own.

W. M. FLINDERS PETRIE.

"ASASEL."

London: July 13, 1885.

An established connexion between the goddess Isis and Azazel would be interesting indeed, considering the paucity of such reminiscences of Egypt in the Pentateuch. But in "Joma 62 a," I find nothing to the point; and in Joma 67 b, which seems to be the passage intended by Dr. David Asher, I find several guesses at the meaning of Azazel, which naturally became a whetstone for Rabbinic wits, when once its true sense had been for-

gotten; but not "a distinct statement that Azazel is intended as an atonement for the worship of Isis." What the Talmud says is this: "The school of R. Ishmael taught that Azazel is what atones for the deed of Uzza and Uzziel." Upon this Rashi notes:

"Uzza and Uzziel: evil angels who came down to the earth in the days of Naamah, the sister of Tubal-Cain. Concerning them it is said, And the sons of God saw the daughters of men, &c. (Gen. vi. 4). As if to say, Azazel is what atones for incest."

The Targum of Jonathan (Gen. vi., 4) also mentions Uzziel as one of the Nephilim or fallen angels.

As to "the difference in the vowel points between Azazel and Isis being of no moment," I may remind Dr. Asher that Isis is a Greek spelling of the Egyptian Ast (*as.t.*). Ast or Isis, moreover, was not "the goddess of the fertile earth." Seb was the earth and Isis was the dawn.

APPOINTMENTS FOR NEXT WEEK.

MONDAY, July 20, 7 p.m. Education.

FRIDAY, July 24, 8 p.m. Quekett Microscopical Club: Annual Meeting.

SCIENCE.

L. MÜLLER'S EDITION OF ENNIUS.

Q. Enni Carminum Reliquiae. Accedunt Cn. Naeni belli Punici quae supersunt. Emendavit et adnotavit Lucianus Mueller. (Petersburg.)

It can scarcely be said that this work answers any very pressing demand. The fragments of Ennius, interesting as they are wherever chance has preserved a passage of tolerable length, are apt to be of not more than two lines, generally are not more than one. About twenty years ago a careful edition of all that was then known was published by Prof. Vahlen. Very little, indeed, has come to light since; and it is only from the point of view of a most determined specialist that a new edition could be thought necessary. Consequently it is not possible to greet this new work of L. Müller's with anything like the interest that his *Lucilius* excited.

It is not easy to see what will be the ultimate effect of the present multiplication of editions of classical works which rages in Germany, and (in the shape of school-books) is too rife in England. It would matter less if the amount of new discovery were in any way considerable. But it is apt to be of a very minute kind, indeed; and in Germany particularly tends at present to an almost complete sacrifice of the matter and substance to the form—of a preference (in another shape) for the fragmentary to the complete. There has certainly never been a period when truncated passages of very second-rate interest have received so immense an amount of philological scrutiny; none in which the really great authors—I mean those on whom we depend for our knowledge of long or important periods of history, such as Ammianus Marcellinus, Dion Cassius, Polybius, Apollinaris Sidonius—have been so systematically neglected.

The work before us suggests these reflections with unpleasant vividness. The method, common to both editions of Ennius, Vahlen's and Müller's equally, of quoting at length the author in whom the quotation from the

poet is imbedded, continually brings before us two names of the first importance—Varro and Fronto. There is no work in the whole range of Latin literature which so imperatively calls for a competent editor as Varro's treatise *De Lingua Latina*; yet no serious attempt to explain this work has been made either in Germany or England. None so illustrative of the interesting era of the Antonines as the letters of Fronto; yet, though Naber's excellent edition was published in 1867, nothing like a commentary on these letters has yet been attempted.

Lucian Müller, it may be said, has to some extent satisfied the demand for explanation: he has added to his book a commentary on the fragments. This is true; but the commentary is very brief—pp. 176-248 on Ennius, pp. 249-253 on Naevius, in a volume of 295 pages in all, and these in very large type. I have not found any allusions to Mr. Wordsworth's *Fragments and Specimens*, only one to Mr. Onions's collation of the Harleian MS. of Nonius; indeed, any allusion to foreign scholars is of the rarest. In many cases where discussion was necessary, it has been omitted—e.g., *Ann.* 145, where the MSS. give

"Ingens cura mis cum concordibus aequiperare,"

we are told "uersus corruptus," without one hint of what has been written on the passage by previous scholars. *Ann.* 215:

"Brundisium pulchro praecinctum praepete portu."

What is the meaning of *praepete*? Neither from the context of Gellius as cited, nor from the commentary, is any information obtainable. What is worse, whole passages of pronounced and notorious difficulty, such as the well-known lines (p. 88), "Nam qui lepide postulat alterum frustrari," &c., are left without a word of explanation. Surely if it was worth the editor's while to publish a new edition with a commentary, it was worth while to make the edition as complete in itself as possible. An additional three months would have done much to remove this objection. As it is, no one who wishes to make up his mind as to the probability of what Ennius wrote and meant will ever be satisfied with what he finds in an editor who professedly ignores all that does not satisfy his preconceived views of metre, diction, or divination.

I will mention one or two points which appear to me to admit of so much doubt as to make an arbitrary alteration on grounds drawn from the later metric of the Romans undesirable. There are three famous verses of the *Annales*, in which Pyrrhus speaks his resolution of restoring the captives:

"Quorum uirtuti belli fortuna pepercit,
Eorundem me libertati parcere certumst.
Dono ducite, doque uolentibus cum magnis dis."

Lachmann altered *me libertati* in conformity with the rules of strict prosody to *libertati me*, and so L. Müller prints the passage. I have a strong conviction that the MS. tradition is here the right one. The collocation *Eorundem me libertati*, is, as regards the syntax of the sentence, the most direct, natural, and forcible. The strong Roman word *libertati* falls upon the ear with its full and proper weight; alter it to *Eorundem libertati me*, and half the effect is gone. No schoolboy would now write anything so faulty metrically as the

MSS. here give us; but that is no reason why we should deny the licence to the father of Roman metric. Take again the line:

"Miscet inter sese inimicitiam agitante."

Müller, influenced perhaps by his "arcana ratio musica," writes *minitantes* to avoid hiatus. As if *minitantes* were, or, indeed, could be, the right word! As if *agitantes* were not the natural, indeed, the single appropriate word! The MSS. do not seem to vary; and, at any rate, if any change is required, *inimicitias* does less violence to the passage. That *inimicitias*, however, should have been the Gellian tradition is to the last degree improbable; but it is even more improbable that *minitantes* should have been altered into *agitantes*. It is equally difficult to believe, against Ritschl, that *etio fufetioo* in the MSS. of Quintilian can represent, as Vahlen and Müller suppose, anything so dissimilar as *Metoi Fufetioi*. Quintilian compares the double barbarism committed by Tinga, in saying *precula* instead of *pergula*, with the same doubling of error (*eadem uitii geminatio*) of which Ennius was guilty in saying *Metioo Fufetioo*, i.e., terminating two Roman names which occurred in the genitive in the Greek *-oo* instead of Latin *-i*. Whether the line ended simply thus, the violent explosive Roman F being allowed to lengthen the short *ö*, or a *-que* followed *Metioo* in the verse of Ennius which Quintilian purposely omitted, is of little consequence.

Nor is Müller consistent in his treatment of the fragments. Thus, he considers the loose and inartistic translation which Ennius gives of the well-known verses of the *Medea* *Κορίνθια γυναικες, ἐξήλθον δόμων*, as a paraphrase not meant to be literal, and conveying the certainly obscure sense of Euripides only vaguely; yet, when Nonius quotes from Ennius' *Eumenides*,

"Tacere opino esse optimum et pro uiribus
Sapere atque fabulari tute noueris,"

which, as I suggested in the *Academy* in 1872, seems to be right in all except that *ut* has fallen out before *tute*, our editor thinks it necessary to suppose Ennius was here translating literally the Aeschylean lines, *Εὐμ. 273, ἐγὼ διδασκῶν ἐν κακοῖς ἐπίσταμαι πολλοὺς καθαρμῶν καὶ λέγειν ὅπου δίκη σιγῇ θ' ὁμῶως*, and rewrites the passage thus:

"Ego sapere opino esse optimum pro uiribus.
Tacere et fabulari tute noueris."

Having said thus much by way of criticism, I am bound to add that this edition of Ennius is a real and important contribution to the literature of the subject. Not only is it the first which contains the three verses

"Cum nihil horridius umquam lex ulla iuberet.
Quantum conelliis quantumque potasset in armis.
at non sic durus fuit hostis
Aeacidas Pyrrhus,"

which Dümmler published from a ninth century MS. of Orosius at S. Gallen in 1869; but among the new emendations are some of very high excellence, of which *proptitum* for *proprium* of MSS. in *Ann.* 92 is perhaps the best specimen.

R. ELLIS.

CURRENT SCIENTIFIC LITERATURE.

Pharmacology, Therapeutics and Materia Medica. By T. Lauder Brunton. (Macmillan.) This is an admirable work; and well may it be, for Dr. Brunton unites in himself qualifications for his task such as are seldom found even singly in the writers of medical text-books. Some of these are an original knowledge of his subject, to which he has himself contributed perhaps the most brilliant discovery of recent years, the science and art of a physiologist who is a physician, a large experience as teacher and examiner, and, finally, so high an ideal of workmanship that for almost twice nine years he has kept back this book to be his exacting companion in ward and laboratory—with the virtuous result that the volume, no bantling now, was considerably larger fifteen years ago. The work may be described in its essence as the first strenuous attempt to render available for English and American students the narrow and broken bridge, the pioneer of better, which scarcely spans the gulf between experimental physiology and therapeutics; and to those who know how much each of these sister sciences depends upon the other for support and even bare existence, Dr. Brunton's labours, as compiler and investigator, are most welcome. Medical students will find here all that there is of examinable value in Garrod and more, much of what is in Ringer and more; but justice and gratitude to old friends compel us to add that, while Dr. Brunton cannot excel the one in dry light, he has no pretensions to Dr. Ringer's vivid and fascinating style, which makes the young readers of that stimulating teacher more sanguine than even the rose-red book itself.

Elementary Text Book of Entomology. By W. F. Kirby. With 87 plates containing over 650 figures. (Sonnenschein.) This is a concise—far too concise—attempt to give a popular description of the 270 families of insects in 240 pages of octavo text, illustrated by far too great a number of figures representing many insects of no popular interest, copied from other well-known works, such as Guérin's *Iconographie*, the Crochard edition of the *Règne animal*, Chenu's *Encyclopédie*, &c. In such a confined space Mr. Kirby, a well-known and hard-working entomologist, has done his best to give a very slight notion of the immense amount of materials before him. Of the 650 figures the larger ones give a fair but uncoloured idea of the insects they are intended to represent, although the unfortunate wooden-like legs of all M. Blanchard's figures in the *Règne animal* are here servilely copied. If one-third of the figures had been entirely omitted, and another third replaced by figures illustrating the transformation and natural history of the different families (almost entirely omitted in the work), the space thereby gained would have allowed the introduction into the book of a large amount of popular matter of a character similar to that in the ten pages devoted to the family of the ants, while the family of the bees, Apidae, is restricted to two pages. And here we must protest against the three figures of the male, worker, and queen of the common hive bee, which are most unsatisfactory. Of the transformations of insects, representations are given of only four larvae of beetles and two caterpillars (of the death's head hawk-moth and silkworm). A considerable space might have been gained in the text if a short note of the size, colour, and locality of each species figured in the plates had been introduced into the explanatory, sometimes nearly blank, pages opposite each plate, thereby saving much trouble in back reference. We would also suggest in any future edition the addition of an alphabetical index to the genera introduced. As it is, the volume is brought out in a handsome style as regards paper, printing, and

binding, and forms a pretty drawing-room table book.

Where to find Ferns, with a Special Chapter on the Ferns round London. By F. G. Heath. (S. P. C. K.) Mr. Heath's latest introduction to the world of ferns is illustrated with sketches of likely situations (as Torbay, and the Falls of Lodore) and with drawings of all the species of British ferns reduced (and, as it seems to us, very carefully reduced) from those in his *Fern Portfolio*. It will be found a useful pocket-companion for those who have the patience to go fern-hunting. A holiday might be pleasantly and profitably spent in working over Mr. Heath's lists for one or more than one county. The chief thing that mars the usefulness of this otherwise excellent little book is that he gives no synonyms for his species; and there will, therefore, be some little difficulty in bringing his lists into relation with those of other writers. Thus, the *Nephrodium montanum* of Baker, *N. oreopteris* of Hooker, *Aspidium oreopteris* of Benthams, *Lastraea oreopteris* of Babington, appears in Mr. Heath's account as *Lastraea montana* only; and this also is a name which we do not remember to have seen elsewhere. (The fern in question is, we are afraid, no longer to be found on Shotover, or elsewhere in Oxfordshire.) There seems, also, to be some confusion in the nomenclature of *Woodsia*. Benthams's *Handbook* recognises *W. hyperborea* and *W. ilvensis* (which it calls "the Alpine W."); Mr. Heath has *W. ilvensis* and also *W. alpina*, a name unknown to the ordinary books, though the plant must from the description = *W. hyperborea*. The time of fruiting might be added with advantage to each notice.

We have also received:—*Physical Expression: its Modes and Principles*, by Francis Warner, with fifty-one Illustrations, "International Scientific Series" (Kegan Paul, Trench, & Co.); *A Phylogenetic Classification of Animals*, for the use of Students, by W. A. Herdman, with Illustrations (Macmillan); *The Chemistry of Cookery*, by W. Mattieu Williams (Chatto & Windus); *The Sun: a Familiar Description of his Phenomena*, by the Rev. T. W. Webb (Longmans); *The Geology of Genesis: an Enquiry into the Credentials of the Mosaic Record of Creation*, by E. Colpitts Robinson (Elliot Stock); *The Metaphysical Aspect of Natural History: an Address to the Rochester Natural History Society*, by Stephen Monckton (H. K. Lewis); *Life: the Explanation of It*, by Major W. Sedgwick (W. Thacker); *A Manual of Health Science*, adapted for Use in Schools and Colleges, by Andrew Wilson (Longmans); "The Young Collector"—*British Butterflies, Moths, and Beetles*, by W. F. Kirby (Sonnenschein); Blackie's "Elementary Text Books"—*Botany*, by Vincent T. Murché; *Magnetism and Electricity*, by W. G. Baker (Blackie & Son); &c., &c.

SCIENCE NOTES.

THE fifty-fifth annual meeting of the British Association is to be held at Aberdeen, from September 9 to 17, under the presidency of Sir Lyon Playfair. The Senatus of the university have placed at the disposal of the executive committee their halls and lecture-rooms in Marischal College, to be used as reception-rooms, and for the meetings of several of the sections; while the city and county authorities have similarly granted their halls. For the general meetings the music-hall, capable of containing an audience of about three thousand, has been engaged, along with the adjoining rooms. It has been arranged to hold two *conversazioni* in the new Art Gallery and Gray's Art School adjoining, in which a loan collection of paintings, got together by the Aberdeen Artists' Society, will be on ex-

hibition during the time of the meeting, as also collections illustrative of the natural history of the North of Scotland.

THE Geologists' Association has arranged a visit to the South of Belgium, commencing on August 10. The party will be under the guidance of several local directors, including M. Dupont, the director of the Geological Survey of Belgium; M. Renard, the eminent petrologist of the Brussels Museum, who is thoroughly familiar with the Ardennes; Prof. Gosselet, of Lille, who has written a sketch of the geology of the country, for the special use of the association; and Mr. Purves, formerly of the Geological Survey of Scotland, and for many years an officer of the Belgian Survey, to whom the general local arrangements have been entrusted. The area to be visited comprises the Cambrian, Silurian and Devonian rocks of the Ardennes, the magnificent section of carboniferous limestone along the valley of the Meuse, between Dinant and Namur, and the famous grotto of Han, near Rochefort.

THE Council of University College, London, have instituted a Chair of Electrical Engineering, and have appointed Dr. J. A. Fleming to be the first professor.

THE Darwin medal, founded by the Midland Union of Scientific Societies for original research, has been awarded this year to Mr. W. J. Harrison, of Birmingham.

MR. WILLIAM MACLEAY has endowed four science fellowships of £400 each in the University of Sydney. Candidates must have already taken the degree of B.A.; they must promise to engage in original research; and they must not hold any other salaried appointment. The term is for one year, renewable on proof of good work done.

PHILOLOGY NOTES.

MR. R. W. FRAZER has been appointed Lecturer in Telugu and Tamil in University College, London.

UNDER the title of *The Date of Patañjali*, Prof. Bhandarkar, of the Deccan College, Bombay, has published a pamphlet of some twenty-four pages, in reply to Prof. Peterson, of the Elphinstone College, Bombay. The latter professor would place the date of Patañjali in the third or possibly in the fourth century A.D.; the former, following Goldstücker, would place it in the second century B.C. Indirectly, the question is of much importance in Sanskrit scholarship, for Patañjali is the author of a commentary on the Vārtikas of Kātyāyana, which are again a criticism on the Sūtras of the famous grammarian Pāṇini. As considerable changes have taken place in the language between the time of Pāṇini and the time of Kātyāyana, it is evident that the further back Patañjali is put so much further back must Pāṇini also be put.

The last issue of the *Journal of Philology* (Macmillan) contains, *inter alia*, an obituary notice of the late H. A. J. Munro, by the Master of Trinity College, Cambridge; an exegetical study of Genesis xlix. 10, by Canon Driver; further notes in Latin lexicography, by Prof. Nettleship; some new suggestions on the *Ibis*, by Mr. Robinson Ellis; critical notes on the *Menæchmi* of Plautus, by Mr. J. H. Onions; and a paper on "The Forms of Divination and Magic enumerated in Deuteronomy xviii. 10, 11," by Prof. Robertson Smith.

DR. EMIL HAUSKNECHT has produced, in Prof. Zupitza's Early English series, a most elaborate edition of the thirteenth-century romance of *Floris and Blanchefleur*. With the help of the French original (and occasionally of other versions) he has reconstructed out

of the four known English MSS. the full English version, keeping the spelling of the oldest MS., the Cambridge, except at the beginning, where the Trentham MS. is the basis of the text. He treats of the versions in French, Provençal, German, Dutch, Czech, Scandinavian, Italian, Spanish, and Greek. He discusses the sources of the story, and gives full collations and notes to his text. He has proved that the Czech version is only a translation from the German, and is the first who has cleared up the doubts about the Spanish romance, of which he gives a full abstract (pp. 50-70), and which he shows is entirely different from the Comte de Tressan's novel. With regard to the Italian version, he adopts Cressini's view that the *Cantiare de Florio e Bianciflore* (which he has printed in *Herrig's Archiv*) is older than Boccaccio's *Filocolo*. Dr. Hausknecht has shown that Lodovico Dolce is not the author of the *Cantiare*, as his *Amore di Florio e di Bianciflore*, 1532, is a wholly different, and very bad, poem on the same subject. The Greek version is, Dr. Hausknecht contends, only an imitation of the Italian *Cantare*. The whole work is thorough and excellent.

Sprachgeschichtliche Studien. Von H. D. Müller. (Göttingen: Vandenhoeck.) This new work by Dr. Müller, who is already known as a writer on philology and mythology, consists of two parts. The first attempts to show that the recent theories on the original vocalism of the Indo-European languages are wrong, and that *ē* and *ō* did not exist in the *Ursprache*. We cannot say that we are convinced by the arguments used, nor would the result be great if the latter were unassailable, for Dr. Müller seems to admit that his original *ā* may have been variously "coloured." The best of the arguments will be found more forcibly put in Curtius's recent *Kritik d. neuesten Sprachforschung* (ch. 3). The rest of the *Studien* is taken up with a development of the author's own views and derivations of particular words. Much here is interesting, e.g., the explanation (p. 163) of *αἰνῶν*, but we think that a philologist who, on the whole disagrees with the views expressed in both parts of the book, would give the preference to the first.

MEETINGS OF SOCIETIES.

PALESTINE EXPLORATION FUND.—(Annual Meeting Wednesday, June 24.)

JAMES GLAISHER, Esq., in the Chair.—The committee have held nineteen meetings during the year. The "firman" necessary for the prosecution of the Survey of Eastern Palestine is still withheld by the Turkish authorities. The work of exploration in the Holy Land has been carried on during the last twelve months by Mr. Laurence Oliphant, Herr Schumacher, and Mr. Guy le Strange. The best thanks of the committee are due to these gentlemen for the valuable reports and papers given to the society by them; some of them, including "Notes on the Jaulan" and "Notes on Carmel" by Mr. Oliphant, have already been published in the *Quarterly Statement*. Other notes by the same gentleman will appear in July, together with an account of a journey east of Jordan by Mr. Guy le Strange. The committee have also just received a really magnificent contribution to the Survey of the East, in a packet of memoirs, plans, and map, from Herr Schumacher. This work, certainly the most important examination, so far as it goes, of the Jaulan district as yet made by any traveller, is put forward by the committee with great satisfaction as the principal work of the year. It is proposed to issue this in a separate form apart from the *Quarterly Statement*, and to present it to all subscribers who may desire to possess a copy. The map will be incorporated with the map of the society, and laid down on sheets now being prepared by Mr. Armstrong. It covers about 200 square miles. The memoirs contain a list of Arabic names, a general description of the country with its perennial streams, cascades, forests, villages,

roads, and people, and an account with excellent plans and drawings of the villages and ruins in the district visited by Herr Schumacher. Among the principal ruins described may be mentioned that called Kh. Arkub or Rahwah, which Herr Schumacher would identify with the Argob of the Bible, commonly placed at the Lejjah. He is supported in this view by the authority of Burckhardt, who maintained that Argob would be found somewhere in southern Jaulan. Important ruins were found in the Ain Dakhar and Beit Akkar. North of the former place is a field of dolmens, in number not short of 500, called by the natives Kubur Beni Israil—graves of the children of Israel. Ancient stone bridges were found crossing the streams at Nahr el Allan and Nahr Rukkad; a remarkable altar was found at Keft el Ma, conjectured by Herr Schumacher to be the Maccabean Altar. Here a remarkable statue of basalt was also found. In a village called Sahem el Jolan, Herr Schumacher thinks he has discovered the Biblical Golan, which has hitherto escaped identification. The situation, the name, the extensive ruins, and the traditions of the people all seem to confirm Herr Schumacher's conjecture. The ruins of the remarkable underground city of Ed Dera were examined and planned for the first time, together with the towns and monuments of El Mezeirib Tuffas and Nawar, identified by Mr. Oliphant with the land of Uz; other subterranean buildings were found at Kh. Sumakh and at Sheik Saad. The rock tomb of Job was also photographed and planned. These memoirs and maps may be considered as following immediately on the notes furnished by Mr. Oliphant for the *Quarterly Statement* of April last. The recovery of two important Biblical places, the mass of light thrown upon ancient worship, the great number of ruins planned, and the care and intelligence bestowed upon the whole work render it incumbent upon the committee to ask for a special vote of thanks to this young explorer, as well as to Mr. Oliphant and Mr. Guy le Strange. It must also be mentioned that Mr. Oliphant has discovered a dolmen in Judaea, where hitherto none had been found. It lies in a desert and hilly part of the country, on sheet 115 of the great map. Another interesting discovery is one made by Herr Hanauer close to the site of the ancient Zorah, of a rock altar which suggests the passage in Judges xiii. 19 and 20. The publications of the year in the *Quarterly Statement* have also included Major Kitchener's important geographical report of the Arabah Valley, an archaeological paper by Clermont-Ganneau on Palestine Antiquities in London, and communications from Canon Tristram, Rev. H. Clay Trumbull, Rev. H. G. Tomkins, Dr. Selah Merrill, Dr. Chaplin, Rev. W. F. Birch, Prof. Hull, Mr. Baker Greene, and others, to whom the best thanks of the committee are due. The books published by the committee since the last meeting of the general committee are *Mount Seir*, by Prof. Hull, and cheap editions of Captain Conder's *Tent Work*, and *Heih and Moab*. The remaining copies of the *Survey of Western Palestine*, have been placed in the hands of Mr. A. P. Watt, of Paternoster Row, for disposal, subject to the condition that no reduction be made on the original price of the work. The committee have now in their hands the whole of Prof. Hull's Geological Memoirs. This important work has been sent to the printers and will be issued as soon as possible. An arrangement has been made with Mr. H. Chichester Hart, by means of which we shall be enabled to publish his Memoirs on the Natural History of the Arabah. Herr Schumacher will also, it is hoped, continue his researches as opportunity may offer. The society received during the year 1884 the sum of £5,854, including a loan of £850, and expended £1,851 in exploration, £2,592 on maps and memoirs, £504 in printing, and £618 in management. Since the beginning of the year the sum of £1,224 has been received; exploration has cost £116, maps and memoirs £408, printers £200; and management £346. As regards the maps showing both Eastern and Western Palestine with the Old and New Testament names on them, they are now ready for the engraver, but will not be handed to him until Herr Schumacher's work can be laid down on them. Mr. Armstrong has also completed a list of Old and New Testament names

with their identifications. The Committee have lately to deplore the sudden death of Mr. W. S. W. Vaux, who has been a member of the Executive Committee since the formation of the society in 1865. There has hardly been a meeting from that date until the last meeting of June 2 at which he was not present, and his interest in the society and his watchfulness over the advance of its work has never ceased from the beginning.—The adoption of the report was proposed by Dr. Chaplin, of Jerusalem, who spoke of the way in which the work of the society was steadily growing in recognition, and seconded by Mr. Cyril Graham, who bore testimony, from his own experience in the country, to the beauty and excellence of Herr Schumacher's work.—The Dean of Chester proposed the re-election of the Executive Committee. This was seconded by the Rev. Dr. Lowy. Both gentlemen took occasion to speak of the great loss the society had sustained in the lamented death of Mr. Vaux.

EDINBURGH MATHEMATICAL SOCIETY.—(Friday, July 10.)

A. J. G. E. BARCLAY, President, in the Chair.—Mr. R. E. Allardice gave an account of a paper, by Mr. Charles Chree, on physical applications of polar co-ordinates to the displacement of elastic solid and fluid bodies, and contributed some notes of his own on solid geometry. Mr. J. S. Mackay submitted a paper by Mr. Robert J. Dallas on the method of orthogonal projection. Mr. A. Y. Fraser, the hon. secretary, and Dr. Rennet, of Aberdeen, were appointed by the society to represent it at the ensuing meeting of the British Association. The president, in his closing remarks, stated that the membership of the society at the end of its first session was 58, at the end of its second, 92, and now, at the end of its third, 147.

FINE ART.

Medallio Illustrations of the History of Great Britain. Compiled by the late Edward Hawkins. Edited by A. W. Franks and H. A. Grueber. (London.)

THE authorities of the British Museum, whose series of coin catalogues is so well known, have now turned their attention towards the publishing of a work dealing with another branch of numismatic lore. Two solid volumes, each a thick book of over seven hundred pages, contain a list of medals relating to English history. They range from the time of the re-introduction of medallio portraiture in the fifteenth century to the last year of the reign of George II. We, in whose days the issue of medals is so unfrequent and restricted, can hardly realise their importance in the sixteenth and seventeenth centuries. Putting military rewards aside, the medal now seems the exclusive right of the successful competitor at industrial exhibitions and the promising schoolboy. Two hundred years ago, however, the medal played a part which has now been handed over to the political pamphlet. Every considerable event, and many events which were not considerable, was commemorated by some memorial in silver or bronze, which dealt with it in a serious or sarcastic, a realistic or allegorical manner. Similarly the lives and deaths of every prominent personage, statesman or scholar, soldier or divine, were recorded in metal.

The medals of England form a series commencing comparatively late (not much less than a hundred years after the Italian series had begun), and are not nearly so numerous as those of Germany, France, or even Holland. Nevertheless, they amount to several

thousands; and when to them are added reckoning-counters, badges and ornamental plaques, the numbers seem astonishing enough. In the endeavour to obtain a complete list of the whole of the English pieces the editors have evidently spared no trouble. Mr. Franks personally went through most of the large foreign collections, and with the assistance of his colleague consulted nearly a hundred numismatic works bearing on the subject. We are not sure that an even superfluous completeness has not been attained, for the connexion with English history of a large number of the catalogued pieces is barely visible. It is, for example, hardly necessary to enumerate the whole series of Neapolitan coins on which Philip II. of Spain styles himself—during the lifetime of Queen Mary—King of England. Nor, again, should we have included a number of Dutch medals referring to the early years of the career of William III., which throw no direct light on English affairs. Nevertheless, it is always better to err on the side of superfluity than on that of meagreness, and we are, perhaps, hypercritical in complaining of the zeal of the compilers. One undoubted mistake, however, has been committed in arranging non-contemporary pieces in the same category as those struck at the date of the events which they commemorate. Prize medals for Christ's Hospital, for example, issued in the reign of George III., hardly appear to be in their proper place when ranged under the date 1553, merely because they display the head of Edward VI. on their obverse. Similarly, too, we are disappointed at finding the first catalogued item to be a medallion of William the Conqueror struck in 1731 by the Genevese artist Dassier.

The earliest contemporary medal which preserves the features of an Englishman is that of John Kendal, a Knight Hospitaller who distinguished himself at the siege of Rhodes in 1480. But this interesting piece was struck in Italy, not in England, and cannot fairly be styled an English medal. It was not till the reign of Henry VIII. that anything was produced on this side of the Channel, and in his time the issues were by no means lavish. Among the most striking of them is a large gold piece struck to commemorate the king's assumption of the title of "Supreme head on earth of the Church of England and Ireland." The obverse gives a characteristic bust of Henry, while the reverse testifies to his well-known bent for learning, as it bears his name and style expressed at full length in Hebrew and Greek; the latter inscription ends with a curiously literal translation of the English title, 'EN TH 'EKKΛEΣΙΑ THΣ 'ΑΓΓΛΙΑΣ 'ΑΚΡΗ 'Η ΚΕΦΑΛΗ. Most of the medals of the reign of Henry VIII. can be proved to be the work of Continental artists; the same is the case with the less numerous issues of Edward VI. and Mary, and, indeed, in almost every period the foreign medallists were as busy in England as those of native extraction. With the accession of Elizabeth, or, rather, with the outbreak of the great religious wars which form the central feature of her epoch, begins the long and numerous series of political medals which continues down to the death of Queen Anne. It is hardly necessary to say that medallists, both at home and in Holland, exhausted all their

powers of adulation in complimenting the Virgin Queen. Not the least frequent character in which she is allegorically represented is that of Venus, a fact which shows that the artists had a fair idea of the royal foibles and aspirations.

While the reign of James I. is rather commonplace from the medallist point of view, that of Charles I. is perhaps the most interesting in the whole English series. Its distinguishing feature is the number of military rewards and party symbols which it displays. The loyal badges worn by the Cavaliers during the Civil War are reckoned by the dozen; in nearly every case the main device is the king's head. On the other hand, the Parliamentary generals struck a large variety of medals for distribution to their soldiery after successful contests. Of these we find pieces of Essex, the two Fairfaxes, Waller, Manchester, Ireton, and Cromwell, as well as of less known chiefs such as Poyntz Brown and Rossiter. They have usually a portrait of the commander on the obverse, and some appropriate device or motto on the reverse. At first it would seem that these pieces were the personal gift of the general to his men; but afterwards the Parliament undertook the distribution of rewards, and we find an interesting series of naval as well as military medals struck by the authority of the government. Some of them bear inscriptions commemorating the action for which they were granted, e.g., FOR EMINENT SERVICE IN SAVING R^T TRIUMPH FIRED IN FIGHT WITH R^T DUCH [sic] IN JULY 1653. Others, like our modern "long service" medals, show types of more general significance. Many of the series have considerable artistic merit, as the brothers Simon, who worked for the mint of the Commonwealth, were engravers of great taste and skill. In beauty their productions far surpass those of Rawlins and the other medallists of the Royalist party.

From the accession of Cromwell to power till the death of Queen Anne English politics were inextricably mixed with those of Holland. Hence it is not strange to find that the Dutch medals of this period which require notice are almost as numerous as the British. They deal not only with battles and treaties, but with the internal affairs of the United Kingdom, commemorating, for example, the imprisonment of the Seven Bishops and the Assassination plot of 1696. The campaigns of William III. and Marlborough are illustrated by a whole host of pieces, issued for the most part in Holland and Germany; while for the rather inglorious wars of Charles II. the French series, struck to glorify Louis XIV., can also be consulted.

With the advent of the House of Hanover the medallist art seems to have languished in England. The dull prosperity of Walpole's ascendancy is marked by very few memorials, and those are mainly commonplace pieces complimenting the royal family. The wars of George II. proved more fruitful in medals. Commencing with Vernon's half-forgotten exploit at Porto Bello, every engagement of importance is chronicled in silver or bronze. A well-intentioned association, the Society for the Promotion of Arts and Commerce, attempted with some success to revive the medallist art of the previous century; and a few productions, notably Yeo's medal com-

memorating the battle of Culloden, attain a high degree of merit. We trust that Messrs. Franks and Grueber will some day find time to carry their researches down to the end of the reign of George III. So good a book as this deserves completion, and we feel ourselves left in mid air when the break occurs in the middle of the Seven Years' War.

We may, perhaps, be permitted, in conclusion, to point out a few weaknesses in the Latinity of the translators. *Perduellis* is a "rebel," not an "assassin"; *Vagetur* does not mean "it will move"; nor *jugi concordia florent*, "they flourish under a concordant yoke." These and several other slips of the kind ought to have been corrected.

C. OMAN.

WATER-COLOUR EXHIBITION OF THE SCOTTISH ACADEMY.

ON Saturday last the Royal Scottish Academy opened an autumn exhibition of works in water-colour by living artists—the first, it is hoped, of an annual series of similar gatherings. The large increase in the number of the practitioners of the art in Scotland during recent years has demanded that greater space should be devoted to the display of their productions than is afforded by the single, and small, water-colour room of the Academy's spring exhibition, and this demand has been fully justified by the excellence of many of the works in question. The formation of the Society of Scottish Water-colour Painters, and the opening by dealers of various small exhibitions, have been efforts to meet the want; but it is satisfactory to find that the Academy has now taken up the matter, and that there is a prospect of an annual display of water-colours in Scotland on a scale approaching that of the exhibitions of the Institute in Piccadilly, and of a similarly representative character.

On the present occasion water-colours to the number of about a thousand have been brought together, mainly by local artists, though a few works, including examples of Pettie, MacWhirter, F. Powell, John Burr, Tom Lloyd, and R. W. Allan, come from London, and D. A. C. Artz, W. Maris, A. Newhuys, and B. J. Blommers, among others, send examples of foreign art. The landscape painters of the Academy are fully represented, Messrs. Smart, Waller-Paton, Beattie-Brown, and McDonald, exhibiting numerous works; while a series of eleven singularly delicate and sensitive little subjects are specimens of the style of art to which the president, Sir William Douglas, has exclusively devoted himself during recent years. Sir Noel Paton and Mr. Herdman both exhibit careful and detailed studies of foreground rock; and the latter sends, in addition, several ideal heads in colour and in black-and-white. Mr. Lockhart shows both landscape and figure subjects. The former include several subjects on the Fife coast and his noble view of the city and cathedral of Durham, which has been already exhibited in London. He also exhibits brilliant replicas of his "Gil Blas," and "Don Quixote," and a large and somewhat altered version of his picture of the "Cid," here entitled "A Champion of the Cross."

Among the works of the younger painters are some very spirited and brilliant subjects by Mr. T. Scott and Mr. J. Douglas. Mr. T. Austin Brown's "Mussel Beds" is delightfully pure and pearly in tone. "In Sussex," by Mr. R. W. Allan, is successful in its rendering of clear morning sky; and Mr. J. T. Ross shows true poetic sentiment in his sea-piece with calm water, mirroring great clouds that pause in their white vastness overhead, broken by the level lines of languid waves and by the dark

curve of "The Lost Net." The works in portraiture include some graceful studies of children by Mr. Otto Leyde, and an exceptionally solid and powerful head of a lady by Mr. A. Malville, who also shows two effective Oriental scenes.

Among the works in black and white are various delicate pen subjects by Mr. George Reid, some early figure-studies by Mr. W. D. McKay, various large drawings in light and shade by Mr. Gourlay Steel and Mr. John Smart, and etchings by Messrs. MacWhirter, G. S. Ferrier, and George Aitkman; while works of sculpture are exhibited by Messrs. Clark Stanton, W. G. and D. W. Stevenson, T. Stuart Burnett—who shows the model for his colossal statue of "Rob Roy"—and C. McBride.

J. M. GRAY.

NOTES ON ART AND ARCHAEOLOGY.

MR. STANLEY LANE-POOLE, who is engaged in preparations for his *Fusti Arabici*, or Synopsis of Mohammedan Coins, will be much obliged by private collectors informing him of the extent of their cabinets of Arabic coins, and, if possible, sending such coins as they believe to be unrepresented in the British Museum to him for examination. Even a single unpublished specimen will be valuable. Communications and coins (registered) should be addressed to him to the care of the Keeper of Coins, British Museum.

MM. GOUFIL & Co. have on view in their gallery to-day (Saturday) Mr. Val Prinsep's portrait of the late General Gordon. This picture, we are informed, is the only portrait painted from life of the Hero of Khartum. It represents General Gordon as Mandarin of the Yellow Jacket and Red Button, the rank conferred on him by the Chinese Government. It has been lent by the Messrs of the Royal Engineers, for whom it was painted.

By arrangement with the Sunday Society both the Grosvenor Gallery and the galleries of the Institute of Painters in Water-Colour will be opened on the two last Sundays of the present month. To-morrow (July 19) admission will be confined to members of the Sunday Society; but on July 26 admission will be free to all who obtain tickets from the hon. secretary, whose address is 8 Park Place Villas, W.

UNDER the title of *English Bells and Bell Lore*; their Founders, Inscriptions, Traditions, and Peculiar Uses, a volume left in MS. by the late Thomas North is now being prepared for the press by the Rev. W. Beresford, of Leek, Staffordshire. It will consist of about 150 pages of letterpress, with fifty illustrations; and it will be issued to subscribers at the price of 7s. 6d.

THE Royal Cambrian Academy of Art will open its third annual exhibition on Monday next at Cardiff, in the buildings of the South Wales University College. Excepting the work of members of the Academy, and of other Welsh artists, all the other pictures have been selected for exhibition by a committee who paid a visit to London for the purpose.

THE copies by Teniers of a portion of the famous gallery of the Archduke Leopold William, which are now on view at Mr. Davis's gallery in New Bond Street, are well worth seeing. Charming in tone and colour, and sympathetic in their rendering of the originals, they justify Teniers's claim to be called the Proteus of Painters. It is strange that with so evident an appreciation of such masters as Titian and other great Venetians his own original work should bear so little trace of their influence. It is greatly to his credit that "in spite of all temptation" he remained a Fleming. The catalogue is a reprint of a portion of the careful and interesting list by Mr. George

Scharf of the pictures at Blenheim which was published in 1862. It is well worth the sixpence charged for it. At Mr. Davis's can also be seen a copy of the "Theatrum Pictorium Davidis Teniers," originally published in 1680, with engravings of all these pictures (except three) and 127 more (244 in all) copied by Teniers from the Archduke's collection. The proceeds of the exhibition will be devoted to the Working Men's Convalescent Home at St. Margaret's Bay, Kent.

"GORDON AT KHARTOUM" is the title of a picture painted by Mr. Lawes Dickinson and exhibited at 57 Pall Mall. The General is represented standing at sunrise on the roof of his residence on the last day of the siege. In one hand he holds his Bible, in the other a binocular. Considering that Mr. Dickinson was guided entirely by photographs and some hints given by the family, he may be congratulated on his success. The figure has a noble bearing, and there is a far-off look in the eyes which accords well with the known character of his subject; but Mr. Dickinson has avoided the temptation to overdo the sentiment of the situation. He has made his Gordon simple and manly, and we hope that the proceeds of the exhibition and of the engraving from the picture will substantially increase the Gordon Memorial Fund. The room is hung with some interesting trophies of the hero's campaigns in Africa and China, and other relics lent for the occasion by Sir Henry Gordon. These include a copy of the pewter medal struck by Gen. Gordon during the siege of Khartum, and an Arabic letter from him to the Mudir of Dongola.

A FEW water-colours by M. Jules Lessoré, the well-known French artist, are to be seen in the rooms of Messrs. Buck & Reid, at 179 New Bond Street. The name given to the small collection is "Picturesque London," and the subjects are all well-known views in the metropolis. The simple and sombre style of the artist, with its sober colour and broad treatment, is well suited to the massive architecture and grey atmosphere of London; and his views of St. Paul's, St. Mary-le-Strand, Whitehall, and Trafalgar Square, are solemn and characteristic.

THE Académie des Inscriptions has divided the Hauteroche numismatical prize between Prof. Percy Gardner, of the British Museum, for his *Types of Greek Coins*, and M. Six for his classification of the coins of Cyprus.

THE new part of the *Transactions* of the Cumberland and Westmorland Antiquarian and Archaeological Society (vol. viii., part 1) contains Prof. E. C. Clark's paper on the Greek inscription at Brough, which was read before the Cambridge Antiquarian Society on February 23, and of which an abstract has already appeared in the ACADEMY. Of the other contents of the number the most noteworthy is a paper by the editor, Mr. R. S. Ferguson, on the question, "Why Alston is in the Diocese of Durham and in the County of Cumberland." The difficulty of the problem lies in the latter part of the question. The parish, according to physical geography, ought to be in Northumberland, the only access to it from Cumberland being over a steep mountain pass. Mr. Ferguson's solution is that the district of Tyndale, in which Alston is situate, was held by the Scottish kings as a feudal benefice under the kings of England, but that the overlord retained his rights over the silver mines at Alston. The miners had to pay their dues to the nearest officer of the English crown, who was the sheriff of Carlisle, and thus Alston came to be regarded as a portion of the county of which Carlisle was the head. Mr. W. Nanson contributes an article on the manorial records of Alston. The writer is puzzled by the local word *geast* in the sense of "pasture,"

which he supposes to be cognate with *guest*. It is really the Old French *giste* (now *gîte*). The part also contains the report of the committee appointed to superintend the excavations of the Roman camp at Low Borrow Bridge, but the diggings seem to have been unproductive of results. There are a large number of papers of local interest, testifying to the remarkable activity of the society.

MUSIC.

MUSIC AT THE INVENTIONS EXHIBITION.

A CONCERT of sacred music was given last Tuesday afternoon at the Inventions Exhibition under the direction of Mr. W. S. Rockstro. The first part of the programme included Palestrina's "Missa Brevis" and Allegri's "Miserere." These two famous works were performed by a choir about equal in number, if not in quality, to that of the Sistine Chapel. Palestrina's music is chaste and solemn, but in listening to it one can hardly understand the extraordinary enthusiasm which it kindled three centuries ago. But then musical ears had been wearied by masses overlaid with counterpoint and ornament, and the pure strains of Palestrina naturally formed a sudden and striking contrast. And the conditions under which his music is given at Rome are so different from those of concert performances that it really seems almost as unfair to produce his Masses in the concert-room as to give Wagner's music-dramas away from the stage. The cathedral of St. Peter's, with altar, priests, intonation, incense, is as necessary to the one as scenery and acting are to the other. The "Miserere" of Allegri is a composition which, apart from its surroundings, loses in effect far more than that of Palestrina. It has acquired much of its celebrity from the jealousy with which it was long guarded, for the Pope allowed no one to copy it. Burney in his *Reise* speaks of the impression made by it, but, as he says, in conjunction with the solemn rites. Then, of course, Mozart added to its fame by taking it down during a performance at the Sistine Chapel in 1770. Leopold Mozart, proud of his son's clever feat, made much of it. Historians, with less excuse, have repeated and even exaggerated the tale. It was, after all, not a very wonderful affair; for the music is simple, there is little of it, and some strains are repeated several times, and in slow time. Mozart was certainly young in years when he wrote it down, but, in intellect, a man. The "Miserere" forms part of the Holy Week service called "Tenebrae." Allegri's setting, composed in 1638, is extremely simple. A portion of the fifty-first Psalm is arranged for nine voices; some verses in five parts as tutti, some in four for solo voices, and part of the last verse for both combined. In 1714 Tommaso Bai set the very same words to music, and the two compositions are much alike. Since 1714 the "Miserere" has been performed, partly from Allegri, partly from Bai. Mr. Rockstro professed to give certain embellishments, called "Abbellimenti," on the authority of Cardinal Alfieri; but he introduced one which is not given among the "Abbellimenti" published by the cardinal at Lugano in 1840. Neither did Mr. Rockstro give the Allegri and the Bai verses in the order mentioned by the cardinal. The second part of the programme included a very interesting harpsichord solo, "Praeludium and Arrangement of 'Een Kindeken is uns geboren,'" by Dr. John Bull. It was well played on a double harpsichord, but the name of the performer was not given. After this came anthems by English composers of the

sixteenth and seventeenth centuries—Redford, Tallis, Farrant, and Gibbons. The only one of these four belonging to the seventeenth century is Gibbons, and he flourished in the early part—for he died in 1625, and not 1685, as stated on the programme. As representative of the seventeenth century Purcell certainly ought to have been selected. The choir sang the Palestine Mass and some of the anthems with taste and expression.

On Wednesday afternoon the first of threeconcerts of music of the Netherland Schools of the fourteenth, fifteenth, and sixteenth centuries was given in the Royal Albert Hall. M. Daniel de Lange is the director, and he has brought with him a selected choir of vocal soloists from Amsterdam. M. S. de Lange is the organist. It is impossible to exaggerate the importance of the Netherland composers from the time of Dufay (1360-1432), the reputed head of the first Flemish School. The fifteenth century produced the famous Ockeghem and the still more famous Josquin des Prés. The greatest name of the sixteenth century is of course Orlando Lassus. But the programmes contain not only works by these important men, but others by composers less well-known, but equally worthy of notice. From a perusal of the scores kindly forwarded to us by M. de Lange, we believe that the sacred and secular works of Obrecht of the fifteenth century, and those of Sweelinck of the sixteenth century, which will be given at these concerts, will excite in no small degree the interest and admiration of musicians. Next week we shall speak more in detail about the various works. For the present we have only to praise the scheme, and to say that the first concert last Wednesday afternoon was most interesting, and we were sorry not to see a larger audience. The time originally fixed was changed at the last moment, and so probably many came at five o'clock only to find that all was over. M. de Lange directs the small body of excellent vocalists with the utmost care and ability. For some of the numbers a larger choir would have been desirable; and for the delicate songs in the second part a smaller room. M. S. de Lange, an accomplished organist, played solos by Sweelinck and Bach. A Kyrie, by Dufay, and a part-song of Orlando Lassus, were encored. The concerts on Thursday and Saturday ought to be well attended. J. S. SHEDLOCK.

MUSIC NOTES.

A HANDEL commemoration was held last Tuesday evening at Westminster Abbey in aid of the Royal Society of Musicians of Great Britain. The Dettingen "Te Deum" was given with full orchestra and chorus, and the performance, on the whole, was a good one. Dr. Bridge, the Abbey organist, played Handel's Concerto in D minor from the second set, published after the composer's death as op. 7. Mme. Albani sang "Angels ever bright and fair." The Anthem, "Zadok the Priest," concluded the Handel celebration. The orchestra was conducted by Dr. Bridge, except, of course, for the accompaniment to the organ concerto, when Dr. Stainer took his place. The Abbey was crowded.

CHEVALIER L. E. BACH gave a concert on July 10 at St. James's Hall. He played Beethoven's pianoforte Concerto in C minor, and his rendering, though not altogether satisfactory, deserves praise. He ought not, however, to misuse Beethoven's *cadenza* for first movement by altering and adding to it. He gave a Capriccio for pianoforte and orchestra of his own composition, and Mme. Stirling sang some of his "Carols of Cradleland." Miss Henson, a vocalist from New York, made a favourable *début*. Sig. Raudaggar was the conductor.

BLACKIE & SON'S NEW BOOKS AND NEW EDITIONS.

OUTLINES of the WORLD'S HISTORY: Ancient, Mediæval, and Modern, with special reference to the History of Civilisation and the Progress of Mankind. By EDGAR SANDERSON, M.A., late Scholar of Clare College, Cambridge; Author of "A History of the British Empire," &c. With numerous Illustrations and Eight Coloured Maps. Crown 8vo, cloth, red edges, 6s. 6d.

AN EPITOME of HISTORY: Ancient, Mediæval, and Modern. For School, College, and General Reference. By CARL PLOETZ. Translated, with extensive Additions, by W. H. TILTINGHAST. 630 pp., post 8vo, cloth, 7s. 6d.

DESCHANEL'S NATURAL PHILOSOPHY. An Elementary Treatise. Translated and extended by J. D. EVERETT, D.C.L., F.R.S., Professor of Natural Philosophy in Queen's College, Belfast. Illustrated by 783 Wood Engravings and Three Coloured Plates. Eighth Edition, thoroughly Revised and Enlarged. Medium 8vo, cloth, 18s. Also separately, in 4 parts, limp cloth, 4s. 6d. each.

PART I. MECHANICS, HYDROSTATICS, and PNEUMATICS. PART II. HEAT. PART III. ELECTRICITY and MAGNETISM. PART IV. SOUND and LIGHT.

ELEMENTARY TEXT-BOOK of PHYSICS By J. D. EVERETT, D.C.L., F.R.S., Professor of Natural Philosophy in Queen's College, Belfast. Illustrated by many Woodcuts. Third Edition, Revised. Fcap. 8vo, cloth, 3s. 6d.

ELEMENTARY TEXT-BOOK of TRIGONOMETRY. By R. H. PINKERTON, B.A. Oxon., late GEORGE A. CLARK Fellow in Mathematics and Natural Philosophy in the University of Glasgow. Fcap. 8vo, cloth, 2s. 6d.

INTRODUCTION of the ART of PRINTING into SCOTLAND. By ROBERT DICKSON, F.S.A. Scot. Demy 8vo, with Twenty-seven Illustrations. 500 Copies printed. Price 3s.

The Large-Paper Copies are all sold.

Aberdeen: J. & J. P. EDMOND & SPARK.

NOW READY.

A SECOND EDITION of A WOMAN'S REPUTATION.

By OSWALD CRAWFURD,

Author of "The World We Live In."

Scotsman:—"This is a delightful novel."

Academy:—"Mr. Oswald Crawford's new novel is extremely clever."

Spectator:—"Mr. Crawford's novel of last year was a comedy; in 'A Woman's Reputation' there is a drama. None of the novel-writers of the day shows his readers the play of motive and the working of the wheels within wheels of our complex life with easier mastery than Mr. Crawford. In his own refined way, Mr. Crawford is as true a painter of life as the chronicler of Barsetshire, and his humour is far more pervading and finely flavoured."

LONDON: CHAPMAN & HALL, LIMITED, HENRIETTA STREET, W.C.

SATURDAY, JULY 25, 1885.

No. 690, New Series.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscript.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

LITERATURE.

The History of Hampton Court Palace in Tudor Times. Illustrated with One Hundred and Thirty Autotypes, Engravings, Etchings, Maps, and Plans. By Ernest Law. (Bell.)

It is seldom that one comes across so satisfactory a combination of research and recital as this volume presents. Mr. Law has spared no pains in the collection of facts, and shown no little skill in his treatment of them. Original authorities have been largely consulted, and the author has availed himself fully of "the opportunities of investigating every nook and corner of the palace" which have been given to him. The history thus obtained is, so far as it extends, very complete; and we trust that nothing will occur to prevent Mr. Law from carrying out his intention of bringing down the annals to the present time, and adding the index, which is essential to the right use and appreciation of such a work. It is certainly a matter of surprise that Hampton Court should have had no historian until the present time, but Mr. Law, we are bound to add, has taken care that it should be no matter of regret.

The manor of Hampton was the property of the Knights Hospitallers of St. John of Jerusalem at the close of the twelfth century, and continued in their possession until acquired by Cardinal Wolsey in 1514. Some sort of manor-house existed on the site of the present palace from an early date, and there is evidence of its having been occupied for a brief period by Elizabeth of York; but no traces of the building have ever been discovered, and its materials were probably employed as foundations for the later structure. Wolsey began to build almost as soon as he got possession of the manor, his first act being the enclosure of the park and the laying out of the gardens. "Twixt to bind therber"—that is, twigs to construct the arbour (in which the Cardinal loved to sit of an evening)—is an item in the early accounts still preserved in the Record Office. The attention paid to such matters as an abundant supply of pure water and the safe disposal of sewage is remarkable. Some idea of the magnitude of the former work may be gained from the facts that about 250 tons of lead were employed in the construction of the pipes, and that the price of lead was nearly £5 a ton. In estimating the value at £50,000 of our money Mr. Law seems to us to overshoot the mark, but not if we include the cost of laying these pipes the whole way from Coombe Hill, a distance of three miles, and conveying them across the bed of the Thames.

All the author's investigations have failed in bringing to light the name of the architect employed by Wolsey in designing the plans of the palace. The name of James Bettes

occurs as master of the works, and mention is also made in the account rolls of Nicholas Townley, chief comptroller, and of Laurence Stubbes, paymaster of the works, and Henry Williams, surveyor; but we are left in doubt whether we should not attribute the design of Hampton Court to Wolsey himself, following the illustrious examples of William of Wykeham, William of Waynflete, and other mediaeval prelates. It must not be forgotten that to a much greater extent than nowadays every workman was then an artist, and the line which now separates the architect from the artisan was a very thin one. There is certainly much reason to believe that, although Wolsey employed foreign workmen for executing the ornamental details, the general design came from an English mind, uninfluenced by the renaissance of Italian art. It seems somewhat difficult to define exactly the limits of the cardinal's palace, as it received so many alterations and additions after his death, and especially at the hands of Henry VIII.; but the west front and the First Court or Base Court were undoubtedly the work of Wolsey; and the Clock Court, with the hall on one side and the chapel on the other, formed his residence. The whole structure, Mr. Law thinks, was not much smaller than the existing one, which covers eight acres and contains a thousand rooms. Both outside and inside there was a marvellous amount of decoration. The terra-cotta medallions upon the gateway turrets were supplied by Joannes Maiano., and to him or to his school must be also assigned the very beautiful device, of which the cardinal's arms form the centre, which ornaments the inner side of the Clock Tower gateway. Of the splendour and variety which the internal decorations exhibited we can form but a faint idea. Cavendish, in his metrical life of his master, used no exaggeration of language when he spoke of

"My byldynges somptuous, the roffes with gold and byse,

Shone lyke the sone in myd-day sphere

Craftely cuntylled, as connyng could devise,

With images embossed, most lively did appear;

Expertest artificers that were both farre and nere,

To beautifie my howssys, I had them at my will,
Thus I wanted nought my pleasures to fulfil."

And the furniture displayed a corresponding degree of magnificence. It threw the king's quite into the shade, and provoked the envy of others besides the monarch who ultimately made it his own. Mr. Law devotes a whole chapter to the cardinal's tapestry, curtains, and carpets, and in reading it one is reminded of the description of Solomon's "exceeding magnifical" temple. Of course, the household and retinue were on a similarly stately scale; and the foreign ambassadors who enjoyed the cardinal's hospitality carried back to their own country "a glorious report" of the chambers glittering with innumerable vessels of gold and silver, and the two hundred and four score beds hung with silk, and reserved for the enjoyment of strangers.

Such was Hampton Court in Wolsey's time, and its splendour was rather enhanced than diminished after Henry VIII. had laid his hands upon it. The royal household required greater accommodation, and the tastes of the king himself found gratification not merely in enlarged kitchens and cellars, but also in a

hall of grander proportions and new apartments and ampler gardens. Much of Henry's time was passed at Hampton Court, and—says testimony unimpeachable—the galleries are still haunted by the spectres of Jane Seymour and Catherine Howard, and the tall, gaunt form of Mrs. Penn, Prince Edward's nurse.

But we have said enough to indicate that Mr. Law has been successful in finding a most interesting subject for his pen, and has done wisely in giving to it the most thorough treatment. Every page of his book bears traces of care, and it will be read with pleasure not only by the historian and the antiquary, but by every one who shares in the English fondness for the relics of a glorious past.

CHARLES J. ROBINSON.

Victor Hugo, his Life and Work. By G. Barnett Smith. (Ward & Downey.)

THIS volume appears very opportunely; perhaps almost too opportunely if the author was at all desirous that his book should occupy a permanent place in the literature of the subject. Mr. Barnett Smith has been at great pains to bring together the facts of Victor Hugo's life; he has collected a good many interesting contemporary criticisms on Victor Hugo's works; he has carried his story quite to the end, and told of Victor Hugo's death, and of the posthumous honours which France has paid to her dead poet; and he has done all this in a volume published well within three weeks after Victor Hugo was laid for his last long sleep in the repaganised Panthéon. The final word on Victor Hugo was scarcely to be penned under such conditions.

And, indeed, it may be doubted whether the final word on Victor Hugo can just now be spoken at all. The man is too great and too near to us. Not far from seventy years have gone by since Chateaubriand, unquestionably the foremost French writer of the time, described him as an "enfant sublime." Sixty years and more have run their course since his *Odes et Ballades* began a revolution in French poetry. During nearly the whole of that long lapse of time he has not ceased to occupy the position of protagonist in French literature. He led the great romantic movement of 1830, led it in poetry, in prose romance, and upon the stage. Passionately followed and passionately hated, he was in the very forefront of that great battle. Then, as comparative peace began to resume her sway, he published poems of greatest beauty. When the *Coup d'Etat* came in 1851, and he was driven into exile, he almost literally made the empire quail before the fiery shafts of his indignation. I know no such other lava-stream of angry scathing rhetoric as glows through the pages of *Napoléon le Petit*. There are passages of scorn and pathos in the *Châtiments* which it would be difficult to parallel in any language. The poet was so great that the antagonism between the exile and the emperor assumed the proportions of a personal duel—a duel in which it was not the poet who bit the dust. Nor did years seem to have any chilling influence on this exceptional nature. "There exists," said Sainte-Beuve, "in the great majority of men, a poet who has died in

youth, and whom the man survives." But in Victor Hugo the poet never died. When the man had reached comparative old age the poet still grew in strength and vitality. The two first superb volumes of *La Légende des Siècles* were published when the author was some fifty-six years old; and these volumes were followed, quite to the last, by more verse, which, if not fully equal to that in power, might still have immortalised many another poet—and followed, too, by the series of prose romances so magnificently inaugurated by the *Misérables*. But I am not drawing up a catalogue of his achievements. *J'en passe, et des meilleurs*. The record is bewildering. It seems to compel admiration.

The character of the man also is grand and imposing. His buoyant optimism in adversity, his belief in the ultimate triumph of liberty and right, his hatred of wrong, his magnificent charities—here again he overawes. In his great battle against the Empire he stands forth among his pigmy contemporaries like a hero of old.

But if he is so great, and so near, as to excite in many an almost excess of admiration, there is some danger also lest those who dislike to follow the crowd should weigh unduly on his demerits. Like the voice of Mephistopheles, croaking discord amid the singing of the archangels, so does the voice of certain critics, who by temperament are admirers of perfection rather than of force, break in upon the psalms of the Hugo worshippers. Such a critic was Sainte-Beuve. Such critics are M. Scherer and Mr. Matthew Arnold. Nor does hostile criticism experience any very great difficulty in finding the wherewithal to justify its attitude—hostile criticism very seldom does. And here the flaws are obvious enough. A thinker, in the same sense that Goethe or Wordsworth were thinkers, Victor Hugo was not. Behind his art there is no large, sane, reasoned theory of life. When we strive to reach beyond his glowing words, we get a vague deism, a vague optimism, and nothing more. The command of language is so regal, the vocabulary so opulent, that they often serve to mask what is really poverty of idea. And the ideas are sometimes even grotesque. The poet's flattery of France, of Paris, would be contemptible if it were not so absurdly sincere. Most of his later declamatory verse is unreadable. His erudition is frequently fantastic. His tricks of antithesis are often painful. His politics, as a practical system, are about on a par with those of Shelley.

So speak Victor Hugo's detractors, not altogether without reason. And M. Zola, who is a pretty voluminous critic, though much more popularly known as a novelist, attacks him from another side. For M. Zola is the sworn foe of the ideal. He is for "naturalism," for "experimentalism," for facts, for the application of scientific ideas to literature. Romance occupies the same position in his system that Christianity occupied in the system of Diderot and the Encyclopaedists. It is the *Infâme*, the intolerable, the abominable thing. It is the corrupter of youth, and undermines society. Wherefore Victor Hugo, as chief saint in the church of the ideal, fares very badly at the hands of this iconoclast. Even the benefit of his influence on the language is doubted. That is

what comes of being judged by so rigid a moralist as M. Zola.

And yet when both schools of critics have done their worst, how much remains standing! That a great deal of what Victor Hugo has written will live for the erudite and curious only—has not really in itself the elements of life—I hold to be true. Much of it, I confess, seems to me empty and unreadable now. But the residue? That great body of verse which is perfect in form, which exhibits such superb metrical command over the rebellious French language, which lifts itself above the earth so readily upon its lyric wings—what shall we say of that? An admirable narrator when he wished simply to narrate; a consummate artist, but not an artist only, for in his art there beat that pulse of humanity without which art is but craftsmanship; a master of such words as move the hearts of men, and play on feeling as on an instrument—what writer of our time can stand beside him for varied gifts? He had so many—the gift of passion, of power, of grace, of music, of gentleness, of scorn, and, almost alone among his contemporaries, of sublimity. He could reach pathos by the simplest means. He could wield words that drew blood like a lash. Surely we who admire him so greatly cannot be deceived in thinking that there is much here against which fashion will beat in vain. Some of it surely will live for ever, and, with better fate than Tithonus, live for ever young.

Meanwhile, if any English reader wants a fair epitome of M^{de}. Hugo's book on Victor Hugo's earlier career, and of the other French books dealing with his life—in fact, a general account of Victor Hugo—then such reader will find his requirements not inadequately supplied by Mr. Barnett Smith.

FRANK T. MARZIALS.

Prolegomena to the History of Israel. With a Reprint of the article "Israel" from the "Encyclopædia Britannica." By Julius Wellhausen. Translated from the German under the Author's Supervision by J. S. Black and C. A. Menzies. With Preface by Prof. W. R. Smith. (Edinburgh: A. and C. Black.)

MESSE^{RS}. BLACK have earned the thanks of English biblical students by placing these two works of Prof. Wellhausen within their reach in the convenient form in which they here appear. The *Prolegomena*, published in German in 1883, is a second edition of the first (and as yet the only) volume of the *History of Israel*, which appeared in 1878, being in fact the same work, the changes (except in chap. viii., which has been enlarged and recast) being few and rarely more than verbal. The title that the work now bears indicates that it is not a history properly so-called, but deals with the questions that must be determined before the history can be written—those, namely, relating to the character and date of the authorities, as estimated by comparison between themselves and with other writings of the Old Testament the dates of which may be assigned with certainty.

The following outline of contents will indicate the scope and nature of the work. Prof. Wellhausen first examines the History

of Worship in the Old Testament, reviewing in succession allusions and notices touching the place of worship, customs respecting Sacrifice and the Sacred Feasts, the position and privileges of the tribe of Levi, and shows that the differences apparent in the three great strata of legislation embodied in the Pentateuch—viz., Exod. xx.-xxiii., Deuteronomy, and the Ceremonial Legislation or "Priests' Code"—correspond with variations of usage presupposed, more or less distinctly, by the historical books for different periods of the national life. The History of Tradition is next examined; an unfavourable judgment is passed upon the Books of Chronicles; in Judges, Samuel, and Kings the importance is shown of distinguishing between the older sources incorporated by the compilers and the matter contributed by themselves, attention being further directed to the differences in character sometimes observable between the sources; lastly, in chap. viii., the two main threads of narrative, which are interwoven in the existing Hexateuch, are disengaged, and the character and aims of each contrasted. In the third part of the work, certain objections having been considered, the development of the oral into the written law is illustrated, the contrasts between the earlier and later periods of Israelitish history are emphasised, and the steps traced by which, through the intervention of the codified "Torah," the teaching of the Rabbis took the place of that of the Prophets. The rest of the volume consists of the brilliant and suggestive sketch of the History of Israel contributed by Prof. Wellhausen to the edition, now in progress, of the *Encyclopædia Britannica*. This sketch is in the main a reprint from the *Encyclopædia*; but the author has taken the opportunity to supply what was a defect in his original article, and has added a section (§ 11) on the relation of Judaism to Christianity, showing how the Gospel, while protesting against the current tendencies of Judaism, developed the hidden impulses of the Old Testament and realised its genuine aims.

It is impossible, within the limits of a notice such as the present, to criticise effectively a volume raising so many questions, and full of such varied contents, as this of Prof. Wellhausen's; a few general observations must therefore suffice. Its aim, viewed as a whole, is to develop and illustrate a theory of the history and legislation of the ancient Hebrews which, though commonly associated with the name of Graf, has found its most able and powerful exponent in Prof. Wellhausen. According to that theory, the priestly legislation of the Pentateuch is the latest phase of Israelitish legislation, and represents legal and ceremonial usage as it was codified in, or shortly after, the Babylonian Captivity. The directions, or—to adopt the old Greek expression—*thémures*, which Exod. xviii. attributes, on civil matters, to Moses, and which, as regulating religious custom, appear in a comparatively primitive form in Exod. xxiii., passing afterwards into the hands of the priesthood, became a system of traditional lore; and this, expanded and gradually added to, culminated (so far as the Old Testament is concerned) in the elaborate ceremonial regulations prescribed in the Priests' Code. This view of the course of Israelitish

legislation is favoured, it is contended, by a comparison of the Pentateuchal codes among themselves, and confirmed, inferentially, if not directly, by notices contained in the historical books. It cannot be denied that the arguments by which the theory is supported are forcible, and that the explanations which it offers of the genesis of institutions and ideas are often just such as analogy would lead us to expect. The analysis of the Pentateuch, so far as regards the two main sources, Q and JE (which alone are here of importance), is, and has been for some time past, accomplished beyond reach of reasonable dispute; and in spite of assertions still persistently made to the contrary, there is not that total disagreement between critics which would suffice to show their method to be a false one, and the conclusions reached by it illusory. When, now, the legislation and historical conceptions of Q and JE are compared with one another and with Deuteronomy, the explanation which appears to account most completely for the differences between them seems to be the theory advocated by Wellhausen. Doubtless, in Wellhausen's volume the reader will come across many arguments which depend upon premises arbitrarily assumed, or which are otherwise inconclusive; he will also sometimes wish that the author would have permitted himself to state facts as facts without the tone of depreciation which neither strengthens an argument nor commends it. But, when every deduction has been made on these accounts, there remains a substratum of indisputable fact which must impress him forcibly, and clearly demands recognition on the part of the biblical student and theologian. To be sure, the sources of the Pentateuch may individually be older than is supposed; yet it seems difficult to deny that relatively the most advanced, in both subject-matter and treatment, is that represented by Q. The real obstacle which prevents Wellhausen's conception of the history of Israel from being estimated impartially is undoubtedly a theological one; but that his conception as such—apart from details which may be questionable and arguments of minor importance which may not be ultimately sustained—is not incompatible with a full belief in the inspiration of the biblical writers, and the authority of their teaching as preparatory to the revelation of Christ, has been shown recently by F. E. König, and is practically involved in the position occupied since 1880 by Delitzsch. For Delitzsch, though he criticises some of Wellhausen's assumptions, and sharply censures the style in which parts of the *Geschichte* are written, accepts almost unreservedly the critical analysis of the Pentateuch, recognises the double stream of prophetic and priestly tradition (the sources JE and Q), and allows that the latter was only finally arrested in or after the period of the exile. More, probably, even in the Priests' Code has its origin in antiquity than Wellhausen is willing to allow; much reservation also may be necessary in accepting his judgments on some of the narratives in the historical books, especially in Judges, Samuel, and Kings; but the views which have hitherto prevailed cannot, it seems, in their integrity, be longer maintained; and the problem that now demands the attention of theologians is

to what extent, and in what direction, they must be modified. An essential preliminary is here, of course, a thorough investigation of the structure of the historical books, and of the character of their component parts—a subject which in ordinary commentaries is singularly ignored; nor should any who are able to do so omit to study the acute and masterly essay on "the Composition of the Hexateuch," by the same author,* which establishes the critical premises upon which many of the arguments in the present volume depend. The problems which are suggested by an exact and conscientious study of the records of the Old Testament are intricate and difficult, and in all probability some, from the imperfection of the data, must remain permanently unsolved; of others it would be ungenerous to deny that Prof. Wellhausen has contributed something towards the solution.

The translation, it should be added, is well executed, the lucid and incisive style of the original being successfully preserved.

S. R. DRIVER.

France and Tongking: a Narrative of the Campaign of 1884 and the Occupation of Further India. By James George Scott (Shway Yoe). With Map and Two Plans. (Fisher Unwin.)

THIS book is a vivid and graphic account of the latest colonial possession of France, and a record, written in a free and easy style, of military the campaigns of 1883-84 by an eyewitness of good judgment. Not only in this country, but in France also, it will be read with profit by those who want to learn about a conquest which has cost so many men and so much money. The author was already known by a good description of the Burmese, signed with a pseudonym which is repeated over and over again on the title and map of this new work. He has described Tongking with a broadness of view and independence of mind which give his book a high place in the literature of the French expedition and its results.

An exaggerated importance has been attributed in many quarters to the conquest of Tongking; and it is no secret that many private interests concerned in the enterprise had much to do with this exaggeration. The enormous mineral wealth of the country is gradually vanishing, not so much in reality as from the difficulties of working. It may be interesting to mention here that the country could not, for want of metal and other difficulties, coin its own money. The work was done at Macao by six manufactories, according to the official report of the Portuguese Governor, quoted by Mr. Ed. Toda in his article on *Annam and its Minor Currency* (p. 67.) And it is a question whether the native population, which is of a low standard in every respect, will ever be incited to more work than is required for mere subsistence. The climate is injurious to Europeans. Even supposing the possibility of overcoming this difficulty, it could only be done by European emigration, of which France has none. Parts of the soil in her richest provinces are left bare for want of

hands. Previous to 1789, when primogeniture was still in force, younger sons of all classes in society, having to provide for themselves, did not shrink from going far away. Audacious pioneers created for the benefit of their mother country great colonies in India, Canada, &c. But now where can such men be found? There is no incitement to leave home when every child has an equal share in the parent's property.

Mr. Scott shows us in a few telling words the condition of the most flourishing of the French colonies at the present time:

"In 1880, leaving out of account the military and naval forces, there were in Saigon 1,099 Europeans. Of these 1,047 were French, 17 were English, and 12 Germans. The Frenchmen were mostly servants of the Government; the rest were shopkeepers and the like. The Germans and English were the merchants, and could easily have bought up the rest of the population."

Such is the result of twenty years of French colonisation. Mr. Scott gives several reasons which are interesting to quote:

"The colony is too far off, too little known. No one has an idea of what may not happen in a place where the government is so military and so despotic. The state does not yet aid emigration (seriously). Frenchmen who have any money at all prefer to stay at home; those who have none might as well stay where they are. The Chinese alone used to be looked on with favour, and they were masters of the situation. Finally, a singular reason is given, which it is almost impossible for Englishmen to understand. Colonists are not allowed to make money or ruin themselves according to their own good pleasure. The Colonial Government mixes itself up in all their affairs. A governor can turn out anyone, whether Frenchmen or foreigner, whenever he pleases. The consequences of all this is that hardly a solitary Frenchman makes money in Saigon. There is abundance of money to be made, but those who make it are all foreigners, and mostly Chinamen. If it were not that the colony is so near to the Middle Kingdom, it would hardly have attained to the moderate degree of prosperity which it now enjoys."

An avowed purpose of the late war by the French was the opening of China to their industry and products. This is, we are afraid, a great delusion. China is not the market-place for European goods in the future. Its population is not one of consumers which will alleviate the over-crowded European markets. Far from that, it is the reverse that will happen. The Chinese only want to be taught and they will be producers themselves, not for their own wants only, but also for other countries. The future of the Chinese is to be the great traders and producers of the world. The small wants and thrifty habits of John Chinaman make him a formidable competitor for European mechanics.

The future of Tongking, which, in Mr. Scott's own words, "ought to be one of the finest in the East, if only the French will set about the right way to make it so," is open to foreigners, and specially to Chinamen, and not apparently to the French themselves. But will the Chinese trust the French, and easily forget many sad incidents of the last war, such as the destruction of the arsenal at Fuchou by a military action which no subtlety will ever justify? The plunder of the Summer Palace, which has remained a

* In the *Jahrbücher für Deutsche Theologie*, 1876 and 1877.

stain on the Anglo-French armies, cannot be compared with this business, since the allies did not enter the palace under the flag of friendship. The Chinese can choose between Germans, English and Americans, should they object to their late foes. And let us say that Mr. Scott, though well disposed to the French expedition and its commanders, with whom he remained, and in whose dangers he took a share, cannot avoid some severe strictures on regrettable circumstances of wantonless vandalism and cruelty. When advancing on Sontay the French troops took several places on the road:

"Since then the 'Four Column Pagoda' has remained in French hands. When they took it it was one of the most magnificent in the country. Military occupation and the water have, however, converted it into a dismal barrack."

And read what took place at the capture of Sontay:

"That was a terrible night in Sontay. The Turcos had entered, with comparatively little opposition, by the eastern gate, and they admittedly killed men, women, and children—every living thing they came across. The French troops were not so bad, but the butchery of Chinamen and crop-headed Annamese (the Prince's men) was sickening. . . . The sacking of the place was a terrible affliction, which the Tongkinese will not forget readily."

On the other hand, Mr. Scott praises highly the endurance and spirit of the French troops through the hardships and privations of the campaign, their courage and the great bravery and devotion of the officers. But we wonder, should the accounts published be trustworthy, if the author still retained his confidence in the Tirailleurs Annamites, at the end of the campaign, for the present book stops at September 1884. He has very hard things to say against the Turcos:

"The bestiality of the Turcos is not to be laid, perhaps, at the French door, except that if the French introduce such animals into a country they ought to muzzle them."

And from many circumstances it appears clearly that they were not muzzled at all, but ran their free course.

The author does not withhold his opinion on the faults of several French officials in the management of the campaign, particularly speaking of Dr. Harmand. He has enriched his book with many valuable details on secondary events. For instance, a chapter worth reading is that where we are told the hardships and fatigues of a flying column sent (unsuccessfully) to discover gold mines for the benefit of M. Bavier-Chauffour, a cousin of M. Jules Ferry. The successive stages of the campaign give occasion for descriptions of the country and people. Little need be said of trade and industry. Let us point out, however, that the author gives some interesting information about the inlaid ware and silk embroidery work of Hanoi.

The book is divided into several sections: (1) Tongking, (2) Annam, (3) Saigon (4) Cambaja, (5) Hainan (the latter from documents buried in a periodical published in China); and, finally, two chapters on the impossible Kia Canal and on the French scheme of an Indo-Chinese empire, where the author tried to awake from its torpor the late government of this country.

As a war correspondent, Mr. Scott gives us faithful descriptions of what he saw. We do not want to be severe on him about scientific accuracy. However, there are a few mistakes which might be advantageously corrected in a second edition. We will only quote two. P. 48, and also p. 51: Mr. Scott gives wrongly the well-known description of the *Tao* by Lao-tze as the explanation of the *Yu* and *Yang* spiral-arrangement (in a circle ornamented with flames), a late figure of cosmogony he met everywhere in Tongking. P. 59: the figure described is not that of an evil spirit, but simply the well-known figure of the god of literature.

The book is well got-up, the plans are interesting, but the general map at the beginning is very bad. To resume. Any one wishing to know without party spirit something of the new conquest for which France has spent so many men and millions without glory and with so small a prospect in the future, cannot do better than read the faithful account of Mr. Scott, otherwise "Shway Yoe," the author of *The Burman*.

TERRIEN DE LACOUPERIE.

Mary Wollstonecraft Godwin. By Elizabeth Robins Pennell. "Eminent Women Series." (W. H. Allen.)

EMINENCE is a quality which it is exceedingly difficult to predicate with anything like exactitude. We may all agree that A. is an eminent person, and that Z. is not eminent; but concerning the rank of M. or N. there may be differences of opinion which can never be adjusted for want of a universally, or even a generally, accepted standard. Even if we accept such a definition as that of Mr. Galton, our acceptance is only provisional, and the definition is useless outside the sphere of the special study in the interests of which it was formulated. To declare, for example, that Mary Wollstonecraft Godwin was not in the true sense of the epithet an "eminent" woman would be to make a mere sterile affirmation that might be contradicted, but could not be profitably discussed. It may, however, be pointed out that her position is very different from that occupied by the great majority of the women whose biographies have provided the successive volumes of Mr. Ingram's series. Of the fame of such women as George Sand, Elizabeth Fry, and Harriet Martineau it may be said emphatically in homely phrase that it stands upon its own feet—that it has been won by sheer force of intellect or character. Now can that be said of Mary Godwin? I should at once answer with an emphatic negative, and I should not expect even from Mrs. Pennell anything more than a very doubtful affirmative. Put the question in another form. Would the author of the *Vindication of the Rights of Women*, the *Historical and Moral View of the Origin and Progress of the French Revolution*, and *Maria* have been remembered at all to-day by the world at large had she not been the wife of William Godwin and the mother of Mary Shelley? Surely there can be but one reply, and it is a reply which practically disqualifies Mary Godwin from taking a place by the side of the really "eminent women" with whom in this series she is associated. Her

life is undoubtedly interesting—much more interesting than her work; but even her life was made for her rather than by her. It would be an exaggeration to say that it owes its interest to circumstance rather than to character; but it is no exaggeration to declare that had it not been for its surroundings the strong individuality of Mary Godwin would probably never have made any impress even upon her own generation. It is certain that her most characteristic literary work was inspired—one might almost say was wrung from her—by the pressure of personal wrong; and though such an origin may, as Shelley implicitly teaches, give force and distinction either to a poem or to a work in prose which has the subjective effusiveness of lyrical poetry, it is of no advantage, but the contrary, to a treatise upon so complicated a subject as that which was discussed in the *Rights of Women*, which was certainly Mary Godwin's most notable work, if not her best.

Still, whether she were or were not an eminent woman her life was rich in strange and pathetic interest, and the story of it would have been well worth telling had it not already been adequately told. It has, however, been so told, first by Godwin himself in a biography which is quite sufficiently copious, and secondly by Mr. C. Kegan Paul in his *Life of Godwin* and in the Memoir prefixed to the *Letters to Imlay*. Mrs. Pennell speaks of these two writers as her "chief authorities," but she might just as well have called them her only authorities; for her little volume contains nothing of the slightest importance which is not to be found in the above books, with the solitary exception of an account of Mrs. Godwin's last illness from an unpublished MS., which, being obviously inaccurate, was hardly worth printing. A new life of Mary Wollstonecraft Godwin could find justification only in striking vividness of portraiture such as we have in Carlyle's *John Sterling*, or, in captivating grace of style like that of Miss Thackeray's *Madame de Sevigné*; and it must be said that neither of these things is to be found in Mrs. Pennell's biography. Her heroine is throughout very like the ghost seen by old Mr. Cave, in which Dr. Johnson believed so implicitly—"something of a shadowy being." Mary Godwin, as painted in these pages, is very shadowy indeed. We do perhaps get some definite impression of her merely intellectual potentialities and limitations; but we should envy the astuteness of the reader who could gather from this volume any consistent notion of her real character. And the writer evidently thinks that the personal appearance of the eminent woman, and the general impression made by her upon those with whom she came into contact, are matters too trivial for the concern of a biographer. We cannot feel that Mrs. Pennell herself has clearly realised the personality of Mary Godwin. We miss the imaginative synthesis which is the primary essential of true biography; and the inevitable result is that we do not feel that we know the subject of this memoir, but only that we know a good deal about her.

Nor is Mrs. Pennell's literary style in any way attractive. It has the merits of lucidity and directness, which are not to be despised, but it is altogether wanting in charm, while here and there we come across some irritating

piece of carelessness or amateurish exaggeration of statement. An example of the former is to be found in one of the earliest pages of the first chapter, where the hardships of the little girl's lot are compared to those of Paul Dombey, whose brief life—as every reader of *Dombey and Son* knows—was surrounded with the luxuries of wealth and the sweet observances of affection. These things, it may be urged, are trifles, but accuracy is not a trifle; and any glaring want of it exposes a book to what may be unjust, but is certainly very natural, suspicion. Mrs. Pennell has an unfortunate fondness for these literary allusions, which do much more to spoil than to adorn her narrative. She cannot, for example, speak of the affection of Mary Wollstonecraft for her early friend, Fanny Blood, without declaring that “it was strong as that of a Sappho for an Erinna,” a reference which, quite apart from any question of taste, is a gratuitous incumbrance because utterly wanting in definiteness of characterisation.

But I have said enough of the faults of the biographer, which are no doubt due, for the most part, to literary inexperience; and the remainder of my space must be devoted to Mary Godwin herself. It will be at once admitted by any candid person that the subject of this volume has suffered much undeserved calumny, and that she was in many respects an even exceptionally admirable character. A woman who is at once admirable and unfortunate can hardly fail to excite sympathy; indeed, the combination appeals so strongly to our sensibilities that sympathy is apt to err by excess rather than by defect, to lose discrimination and to lack balance. The most unhappy portion of Mary Godwin's life was, of course, that immediately subsequent to Imlay's desertion, when she was driven by misery to attempted suicide; and in contemplating her misery, we are apt to forget, as Mrs. Pennell undoubtedly forgets, that she deliberately exposed herself to the risk of the very misfortune which befel her. I am not thinking of the moral issue suggested by the story. The marriage question is not one that needs to be raised in connexion with this matter. The one essential point which is missed both by Mrs. Pennell and her predecessors is this—that the theory of marriage held by Mary Wollstonecraft, and put into practice by her when she consummated her unlegalised union with Godwin, was that the true and only basis of such a union between a man and a woman is mutual love, and that when love has died the union should cease to exist. It was, of course, unfortunate for her that Imlay grew cold while she still retained her old ardour; but then the very theory had been formulated with special reference to the probability, or at least the possibility, of such a misfortune, and with a view to making the best of it. Mary Wollstonecraft went to live with Imlay without going through any preliminary ceremony of marriage, because she believed that the enforced permanence of wedlock was inexpedient or immoral; and yet, curiously enough, those who are most eager to justify her in acting out one half of the theory are most severe upon Imlay for acting out the other half. The deserted woman, naturally enough, set the example of injustice, and it has been followed by all her admirers. Mrs.

Pennell quotes Southey's saying that “Mary Wollstonecraft was but beginning to reason when she died.” She had certainly not begun to reason when she blamed Imlay, and considered herself a wronged woman because he had acted as her disciple, and owned no obligation save to his own emotional instincts. He may have been worthy of blame; and for my part I, with probably the majority of my readers, must regard him as a heartless brute; but I do not think that any one who echoes my verdict with one breath, and justifies Mary Wollstonecraft's theory and practice with another, can be credited with a severely logical mind.

It has been admitted that many of the calumnies which have been again and again repeated were largely undeserved, but it must be said that the victim of them was not irresponsible for their existence. She made no attempt to state her subversive theories in the least offensive or startling form, and it is impossible not to feel that she manifested in an unmistakable manner her lack of healthy delicacy and true refinement of feeling. How can we wonder that many readers of *Maria*; or, the Wrongs of Woman, regarded its author with mingled dread and detestation when even an enthusiastic admirer like Mrs. Pennell compares the book to the work of Zola; declares it to be “an astonishing production even for an age when Fielding and Smollett were not considered coarse;” and thinks it necessary to affirm that its author had no “delight in impurity and uncleanness for their own sakes”—an apology which is surely more damaging than a score of philistine or puritanical indictments?

The intellectual and literary merits and demerits of Mary Godwin's work are so curiously mingled that any brief criticism which is not very vague and general in character will necessarily be inadequate and probably misleading. By cleverly chosen quotations she might be proved to be either a calm philosopher, with a fine feeling for the adaptation of means to ends, or a hot-headed fanatic devoid alike of moral and intellectual sanity. Her style presents similar inconsistencies—at one time strong, lucid, restrained, at another diffuse, involved, extravagant. Her best known books—if, indeed, any of her books can be said to be well known—are not from any point of view the most admirable; and perhaps the only book of hers which can be read to-day with uninterrupted pleasure and interest is the almost forgotten volume of *Letters written during a Short Residence in Sweden, Norway, and Denmark*. For her other works even Godwin cared little: this one he admired, and his admiration testifies to his critical acumen.

JAMES ASHCROFT NOBLE.

Life and Works of Alexander Csoma de Körös.
By Theodore Duka. (Trübner.)

DR. DUKA has succeeded in writing a very readable book on what is, perhaps, a not very promising theme. It is true that the subject of the biography before us, Alexander Csoma de Körös, was by no means an ordinary man, and his experiences were certainly exceptional. On the other hand, his biographer has to complain of his “lamentable reticence” and his “regrettable diffidence,” which have led

people to disparage his unique accomplishments, and have deprived his biography “of much that would have been most attractive.” So much Dr. Duka himself is obliged to allow, but we may add that Csoma was characterised by a certain narrowness of mind and deficiency of imagination. Like the rest of us, he had the defects of his qualities. A man of a more genial and many-sided disposition could never have endured the privations or gone through the drudgery that Csoma did. At the college of Nagy Enyed, in Transylvania, so we are told, “Csoma was not considered in any way a genius, but rather looked upon as an example of industry and perseverance.” His industry and perseverance were, however, truly extraordinary.

A poor Protestant student of Transylvania, Csoma, like so many of his compatriots, was early led to take an interest in Asia by the idea of there finding something that would throw light on the origin and early history of the Hungarians. After studying Oriental languages at Göttingen, he started in November 1819, being then thirty-six years old, on his adventurous journey. He travelled through European Turkey, took ship for Alexandria, from thence through Cyprus, Syria, Bagdad to Teheran, Bokhara, Afghanistan and Cashmere. Of all this long journey through countries at that time so little known, Csoma has left on record nothing more than the dates and notices of the kindness he received from the few Europeans he met on his way. It was his intention to go to Yarkand in order to learn Mongolian, but finding the journey too difficult and expensive he turned back, and on July 16, 1822, near the frontier of Cashmere, he met with Moorcroft. This meeting decided Csoma's fate. During his wanderings he had more than once had his course dictated to him by external circumstances. The plague prevented his visiting Constantinople, and cut short his stay in Egypt. In Bokhara he had intended to pass the winter, but left it after a residence of five days, “affrighted by frequent exaggerated reports of the approach of a numerous Russian army.” In the account he gave of himself in 1825 to the Indian government he wrote vaguely of devoting his whole life “to researches which may be afterwards useful to the learned world of Europe in general, and, in particular, may illustrate some obscure facts in our own history.” But it seems that it was the society, and doubtless the suggestions of Moorcroft that gave a definite direction to these “researches,” and led Csoma to devote himself to the study of Tibetan. In that study he spent four fearful winters among the Himalayas in Buddhist monasteries, wrapped in sheepskins, without fire or candles, suffering “privations such as have been seldom endured.” His expenditure was little more than twenty rupees a month for food, travelling, clothes and wages of servants and pundits. At last in 1831, nearly nine years after his first meeting with Moorcroft, Csoma arrived in Calcutta to superintend the publication of his Tibetan Dictionary and Grammar—a task finally accomplished in January 1834. On these works Csoma's fame rests as that of an “original investigator,” a pioneer who first made the Tibetan accessible to European students. With the exception of two years passed among the natives of Eastern Bengal,

the rest of Csoma's life was spent at Calcutta, arranging the Tibetan MSS. of the Asiatic Society as its librarian, writing articles on Tibetan subjects, and making translations into that language for the missionaries. In 1842, when fifty-eight years old, he was seized with a desire to visit Tibet proper. He had an idea that in the libraries at Lassa he should find the real history of the Huns, whom he of course identified with the Hungarians. He, however, died on the way, at Darjiling, of fever caught by sleeping in the deadly Terai. The Asiatic Society erected a monument over his grave, which is now placed on the list of the public monuments in India under the immediate care of the Public Works Department.

His fellow-countryman, Dr. Duka, has done well, in writing his biography, to bring before us the exact work which Csoma accomplished. As is the case with so many of us, it was not exactly that which he had marked out for himself in the dreams of youthful ambition.

ARTHUR J. PATTERSON.

NEW NOVELS.

The Autobiography of Christopher Kirkland.

By Mrs. Lynn Linton. In 3 vols. (Bentley.)

Snow in Harvest. By Miss Ida A. Taylor. In 3 vols. (Hurst & Blackett.)

On Golden Hinges. By Miss Dora Russell. In 3 vols. (White.)

Esther. By Frances S. Compton. (Bentley.)

Madame Naudet. By Paul Lerrac. (Elliot Stock.)

Mrs. LYNN LINTON's new book purports to be an autobiographical novel; but under this pretext she has brought together a mass of personal reminiscences, varied with disquisitions on a number of topics. It may be doubted whether the plan is a good one. At any rate, it is absolutely destructive of artistic unity. The first volume opens like the beginning of a regular novel; but, after a short time, the element of fiction is practically buried under reminiscences and discussions. In more than two-thirds of the book, in fact, Christopher Kirkland is only here and there obtruded on our notice by way of supplying some connexion to the different chapters. He forms the link between an excursus on the character and position of the Jews, which is not unlike a magazine article, and a caustic examination of what its advocates delight to call the Woman question. It is not, therefore, difficult to surmise that the earlier portions of the *Autobiography* are the most attractive. Mrs. Lynn Linton's picture of a savage northern parish in the days when Chartism was first beginning to make itself heard in the land is vivid and interesting. Her account of the large family in which Christopher was brought up, of the incidental conflicts of characters, and of the rough tyranny of the elder children, is also full of lifelike touches. Christopher himself starts as a boy of ungovernable aspirations, devoted to indiscriminate and ill-regulated reading. As he grows up, he passes through the familiar declension from an epic poet to a miscellaneous journalist (through the intermediate stage of a novelist with ethical pur-

pose), with a large experience of premature and somewhat unreal attachments. Finally, after traversing many religious phases, we leave him as a kind of pious Agnostic. Certainly a considerable number of religious and social theories are discussed in these three volumes; but they are rather discussed than worked out to a conclusion. Mrs. Lynn Linton's reminiscences and sketches of literary and miscellaneous society are of the class now so greatly in vogue. They have nothing to distinguish them particularly. Mrs. Lynn Linton, however, writes with the vigour and point to which she has accustomed her readers, if with something more than her usual exaggeration, and with an unusual profusion of metaphorical language. Some of the sketches, which are very thinly veiled for the most part, are in the happiest manner of the author of *The Girl of the Period*, and are made additionally piquant by something not altogether distinguishable from personal animosity. Among the kindly ones that of Walter Savage Landor is, perhaps, the most notable. As an instance of the reverse, we may cite the attack on John Forster.

Miss Taylor's second novel is a distinct improvement upon her first venture of last summer, though it does not rise beyond the class of fiction to which *Venus' Doves* belonged; that is to say, *Snow in Harvest* is a graceful and well-written story, made up out of the complications of a somewhat dilettante society that has very little else to do besides falling in love. But there is more variety of character than before, and Miss Taylor's grasp of it is firmer, while her analysis of moods and motives is closer and better sustained. At the same time, Miss Taylor appears here and there to draw not so much upon experience as upon an unrealised imagination of life and feeling which might not always be borne out by fuller knowledge. The central situation in *Snow in Harvest* is by no means wanting in interest and originality. It is very appropriate that Darell Graham, the gambler's daughter, should allow her life to be governed by what at the outset is a fanciful idea of destiny. Miss Taylor works out the meaning which Darell gives to this and its influence upon her with much skill and sympathy. Darell Graham makes a very successful heroine; with Gerard Laurence Miss Taylor has not been so fortunate. The task was a more difficult one, but Laurence remains a study and not a creation. It is a matter of regret that the minor actors in the story should sometimes unnecessarily crowd out the main interest. Miss Taylor has a dangerous facility in sketching character, though some of the sketches border very closely on the conventional. There are too many of them for the slight framework of *Snow in Harvest* to bear. It is also somewhat curious that Miss Taylor, whose style is unusually correct, should allow herself to write "chaperone." She errs, however, in company with the great majority of people, besides writers of fiction.

Miss Dora Russell's new novel is not uninteresting, although she has drawn largely on the incidents and characters which form the regular stock-in-trade of fiction. Her hero is captivated by the pretty face of a rustic love, who returns his fancy of an idle summer with tenfold the

ardour he intended or expected. Graham North is saved from taking what would have probably been an unfortunate step by an ambitious mother, who drives him into a marriage more likely to result in a permanent attachment. Winny Riddell, in her desperation, flings herself into a wintry stream. Here, however, the *deus ex machina* steps in—a dark, military, and unscrupulous rival, who saves her life for his own ends. Meanwhile Graham, like most other young men, in modern novels, temporarily cast adrift, who have no particular training or aptitude, obtains work on the London Press with little of the difficulty that even George Warrington and Arthur Pendennis experienced. His vocation finally leads him to the Soudan as an "especial" correspondent. There the rival's machinations are cut short by an Arab bullet, the long-lost Winny is recognised in a wounded soldier, and poetic justice is meted out with an unsparing hand. As in an orthodox fairy-tale, everything comes right for hero and heroine in the end; the golden hinges at last revolve, and the story closes upon happiness ever after. Miss Russell's characters are certainly rather conventional, and the descriptions of Korti and Abu Klea necessarily suggest the columns of the daily paper, on which they are apparently founded; but her writing is readable and fairly correct, there is comparatively little padding, and the narrative has a good deal of movement.

There is very little narrative or plot in *Esther*, which is a novel of analysis of character and situation after the American fashion. The opening chapters hang a little; but, when Miss Frances Compton once gets to her subject, her development of the situation is certainly clever, and she has succeeded in imparting singular interest to it. The scene is laid in New York, and the problem to be resolved is tolerably simple. Esther Dudley, an American girl of vigorous and independent character, has been brought up among the unspiritual, but perfectly honest and straightforward, ideas of her father and of a cousin who delights in palaeontology and German science. Into this life enters a totally dissimilar character, Mr. Hazard, a clergyman absorbed in trying to revive an ecclesiastical and mediæval theory of life. He is the first person to touch Esther's heart. Is she to renounce her old independence of judgment, and to break with her old self, in order to enter this exhausted and artificial atmosphere of ecclesiasticism? The conflict is severe; but at the critical moment Mr. Hazard makes an unfortunate appeal (which is very adroitly devised), not to her reason, but to the weakness of her sex. But, if he loses the struggle, he carries away her love. Miss Compton writes well; but there are some curious instances of orthography—e.g., "gayety," "pretense," which may, perhaps, be explained as Americanisms.

Madame Naudet is a slight, but pretty, story of Algerian life. It is apparently written to illustrate the theme propounded in the concluding paragraph, and to exemplify what most people loosely term the irony of human life. Charles Trémond is a pleasant, easy-going egotist, the only excuse for whose egotism and its fatal results is a touch of Oriental fatalism. Contrasted with him is M. Naudet, the unattractive man of genuine

integrity and constancy of sentiment. It is the egotist who wins the love and breaks the heart of the girl for whom the worthy man would have laid down his life. The description of the Fox family is very pleasant, and we have a feeling for Lieut. Jules Michaud.

C. E. DAWKINS.

SCHOOL-BOOKS.

The Evagoras of Isokrates. With an Introduction and Notes by Henry Clarke. (Sonnenstein.) The purity of language and the other excellences which, as Mr. Sandys has said, make Isokrates a favourite subject in German schools to-day and made him a favourite in the English schools of the sixteenth and seventeenth centuries, induce us to wish Mr. Clarke every success in his endeavour to restore the study in England of this author. Nor would it be easy to find among his twenty-one speeches one more interesting than the *Evagoras*, or, as we should prefer to write it, the *Euagoras*. Not too long, possessing the attraction of a story and the compactness of a biography, it excites, too, the peculiar interest attaching to the spread of Hellenism, and to the spread of Hellenism among a reluctant people. For Euagoras not only hellenised his own degenerate folk in Cyprus, but also extended a similar influence to τὸν τόπον διὰ τὴν ἐπὶ τὸν ἄνθρωπον. That we have not more information as to the exact means by which this was effected, how the change showed itself first, and what peculiarities Hellenism put on among Phoenicians and natives of South and South-East Asia Minor, is a thing which students of antiquity must always regret. The other Cyprian orations of Isokrates by no means satisfy our curiosity. This field of enquiry is one in which archaeologists must work with scholars, and a trustworthy book on the characteristics (rather than the history) of Hellenism in Cyprus and elsewhere is greatly wanted. Mr. Clarke's notes seem to us judicious and generally accurate, though we doubt whether in § 55 δ τι χρῆσθαι τοῖς πράγμασι means "how to derive advantage from the situation of affairs." The generals of the Great King were too hard pressed by the Spartans to think of anything but avoiding defeat: the existing situation of affairs could only bring them loss. The book is very carelessly printed, especially in the notes; ζ commonly becomes ξ; letters are turned upside down and accents omitted; and such mistakes as παιδείας δυναμῆς for παιδευόμενος δυναμῆς (p. 40) have escaped detection.

The Jugurtha of Sallust. Edited by W. P. Brooke. (Rivingtons.) This is an edition "for the middle forms of public schools." Mr. Brooke has sensibly adopted Dietsch's text (wrongly described as of 1880). It is not stated, however, that Dietsch's spelling is not adopted, nor is the list of variations complete. (On p. 68 Tanam is read for Tanaim, though Mr. Brooke does not appear to be aware of the reasons for that reading.) It would have been better if the editor had made yet more free with the text, and had adopted such conjectures as make things easier for boys. Mr. Brooke even departs from Dietsch at times to adopt a harder reading. Still less satisfactory is it to introduce the middle forms of schools to questions of textual criticism, as is not unfrequently done in the notes. The notes, however, are otherwise decidedly good and suitable for their purpose. Some schoolmasters may complain of the plentiful supply of translation; but the fault, if it is such, is aptly atoned for by references to Bradley's (so-called) edition of Arnold's Latin Prose, Roby's grammar, and Appendices. We have noticed an occasional omission in the notes, and some few errors. An

original explanation of "in utroque magis studia partium quam bona aut mala sua moderata," "in the two men (were seen) the fancies of partisans rather than the limited amount of good or bad qualities which they actually possessed" (p. 163), is hardly a success. On the whole, however, Mr. Brooke's little edition makes an agreeable impression.

Easy Selections from Thucydides. By E. H. Moore. (Rivingtons.) Mr. Moore has followed the example of Mr. Philpott's well-known selections from Xenophon, and produced a small collection of connected passages from Thucydides, which are very suitable in themselves for the lower forms of schools. The speeches are altogether omitted, and no very difficult passage seems to be inserted. But we have read enough of the Greek along with Mr. Moore's notes to discover that, though the book will, as it stands, be useful to schoolboys, it might have been made more useful by a little further care. The usual Nemesis (or at least a usual Nemesis) of people who make selections has found Mr. Moore out at p. 127, where ("1. 32") he has a note on a passage not included in his text, and (what is odder still) not occurring thereabout in the full text. The notes are too short and too few for young boys. The awkward expression in Thuc. 2.70, that the people of Potidea ἀλλήλων ἐτέρευοντο (not ἐτέρευοντο ἀλλήλων) is not sufficiently pointed out, let alone explained, by saying that they "had devoured one another," i.e., the dead bodies of their comrades. It was the archons, or an archon (not "the Athenian soldiers") who were involved in the Kylonian ἔργον. Nor does "Pallas Chalcioecus" seem a correct conjunction of titles. Pausanias knows only of Athena Chalcioecus. But it is by attention to these little accuracies that boys are turned into scholars.

Tales for Latin Prose Composition. Arranged with Notes and Vocabulary by G. H. Wells. (Bell.) This volume is a collection of pieces, without any attempt to teach principles of writing Latin. The stories—150 in number—are graduated in difficulty, and rather bright and interesting in themselves: short notes are appended to each. For the first hundred there is a vocabulary; for the remainder, the translator is left to his memory and energy. The compiler is content to give negatives, e.g., "not infinitive," on p. 12, n. 3, p. 25, n. 4; or to ask questions, as on pp. 25, 28, 94, 121, to be answered by pupil or teacher. Therefore, in combination with systematic teaching which could avail itself of this book to exemplify the points already insisted on, these tales would be very useful. In the vocabulary, p. 112, consocio seems to us a bad equivalent of "associate"—the latter is both transitive and intransitive. On p. 113, "ferri" is wrongly given for "ferre," and "caerulus" for "caeruleus," the prose form. On p. 126, is not "piget" an error for "poenitet," and "resistiti" for "restiti"?

Summary of English Grammar. Compiled for the Use of the Notting Hill High School. (Rivingtons.) This little volume deserves more than common praise as a concise, but lucid, account of what may be called the received views on English grammar. There is, however, some deviation from the beaten track in the treatment of the moods and tenses; but the system adopted shares with that of other school-books the fault of being based on what is called "universal grammar," and not on the structure of the English language. English grammar will never be properly taught till this is reformed. For instance, our school grammars ought to recognise the fact that English has no future tense, i.e., that it has no inflexional form and no auxiliary verb which expresses futurity and nothing besides. When

we wish to express simple futurity, we are obliged to use phrases which say something more than what we mean; and of the alternative phrases which may be used for this purpose, we have to choose that one in the sense of which the superfluous element is least inappropriate in the particular case. In this grammar we find not only a "future tense," but a "conditional mood," the example of which is "I should love." Now even if we grant the principle of this nomenclature, its application is only partially correct. The compound verb "should love" has more than one meaning, according as "should" is indicative or subjunctive. In the sentence "I should love him if he deserved it," the verb may fairly enough be said to be in the conditional mood; but in the sentence "I told him I should always love him," the mood is indicative, and the tense is one for which this grammar provides no name. On the analogy of the other tense-names employed in the book it might be called "past prospective." Moreover, in the sentence "We shall get wet through if it should rain," the verb "should rain" is neither indicative nor conditional, in the sense in which the latter term is defined in the book. The rules for choosing between "will" and "shall" are fairly correct, though no notice is taken of the important distinction between the usage of archaizing English (based on the Bible) and that of ordinary modern idiom; but the pupil receives no guidance in the use of "would" and "should," to which the rules for "will" and "shall" do not in all cases apply. Here and there the author has introduced remarks belonging to historical grammar or to comparative philology, but these observations are often erroneous. The statement that the name of Q means "the tailed letter" (from the French *queue*) is decidedly funny. In the chapter on versification the word *sextant* (which means sixth part) is used by mistake for *sestett*. The chapter on figures of speech is rather superfluously full: we do not quite see why boys and girls should be made to learn the meaning of antonomasia, synecdoche, and metalepsis. Dr. Orichton Browne would probably have a strong opinion on the matter.

The Wanderings of Ulysses. By Prof. C. Witt. Translated from the German by Frances Younghusband. (Longmans.) This volume—similar in style and plan to Prof. Witt's earlier books, *The Myths of Hellas* and *The Trojan War*, which have already been rendered into English by the same translator—is a prose retelling of the story of the "Odyssey," intended principally for children. The translation reads quite like an original work, and the style is simple and attractive. We should be able to praise the book almost unreservedly if it were not for the outrageously inaccurate way in which the quantity of the proper names is marked in the index; for instance we have Dölus, Eöhetus, Mëdon, Ogygia, and Pylös. It is explained that the intention is to give "the ordinary English pronunciation." This piece of unconscious sarcasm is no doubt deserved; but even Englishmen do not say "Aeölus," nor, we hope, do they pronounce the diphthong *au* like *or*, as the reader is instructed to do in the Preface.

We have also received:—*The Teacher's Companion to Macmillan's Progressive French Course*, Second Year, by G. Eugène Fasnacht (Macmillan); *The French Handbook*, designed for Competitive Examinations, by Léony Guilgault (Longmans); *Colloquial French*, for School or Private Use, by H. Tarver (Williams & Norgate); *Hans Lange: Schauspiel in vier Akten*, von Paul Heyse, edited, with Introduction and Notes, by A. A. Macdonell (Symons); *First French Course*, by A. Esclançon (Collins); *The Woodford French Book*, by G. F. H. Sykes (Relfe); *Home Educa-*

tion in Relation to the Kindergarten, two Lectures by Miss Shirreff (Chapman & Hall); *Notes on the Early Training of Children*, by Mrs. Frank Malleson (Sonnenschein); *Recitations for Infants' Schools*, arranged by Wilhelmina S. Rooper (Griffith, Farran, & Co.); *The Chief Dates of History*, selected and arranged for Use in Schools, by B. B. Le Tall (Hamilton, Adams, & Co.), &c.

NOTES AND NEWS.

MR. HENRY COTTON, of the Bengal Civil Service, who is now at home on leave, has occupied himself with writing a book entitled *New India; or, India in Transition*. The following are the subjects of some of the chapters: The Political Crisis, the Social and Moral Crisis, Native Opinion and Aspirations, the Increased Bitterness of Race Feeling, Administrative Reform, Political Reconstruction, the Religious Tendencies of India. The Hindu Joint Family System will be discussed in an Appendix.

WE understand that a History of Toryism from the formation of Mr. Pitt's first ministry in 1783 to the death of Lord Beaconsfield in 1881, by Mr. T. E. Kebbel, the editor of Lord Beaconsfield's speeches, will be published in the course of the autumn by Messrs. W. H. Allen & Co.

MR. LUCIEN WOLF is engaged on a work upon old Jewish families in England, which will relate at length the histories and traditions of all the important Jewish families in this country, as well as of many obscure families possessing interesting histories or remarkable genealogies.

WE hear that an edition of Lawrence Minot's poems is being prepared for the Clarendon Press, by Mr. Joseph Hall, of the Manchester Grammar School.

UNDER the title of *The Murder of Amy Robsart: a Brief for the Prosecution*, Mr. Walter Rye will issue immediately a brochure in which fresh light is poured upon the connexion of Queen Elizabeth with this tragedy. The book will be published by Mr. Elliot Stock.

MESSRS. MACMILLAN announce a volume by the Rev. J. Llewelyn Davies, entitled *Social Questions from the Point of View of Christian Theology*.

AT the end of this week Messrs. Vizetelly will publish, in the form of an illustrated book for railway reading, a series of articles contributed by Mr. Charles G. Payne to the *Pall Mall Gazette*, and other journals. They will include "A Spell in a Madhouse," by an amateur maniac; "A Day on a Hansom," by an amateur cabby; as well as a description of the author's adventures in a pretended search for a wife through the agency of the matrimonial papers.

WE learn that Mr. Frederick Locker is printing a descriptive catalogue of the more valuable of the books, autographs, and sketches in his possession. The books are mainly imaginative (English and American), and include many scarce and early editions of the Elizabethan poets and dramatists, Shakspeare, Spenser, Jonson, and Dekker being particularly well represented. The frontispiece is a sketch by Cruikshank specially designed when Mr. Locker first began his collection.

AN English edition of Miss Cleveland's book, entitled *George Eliot's Poetry and other Studies*, will be published in a few days by Messrs. Hodder & Stoughton, in conjunction with Messrs. Funk & Wagnalls, of New York, the American publishers.

MESSRS. J. & R. MAXWELL's forthcoming works include a society novel, in one volume, entitled *Paul Sterne*, by Cicely Powell.

ON August 1 will appear the first number of a new monthly magazine called *Hibernia*, which is intended to be of a non-sectarian character, and to allow fair discussion of all subjects interesting to Irish readers. Among those who have promised to contribute are Mr. Justin McCarthy, Mr. Michael Davitt, the Rev. H. Stuart Fagan, and Miss Charlotte G. O'Brien.

THE *Expositor* for August will contain a full account, from special information, of the fragments of a Gospel discovered in the Fayum MSS. by Prof. G. T. Stokes, of Dublin.

THE forthcoming number of the *English Illustrated Magazine* will contain the first part of a new serial story by Mr. André Hope, entitled "Beneath the Dark Shadows."

THE forthcoming number of *Walford's Antiquarian* will contain a continuation of Mr. W. Rendle's account of the playhouses at Bankside in the time of Shakspeare, treating at some length of the Hope and the Rose theatres, and the conclusion of Mr. J. H. Round's criticism of Prof. Freeman's remarks on the founder of Colchester Castle.

MR. D. NUTT is receiving subscriptions for an exhaustive work in Modern Greek by N. G. Polites entitled *Studies on Modern Greek Life and Language*. It will comprise popular tales, ballad usages, superstitions, specimens of dialect, reprints of chap-books, &c.

MR. CHARLES MARVIN's new pamphlet, *The Railway Race to Herat*, describing the extension of the Russian railway to the Afghan Frontier, and the revolution its completion next year will occasion in Russo-Indian politics, has been translated into German, and is about to appear in a Russian form.

WE hear that a reprint of Miss Fairfax Byrnes's new novel *Entangled* (Hurst & Blackett) will be issued in America by Messrs. Harper Brothers, of New York.

MR. EDWARD ARBER, Professor of English Language and Literature at Sir Josiah Mason's College, Birmingham, has now ready for issue to subscribers a quarto volume of 456 pages, containing a reprint of the three first books in English relating to America. The first of these is entitled "Of the newe landes and of ye people found by the messengers of the kynge of portyngale named Emanuel." It was printed probably in 1511 by Jan Van Doesborch, of Antwerp, a contemporary of Wynkyn de Worde and Richard Pynson. It is also the first English book containing the word, "America," in the form "Armenica." The other two are translations and compilations by Richard Eden, private secretary to Lord Burghley, from the writings of Pietro Martire, Sebastian Münster, and Sebastian Cabot, and were published at London in 1553 and 1555. It was from these that Francis Drake must have learned his knowledge of the Spanish Main, and Shakspeare taken his conception of Caliban. Needless to add, for those who know Mr. Arber's series of reprints, that the volume is a model of typography.

THE *Visitation of Dorsetshire*, and the *Visitation of Gloucestershire* of 1623, have just been issued to the members of the Harleian Society. The two volumes are included in the subscription for 1885, and the second volume of the Registers of St. James's, Clerkenwell, will be ready for the members in August.

THE Grolier Club, a society of book-lovers in New York, has reprinted Mr. Quaritch's edition of the late Edward Fitzgerald's *Omar Khayyám*. It is a remarkable testimony of the influence

which the *Rubaiyât* seem to exercise over the minds of American, as well as of English, readers, that a club of bibliophiles should have thought it appropriate to justify their name by the issue of such a reprint; but we regret to learn from the English publisher that the Transatlantic rivals of our Philobiblon Society have not done him the courtesy of any communication on the subject.

NEXT Monday, July 27, Messrs. Sotheby will begin the sale of the library of the late Rector of Lincoln College, Oxford, which numbers 3,737 lots, and will last for nine days. For early-printed books and volumes from royal libraries this collection cannot compare with some of those which have recently been dispersed; but to many it will possess a unique interest as representing, more faithfully than in his own autobiography, the wide interests of the foremost Oxford scholar of our generation, who knew the real value of books better than, perhaps, any of his contemporaries. Nor are rarities, in the sense of the bibliophile, altogether absent from this large collection. There may be found the first editions of Aristotle and Aristophanes, printed in folio at the Aldine Press; the scarce volume containing the scurrilous attack of the Jesuit Scribanus upon Scaliger and other Protestant scholars, which the Jesuits themselves tried to suppress; the editions of Tennyson's Poems published in 1833 and 1842; and some of the productions of Mr. Daniel's private press at Oxford, which hardly ever come into the market.

IN the note on the Index Society's forthcoming publications in the ACADEMY of last week the index to the plates in the *Gentleman's Magazine* was erroneously attributed to Mr. E. Peacock. To his daughter, Miss Mabel Peacock, is due the credit for that laborious undertaking.

ORIGINAL VERSE.

TO H.R.H. PRINCESS BEATRICE.

Two Suns of Love make day of human life,
Which else with all its pains and griefs and deaths
Were utter darkness—one, the Sun of dawn
That brightens thro' the Mother's tender eyes,
And warms the child's awakening world—one and one
The later-rising Sun of spousal Love
Which from her household orbit draws the child
To move in other spheres. The Mother weeps
At that white funeral of the single life,
Her maiden daughter's marriage; and her tears
Are half of pleasure, half of pain—the child
Is happy—ev'n in leaving her! but Thou,
True daughter, whose all-faithful, filial eyes
Have seen the loneliness of earthly thrones,
Wilt neither quit the widow'd Crown, nor let
This later light of Love have risen in vain,
But moving thro' the Mother's home, between
The two that love thee, lead a summer life,
Sway'd by each Love, and swaying to each Love
Like some conjectured planet in mid heaven
Between two Suns, and drawing down from both
The light and genial warmth of double day.

July, 1885.

TENNYSON.

MAGAZINES AND REVIEWS.

THE June number of *Le Livre* (Fisher Unwin) contained little of interest to English readers except three portraits of Victor Hugo, the literary contents of the "original" portion consisting almost wholly of a very long article by M. Ernest Chesneau on some London publishers—Messrs. Cassell, Chatto & Windus, Sampson Low, &c. Even the July number is partly English and, so far, of little interest to us (we are not speaking paradoxically, and we refer to interest of novelty only), there being an illustrated paper on the localities of Dickens. Here, however, there is ample compensation. "Champfleury" gives another of his

Romantic studies—this time on bindings—with a fine full-page coloured illustration of a mosaic coat, in which Théophile Gautier clothed a presentation copy of his own *Les Jeunes-France*. Another interesting (not the less interesting for being a little desultory) paper is by the Count de Longpérier-Grimoard; it is entitled "Un Présent de Bossuet," but really deals with bindings and book-plates after an agreeable and duly illustrated fashion. M. Bernard's article on the National Library in the Revolution also deserves favourable mention, and with the Dickens paper completes an excellent and cleverly varied number. The "Bibliographie Moderne" in both numbers is, as usual, useful, if unequal in merit. We notice that one reviewer speaks, not with too much rigour, of certain "fautes de français" in E. V. B.'s delightful *Ros Rosarum*. It is almost a pity that in the same number there occurs the eccentric title of "Miss Lirriper Lodgius" (*sic literatim*).

THE July number of the *Theologisch Tijdschrift* contains a study on Prov. i.-ix. by Dr. H. Oort, valuable especially from a text-critical point of view; a favourable review by Dr. Vorstman of Schnapp's recent researches on the Testaments of the Twelve Patriarchs, in which the original work is cleared from Jewish and Christian interpolations; an admiring notice by Dr. Lohr of Dr. A. Pierson's studies on Calvin; and the usual short reviews of books (H. Was's *Plato's Politeia*, Gregory's *Prolegomena to Tischendorf's Greek Testament*, and Weiffenbach's treatise on Phil. ii. 5-11).

THE PROPOSED TEACHING UNIVERSITY FOR LONDON.

AN extraordinary meeting of the Convocation of London University will be held on July 28, when the report of the special committee appointed on February 24 to consider the question of a Teaching University for London will be presented by Lord Justice Fry, who will also move the following resolutions:

1. That the report of the special committee and the scheme therein comprised be received and adopted.

2. That the senate be requested to consider and approve the said scheme, and to take such steps as they may think fit to carry the same into effect.

3. That a committee of this house, consisting of five members, be appointed to confer with the senate in respect of the said scheme in case the senate shall desire such conference.

The following is the scheme for the constitution of the university proposed by the special committee:

"The university to consist of (1) Senate; (2) Convocation; (3) Constituent Colleges; (4) Faculties; (5) Boards of Studies, with the Queen as Visitor.

"I.—SENATE.

"To consist of chancellor and vice-chancellor (to be appointed and retain office as at present); the chairman of Convocation *ex officio*; and not more than thirty ordinary members (including the vice-chancellor), of whom six shall be nominated by the Crown, six shall be elected by Convocation, and three shall be elected by each of the four faculties. And if and when the following bodies respectively shall become constituent colleges, one shall be nominated by the president of University College, London; one shall be nominated by the principal of King's College, London; one shall be nominated by the president of the Royal College of Physicians of London; one shall be nominated by the president of the Royal College of Surgeons of England; one shall be nominated by the chairman of the Council of Legal Education, and one shall be nominated by the president of the Incorporated Law Society.

"The nominating bodies to determine for themselves on what recommendation the nominations shall be made.

"One-third of each of the groups of six and three members of the senate to retire each year; such one-third to be those who have been longest in office, or, when several have been in office for the same period, to be ascertained by ballot.

"The six representatives of colleges to serve for three years.

"Power to fill up occasional vacancies.

"Power to re-nominate and re-elect.

"In the first place, the faculty and college members to be added to the existing senate; but no new members to be appointed by the Crown or Convocation till the number of Crown or Convocation members respectively has fallen below six, and then only so as to bring the number up to six.

"II.—CONVOCACTION.

"To remain unchanged.

"III.—CONSTITUENT COLLEGES.

"The constituent colleges to consist of the following bodies in or near London: such bodies as may be named in a schedule to be settled by a joint committee of the senate and Convocation; such other bodies being colleges or institutions incorporated by Royal Charter, or otherwise established on a permanent and efficient footing, in which the majority of the students are of the age of seventeen years at least, as the senate with the concurrence of the faculty or faculties interested may from time to time admit.

"Admission as a constituent college shall be subject to such terms as may be agreed upon between the body becoming a constituent college and the joint committee or the senate, with the concurrence aforesaid (as the case may be).

"The constituent colleges shall be arranged in three groups—viz., those colleges which are principally intended to occupy the entire time of their students; those colleges in which lectures are given of the most advanced kind, whether professional, literary, or scientific; those colleges which are intended to aid the evening studies of persons engaged in business, or otherwise do not fall under either of the preceding groups.

"By the terms of agreement on the admission of such constituent college the following points shall be determined: The group to which it shall belong; the faculty or faculties to which it shall belong; the number of members of the faculties to represent the college; the class or classes of professors or teachers in the college who are to take part in the election of members to represent the college.

"In a college of the first and second group the number of its representatives on the faculties shall *prima facie* bear a larger portion to the total number of professors and teachers in the college than in the case of a college in the third group.

"A constituent college and the senate with the concurrence of the faculty or faculties interested may revise the terms of the agreement between the university and the constituent college.

"No person shall be eligible as a member of a faculty representing a college unless he be in the class of professors or teachers in that college, and capable of taking part in the election of members to represent that college.

"Power to be given to the senate with the concurrence of the faculty or faculties interested—to diminish or increase the number of teachers in a college who shall be members of a faculty or faculties; for good cause to remove any college from being a constituent college.

"The affiliation of colleges to the university to cease.

"The institutions from which the university receives certificates for degrees in medicine (hereinafter called the recognised medical institutions) to retain their right of giving such certificates whether they be or be not constituent colleges.

"The list of recognised medical institutions to be subject to the existing power of revision, but so that the senate shall not report thereon without the previous advice of the faculty of medicine.

"IV.—FACULTIES.

"There shall be four faculties—viz., arts, laws, science, medicine.

"All departments of knowledge in which examinations may be held by the university, and not included in any of the other faculties, shall be included in the faculty of arts.

"Each faculty shall consist of—the representatives of the constituent colleges; the examiners in the faculty during their periods of office and three years afterwards; such persons eminent in the studies with which the faculty is concerned not exceeding six in number as the faculty may elect and for such periods as they may determine.

"Each faculty shall elect—a chairman for three years; three members of the Senate; members of a board of studies.

"The persons to be elected under the last clause must be members of the faculty not being examiners in office, and on ceasing to be members of the faculty or accepting the office of examiner such persons will vacate their seats as chairman or member of the senate or board.

"On any matter connected with its subjects a faculty may—make recommendations to its board of studies in all matters within the competence of the board; and represent its views to the senate.

"V.—BOARDS OF STUDIES.

"There shall be a board of studies in each faculty.

"Each board shall consist of such a number of members, being a multiple of three and not less than six nor more than twenty-one, as the faculty shall from time to time determine, together with one member of Convocation to be elected by Convocation.

"One-third of the faculty members shall retire each year.

"The member elected by Convocation shall sit for three years.

"Power to fill up occasional vacancies.

"Power to re-elect.

"Each board shall elect a chairman every year.

"Each board of studies shall have the following powers and duties:—To consider the recommendations of its faculty; to consult together on all matters connected with the subjects of its faculty and the examinations therein and the teaching thereof; to advise the senate from time to time as to the institution of new degrees or any change in the degrees, or as to the regulations in force with regard to the degrees and examinations in its faculty (without which advice the senate shall not act in the said several matters); to consult with and advise the examiners in the faculty; to represent its views on any matter connected with the subjects of its faculty to the senate; to make by way of report to its faculty such recommendations as it may think fit, with the object of insuring suitable and efficient teaching in the subjects of its faculty, and generally to report to its faculty on all matters connected with its subjects as the board may think desirable; to summon a meeting of its faculty for the discussion of any matter relating to its subjects.

"Boards of studies may, if they or any of them shall from time to time think it desirable, meet and act concurrently on particular subjects.

"VI.—EXAMINERS.

"The examiners in each faculty may from time to time make such reports and recommendations to the faculty or its board of studies as they may think fit.

"VII.—DEGREES.

"Candidates to be admitted to matriculation and all degrees other than degrees in the medical faculty without regard to the place of their education.

"Candidates for degrees in the faculty of medicine to show that they have passed the required course of instruction in a constituent college in the medical faculty or in a recognised medical institution.

"VIII.—GENERAL PROVISION.

"Except so far as altered by the foregoing provisions either directly or indirectly, the existing constitution of the university to be retained."

CORRESPONDENCE.

"DEFNSAET," &C.

Bristol: July 20, 1885.

I believe I have a right to claim the accident of having detected and traced the error of speaking of the "Defnsaetas," as the name of the West-Saxon colonists of Devon, in some remarks which I had the honour to be allowed to make when accidentally present at a meeting of the Dorset Field Club, held at Shaftesbury in July, 1879; which remarks that society printed, with the title "The Welsh in Dorset," in their *Transactions* in 1880.

I there traced the error from Sir Francis Palgrave's *English Commonwealth*. In that very learned and interesting book, the author frequently quotes what he dignifies with the name of "The Devonian Compact"; and it is only late in his work that it turns out that he means a short code or local agreement between some Saxon and Welsh neighbours called "Wentsaete" and "Dunsaete," which is printed in the collec-

which Lambarde printed in 1568, seems to have been lost, but to have had rubrics not found in any others; and in printing one of these rubrics the word appears as "Deunsaete"; but wherever it appears in the text—three times—it is "Dunsaete." This one rubric, only extant in Lambarde's print, was read by Sir Francis Palgrave into "Deunsaetas," and was his sole authority for the name "Defnsaetas," which he constantly uses; and he, upon that sole ground, constantly quotes the little local code, regulating the cattle and property of two national settlements divided by a stream, as "The Devonian Compact."

Sir Francis Palgrave's "Defnsaetas" had been adopted by most historians, including, up to that time, Mr. Freeman, "as the matter of course ancient name of Devonshire men," as I presumed to intimate in my Dorset paper, upon which Mr. Freeman remonstrated against the words "matter of course," which, however, I justified by its use in his map, as, I ventured to think, distinctly a "matter of course" use. I believe, Sir F. Palgrave's form, "Defnsaetas," simply arose from his adopting the modern plural when writing a mere English sentence.

An earlier paper of mine, "The Celt and the Teuton in Exeter" (*Archaeological Journal*, vol. xxx.), which obtained from Mr. Freeman quite as much generous applause as it deserved, presented to him a difficulty—that the Saxons seemed thereby to have penetrated Devon from Somerset at an earlier time than is elsewhere recorded. He suggested that this penetration must have been made by a more southern pass than the recorded one. I have since proposed that no penetration of the kind took place, but that an independent Teutonic settlement from the sea was already established there, with a ruler known in legend as a "king," before the recorded progress of the Gewissae had advanced so far westward. This is how it happens that we have Sumorsaete, Dornsaete, and Wilsaete, but no Defnsaete. The first three were a nearly contemporaneous settlement of the Gewissae, by conquest, among three Celtic peoples whose names, thus qualified, they continued. The business of the Saxon Chronicle is with the aggressive and empire-seeking descendants of Woden; but I believe there are outside evidences that Devon had already an independent Teutonic colony, and the invaders had only to annex it when they reached it. They were not named "saete," along with the others, because they were found already settled.

THOMAS KERSLAKE.

EARLY ENGLISH INVENTIONS.

Patent Office: July 22, 1885.

I am grateful to your reviewer for raising a question in regard to the patent, *temp.* Edward III., for making the philosopher's stone, mentioned in my article on "Early English Inventions" (*Antiquary* for July, p. 2). Your reviewer points out that the patent rolls are all preserved in the Record Office, and suggests that some antiquary should print the document entire. At present the fact rests on the authority of Sir Francis Moore's report of the case of Darcy v. Allen, as quoted by Mr. Hindmarch. With the kind assistance of Mr. Selby at the Record Office, I hope to be able to get a view of the original documents of the judgment in this case, and obtain a copy at first hand of the fact as quoted by Sir Francis Moore. But it is probable we shall here find a reference to the Patent Roll, 3 Edward III., containing the original grant of the patent itself.

In the meantime, to show that there is no inherent improbability in the patent, I may mention the following grants, the first of which may turn out to be the very patent we are in

search of. The descriptive entries may be thus rendered:

1. Patent Roll, 3 Edward III., membr. 21 Touching the bringing to the King John le Rouse and Master William de Dalby, alchemists, with their instruments, to make experiments before the king for the good of the kingdom.

2. Patent Roll, 16 Edward IV., membr. 20. David Beaupée and John Merchaut have grant for four years to occupy the natural science of generating from mercury and making into gold, and in like manner from mercury into silver, &c.

3. Patent Roll, 22 Henry VI., part 2, m. 11 and 9. That John Cobbe, by the art of philosophy, may transform (*transfere*) imperfect (*i.e.* base) metals from their proper kind, and transmute them into gold or silver.

If I am so fortunate as to obtain a transcript of this curious patent for making the philosopher's stone, it will be printed in an early number of the *Antiquary*.

T. FAIRMAN ORDISH.

[In connexion with the same subject, Mr. W. E. A. Axon writes that a royal licence for the transmutation of the baser metals into gold, granted by Henry VII. to Sir Edmund de Trafford and Sir Thomas Ashton, was printed by Baines, and may also be found in his own *Lancashire Gleanings*.]

SCIENCE.

Knowledge and Reality: a Criticism of Mr. T. H. Bradley's "Principles of Logic." By Bernard Bosanquet. (Kegan Paul, Trench & Co.)

It is not often that a book succeeds soon after its appearance in calling into existence a second book specially devoted to expounding and criticising its ideas. Mr. Bradley's *Principles of Logic* has won this honour. From the point of view of the public the desirability of such a book about a book turns on one or two circumstances like these: the importance of the original; the difficulties of its argument or manner of expression; the number of distinct issues raised in it. Judged by a reference to these, Mr. Bradley's work may certainly make out a good claim to this distinction. We may not be ready to go quite so far as Mr. Bosanquet in pronouncing it an epoch-making work; but we certainly esteem it a valuable contribution to English thought. And no one is likely to disagree with Mr. Bosanquet with respect to the numerous difficulties of the work, or to the many queries to which it gives rise.

While Mr. Bosanquet might thus justify the publication of his essay on objective grounds, he is able still further to defend it by the fact of his close sympathy with the aims and spirit of the treatise with which he deals. Nothing is more useless, probably, than the mutual criticism of men who stand in the relation of philosophical antipodes. Mr. Bosanquet is sufficiently near the latitude and longitude of Mr. Bradley to gain a distinct insight into his principles and method. Yet with this general affinity he combines a good deal of independence on matters of detail; and his volume is, in fact, made up largely of a presentment of points and disagreement. This attitude gives the peculiar character to the volume. It reads like the protest of a friend who approves of your principles and is only disappointed that you do not carry them far enough. Mr. Bosan-

quet is the impatient Radical who wants to push on a cautious Liberal minister to a more thoroughgoing measure of reform. As he explains in his preface, his object is to show "how Mr. Bradley's essential and original conceptions might be disengaged from some peculiarities which he apparently shares with reactionary logic"—that is, with the logic which is the outcome of the present philosophical reaction in Germany. Such an attitude, though on the whole favourable to a respectful tone, is compatible with moments of irritation; and Mr. Bosanquet, though he preserves an excellent temper throughout, comes now and again, in his light banter, amusingly near the line which divides friendly from distinctly hostile criticism. Possibly some will think that Mr. Bosanquet shows too much of a pedagogic eagerness to set his predecessor right. Very little space is devoted to setting forth and illustrating Mr. Bradley's positions. In truth, a reader who has not previously assimilated that gentleman's weighty tome will be ill-prepared for digesting Mr. Bosanquet's lighter treatise. The critic sets out with some brief quotation, and then instantly runs off on a side course of independent reflection. With this trait, so suggestive of the corrective habit of the tutor, there goes another which may prove still more distinctly conical to a plain home-bred student. Mr. Bosanquet, though he professes himself in favour of "a philosophy distinct and national," is plainly among those who hold that the natural habitat of philosophic ideas is German soil. Among German logicians Lotze seems to be Mr. Bosanquet's favourite. One almost imagines a tone of peevish disappointment in one place, where he has to admit that "even Lotze" fails to seize the essential point. And on another occasion (p. 263) he appears to go so far as to affirm that Lotze's assent to a view of Mill has once and for all settled the matter in dispute. As Mill's authority does not seem to count as an appreciable quantity with Mr. Bosanquet, one may perhaps safely read the above as meaning that Lotze's dictum by itself settles the point. And if so, one hopes to be forgiven for indulging another profane smile. Lotze is deservedly held one of the teachers of this generation, and the present writer owes too much to him to be in any danger of under-rating his work. Still, when it comes to putting him forward as the supreme arbiter on logical matters, one may perhaps be allowed to question whether logic was Lotze's peculiar forte.

The manner of Mr. Bosanquet's book makes it hard to give a concise account of its drift. It is a series of quite disconnected chapters on special logical points raised by Mr. Bradley. These are no doubt important, and give rise now and then to a discussion of fundamental principles. Still it would, one suspects, be hard to construct even the outlines of a compact system of logical thought from the volume. This is partly due to the huge gaps. Mr. Bradley must have seemed precipitate to the simple-minded student of English logic when, with a fine disdain for traditional rules of procedure, he leapt over the initial abyss of the concept with its dark puzzles of realism and nominalism, and plunged literally *in medias res* by dealing first of all with the nature of the judgment. But Mr. Bosanquet

puts this exploit into the shade by attacking at once a question which one expects to meet with pretty far on in a treatise on formal logic, namely, the distinction between the categorical and the hypothetical judgment. Mr. Bosanquet has, too, a provoking way of refusing to simplify and explain. He seems, like certain mathematical teachers one has known, to count on his reader's mind easily adopting his own direction and velocity of movement, which is a little hard on the average reader, and seems to imply an excess of modesty on the part of the writer. The truth is that Mr. Bosanquet has a particularly acute and subtle mind. He views his subject at every stage in a thoroughly fresh way, and so makes exceptional demands on the reader's attention. Hence the absence of definition, and of a preliminary indication of the direction of inquiry, is a real hardship. Now it is a term one wants defined, as, for example, the "ideal content" of a judgment which is made to play so important a part in the discussion. Now it is some distinctly obscure passage, or disconcerting paradox, which calls for elucidation and justification. Here are one or two of such hard sayings. Measurement is implied in all counting: in perceiving more and less, the less is itself the unit (p. 88 *seq.*). Whenever you specify points of likeness you really come to partial identity (p. 101); which provokes the retort: may I not say that two flowers are alike in colour without implying that the colour is the same? Mr. Bosanquet is given, too, to throwing out pregnant observations carelessly by the way, which, though impressive enough in their novelty, fail to interest by reason of their brevity. Here is one of these parenthetical dicta:—"I incline to think that in the analysis of every judgment, whether affirmative or negative, three elements are traceable—the ground, the content actually employed in judging, and the consequence, *i.e.*, application." This is highly suggestive, but one cannot help feeling that it needs a concrete illustration. A full explanation of "ground of judgment" is one of the great desiderata of the book, it being one of Mr. Bosanquet's leading conceptions that all judgment involves inference, and so some ground or reason.

Still, in spite of features which provoke a smile in the irreverent, and difficulties which may frighten away the timorous, Mr. Bosanquet's volume is an excellent piece of reading. It is full of just and penetrating observation, and is a worthy pendant to Mr. Bradley's praiseworthy effort to connect logic more closely with living concrete thought. Logic is only dry as long as we keep to its grammatical side, the technical distinctions which logicians have drawn from an exclusive consideration of the verbal mechanism of thought. In truth, even a wide and impartial survey of verbal forms themselves would have saved writers from the narrow and arbitrary rules which they have commonly laid down. The whole doctrine of the judgment as unfolded in current treatises on formal logic is vitiated by this fault. Mr. Bradley has endeavoured to pare away the verbal sheath and exhibit the structure of the contained germ of thought. In doing this he had of course to approach the subject from some point of view, and has adopted that of the Constructive Idealism which flourishes at Oxford, and

which we are forbidden to call Hegelianism. Mr. Bosanquet seems to be more of a Constructive Idealist than his predecessor, yet he manages, on the whole, to keep his metaphysical prepossessions well in the background. And so those who might find themselves in direct antagonism to him on purely metaphysical issues will be able to accept much of his teaching in this volume.

The first chapter is an excellent example of Mr. Bosanquet's style of thought. He argues ably against a sharp division of categorical judgments into those which involve a supposal and those which do not, and points out, in an interesting way, how the hypothetical or abstractive element enters into all judgments alike in varying degrees. The chapter on "The Judgment and the Sentence" is another admirable specimen of the author's finely discriminative insight into his subject. Here, by-the-by, he is less of a reformer than Mr. Bradley, and shows a quite conservative attachment to the poor little copula which that writer would rudely expel from the judgment. Like Mr. Bradley, our author does good service in making plainer the boundaries between the psychological and the logical treatment of thought, boundaries which, it must be confessed, English writers have done much to efface. Perhaps one of the most ingenious passages of a highly ingenious work is the chapter headed "Alleged Subjectivity of Negation." The writer makes out a good case for placing negation on a line with, and not behind, affirmation. The subject is a knotty one, and Mr. Bosanquet is perhaps open here to a charge of using his ingenuity in the way of logical sleight of hand in order rather to give an appearance of untying knots which all the time remain tied; but he has certainly succeeded in throwing out a number of striking suggestions on the matter.

If space allowed I should be inclined to question more than one of Mr. Bosanquet's contentions. Indeed, a philosophical writer in need of a subject might do worse than make this book about a book the theme of a third volume. The point where the author seems to me to be weakest is the account of common modes of thought, and current sayings. He does not seem to have kept touch with popular common-sense notions. I seem to find examples of this misapprehension of that worthy person, the plain unphilosophic man, on page 97, where it is said that "no one but an American humourist thinks of a man as diminished in quantity by the loss of a leg or an arm;" on page 130, where we find "even the judgment that 'I am in pain' carries with it some notion of cause or of permanence;" on page 147, where the author remarks, "It would strike us as nonsense to ask 'Did Clive marry Ethel' (in *The New-comer*) rather than 'Does Clive' &c.;" and on page 193, where it is affirmed that the proposition "the Scotch crofters are always distressed in a bad season," tends to mean what it ought to mean, *viz.*, that none but these are so distressed. In giving a logical account of scientific assertions Mr. Bosanquet seems to be far less open to criticism; and, indeed, the illustrations drawn from science, in which the author's mind appears to have been trained to exceptional exactness of thought, are one of the most attractive features of the work.

JAMES SULLY.

CORRESPONDENCE.

ANCIENT UNITS OF LINEAR MEASURE.

II.

Coles, Buntingford, Herts: July 20, 1885.

Buddhist and Indian.—There would appear to be considerable uncertainty, as well as variety, in connexion with units of measure in Persia and India, more especially in comparatively modern times, since the introduction of Mohammedanism and the employment of European architects.

In Petrie's *Inductive Metrology*, p. 129, there are given no less than fifteen varieties of the so-called *gaz*, *guzze*, or cubit, varying in length from 14.9 to 38.3 inches. In more modern times the $\frac{1}{2}$ *gaz* is also common = 6.93 inches. The *hasta* Mr. Petrie considers to be a very ancient Aryan measure, sometimes found in Greece and Asia Minor as = 17.9 inches; but in India it may be reckoned at about 18.4 inches. Another unit is 11.63 inches, which may, perhaps, be referred to the Roman foot in Mohammedan buildings in Turkey and Persia, where the Greek or Roman Empire extended.

Mr. James Fergusson informs me that no ancient buildings of India are set out with sufficient exactness to recover a measure from them, which may even apply to buildings of the time of the Mogul Empire, when Europeans were employed. It is nearly impossible to ascertain the length even of the Illahi *gaz*, and it might almost seem that the Hindoos never employed any other "rule" than the cubit or forearm of the reigning king. Mr. Petrie, however, gives the Illahi *gaz* = 34.1 inches English = 41 digits; and it has probably nothing to do with the digit of the early Hindus, which is connected with the *hasta*, though it would come to about the double of it.

It is difficult to suppose that the old Assyrian cubits of 19.04 and 19.97 inches did not find their way into India by way of Persia, either directly or indirectly, but they may have been modified, or carelessly applied; the sacred or royal cubits of 25.3 too were larger. I have taken from Mr. James Burgess's *Archaeological Survey of Western India* about 250 measurements of from 2 feet to 100 feet; most from early Buddhist shrines, cells, temples, and caves, as those of Elora, Anka, Kaladgi, Badamj, Bhājā, Kuda, Gumli, Sana, Junagarh, Navalakha and Aurungabad; say 200 A.D. to 1200 A.D. On tabulating these measurements, I found a decided tendency to maxima and minima grouping of nearly five English feet; giving say for maxima, the Nos. 60, 66, 51, 47, 42, 37, 32, 27, 22, 19, 16, 12, 7, 4, and 2.7. After trying various cubit lengths, say of 17, 18, 19 and 20 inches, I found that a cubit of almost exactly 19 inches suited best for a series of most likely cubits, giving say 38, 35, 32, 30, 26, 23, 20, 17, 14, 12, 10, 8, 6, 4, 2, and 1.7, apparently pointing to a series showing differences of 3 cubits, which would be best represented by the series of 39, 36, 33, 30, 27, 24, 21, 18, 16, 13, 10, 9, 7, 6, 3, from 40 to 20 cubit lengths, where a half-rod might have been employed, and for the smaller lengths perhaps a quarter rod, or $\frac{1}{2}$ cubit measure. Here $4\frac{1}{2}$ English feet = 3 cubits = $\frac{1}{2}$ rod, and $9\frac{1}{2}$ = 6 cubits = 1 rod. From 45 special measures of dagobas, shrines and chakras I obtained about the same 19-inch cubit.

It is, however, hardly to be expected that the same exact cubit or measure should have been constantly employed over a period of 700 or 800 years, even in the same part of India. In further corroboration of a probable earlier Buddhist unit of about a cubit of 19 inches, I may mention that Williams gives the Japanese *thuo*, *chi* or cubit = 17.12 inches English, specially used by architects. This may have not improbably been introduced by the Buddhists more than

1,000 years ago. Again, in Java, I have got from Raffles descriptions of old Buddhist or Hindu temples, probably free from European or Mohammedan influences, some 90 measurements, showing apparent favourite maxima numbers of about $5\frac{1}{2}$, $5\frac{3}{4}$, $6\frac{1}{2}$, $7\frac{1}{2}$, 10, $11\frac{1}{2}$, 12, 16, 20, 21, and 30 English feet, which would again seem to suit best a cubit of 19.20 inches, giving roughly say 2, $3\frac{1}{2}$, $4\frac{1}{2}$, 6, 7, 8, 10, 13, and 20 cubits. Here the smaller measures given by Raffles, e.g., below 2 feet, of 12, 12, 14, 14, 16, 18, 20, 24, 26, 26 inches indicate a very regular gradation of 2 English inches, probably = $2\frac{1}{2}$ digits. At the same time the old Indian *hasta* might also yield for $6\frac{1}{2}$, $7\frac{1}{2}$, 10, $11\frac{1}{2}$, 12 and 20 English feet, very nearly the numbers 5, $6\frac{1}{2}$, $7\frac{1}{2}$, 8, 9, and 15.

From some measurements connected with the Amravati tope, Madras Presidency, I get a small *hasta* of 16.25 inches, for large measures, and of $\frac{1}{2}$ = 16.0, from a number of smaller measurements of plinths, tablets, &c., in the British Museum. The two large feet of Buddha from the same tope measure 20 inches in length. From some larger cave temple measurements at Adjanta, second to tenth century, mentioned by Fergusson in his *Handbook of Architecture*, I get a unit of 17.8 inches, probably the *hasta* of 17.82 as given by Petrie as a unit of some measurements at the Elora cave temples. One of the oldest Buddhist topes in North India, near Peshawur, is said to be about 20 feet in diameter, which might also indicate a small *hasta* of about 16 inches. From 12 measurements of old buildings in Ceylon given by Fergusson, I deduce a unit of 22.1, which does not fit precisely any known measure, though near the prehistoric one of 22 inches, and an old Assyrian cubit of 21.30 as given by Petrie, but it might possibly fit equally well a *hasta* or *aratni* of 16.5 inches.

Of course a good deal in these matters must depend on the respective dates of the buildings themselves, and in what part of India they are situated. I have been attempting to deal rather with old buildings, prior to the twelfth century; and the general results appear to indicate a cubit of 19.1 inches, and a *hasta* of about $16\frac{1}{2}$ inches, very near Mr. Petrie's *aratni* of about 16.6 to 16.8 inches, and also, I believe, identical with Warren and Conder's latest determination of the old ordinary Hebrew cubit.

Prehistoric Measures of Bronze and Stone Period.—The entire question of prehistoric units, as distinguished from the older and more classical measure units of Egypt, Assyria, Greece, and Rome, requires a more thorough examination than it has yet received. Mr. Petrie, in his *Inductive Petrology*, gives a very common and apparently well-established prehistoric (? Celtic) unit of from 21.30 to 22.50 as obtained from the ruder stone monuments of France and Britain, &c.; and for Irish bronze weapons 22.0 (as from 2.20 inch objects probably). The half of this would show a (? foot) measure of about 11.0, too small to agree with the old Roman foot of 11.60 to 11.70 not unfrequently found in Great Britain in connection with old Druidical remains, as even at Stonehenge. This unit, or half unit of 11.0, is, however, by no means uncommon, and may prove to be of considerable importance. May not this old Aryan foot of about 11.0 inches, found in North Europe and elsewhere, prove to be the identical unit which in my first letter I called the North American prehistoric one? On scaling $\frac{1}{2}$ = 11 into twelve equal parts the result is a foot, barely the one-eighth of an inch less than my American one, as indicated by the Cincinnati double-scaled measure tablet. I most unexpectedly came upon this conclusion from a quite independent investigation of objects from North Europe of the bronze period, described by Evans, Keller, Madsen, and Montelius, as well as from specimens in my own collection.

It is, therefore, not by any means improbable that there was at a very early period, before the superior civilisation of Egypt and Assyria had begun to extend itself to other parts of the globe, one, if not two, rather widely extended primitive units of linear measure in existence, which spread over the New World as well as the Old, but which also probably, as time advanced got modified or mixed up with other units.

I have likewise found rather strong traces of the North American mound foot of .254 metres, as well as the Mexican or old Roman foot of .268, occurring in North Europe in the bronze age. That the Roman foot is frequently met with in Europe, and occasionally even in the East, is a well-known fact, and easily to be accounted for.

The following is the analysis of some 360 measurements of bronze objects I have collected from various sources, and is, at least, curious; probably three-fourths of the objects measured or figures examined to scale gave good results to one scale or the other, say, to very nearly round inches and half inches.

	English Inches.	Mexican or Roman.	Mound Inches of N. America.	Prehistoric Inches, N.A.
Scandinavian objects	6	5	16	22
Swiss Lakes... ..	13	9	9	17
Evans's Bronze Age, British ...	14	16	25	29
R. P. Greg's Collection, Miscellaneous	33	30	50	68
Totals	66	60	100	136

Mr. Petrie gives 2.20 as an average of Irish bronze objects, which would be almost exactly 2.5 of the prehistoric scale.

The large proportion agreeing with old American measures is very remarkable, making considerable allowance for accidental coincidences, and looks as though two, if not three, prehistoric standards of linear measure were once more or less prevalent over a very large area. The Mexican or Solon's Roman foot may have been derived from the old world, very possibly from an Egyptian cubit, some thousands of years ago. I have largely tried decimal scaling, but do not find that the larger inches agree nearly so well as those taken by duodecimal division; also for bronze objects, a scaling from an Etruscan unit of .230 mentioned by Petrie, but with very few accordances.

The few measurements I have been able to collect with reference to the stone and bronze age in India do not lead to great results, but may be worth giving. The remarkable and almost unique series of bronze celts found at Gungeria in Central India, and now in the British Museum, give lengths for the larger ones 17-27 inches; average about 21, which comes very near Petrie's 22.0 prehistoric unit before referred to. The smaller ones ranging from $4\frac{1}{2}$ -8 inches; best average about $5\frac{1}{2}$ inches, $\times 4 = 22$; which again is in accordance. They have possibly been hammered out, or subsequently cut, according to Mr. Franks.

In Bree's account of the Primitive tribes (Toda, &c.) of the Nilgiris in South India are figured several cromlechs, on some of the upright stones of which are sculptured rows or series of figures in relief. The average width of these rows and divisions gives about 1.15 metre = 45 inches, which divided by 2 would give 22, again an excellent accordance with Petrie's 22.0 unit, and four times my prehistoric foot. I have also got 33 inches for a number of objects from modern Polynesia, which is, of course, a multiple of 11.0. The diameter of a hole at Kakusi, in India,

in a kistvaen, is also about 44 inches. It is doubtful if this apparently old Aryan and wide world prehistoric unit of 11·0 inches has any connection with the *hasta* of $16\frac{1}{2}$ — $18\frac{1}{2}$ inches.

Whether there is anything in common in the dimensions of Indian cromlechs, dolmens, and stone circles with those of Europe, I cannot at present say. The proportion for prehistoric as compared with English measurements should be as 12 to 11. Waring gives 19, 27, 45 and 66 English feet for some small stone circles in India, which would give in prehistoric feet a close approximation to the very likely round numbers of 20, 30, 50 and 70; Mr. Fergusson also, in his *Rude Stone Monuments*, p. 474, gives two common dimensions of a class of small stone circles as 24 and 32 feet diameter, which would give $26\frac{1}{2}$ and 35 prehistoric feet. The age, however, of this class of stone monuments is uncertain, and varies greatly, and may even not be pre-Buddhist; but it is very probable there may have been some pretty accurate standard or standards of linear measurement going back to at least the commencement of the bronze period, which are well represented by some of the measures I have been considering.

Oceania.—From about 20 measures of old stone ruins in Microlesia and Easter Island, as given by Wallace and Palmer, I have obtained an apparent unit of either 8 inches, a probable span; or else one of about 12 English inches, or very near the Mexican foot, neither of which however would agree with my prehistoric foot of 11 inches. But from a few measures of somewhat similar ruins in the Sandwich Islands given by Ellis, Mr. Petrie obtained a unit of $44\cdot65$, which would be a good multiple of that foot. R. P. GREG.

P.S.—With reference to the Cincinnati tablet referred to in my first letter in the ACADEMY of July 4, I should have mentioned that there is a very slight difference in the length of the two supposed standard inches, amounting for 3 inches to $\frac{1}{4}$ of an inch. I fancy this must have arisen accidentally, and was hardly intentional, since for a half-foot or foot, it is not nearly sufficient to give even the prehistoric foot, much less the Mexican, nor any of Mr. Petrie's. I therefore averaged the length of the two, which gives excellent results, so far as the tablet itself is concerned, and for various mound objects, such as tubes; and I may add that the 7th larger division of the right hand scale might have been added to fill up the smaller space, as compared with the 6 rather smaller divisions on the opposite end, meaning merely a seventh prehistoric inch, or $\frac{1}{7}$ of it. A foot of $7 \times 2 = 14$ mound inches would hardly be a likely one, though it would come within $\frac{1}{4}$ of an inch of Mr. Petrie's mound builder's foot unit of 12·60, and would fairly measure a very long stone tube of $12\frac{1}{2}$ inches in the Salisbury Museum, but no other object that I have come across.

With respect to Mr. Petrie's unit of 12·60 for the larger mound measures, I am now investigating it more particularly. It measures no small objects, however, and so far, I think, with a few exceptions, does not give such good results as my own unit of 10·0 English inches. Mr. Brinton of Philadelphia states that in 1881 Prof. McGee applied Mr. Petrie's arithmetical system of inductive metrology to a large number of mound measures of Iowa, with the result of a common standard of $25\cdot716$ English inches; that is $= 32$ of my mound inches, or very nearly $10 \times 3 = 30$; agreeing pretty well with Col. Whittesley's conclusion that for the Ohio mound works, 30 inches was about the length, or was one of the multiples of the metrical standard employed. For various reasons it may even be doubted whether any small unit, or too strictly scientific method, will be found to give uniformly satisfactory results for these

mound measures of North America. The mere circumference or diameter must necessarily have varied with the height, as far as mere mounds were concerned, which ranged from 10 to 100 feet; it is not unlikely, too, that in constructing their enclosed "sacred" areas, they may not have sometimes intended to construct a circle, say, to measure to a certain square area, or the reverse, in which case too much importance should not be attached to the circumstance that a circle diameter of exactly 1,050 feet should $= 1,000$ of Mr. Petrie's unit, on which he lays much stress, and which, according to my scale of 12 to 10, would show 1,300 feet—a less likely round number perhaps. There are, however, no fewer than eight cases, where no equal squares are in question, given by Squier and Davis as having the diameter of 250 feet, which would give exactly 300 of my mound feet, and a much more likely number than Mr. Petrie's unit would give, viz. 240. Quite probably, too, all North American mound measures cannot be dealt with by one unit of measure only. Those in the lower Mississippi Valley may be found, perhaps, to give more purely Mexican measures. The pyramid of Teotihuacan has a gallery of 157 feet long $= 160$ feet, springing from a height from base of 69 feet $= 70\cdot71$ feet. That of Cholula, of 1,450 feet square, would give 1,500, and that of Sonora of 4,350 feet exactly $= 4,500$, according to Solon's foot unit.

I purpose to examine more thoroughly Mr. Petrie's units of $6\cdot76$ and $10\cdot65$, as applied to Mexican and Central American measures. Of those from Peru, Copan and Palenque, I think that there Mr. Petrie's units may be the best. For Aztec Mexico itself, I do not find that they suit so well as Solon's foot of 11·70. The body of the great temple at Tiahuanaco, in Peru, is given by Squier as 388×445 , which, with 2 or 3 per cent. added, would give 400×450 . A circular stone building near Cuzco, in Peru, of 24 feet internal diameter, and one in Central America of 48 English feet, look very like 25 and 50 feet, by my Mexican measurement.

Dr. Brinton also states that Señor Almaraz, in 1864, specially determined the probable old metrical standard for the ruins of Teotihuacan, and made it about 0·8 metre $= 31\cdot5$ inches, which is not far from Mr. Petrie's for Central America and Copan if $10\cdot65 \times 3 = 31\cdot95$; though it is also very near an even $\frac{1}{3}$ of the *Octacall*, to which I have previously referred.

There is, doubtless, room for further investigation in respect to these old American measures.

R. P. G.

SCIENCE NOTES.

MR. ALEXANDER WATT has been for many months engaged in writing a practical treatise on the electro-deposition of metals, including the electrolytic refining of copper and other metals and treatment of ores. The work, being now complete, will shortly be published by Messrs. Crosby Lockwood & Co.

THE fourteenth meeting of the French Association for the Advancement of Science will take place on August 12, at Grenoble, under the presidency of M. Verneuil, member of the Academy of Medicine. The public lectures will be on "The New Gallery of Palaeontology in the Paris Museum," by M. Cotteau, and on "The Victualing of France," by M. Rochard. Numerous excursions will take place in the Alps as far as Chambéry.

MR. JUKES-BROWNE, who is engaged in the preparation of a manual of Historical Geology, has contributed to the current number of the *Geological Magazine* a scheme of classification of the stratified rocks. Its chief novelty consists in the arrangement of the Tertiary strata in two groups: a lower, including the Eocene and Oligocene beds, for which he proposes the name

of the *Hantonian System*, since it is well developed in the Hampshire basin; and an upper group, comprising the Pliocene and Pleistocene, which he unites under the name of the *Icenian system*, in allusion to their development in East Anglia, the country of the Icenii. For the Lower Greensand he suggests the name *Vectian*, in reference to Forbes's work in the Isle of Wight.

PHILOLOGY NOTES.

PROF. TERBIEN DE LA COUPERIE has contributed an important paper to the forthcoming part of the *Journal of the Royal Asiatic Society* on "The Beginnings of Writing in and around Tibet." It is divided in four parts: (1) Embryo Writings; (2) Writings impeded and decayed; (3) Mo-so Hieroglyphic Writing of Tibeto-China, with three plates; (4) Alphabet in Tibet.

OTTO SCHULZE, the Oriental publisher of Leipzig, announces for issue by subscription an edition of the *Buch Al-Chazari* of Abu-l-Hasan Jehuda Hallewi, by Dr. Hartwig Hirschfeld. It will contain the original Arabic text, in square Hebrew characters, from the unique MS. in the Bodleian Library; and also the Hebrew translation of Jehuda ibn Tibbon, which is preserved in five MSS. which have all been collated for the purpose, together with critical notes. The publication will be in two parts, at the price of 5 marks each.

THE next volume in the "Library of Anglo-Saxon Poetry," published by Messrs. Ginn & Co., of Boston, will be an edition of the *Legend of St. Andrew*, by Prof. W. M. Baskerville, of Vanderbilt University. The text is based upon a collation of the Vercelli MS. expressly made for this edition by Prof. R. P. Wülcker, of Leipzig; and a full glossary will be given.

MR. D. NUTT has received from Athens copies of a new edition, with elaborate commentary extending to upwards of one hundred pages, of the *Antigone* of Sophocles.

THE *Zeitschrift für deutsche Philologie* contains a review by E. Mogk of the first part of the fifth volume (published in 1883) of the late Karl Müllenhoff's *Deutsche Altertumskunde*. This instalment of Müllenhoff's great work deals principally with questions of Scandinavian literature and mythology, and was published out of its proper course (the first volume being the only other portion of the book which has appeared) by way of a counterblast to the theories of Bang and Bugge on Norse mythology. Herr Mogk expounds in some detail, and in general with warm approval, Müllenhoff's analysis of the text of the *Hávamál* and the *Völuspá*, contrasting it with that given by Vigfusson, which he stigmatises as arbitrary and subjective. Among many other interesting points in the article is the suggestion (borrowed from Gislason) that the word *Edda* means *ars poetica*, being derived from *ēðr*, poetry, to which it is related as *stedda* to *stēð*, and *ledda* to *lēð*.

MEETINGS OF SOCIETIES.

EDUCATION SOCIETY.—(Monday, July 13.)

MRS. BRYANT, D.Sc., in the Chair.—Mr. Fleay read a paper on "Musical Harmonies." The purpose was chiefly to call attention to the important modifications of Mr. A. J. Ellis's duodene theory as contained in the forthcoming new edition of his translation of Helmholtz' great work: to advocate the use of D as a central starting-point instead of C in book theoretic investigation; and especially to point out the need of a more perfect instrument than the twelve-note piano as an accompaniment for singers. Mr. Fleay advocated the introduction of a nineteen-note piano. He concluded with an estimate of the mental value of musical theoretic teaching as involving approximation, symmetry, and the connexion of art with science.

FINE ART.

GREAT SALE of PICTURES, at reduced prices (Engravings, Chromos, and Olographs), handsomely framed. Everyone about to purchase pictures should pay a visit. Very suitable for wedding and Christmas presents.—Geo. Haas, 115, Strand, near Waterloo-bridge.

Life and Reminiscences of Gustave Doré. By Blanche Roosevelt. (Sampson Low.)

It would be in vain to deny that Miss Roosevelt has written an amusing book, but it is impossible not to wish that it were less amusing, and therefore less likely to find readers. Better still, indeed, had it never been written; for, whether consciously or unconsciously, the biographer has done her "level best" to belittle the hero of her choice. Every foible of dear Doré's generous and impulsive character is paraded and emphasised in her pages; every chagrin that he would have locked up most jealously in his own breast is exposed to public view. Not even his tears are sacred. We know well enough that he was a disappointed man. We know that he was more than indifferent to his successes as a designer, and that it was his dearest ambition to be accepted at his own valuation as an historical painter. We know that he believed implicitly in his right to such recognition, and that—unable to see his pictures as others saw them—he to the last deemed himself unjustly neglected by the press and the public of Paris. But is it necessary, or kind, or delicate, to insist on these points through the best part of 500 pages of letterpress? Is it well to recur again and again to the fact that he "brooded and fretted," that he felt himself to be "misunderstood and unappreciated," that he was "sore to his heart's core," and that he conceived "every unfavourable criticism to have been inspired by personal enmity"? Miss Roosevelt is never weary of this theme, nor of dilating upon the causes which led up to what she calls the "pitiful delusion" of his life. Those causes are not far to seek. Doré's genius was too precocious, and his first successes were too easily achieved. He was earning money and winning popularity when he ought to have been studying the rudiments of his art. He consequently never mastered, or sought to master, that elementary knowledge, the possession of which was essential to the fulfilment of his hopes. He had in him the making of a very great painter—of, perhaps, one of the very greatest painters that the world ever beheld. He had imagination, unbounded audacity; a wonderful sense of space, of motion, of multitudinousness; and an unlimited capacity for drawing anything and everything that came in his way. Men and animals, buildings and boats, sea and shore, forest and mountain and cloud, were alike familiar to his pencil. All he needed was training. With perspective and anatomy at his fingers' ends, with a sound knowledge of colour and a juster perception of form, he might have scaled the highest heaven of invention. Wanting these, he was fore-doomed to failure. His "Christ leaving the Praetorium" is, take it for all in all, the nearest approach to a really great picture that Doré ever painted. Its faults of colour are comparatively few, and as a composition it has very great merit. But the cross is out of perspective, and one or two of the Roman soldiers in the foreground are glaringly out of drawing. He was himself

probably quite unconscious of these errors, and not one of his friends, however intimate, would have ventured to point them out to him; yet they are errors which could not by any possibility have occurred in the work of a man who had devoted even so little as two years to the life-school at the Ecole des Beaux Arts or two weeks to the study of perspective. As with "Christ leaving the Praetorium" so it is with the rest of his historical paintings. There is always something which betrays the unlearned hand, and that something is fatal. So much it will be necessary for every biographer of Doré to admit, and for every reader to know. To suppress this plain and simple truth would be to withhold the key to the enigma of Doré's life. But let it be said once, and no more.

Again, it is true enough that Doré was worshipped by his mother, and that he lived surrounded by a circle of devoted friends. The man was so affectionate, so gifted, so generous, that he naturally and inevitably became the centre of a little social system of his own. His hospitality was unbounded, and his fortune was as large as his heart. It is also true that he was an admirable gymnast, and that he was wont, in his merriest moods, to perform all sorts of unexpected feats of strength and skill; but we do not need to be told upon every other page that he walked on his hands and stood upon his head, that he was "spoiled at home and petted in society," that he was "volatile and fantastic," a creature all "waywardness, boyishness, flightiness," and the like. Still less tolerable is it to find him constantly labelled as "this spoiled child," "this schoolboy artist," his mother's "enfant terrible," &c., &c.—phrases which recur at short intervals with "most damnable iteration," and which, apart from their bad taste, convey an entirely false impression.

It is only just, however, to note that Miss Roosevelt, when she most offends, but reflects the tone of her authorities, and that many of the long-forgotten anecdotes which she has been at so much pains to collect are not a little apocryphal. Some of these are quite incompatible with my own knowledge of Doré's opinions, and some I can correct out of letters addressed to myself. Doré, having declined an imperial invitation to accompany the Emperor and Empress to Egypt on the occasion of the opening of the Suez Canal, is made to say that he dreads new impressions, that he is "too old to attempt new departures in art," and that, "in the interest of his fortune," he is resolved not to indulge himself "in the luxury of visiting strange and fascinating countries" (pp. 358-9). But I have in my possession a letter in which, *à propos* of some journey of my own, he says how he ever looks forward to a life of greater freedom and leisure, when he too shall see not only the places which I had recently visited, but others yet more distant. And then he sketches the grand tour that he means by-and-by to make—Egypt, India, Persia, China, North and South America, and the islands of the Southern Pacific. I regret that I cannot quote this interesting letter verbatim, but I am writing away from home, and relying upon memory. As for "the interest of his fortune," it is a phrase and a sentiment utterly foreign to his nature. Against another long anecdote—

three pages in length, which recounts how at one time Doré neither ate, drank, nor slept, but was utterly broken down, "like a wretch on the very verge of distraction and suicide," because he had not yet received the Cross of the Legion of Honour (pp. 224-6)—I must enter an earnest protest. No man was less eager for honours of the kind, or more indifferent to the decorations conferred upon him. His surprise was great when, on his first introduction to a brilliantly lighted London drawing-room, he found himself in the midst of a crowd of ribbons and orders. "Tiens!" he said, naively, "the men wear their decorations! We do not do so in Paris." To this I retorted that he himself had the red rosette in his buttonhole. "True," he replied, "but it is only the rosette, and we all wear it. It is the rule. A man who did not wear it would be supposed not to have it; and not to have it, when one has attained a certain position, would imply some disgrace—some blot upon one's character. But these ribbons and stars . . . bah! I have a whole string of them, but I never put them on. They are too common. *On les donnent aux dentistes.*" I tried in vain to make him understand that our English honours were not so cheaply bestowed, and that the Garter, the Bath, and the Star of India were not precisely the kind of rewards with which royalty in this country recognises the merits of "painless dentistry." I may mention in this connexion that it was not, as Miss Roosevelt states, "at a dinner-party given in his honour" that Doré made his *début* in London society, but at this very evening party; and that it was I who had the pleasure of taking him there, and of presenting him to his hostess. The dinner-party took place later. Again, it is incorrect to say of Doré's violin-playing that it "lacked that technical perfection which practice and experience alone can give" (p. 140). His playing was that of a master—fiery, impassioned, and remarkable for *verve* and brilliancy rather than for "beautiful smoothness of execution." Were I to be asked who, among all the violinists I have heard, came nearest to Joachim in fulness and richness of tone, I should reply, "Gustave Doré." As to his alleged jealousy of Meissonnier and Gérôme, I take leave to doubt it *in toto*. His admiration of good work from whatsoever hand was always frank and generous. I remember showing him one day a pile of Japanese picture-books which I had just bought and brought home. He looked through them silently, intently; then turned back and looked through them again. One picture of a zebra on a hill-top, with an elaborate study of weeds in the foreground and a lake and mountains in the distance, especially fascinated him. "Grand Dieu!" he said at last. "Ces Japonais—ils sont plus forts que nous!"

Miss Roosevelt's book is chiefly valuable for the many reproductions of Doré's early sketches which it contains. Most of these are from copy-books and drawing-books, and some date from the fifth year of the artist's life. The "Calypso" series is wonderfully comic; and three or four studies of Strasbourg peasants, done at about ten years of age, are as characteristic and forcible as any of his maturer sketches. By far the best thing here, however, is an excellent wood-engraving

from Doré's portrait of his old nurse Françoise, done in 1880. It is one of his happiest efforts, and one which, as the author truly says, "earned him many compliments from the most famous masters and critics in Paris."

The frontispiece, which represents Doré in the act of illustrating some work, his pencil momentarily stayed and his eyes intent upon the text of his author, is evidently from a photograph. But the likeness is bad, and, like Miss Roosevelt's biography, it dwarfs and vulgarises the original.

AMELIA B. EDWARDS.

CORRESPONDENCE.

A CENTURIAL STONE AT CHESTER.

Parkgate Road, Chester: July 16, 1885.

The Roman tablet of which I now submit a new reading is the first inscription of a centurial nature recorded as having been found here. According to Hemingway (i. 396), it came to light "on the 25th of May, 1748, in a garden belonging to Mr. Kenrick, on the banks of the Dee; it was subsequently in possession of the late Mr. Ogden, and fixed at the end of his garden-wall in John street." Afterwards it became the property of the Dean and Chapter, and has for some time been preserved in the chapter house of the cathedral. Last year it was exhibited at a meeting of the Chester Archaeological Society by the dean, Dr. J. S. Howson, who has since generously presented it to the society's Museum, where it rests in company with some other stones relating to various *Centuriæ* of the Twentieth Legion. Having of late made a few memoranda of our Roman inscriptions, with the object of forming a small Catalogue for the use of the Chester Society, this stone, among the rest, came under my notice, and I have thus been enabled to examine it carefully. The tablet is, as nearly as possible, in a perfect state. The inscription, which consists of two lines, is fairly well executed, and is enclosed within a classic label or ansated border. Though it has been repeatedly noticed by antiquarian writers, yet, strange to say, not a single reliable interpretation has been arrived at. This is partly due to a misconception of the lettering, and of the purposes for which the stone was designed. But the greatest mistake of all has been occasioned by the presence of a supposed "omega" that occurs after the word *MAXIMI*, near the end of the second line. Now this is, I feel convinced, nothing more than an ordinary leaf-shaped point or stop, such as may be seen on many Roman inscriptions. The stalk of the leaf happens to be rather worn and obscure; this, and an injury (probably caused by the pick or spade at the time of discovery), which forms an additional stroke in an opposite direction to its curved apex, have made it assume somewhat the appearance of one form of this Greek letter placed in a slanting direction, thus—*Ω*. To make this still more apparent I have made a reduced

Ocrati Maximi. Limes millium pedum: "The Century of Ocratus Maximus of the First Cohort. The limit of one thousand feet." The final letter has, in some instances, been expanded to *passuum*, apparently from the erroneous idea that the tablet was set up to record the formation of this length of a road. Indeed, such an explanation will not accord with the known use of these stones, as a thousand paces (or Roman mile) would indicate the restoration of the entire city walls, in which they were undoubtedly inserted, for this would rest on the assumption that the early walls were capable of such extensive reparations, which from the comparatively small size of Deva is clearly a mistake. These legionary inscriptions no doubt often came together in pairs, each stone having reference to the masonry of which it formed a part. Those on which the name of the officer (centurion) alone appears, may be regarded as tablets set up at the commencement of the work; while others, like the above, bearing in addition the number of feet executed, would be the terminal ones, which thus marked the extent and direction of the *limes*. This is brought forward merely as a suggestion, to be applied to the more important lengths of walling, for it has not yet been confirmed by the finding of duplicate tablets. Perhaps in minor repairs, one stone roughly carved with the name of the century would suffice. It is interesting to compare our local tablets with some from the Great Northern Wall of Hadrian, which are larger, and in many cases very elaborately ornamented. Reference is here made to those erected by the *Vexillarii* of the Devan Legion, which have been frequently met with bearing its well-known emblem of the Boar. This device does not occur on any of the Chester inscriptions yet discovered, though it is stamped upon one variety of the roof-decoration known as the *Antefix*. These, which are formed of terracotta, bear in relief the figure of this animal transfixing by the pole of a *labarum* or standard, between the letters *LEG XX VV. (Legio Vicesima. Valeria, Vidrix.)* A carving in stone, life-size, of the head and shoulders of a boar, was, however, found in this city some years ago.

FRANK H. WILLIAMS.

NOTES ON ART AND ARCHAEOLOGY.

MR. F. WEDMORE purposes to pay a visit to America, sailing from Liverpool for New York in the *Celtic* on September 3. His visit is not for the purpose of lecturing, though it is probable that he may lecture in one or two of the principal cities of the United States before he returns.

ON Friday the annual exhibition of the works submitted for competition by the Schools of Art were opened to the public in the central block of the buildings on the south of the Royal Horticultural Gardens. The exhibition this year consists of upwards of 451 works, selected from 285,277 works sent up from 217 schools of art and branch classes throughout the kingdom. The subjects of the competition are figure drawing and modelling, painting in oil and water-colours, and design, especially as applied to manufactures. The prizes awarded are 12 gold medals, 68 silver medals, 109 bronze medals, and 181 Queen's prizes of books. Those works only are exhibited for which medals or Queen's prizes have been awarded by the examiners. The Princess of Wales's scholarships, of £25 and £11 respectively, are awarded to the two female students who take the highest prizes of the year in the national competition. Besides the medals and prizes given by the Science and Art Department, prizes are given by the Plasterers' Company, for designs for plasterers' work done in monochrome or modelled in plaster; and the Owen

Jones memorial prizes by the Society of Arts for designs.

WE have received from the office of *L'Art* proof impressions of two etchings by M. Léon Gauchere, who is, we believe, himself the art editor of that periodical. The one is after the portrait of a lady, Mrs. Winchester Clewes, painted by Mr. Orchardson; the other is after a chalk drawing of Galileo by M. Maréchal, of Metz, an artist best known for his pastels. While both are fine examples of technical skill, the latter has the advantage not only in the interest of its subject, but also in its greater adaptation to the special capabilities of the art. As usual with Mr. Orchardson's pictures, effective as they are in other respects, his monotonous scheme of colour fails to bring out the contrast of the flesh and the drapery. The "Galileo," on the other hand, is as admirably designed as it is nobly executed. It represents the astronomer in old age, propped upon a couch, but still turning his telescope towards the starry sky. It may be as well to mention that he did not become blind until he had reached his seventy-second year. The prints are published in this country by Messrs. Vokins, of Great Portland Street.

M. F. GAILLARD's portrait of the Jesuit, Père Hubin, which appears in the last number of the *Gazette des Beaux Arts*, is scarcely more remarkable as a portrait than as a specimen of line engraving. The face, keen and hard in form, but burning with inward spirit, is realised with intense vividness; and the execution of the flesh is so minute and broken in line that it is difficult even with the aid of a magnifying glass to trace the course of the artist's burin. The general effect is rather that of heliogravure. The style is scarcely one to be recommended for imitation, if any were so hardy as to attempt it, but there is no doubt of its wonderful effectiveness and skill.

A REPORT is going the round of the Swiss papers that a hitherto unknown Raphael has been discovered in Lausanne. The experts who have seen it express a doubt whether the picture is by Raphael himself or one of his pupils. It is to be removed to Bern at the approaching Schützenfest, and exhibited in a room at the Kunst Museum.

A MONUMENT to Hans Makart is to be erected in Salzburg, his birthplace. It will consist of a bust in bronze, twice life-size, upon a marble pillar, resting upon a huge block of granite. The sketch of the work by Tilgner, is now being exhibited in Pressburg.

THE STAGE.

MR. AND MRS. BANCROFT's farewell at the Haymarket is the important event of the week. It is true that the valedictory spectacle of Monday night was but a farewell to management, and not a final adieu to the stage. Still, that fact hardly robs the event of its importance, for, in the first place, the appearances of Mr. and Mrs. Bancroft on the boards will now presumably be quite infrequent; and, in the second, the celebrity of these artists has been gained even more as managers than as actors. There was, therefore, justification for the stir which the circumstance of Monday occasioned in the theatrical world. What passed has, perhaps, already been sufficiently recorded, but a word must be said. A selection from "London Assurance" and "Masks and Faces" was performed; and, when this portion of the evening's business was over, Mr. Toole made a funny speech, narrating how great had been his difficulties in persuading the stage door-keeper to let him come behind the scenes; and Mr. Irving delivered with grace and tact the cordial lines which Mr. Clement Scott had written for the occasion, and Mr. Bancroft

inspection, have accepted the readings of others, and by suggesting interpretations for a character which never existed, have consequently given rise to false data. The lettering is as follows:—

COH·I·>OCRATI
MAXIMI·L·M·P

And may be read:—*Cohortis Primæ. Centuria*

bade adieu to his friends and the great public in a speech that was very manly. Then, of course, came wreaths, flowers, cheers, for Mrs. Bancroft and her husband; and that was the end of a successful, nay even a triumphant, evening. It is more than twenty years since the actors who said goodbye on Monday to theatrical management entered upon that portion of the task of their career, or, rather, it was then that the "Miss Marie Wilton" of old days began her managerial work at the little theatre at Tottenham Street, an elegant bandbox now destroyed. Shortly afterwards she encountered the author who was to be associated with her for several years as literary purveyor to her theatre; and she has, we believe, always recognised that she owed much to the assistance of Mr. T. W. Robertson, who, in his turn, surely owed much to the management that gave him his opportunity, and which brought so much intelligence to the interpretation of his work. So far as their association with original stage literature is concerned, the Bancrofts were more fortunate in the earlier than in the later years of their career; but it was assuredly not their fault if no second T. W. Robertson presented himself, and if their tenancy of the Haymarket was, in respect of original dramatic work, less brilliant than their tenancy of the Prince of Wales's. Doubly unfortunate were they in the discovery that the Robertsonian pieces lost half their effect on the great Haymarket stage, and in what they deemed the necessity for substituting repulsive and highly spiced dramas like "Fédora" for healthier English work. "Fédora" was without a moment of repose, without a moment of charm. Since then, however, we have enjoyed a revival of "Diplomacy" and a revival of the admirable "Masks and Faces." We do not hold our speech fettered by the fact that Mr. and Mrs. Bancroft have taken their farewell. There is no obligation laid upon us to deliver ourselves of a purely conventional eulogium, and we shall take leave to say, in the midst of our cordial acknowledgment, that we cannot think that Mr. and Mrs. Bancroft's suppression of the Haymarket pit tended at all to increase the attendance of intelligent and studious playgoers at their theatre; and we shall repeat to-day, what we have said often before, that though, in their stage arrangements, the Bancrofts did excellently to abolish shabbiness, they did ill to introduce a wholly superfluous luxury. It is not given to the very best and wisest folk to steer clear of every possible mistake during twenty years; and—looking at the matter honestly—the Bancrofts have not altogether avoided mistakes. They are quite strong enough to recognise the fact—they can afford to be spoken of with veracity and without undue compliment. As they are not finally retiring from the stage this is not the moment to attempt any elaborate analysis of their acting, which, whatever it lacked, possessed at all times the charm of intelligence and originality. But this is undoubtedly the moment in which to commend them for the thoroughness with which all the work upon their stage has been accomplished, and the moment in which to speak of the liberality and the clear-sightedness through which they have never failed to surround themselves with the most rising or the most illustrious actors of their day. It has been their distinction to have introduced to the public in prominent parts so many excellent artists now cordially recognised—from Mr. Hare to Mr. Brookfield, say, or Mr. Barrymore, and from Miss Ellen Terry, the most illustrious of their "leading ladies" at the Prince of Wales's, to Miss Calhoun, by far the most notable of the actresses who have come to the front at the Haymarket. In this way, as in several others, their influence on the contemporary stage has been both peculiar and bene-

ficial. Sometimes "stars" like to be surrounded by the incompetent or the dull; but the Bancrofts have almost invariably aimed at being supported by those who deserved to be favourites, and who have become what they deserved to be.

THE flying visit of Mme. Sarah Bernhardt finished last night. "Théodora" is, as we had reported it, a play fashioned to exhibit her in all her most familiar and most recognised attitudes. As for the piece itself, it is scarcely a serious contribution to literature. Very different is the standard by which Sardou must be judged from that which one would apply to Dumas or Emile Augier. The facile and ingenious author of "Théodora" trifles with history, and disregards fact by no means to attain to that which is greater than fact—poetry. As for the character of Théodora herself, as Sardou has been pleased to arrange it for the witch of the modern stage, it is even too self-contradictory to be natural—and we say this knowing full well that what is called "consistency" is generally conventional and often very narrow. Still, there are limits, and Théodora passes beyond them. She pines too much for virtue when she is vicious, and, in intervals of good conduct, suffers too deeply from the *nostalgie de la boue*. But Mme. Bernhardt has her triumph; she sounds every note of the instrument on which she plays, and her discords are as attractive as her harmonies. As for the "setting" of "Théodora," it suffered very much in London. What had been gorgeous at the Porte St. Martin became tawdry at the Gaiety. You can do without scenery, perhaps, when acting is great; but if you do aim at a spectacle, the spectacle nowadays has to be really magnificent.

THE last meeting for this season of the London branch of the Richard Wagner Society was held on July 17, when Miss Alma Murray gave a dramatic reading. This lady fully deserved the applause she received from a discriminating audience, her most successful recitation, perhaps, being Victor Hugo's "Vanished City."

MUSIC.

MUSIC AT THE INVENTIONS EXHIBITION.

THE second and third Dutch concerts were given last week on July 16 and 18. There was a good audience on the Saturday, but the constant in-coming and out-going disturbed those who wished to listen carefully to the music. The concerts ought to have been held in the concert-room of the Exhibition, with closed doors during the performance of each piece. The programmes of the series might have been better planned. There were three concerts, and three centuries to illustrate. From an educational point of view it would no doubt have been best to give to each day its century; but, anyhow, chronological order might have been observed. The programmes of all the concerts commenced with the sixteenth-century music, and afterwards the pieces were now of one, now of another period. It was also somewhat disappointing to find so little prominence given to the chiefs of the respective schools. Dufay was only represented by one movement from his Mass "L'Homme Armé," Josquin des Prés by a hymn and three short secular pieces, and Lassus by one sacred movement and a few secular songs. M. de Lange seems specially partial to Jan Pieter Sweelinck, of whom no less than five psalms were given, and, in addition, two chansons and a fantasia for organ. This composer, who flourished in the sixteenth century, was a prolific writer. In his psalms he astonishes us not only by the cleverness of his contrapuntal devices, but by the

boldness of his style, by striking effects of contrast, and, above all, by the melodious character of the music. He reminds us, too, of his great contemporary Lassus in the marked difference between his sacred and secular compositions; for it must be confessed that in much of the music of that period, the difference is one of name only. As an instrumental writer, Sweelinck occupies a position of great importance. For over forty years he was organist of the old church at Amsterdam. His works were studied by the principal organists of the seventeenth century. The famous Reincke was a pupil of Sweelinck's pupil Scheidemann, and how much Bach was influenced by Reincke is a matter of history. The Sweelinck fantasia, with its rugged and quaint strains, was highly interesting. While speaking of the organ performances by M. de Lange, we must object to his choice at the second concert of Handel's Concerto No. 4 of the second set. Handel wrote it for organ and orchestra, and in an arrangement of the concerto for organ alone one loses all the composer's special effects of combination and contrast. Besides, M. de Lange only played two of the three movements. His other solos were toccata and fugue in D minor, G minor prelude and fugue by Bach, a toccata by Muffat, and a fine old fugue by Frescobaldi. Two movements from Obrecht's mass "Fortuna Desperata" were much admired. Obrecht flourished at the close of the fifteenth century. In early life he lived at Utrecht, but in 1491 was elected chapel-master in Antwerp Cathedral. Of his eight printed masses, the one named above is the most famous. It takes its name from the secular song on which it was founded. We find this song employed in many of the movements of the mass, sometimes in part, sometimes in its entirety; also in augmentation and as a "canon cancriza" or retrograde canon. It thus formed a link connecting the various sections of the work, and gave to it a certain unity. In the time of Palestrina the introduction into sacred compositions of these secular melodies gave strong cause of offence, not on their own account—for in *canto fermo* disguise they were scarcely to be recognised—but because members of the choir often sang the frivolous, if not lewd, words of the chansons instead of the sacred text to which the music was set. Great men live ahead of their age; and although Obrecht lived at a time when music was read horizontally, and not, as now, perpendicularly, there are many striking passages in the "Fortuna" mass which speak to the heart as well as to the intellect. The movements performed were the second Agnus Dei, and the "Christe," both for three voices, or rather, in three parts.

At the first concert some national songs were sung. They were taken from an old collection entitled "Niederländischen Erinnerungsklänge von Adr Valerius" (1625), and belong to the period of the terrible struggle against Spain. They are bold and passionate, and, like the Flemish ballads quoted by Motley, express the hatred which the cruelties of Alva had excited in the hearts of the people. Among the secular pieces performed at the three concerts the light and graceful songs of Clemens non Papa were much appreciated. The great success of Lassus's "Si je suis brun" made us regret to find his name only twice in the secular list. His other piece, "Petite Camusette," was pleasing, but very short. We give in conclusion the names of the singers, who interpreted all the music with great finish, taste, and expression. The ladies were Mmes. W. Gips, Cath. van Remaes, C. Esjer, and C. Veltman; and the gentlemen, Messrs. Rogmans, Jebak, Messehaert, and Sendries. Of the director, M. de Lange, we have already spoken.

J. S. SHEDLOCK.

LITERATURE.

The Patriarchal Theory. Based on the Papers of the late John Ferguson McLennan. Edited and completed by Donald McLennan. (Macmillan.)

IN this controversial volume the series of arguments framed by the late J. F. McLennan against Maine's theory of the "patriarchal system" have been added to, sharpened up, and worked into more or less of a substantive treatise on early society by Mr. Donald McLennan, who from the first took part in his brother's researches, and now keeps up after his death one of his chief controversies. To pass judgment on the whole discussion involved is beyond the legal skill of the present reviewer, who can only offer a few suggestions bearing on the issues raised. Even to do so much has proved a perplexing task, delaying this notice beyond its proper time. McLennan's position in the controversy cannot be understood without looking back to over twenty years ago, when writers on ancient society generally took up as a primeval institution the patriarchal family, framed on male descent, as seen among Romans and Hindus, Jews and Arabs, Tatars and Chinese. Sir Henry Maine's *Ancient Law*, to which is greatly due the modern advance of philosophy of law in England, is almost entirely concerned with that dominant part of social history which is either patriarchal or derived from patriarchalism. How entirely such views of social history then prevailed is well seen in the unreservedly patriarchal picture, drawn by J. F. McLennan himself, in his article on "Law" in the eighth edition of the *Encyclopædia Britannica*:

"Society obviously commences in the Family; the society of parents into which every human being is born, and in which are to be found the germs of that subordination to, and recognition of, authority which are essential to the civil state; the state where the government is patriarchal is, indeed, the direct prolongation of the Family. As the banyan tends to surround itself with a forest of its own offshoots, so the family tends to multiply families around it till it becomes the centre of a Tribe."

It was writing this very article that brought to McLennan's notice the existence of numerous non-patriarchal customs, the study of which carried him further afield, landing him in social inferences which he stated in his celebrated little volume on *Primitive Marriage*, thereby disturbing the settled views of jurists and anthropologists. It is needless to recapitulate how he worked the existing customs of wife-capture, female infanticide, polyandry, the levirate, totemism, exogamy, and maternal kinship into a theory that the original condition of human society, far from being patriarchal, was a condition so rude that marriage and kinship, even on the mother's side,

had hardly yet taken shape; while the tie of paternity, the foundation of agnation and patriarchalism, belonged to a more modern stage of development. McLennan's theoretical starting-point thus corresponded in some measure with that already arrived at independently by Bachofen, especially as to the leading doctrine that female preceded male kinship—a doctrine now characteristic of the matriarchal school, including Morgan, Lubbock, Wilken, Giraud-Teulon, Lippert, &c. When McLennan published *Primitive Marriage*, it seemed to him that Maine on reading it ought to have remodelled *Ancient Law*, removing the patriarchal system from the homes of primeval man, and placing it as a social development late in comparison with the really early stages—female descent and exogamic totemism. Sir H. Maine thought otherwise, and left the patriarchal passages to stand in successive editions of his text-book. The effect which the researches of the matriarchalists had on his mind is to be seen in his lecture on "Theories of Primitive Society," printed in 1883 (after J. F. McLennan's death), in *Early Law and Custom*. While disclaiming that the object of his earlier work had been "to determine the absolute origin of human society," Sir H. Maine takes up that problem with a serious criticism of the matriarchalists. He adduces Darwin's views as to the sexual jealousy of the higher mammals, making it unlikely that primeval man, animated by the same passion, would have tolerated the communistic life postulated by McLennan; and points to physiological experience as proving that a race living under such conditions would tend not to increase but to die out. The analogies of the higher mammalia seem to him to indicate man's primitive condition as rudely patriarchal; and while he admits the fact of mankind having largely lived and still living under matriarchal conditions, he holds the question open whether such forms of society may be not primary types, but secondary variations brought on by disturbing causes such as migration, war, and slavery. Recently, in his preface to the tenth edition of *Ancient Law*, he observes, with reference to this lecture, that since 1861 the observation of savage or extremely barbarous races has brought to light forms of social organisation extremely unlike that to which he has referred the beginnings of law, and possibly, in some cases, of greater antiquity. To McLennan the non-recognition of his new views by Maine seemed the great obstacle to the spread of just ideas; and, accordingly, he set himself, in concert with his brother, to besiege him in his own patriarchal stronghold. Thus the book before us originated.

Its chief line of criticism is directed against the doctrine of the patriarchal family, defined in the Roman legal sense, as subsisting or traceable by indications among Hindus, Kelts, Teutons, Slavs, and Hebrews. The Hindu family system is discussed, and the Code of Manu cited to show that the father's power over his household was limited, that he must not sell his daughter, that he was not absolute owner of the family property, &c. The fact that, as every Indian civilian knows, paternal authority is extremely strong at this day, is not directly taken up; but it is argued at the end of chap. vi. that if there were evidence of *patria potestas* since Manu, this would show it not

to be of earlier, but of later growth. The meagre records of the Slavonic world are searched to show female headship positively, and absence of paternal power negatively; and in examining the modern Slavonic house-community, Bogisich and Wallace are appealed to in order to make the house-father not so much patriarch as manager. The traces of early matriarchalism among the Hebrews adduced by McLennan himself and others have of late become familiar matters of discussion; but there is novelty in the way the case is here put of Jacob's relationship to Laban, and his serving for the daughters after the Singhalese matriarchal manner. There is also an interesting attempt to interpret Gen. ii. 24—"Therefore shall a man leave his father and his mother, and shall cleave unto his wife"—as a relic of matriarchal ideas, by taking it as describing the husband quitting his own people to take up his abode in the house of his wife's family. This, ingenious as it is, seems hardly conclusive, for does it not apply just as well to the case of a young Bechuana, for instance, taking a wife and setting up housekeeping in his new hut on ordinary patriarchal principles? But here the question arises, what are patriarchal principles? Sir H. Maine himself says he means such a life as Homer attributed to the *Kyklôpes*—"Each judges his wives and children, and they regard not one another;" whereas Mr. McLennan, in criticising him, is apt to pin him down to the strictness of the Roman paternal system. While everyone must admit that the brothers McLennan have advanced their subject by discussion and criticism, their arguments are often wire-drawn into a controversial minuteness hardly suited to reasoning on social systems for the most part imperfectly understood. For instance, there are chapters on agnation and its relation to the patriarchal system; but the ordinary anthropologist, who thinks he is merely reading about male kinship, finds with surprise that agnation is to be construed as meaning a custom so peculiar that cases of it are scarcely to be found anywhere but in ancient Rome. Evidently we are dealing here with technical nicety beyond what anthropology can as yet work with. This comes out more plainly still where it is declared that *patria potestas* and agnation have never been shown to occur together except at Rome. Supposing this to be correct if the words be taken in a special technical sense, it is not at all correct if *patria potestas* merely means paternal authority, and if agnation refers to kinship in the male line. To take the first case which occurs to one's mind, the already-mentioned Bechuanas, who reckon kinship through males, are remarked on by travellers for the passive obedience of wives and children to the father. At the British Association at Montreal, the Hon. J. W. Powell mentioned from his own observations of American tribes a visible cause of the change from female to male kinship—the necessity of tribes spreading over the country for hunting. The husband thus removing his wife from the neighbourhood of her uncles and brothers in the matriarchal settlement, naturally gets her and their children into his own power, and a kind of patriarchalism with male kinship sets in. Defined in this rough way, the doctrine of *patria potestas* leading to

agnation has much to be said for it, which is not answered by the too legally refined attack here made against it.

On the whole, it seems to the present reviewer that the fault of method in the present book is that it cuts hay with a penknife, whereas we want a broader machine. To this objection Mr. Donald McLennan may very likely answer that his reviewer does not understand legal argument. It may be so, for several arguments which seem conclusive to the writer have not that effect on the reviewer. For instance, J. F. McLennan's famous thesis that the Jewish and Hindu union with the brother's widow is a custom derived from an earlier polyandry, when she was the wife of both at once, is here given for the very purpose of showing what amount of proof is sufficient in such investigations. The present reviewer, though he has known the argument ever since it came out, and he talked it over with its author, never could see anything approaching proof in it, and still remains incapable. It is, however, desirable that proof in this subject should be such as the lay mind must acknowledge. It will be through many partial hypotheses, some upset by criticism and others standing their ground, that we may hope to have the whole theory of primitive society some day worked out. At present the part of it which converging research seems to establish is the doctrine of an early general prevalence of the system of kinship on the female side, which seems so strange to the modern European, with his long-inherited patriarchal tendencies.

E. B. TYLOR.

The Song Celestial; or, Bhagavad-Gītā. (From the *Mahābhārata*). Translated from the Sanskrit Text by Edwin Arnold. (Trübner.)

It will be the fault of the English reader if his ignorance of the great Sanskrit epic is not considerably lessened by the efforts of translators who from time to time have done into English the principal episodes of the *Mahābhārata*. Mr. Arnold has been particularly assiduous in popularising Sanskrit poetry. His charming volume of *Indian Idylls* included the more poetical narratives of the labyrinthine epic, most of which were already familiar through versions by various hands. *The Song Celestial* may also be said to have been anticipated by the translation of Sir Charles Wilkins. Quite recently, from the Bharata press of Calcutta, was issued the first instalment of a version of the epic in English prose by Pratap Chandra Roy. This gentleman contemplates translating the whole work in monthly numbers—a task of such magnitude that its efficient rendering might well occupy a lifetime.

It is easier to sympathise with Mr. Arnold's diligent efforts than to anticipate any great popularity for his latest attempt. The *Bhagavad-Gītā* possesses none of the attractions of such episodes as the story of Savitri, of Nala and Damayanti, the journey of Arjuna, and the many accounts of tremendous conflicts that diversify much tedious dialogue. It is no more indispensable to the action of the poem than the numerous other moral discourses that have become incorporated in the poem during the flight of centuries. The praise of love, the deeds of heroes, and the

exaltation of war, are the characteristics of the epic in its primitive form. These are fully illustrated by the *Mahābhārata*, it is true; but, combined with much excrescence in the shape of philosophical reflection that could only have proceeded from later scribes. *The Song Celestial* is typical of these. Its form is quite opposed to the genius of the epic; it delays a mighty battle between two great armies, and chills the promise of vigorous animated action by a long abstract dialogue like a discourse of the Schoolmen. That Mr. Arnold should be attracted by this particular discourse is natural enough. It is a most interesting exposition of philosophy, conceived in a strain of transcendental thought, in which the comparative values of the life of action and the life of contemplation are ingeniously set forth with a suggestive delineation of the *via media*. In spite, however, of the sustained dignity of its language, the discourse is too purely didactic, too abstract in its nature, too involved in style, to be susceptible of metrical translation. This conclusion is strengthened by comparing Mr. Arnold's blank verse with the lyrical interludes of the poem. Blank verse is only too liable to become distorted prose when employed as the vehicle of translation from an antagonistic measure. The risk is increased when the subject is not pure poetry, but an ethical treatise. In *The Song Celestial* Mr. Arnold is seldom successful in reproducing the mellifluous verse of a former volume. *The Light of Asia* was easy reading on this ground alone, whereas there are many pages of *The Song Celestial* that accentuate its original sin of prolixity by language that is tame and prosaic and metre that is no alleviation. The lyrical passages of Mr. Arnold's version only increase the regret that he has not, in this particular poem, eschewed verse altogether. Here the sense of restriction, of "the fly in the glue-bottle," as Coleridge said of Schiller's blank verse, is sometimes almost painful. It agitates the reader with the impolite desire of the man who is fain to supply a stammering friend with the needful phrase. It must be hard for the English reader to conceive the Oriental quality of the original from which Mr. Arnold evolves the following lyric (p. 13):

"Nay, but as when one layeth
His worn-out robes away,
And taking new ones, sayeth,
'These will I wear to-day!'
So putteth by the spirit
Lightly its garb of flesh,
And passeth to inherit
A residence afresh."

Again, in the varying accent of the following lines the ungainly jingle quite nullifies the solemn significance of the theme:

"Wonderful, wistful, to contemplate!
Difficult, doubtful, to speak upon!
Strange and great for tongue to relate,
Mystical hearing for everyone!
Nor wotteth man this what a marvel it is
When seeing, and saying, and hearing are done!"

It is impossible to doubt that these lines would not gain by further translation into expressive rhythmical prose, or into what Mr. Arnold diffidently calls "our flexible blank verse."

Another disconcerting feature in Mr. Arnold's version is the large number of technical phrases retained side by side with

their English equivalents. Of this we have (p. 19) a curious instance:

"Make thine acts
Thy piety, casting all self aside,
Contemning gain and merit; equable
In good or evil; equability
Is Yōg, is piety!"

The attributes and titles of Brahma (p. 65) afford another striking instance. The effect of this, when not merely futile or grotesque, is to cumber the text needlessly. In many instances the original defies adequate translation within the metrical limits Mr. Arnold has prescribed. This, however, is only another argument in favour of prose translation. In other cases translation in the fullest sense is impossible, and Mr. Arnold wisely gives the original. When he attempts translation, and at the same time shows his perception of the weakness of his version by giving the original, he is much less discreet. It were far better frankly to translate, or frankly to acknowledge the untranslatable.

Having indicated the more obvious defects of an arduous undertaking, it is but fair to give a favourable sample of Mr. Arnold's work. In the second, fifth and sixth books of *The Song Celestial* are several passages of sustained eloquence and execution that will meet with ready admiration. From the second book the following precepts of Krishna addressed to Arjuna are selected:

"Yet the right act
Is less, far less, than the right-seeking mind.
Seek refuge in thy soul; have there thy heaven!
Scorn them that follow virtue for her gifts!
The mind of pure devotion—even here—
Cast; equally aside good deeds and bad,
Passing above them. Unto pure devotion
Devote thyself; with perfect meditation
Comes perfect act, and the right-hearted rise—
More certainly because they seek no gain—
Forth from the bands of body step by step,
To highest seats of bliss."

In the succeeding book, the passages in which Krishna reconciles the praises of contemplation and action (pp. 26-27) are fairly expressive of Mr. Arnold's harmonious versification. All through the poem the perfect life is indicated by the ideal existence that is intermediate between two active opposing forces. This is the *motif* of the divine song which Krishna recited to Arjuna midway between the forces of the Pāndavas and the Kauravas. There is a third and more excellent way in life even as there is in thought and deed, as is set forth in the triads of thought and action in the last book of *The Song Celestial*. J. ARTHUR BLAIRIE.

The Field of Honor; being [which it is not] a Complete and Comprehensive History of Duelling in all Countries, including the Judicial Duel of Europe, the Private Duel of the Civilised World, and specific Descriptions of all the noted Hostile Meetings in Europe and America. By Major Ben C. Truman, &c. Introduction, pp. 9-17, pp. 560 and Index of Names. (New York: Fords.)

It has become a favourite practice with the so-called Anglo-Saxon, and, *à plus forte raison*, with the Anglo-American—among whom education is more widely spread and in an even shallower stratum—to take up a subject of the highest importance, requiring years of study and extensive collateral knowledge,

and to vulgarise it in a half-a-crown popular volume, with a clap-trap title and a specious binding, which blocks the way to a better book. This is emphatically the case with Major Truman's *Field of Honor* (with the nice difference between Honor and Honour), inscribed to an *amicus humani generis*, when humanity is not the quality especially required.

Books on duelling abound, but one is still wanted as colophon for the following list: *Traité contre les Duels*, par Jean Savarget, 1610; *A Discourse on Duels*, by Thomas Comber, 1687, neglecting others of about the same date; *Essai sur le Duel*, par le Comte Chateaullard, Paris, 1836; *Le Duel, ses Lois, ses Règles, son Histoire*, par Henri Vallée, Paris; *History and Examination of Duels*, by the Rev. John Cockburn, D.D., 1720; *The Romance of Duelling* (a most valuable and enthusiastic work in two volumes), by Andrew Steinmetz, 1868; *Nouveau Code du Duel*, par le Comte du Verger de Saint Thomas; and *History of Duelling in all Countries*, from the French of M. Constance de Massi, of the French king's body-guard, with introduction and concluding chapter by Sir Lucius O'Trigger (London: Newmans). Following these comes a vast mass of learned matter, especially juridical, and still being supplied by Italy; for never has the *duello* been more popular among the neo-Latins than it now is, nor has the use of weapons ever been brought to such perfection. It is of this latest development that a history is required.

The *Field of Honor* opens badly. The first requisite was a sharp line of demarcation drawn between the *duello* and the combat singular, which is of all ages, and common to every race. The latter may be distributed into two kinds: the first is championage, when the warrior, like the Arab "Mubáriz," sallies forth to "renown it," and gains glory by slaying one adversary or more, or haply by gaining the Victoria Cross; the other is the monomachy for especial purpose, either retributive or judicial, to decide an important question without shedding the blood of the general. This, complicated with the Judicium Dei or ordeal-idea, the firm popular belief that in trial by battle the Deity could and would lend special aid to the just cause, was the father of the duel proper, the *Zweifsch* which the Scandianavo-Germanic races (Franks, Lombards, &c.) naturalised among the conquered Latins. The mother was what I have called the Religion of Honour, born of chivalry. It raised still higher the ethical system, borrowed by the noble Pharisees from the Stoic school. Its one commandment was *Fais ce que dois, advienne que pourra*. It taught mankind to do right for right's sake, not to save their souls or take a ticket for paradise; and, furthermore, it inculcated with the highest truth that each man—and he only—is judge, jury and advocate of his own honour, a purely personal and individual consideration, which has nothing to learn from or to teach his fellow-men. This was diametrically opposed to the creeds and catechisms which ordered men to offer the other cheek, or simply to run away, as the good Moslem is told to do (without his so doing) when assailed by a brother Moslem, rather than engage in a *Wáki' al-isnayn* or duomachy. And, as the best, corrupted, becomes

the worst, so arose the prodigious abuses which brought down upon the *duello* ecclesiastical excommunication and laical persecution and punishment, and which utterly failed to abolish what is based upon the noblest feeling of human nature. Again, we nowhere find in Major Truman the law pure and simple that the *duello* is a "satisfaction," fought for the purpose of purging honour; and that going to the ground for the settled purpose of taking the adversary's life is unjustifiable homicidal intention, little better than cold-blooded murder. The seconds who assist in a *rencontre* of this kind should be punished as severely as, if not more so than, the principals.

The book is difficult to review. Major Truman tells us (p. 82) that he has spent much of his leisure time during twenty years in collecting material, and he might have given a few months more of care to the result. Formally considered, the *Field* contains thirty-one chapters, of which nine are devoted to the "noted American" duels; and the author is justly severe upon that scandalous invention, the so-called American duel, a modified "hari-kari," of which Americans know nothing. The subject is badly distributed, the centuries jostle one another, and among "noted duellists" is the grand figure of the hero Cid, Don Rodrigo de Bivar. Here and there we have mere strings of names, "conflicts between kites and crows," for which the Index should have been ample lodging. "The skewer duel in the French Army" shows the true Mark Twain tone, which would consider the Old World and its venerable belongings from the vantage-point of the Western hemisphere. The sword is the weapon for affairs of honour. The pistol is only a *pis aller* when the curriculum has been neglected and gentlemen have not learned to use their weapons; and as for the shot-gun and the cow-boy revolver—faugh! The knife, however fairly used, has assassin-like proclivities (p. 20), although it is the bravest of weapons which most wants a man behind it. But it is a servile instrument which does not become *sangre azul* on state occasions like the *duello*.

Want of ordinance has led Major Truman to perpetual repetition, sometimes extending to the *tertius repetita*. We have the usual flower of prairie speech (p. 100):

"Ben Carter had 'heaps of fun,' as he expresses it, at Rock Creek. . . . Ben is a typical Western cowboy—a whole-souled, dare-devil puncher of steers. . . . Ben has one weak point, however, a fondness for the sulphuric acid annihilator which tyrannising bar-keepers retail as whiskey, and when he is 'full' he is ready for any harmless mischief."

This alternates with the normal rhetoric locally called "tall talk," e.g. (p. 393):

"As we write, a sky of spotless blue overhangs Lone Mountain, and away in the distance we can see the handsome shaft which perpetuates the memory of the chivalric being [Senator David C. Broderick] whose remains repose beneath; while grouped around the sacred inclosure are the annual pilgrims with their floral offerings [i.e., flowers], the perfume of which intermingles with the aroma of wild roses, shrubs, and plants, and an atmosphere seemingly freighted with the incomparable spices of far-off Cathay [here ousting India]."

The mistakes are innumerable, and the reader will learn with surprise and gratitude that

the guillotine was in full play during Richelieu's age (p. 453), that Col. Fawcett was killed by Lieut. Alexander Thompson (p. 198), and that Smythe O'Grady called himself Smith (p. 212). In his notes on the hostile meetings of the gentler sex Major Truman might have given interesting details concerning the serious study of the sword, now become "modish," in Austria, and especially at Vienna. And in the "Pleasantries of the Field" he should not have forgotten the witty consul for Trieste, Charles Lever, who, when asked to name his weapons, solemnly chose "swords at twelve paces."

RICHARD F. BURTON.

The Iliad of Homer. Done into English Verse by Arthur S. Way. (Sampson Low.)

MR. WAY, if he has not solved the standing riddle of translation, may at least be congratulated on one title to fame. His introductory page solves for us the vexed questions

ἀκρατομόρου σκέψας Ὀμηρικῆς

by describing him as "Author of the *Odyssey*, &c." Since the Great Unknown revealed himself as Sir Walter Scott, and took the responsibility of the "Waverley Novels" upon him, no such momentous mystery has been declared. In all seriousness, we trust that this ludicrous addition to the title-page of a meritorious work will be cancelled.

Mr. Way has attempted a less ambitious and more hopeful task than that which Mr. Smith Wright recently undertook. The hexameter, to say the least, has not taken its place among English metres with undisputed success. The metre of "Sigurd the Volsung" has done so. And if we follow a high authority in regarding the Homeric poems as Sagas, there is much to be said for putting them into that form in English which has so successfully presented other Sagas to modern readers. There is a combination of dignity with rapidity in this metre, when properly handled, that makes it, in those qualities at least, a really good representative of the Homeric hexameter.

Mr. Way appears to me to have handled his instrument somewhat roughly—whether from fearing a smooth monotony, or from possessing an imperfect and unwatchful ear for rhythm, I cannot say, but I incline to the former hypothesis—and to have somewhat marred "The rise and roll of that hexameter" by such lines, e.g., as the second of his opening couplet:

"The wrath of Achilles the Peleus-begotten, O Song-Queen, sing,
Fell wrath that dealt the Achæans woes past numbering."

Here it is difficult, either with ear or finger, to count the line into rhythm at all. Less harsh perhaps, but surely not musical, is l. 572, bk. i., p. 24:

"To comfort his dear-loved mother, Hêrê of arms snow-fair,"

and l. 19, bk. ii., p. 27; l. 315, bk. i., p. 13:

"Asleep in his tent, and the balmy slumber around him was poured."

"And unto Apollo a perfect hecatomb they slew."

Another defect of Mr. Way's is a predominant mannerism, peculiarly out of place in translating the lord of the "grand style"—a per-

petual coinage of double substantives. These seem to have a fascination for Mr. Way; and while a few of them are felicitous, the most part are clumsy, and their frequency almost irritating. Within a few pages we find "pestilence-stroke," "augury-skill," "covenant-plight," "prophecy-lore," "ransom-price," "ransom-store," "guerdon-prize," "battle-tide-sweep," "treasure-store," "ruin-spice," "counsel-treasure," "agony-pain," &c. If these represented double substantives in Homer, there might be something to say for them, though, even in that case, the essential differences of the two languages should have warned Mr. Way against perpetually coining such heavy equivalents. But for the most part they represent perfectly simple single words, and can only be regarded as a metrical trick easier to fall into than to escape from.

But, with these deductions, there is no doubt that Mr. Way's translation is nearly always forcible, and at times really poetic and Homeric. Somehow—and the reason is not far to seek—English translators of Homer come nearest to their original where the subject is the sea. Mr. Lang and his coadjutors are seldom so happy as when they

"Know the brine
Salt on their lips, and the large air."

Mr. Smith Wright, as we recently pointed out, can realise the Homeric seafaring; and here is Mr. Way at his very best on the same subject (p. 20, ll. 475-83):

"And the sun went down in the sea, and the darkness covered the land;
And beside the ship's stern-hawsers they lay,
and they slept on the strand.
And so soon as the dawn rose-fingered through
folds of her mist-veil broke,
They sailed over sea for the wide war-host of
Achaian folk.
And Apollo sent them a breeze fast-following
over the tide,
And they set up the mast in the ship, and they
spread the white sail wide.
And the sail bellied out with the blast, and the
cut-water plunged as she drave
The foam from her bows with the hiss and the
roar of the sundering wave."

There is a swing and and a pulse in that passage to which the translator does not often attain. It should be noted, however, that he seems to improve as he proceeds: the rhythm of book vi. (the last here translated) is superior to that of the first two books. Let us take, in proof of this, the really fine version of the close of Hector's farewell to Andromache (book vi., ll. 456-465):

"When in Argos my darling shall weave at
another's behest, and bring
The pitcher at dawn from Messæis or Hyperæia's
spring,
Sore loth—but the yoke of resistless constraint
o'er thy neck shall be cast;
And thus shall they say, as their hard eyes
watch thy tears flow fast;
'Lo, this is the wife of Hector, the chiefest in
battle-renown
Of the horse-quelling Trojans in days when
they warred round Ilium town.'
So shall they speak; on thy soul at my name
new anguish shall fall,
With aching of heart for thy hero, thy shield
from the lot of the thrall.
But me may the grave-mound cover, the earth
my dead face veil,
Or ever I hear thy shriek, and thine enthrall-
ment's tale."

That is all good, we think—the last three lines excellent; and, speaking generally, the

style of all the last book is clear and good, though even here we are affronted with "onset-fire," "frenzy-glorious," "vengeful-grim," "tameless-wild," "victory-light," "stewardess-handmaid." On the other hand, though it sounds rather recondite, perhaps no better rendering of the Homeric *dyopē* than "the folk-mote-stead" has been found. The famous and testing line (bk. i., l. 49),

δεινὴ δὲ κλαγγὴ γέενε' ἀργυρέοιο βιοῖο

has become far too nasal in Mr. Way's

"Terribly rang the twang of the silver lightning-bright"—

and why should *βιοῖο* disappear altogether to make way for yet another uncalled-for double-barrel word?

Mr. Way's will be a good translation if he can add to his native vigour more of Mr. Morris's skill in this metre.

E. D. A. MORSEHEAD.

Peasant Properties, and other Selected Essays.

By Lady Verney. In 2 vols. (Longmans.)

The art of bookmaking is said to be waning, as the arts of the reviewer and the magazine writer wax and abound. New periodicals are founded, less to satisfy the craving of the reading world for more instalments of light literature than because there is a world of contributors whose quite respectable productions are in constant danger of being crowded out of the magazines, as pictures are crowded out of the Academy, swamped by a surrounding merit as modest as their own. This development of periodical writing is especially fatal to one kind of book, which used to be a favourite with occasional writers—the volume of "collected essays." The number of articles quite as good as those which used to receive the honour of a reprint has become so overwhelming that, in fact, a well-edited monthly review ought to consist almost exclusively of such. Hence a versatile writer's collected papers are in danger of looking only like two or three bound numbers of a review, and to enable them to face this comparison the author needs to edit himself with some courage and severity. There are books intended to be books, and perhaps slightly damaged as such by having been written in a form partly or wholly adapted for periodical publication; and in such cases, of course, there is nothing to be said against the final publication—the mistake, if any, is at the earlier stage. On the other hand, there are writers of such marked ability or individuality that it is desirable to know their passing judgment on every subject which they have chanced to treat; the unity of style and thought will either turn their miscellanies into a book, or the interest of the component parts will be so great as to warrant their preservation as independent contributions to thought or knowledge. But to reprint articles which have only so far justified an editor's hospitality that we read them once is to challenge the same reader to ask "Are they worth reading twice?" Life is short, and there are twelve numbers of many estimable reviews in several modern languages published in every short year of man's short life. There are many mansions in the house of fame; and the writer whom

all editors reject may appeal to the great public, as once in a way an artist appeals against the verdict of the Hanging Committee; but the writer of occasional articles who is so successful as to appear pretty frequently in print should hesitate to infer from that agreeable fact that the general public will be even kinder than the able editors. What editor, howsoever hospitable, would dare to print the same article twice; and is it not they of all men who know, whose profession it is to know, exactly what the general public will condescend to read?

The best of Lady Verney's articles have been read recently enough in well-known magazines not to be new, and the worst are not sufficiently above the ordinary magazine level to make her two volumes more lively as a whole than the same quantity of *Contemporary Review*. On general grounds, therefore, the republication would be a mistake, even if the slight continuity of subject, which belongs to the first half of the first volume, had been kept up. The title of the book is borrowed from the subject of these five papers, but even they do not gain by being brought together. They are pleasant enough sketches of autumn tours, in the Salz-kammergut, French Switzerland, Auvergne, Brittany, and such-like not altogether unknown regions, by a kindly traveller interested in the domestic economy of the peasants; and anyone of them by itself would appear deserving of attention, as representing one of the score of veracious *impressions de voyage* which have to be put together in order to give a complete picture of the life of any country or class. These sketches have a real value, because when duly multiplied and varied, they have a vitality often wanting in more laboured volumes of travel and description. We learn not only what the tourist saw and felt, but also what we have to allow for the personal equation in each case. What Lady Verney's "Autumn Jottings" lose by being brought together is that we are tempted to make a larger allowance than before for the personal equation. The traveller who receives the same impression in Belgium and Brittany, at Berchtesgaden and Beau Séjour, from Clermont and Chamounix, is open to the suspicion of having found what he went to look for. The districts are too different for it to be the natural first-thought of a quite unbiassed observer, in all alike, how much better off the British labourer is than the native peasantry upon the tourists' path. The observer with a purpose must be as picturesque as Cobbett, or as judicial as Arthur Young, if he would save the purpose from looking like a prejudice.

Lady Verney's tale is true, but the moral is forced. The peasant's life is hard, his methods of cultivation often imperfect, and his dwelling, at least in Southern Europe, almost always dirty; furthermore he is illiterate, his wife is overworked, and unless Nature happens to have provided for the water supply and drainage, ugly diseases and deformities abound; where the landlord does not grind, the money-lender does; and the severity of the struggle for existence seems rather intensified than not, when each generation strives not only to live itself, but to hand on the means of living unimpaired to the next. These are the shadows of rural life as

it exists in most European countries. But it is easy to exaggerate the importance of differences which are more a matter of custom and climate than of essential comfort and well-being; and even when the difference is in favour of English usage, it does not follow that our superiority is due to the absence of peasant proprietorship in England. Granted that farmhouses in Auvergne are dark and bare of furniture. They are dark as Italian streets are narrow, and bare as Italian palaces are bare of modern upholstery. It is a progress, no doubt, to separate the granary from the bedroom, and the cow-shed from the kitchen, and the manure-heap from the front door; but even in England there are still farmers who hold out against the latter innovation, and think "clean muck" is never in the way. It is needless to pity French peasants for living in the nineteenth century among smells that would not have disturbed even English squires of the eighteenth. A comparison of the standard of comfort in different countries is no doubt instructive, and, other things being equal, the institutions which favour the highest standard are to be preferred; but a thousand and one social and political accidents contribute to each local result, and the significance of curious traits can often only be appreciated in the light of antecedent custom. Thus, the Breton bedsteads in the wall which struck Lady Verney as the acme of discomfort are really a survival from one of the earliest flights of French civilisation. Seen at its best, as in the old farmhouse by La Garaye, with solid oak panellings and carving, the recessed sleeping-places in a massive wall are still unsanitary; but they are eminently picturesque, and they as evidently contain the germ of the alcove, in virtue of which the modern French bed-chamber ranks higher in the scale of civilisation than the unspecialised four walls of British architecture.

Even if firewood is scarce Lady Verney thinks peasant proprietorship is to blame, because "the peasants cannot afford to keep forest land," though England itself, the home of large landowners, is notorious for neglect and ignorance of forestry. If the peasants plough with too large a team she laments the waste of labour, and calculates that an English farmer would get the same crop with fewer labourers; but she does not consider that this would appear a doubtful benefit to the superfluous labourers, who at present share among themselves, in return for their squandered toil, the profits which high farming would procure to a single tenant. High farming means the application of more and more skilled labour to the land; and where land is badly farmed by impoverished labourers it would seem a more appropriate remedy to increase the skill than to lessen the number of the labourers. Lady Verney seems to think of the tenant-farmer like Voltaire of the Deity, if he did not exist "il fallait l'inventer"; but the tenant, like the proprietor, is not to be invented at will. After all, her practical solution of the difficulty is that friendly landlords should let small holdings of five to fifteen acres to agricultural labourers and village tradesmen, who would live partly on wages and partly on the produce of their land; and the difference between such a state of things and peasant

proprietorship is more nominal than real. She mentions a curious example of extreme subdivision in Brittany. Land is measured by the *sillon* (or "furrow-long"), and in one case half a *sillon* had three owners, who worked and harvested it in turn.

The rest of these two volumes is made up of articles the character of which can be guessed from their titles: "Paris during the Exhibition," "Pictures in Holland," "Old Welsh Legends," "Modern Greek Songs," "Dean Milman," "Bunsen and his Wife," &c. There are also a few essays on Proof, Art, Civilisation, and "The Powers of Women." The latter was published in 1870, and is worth reprinting just to show how mild a dose of moderate liberalism it was thought salutary to administer fifteen years ago.

EDITH SIMCOX.

NEW NOVELS.

The Sacred Nugget. By B. L. Farjeon. In 3 vols. (Ward & Downey.)

A Rich Man's Relatives. By R. Cleland. In 3 vols. (White.)

Woven in Darkness. By W. W. Fenn. In 2 vols. (Kelly.)

Jan Vedder's Wife. By Amelia E. Barr. (James Clarke.)

Every Inch a Woman. By Mrs. Houstoun. (White.)

MANY persons might suppose that the romance of the gold fields had been practically exhausted by the novelists. That this is the reverse of the fact, however, is proved by Mr. Farjeon's new story. It is one of unquestionable interest, though the idea associated with *The Sacred Nugget* appears to be a little far-fetched and fantastic. Mike Patchett, "the man from Pegleg," is a character study of very high merit. As the luck is with some men, Mike cannot undertake the smallest labour at the diggings but gold is the result. He has the most extraordinary run of fortune, and one day he comes across the famous nugget which furnishes the title of the novel. It is "found at the foot of Ironbark Hill, three feet below the surface. Two hundred and twenty-two ounces, in the shape of a cross. Solid gold, with not an ounce of quartz about it." The digger's fame penetrates through the whole of the colonies. Yet, although he amasses wealth as if by magic, and although the coffers of the Melbourne Bank are heavy with his gold, the man's heart is as heavy as his treasure. Deceived by the woman of his love, and voluntarily taking upon himself the punishment for a forgery committed by another, he had been sent out to the Antipodes nearly twenty years before the opening of the narrative. His real name was Purdy. Escaping from his confinement, he assumed the name of Patchett, and went to the gold diggings, where he enjoyed a phenomenal success. But his heart pined for the love of the one being connected with him by the ties of blood—an only daughter, who was a babe when he left England, and whom he had never seen since. Fearing to go back himself in search of her, he commissioned another person to find her and send her out to him. The reader will be entertained in

tracing the imposture of which he is made the victim. A flashy fourth-rate actress is despatched from England as his daughter, whereas the maid who accompanies her is the real child and heiress, though this is not known to her mistress in the outset. That is a very natural touch when, on board the steamer whither he has gone to welcome his Peggy, Mr. Farjeon makes his hero go first up to the maid Madge to embrace her as his child. Little by little the plot is steadily unravelled. Patchett or Purdy is nearly killed by falling down a mining shaft; and his supposed daughter, fearing that her game is pretty well exploded, flies from his side, eloping with an Italian adventurer, and taking the Sacred Nugget and other property with her. Old Purdy is nursed by his real daughter, and things work onward towards a desirable consummation. A prominent part is played by one Mr. Horace Blakensee, a clever and unconventional character. Mr. Farjeon may be congratulated on having produced a novel evincing a distinct vein of originality, and no small share of humour.

The crimes of a man for money form the staple of the plot of *A Rich Man's Relatives*. A villain who could steal a golden-haired child from its mother—her dearest possession—and calmly commission it to be put out of the way, seems more of a fiend than one who could shoot a full-grown man who chanced to stand in his way. But Ralph Herkimer did both these things, as well as a good deal of swindling in the formation of bogus companies, which wrought devastation and wholesale ruin. Fortunately, the two murders which he committed in intent were not committed in actual fact. The child was restored to her parents when she had become a young woman, and the man who was believed to be shot was miraculously recovered by gipsies. The novel furnishes some graphic glimpses of Canadian life, and life among the Indians, and the reader will be interested in pursuing the ramifications of a very entertaining story. Mr. Cleland evidently writes from full knowledge of the people and the scenes he describes.

The writer of *Woven in Darkness* was driven by blindness, some years ago, to seek in the pen something that might serve as a substitute for the brush, which his infirmity obliged him to lay down. His present literary efforts, which he describes as "a medley of stories, essays, and dream-work," need no apology. There is many an allusion in the essays which betrays the spirit and mind of the artist; while in the stories, in addition to a weirdness which is very remarkable, there is a graphic power that deserves frank recognition. Undoubtedly a mass of periodical literature is published which, having no merit of any kind, passes unregretted to that bourne from which it can never return, viz., the hands of the buttermilk; but there are to be met with, occasionally, compositions which deserve a better fate. Of this character are Mr. Fenn's, and, if we mistake not, readers will be deeply interested in some of his sketches. In the first volume, among the most attractive of the papers are "The Hand on the Latch," "The Legend of the Light," "The Face at the Window," and "The Marble Hands"; and of papers in the

second volume we may mention "The Night of the Great Wind," "The Captain of the Heart's Content," and "The Missing Man." All these are original in incident and in treatment. But, indeed, we did not find a dull page in the whole of Mr. Fenn's two goodly volumes.

Jan Vedder's Wife was originally published in the United States, but it now appears in an English dress. It is a story of life in Shetland, and the characteristics of the old Norsemen are well preserved in the hero of the story and his Lerwick friends. Miss Barr writes very effectively, and there are many tender touches in these pages. The book deals with the at first painful story of Margaret Vedder's wedded life. She and her husband Jan drift asunder, and terrible griefs and angry passions divide them for many years; but at length they are brought together, and Margaret realises to the full the depth of that happiness which she had long put away from her.

Mrs. Houston's *Every Inch a Woman*, published in the shilling form now so much in vogue, is very readable, and is calculated to wile away pleasantly an occasional hour.

G. BARNETT SMITH.

CURRENT THEOLOGY.

The Prophecy of Joel: its Unity, its Aim, and the Age of its Composition. By William L. Pearson. (Leipzig: Stauffer.) A research of considerable promise, blending Anglo-American and German elements, and suggesting to us this reflection first of all—How great would be the gain to our theology if the most promising of our students completed their training at the larger German universities! The poverty of our native Biblical criticism, especially in the Old Testament department, makes an honest review of the published results almost necessarily discourteous. It is obviously not merely the want of progressive teachers which is felt: Ewald himself could not neutralise the influences of a faulty system. The wish of Paracelsus—

"Flash on us all in armour, thou Achilles,
Make our hearts dance to thy resounding steps,"

was not spoken of the class lists of theological examinations! Dr. Pearson, who has suggested these remarks, dedicates his treatise to his American teacher, Prof. W. H. Green, and therefore proceeds from a school very distinct in its opposition to all that savours of "rationalism." We doubt not that he has conscientiously endeavoured to put aside early prejudice, and pursue the higher criticism according to the principles of the best continental critics. The Anglo-American mind comes fresh to such researches, and is perhaps less easily than the German led astray by the imagination. But does Dr. Pearson really think that he can discuss such a difficult question as the date of Joel without having first solved some of the easier critical problems? What has he learned from his German teachers on such long since settled critical questions as those which relate to the speeches of Elihu, the latter chapters of our Book of Isaiah, and chaps. ix.-xiv. of our Book of Zechariah? Nothing. All his reading has but served to confirm him in his educational reverence for the opinions of the synagogue. His own solution of the problem of Joel cannot, under these circumstances, have much weight attached to it. He agrees, no doubt, with Ewald and Bunsen—critics of the non-traditionalistic school; with Ewald, so far as the priority of

Joel to all the other prophetic writers is concerned; and with Bunsen, so far as to place the book in the first generation after Solomon. Ewald and Bunsen were both fine characters, but marred by self-importance; and Bunsen, in particular, in his whirling life, had no leisure to mature his thousand and one literary schemes. Ewald too, as Dörner has suggestively remarked, did not always keep a firm hold on the principle of historical development. The more the later periods of Jewish history and literature are studied, the more it will appear impossible to assign the book of Joel to any age previous to the Restoration. These later periods were not sufficiently studied by Ewald, who did all that one man could do in the fields which called for an army of workers. Dr. Pearson's second and third parts are vitiated therefore by his want of proper preparation. He seems to agree with Carlyle that a library is the best university, and has not yet assimilated either the spirit or the best results of continental scholarship. For all that, his treatise is better worth having than any recent English work on Joel, because of its full account of critical views, and because the author writes in an argumentative style. These points are still novelties in Anglo-American biblical literature. And hardly less useful is Dr. Pearson's first part, devoted to the contents, unity, and aim of Joel. There is so strong a temptation to espouse critical results before the text of an author has been sufficiently studied, that a student who sets a better example cannot be too warmly applauded. We cannot enter much into detail. But it is worth noticing that, with Merx, our author understands the imperfects in ii. 18, 19 (beginning), as virtually futures, though without regarding them, as Merx so strangely does, as jussives. He thinks that these are quite sufficient arguments against the allegorical interpretation which refers all the details of the prophecy to the future, without the doubtful argument derived from the "vav consecutive." We are thankful for this protest against the grammatical literalism which seems to have dictated the Revised Version of Joel ii. 18, 19, Ps. cix. 17, though if the imperfects in ii. 18, 19 relate to the future, is it natural to say, with Dr. Pearson, that the perfects and imperfects in the part preceding ii. 18 refer to the past? In conclusion, it should be mentioned that Dr. Pearson's acquaintance with the learned literature of his subject is complete. The only lacuna is inevitably Matthes' "Het Boek Joel" in the January and March numbers of the *Theologisch Tijdschrift*.

Analytical Notes on the First and Three Last of the Minor Prophets. With an Appendix on Dan. ix. 24-27. By the Rev. William Randolph (Bell.) This is not a critical work, but written with so much enthusiasm for Hebrew poetry that we hope that the book may do some little good. It is our duty to add that the author is equally behindhand in Hebrew grammar, historical illustrations and criticism, and biblical theology; his literary apparatus is partly at fault, his training still more. There is abundance of orthodox theology of an antiquated type; thus, in Zech. i. 3, "the co-operation of the three Persons of the Godhead in man's salvation is indicated by the mention of the Divine name three times," &c. Of grammatical help there is little, and that little to our mind very poor; yet it must be admitted that the author in one place protests mildly against the confusion of Hebrew prepositions usual among older writers. Would that the authorities saw the importance of encouraging, not merely Hebrew, but sound Hebrew, a study which can never be dissociated from a critical investigation of the contents of the Old Testament!

Lehrbuch der biblischen Geschichte Alten Testaments. Von Dr. August Köhler. II. Hälfte,

1 Theil. (Erlangen: Deichert.) We sincerely wish for this thorough and conscientious work a wide circulation among teachers of the Old Testament. The concessions to criticism are, it is true, very inadequate. Dr. Köhler goes so far as to maintain that "none of the Old Testament historians are so largely dependent on *Quellenschriften* [genuine historical authorities], and none of them gives the men of learning among his contemporaries such means of controlling his statements as the Chronicler" (p. 214, note). Still, he means to be fair, and is not above learning from rationalists, to whom as well as to orthodox writers (including those of the *Speaker's Commentary*) he gives ample reference. As one subsidiary evidence of thoroughness, it may be stated that the foot-notes form a considerable part of the volume.

A Catechisme or Christian Doctrine, by Laurence Vaux, B.D., Canon Regular and Sub-Prior of St. Martin's Monastery, Louvain, Sometime Warden of the Collegiate Church, Manchester. Reprinted from an edition of 1583. With an Introductory Memoir of the Author. By Thomas Graves Law. (Manchester: Printed for the Chetham Society.) The Chetham Society could not have put Vaux's Catechism into better hands. Mr. Law's customary thoroughness and accuracy, together with his exceptionally full knowledge of the history of the struggles and sufferings of the English Roman Catholics during the reign of Elizabeth, make the Introduction (pp. cvij.) a really valuable contribution towards the religious history of the period. In the Catechism itself there is little that calls for comment. It very faithfully pictures the Roman Catholic doctrine of its day as declared by the Tridentine decrees. Mr. Law indicates as worthy of notice Vaux's continuing to retain the old English baptismal formula—"I christen thee in the name," &c., and the old English mode, in administering the sacrament of extreme unction, of "anoyling" "the reins of the back," &c. Again, the prayer at the conclusion of the "Hail Mary," as now used, is omitted. But this is merely an example of Vaux's conservative temper, as the addition had been authorised by Pius V. in 1568.

Expositions. By Samuel Cox. (Fisher Unwin.) It will be remembered that more than a year ago the publishers of *The Expositor* withdrew the editorship from Dr. Cox, on account, as is alleged, of certain views on eschatological questions which he held and taught. We have in this volume several discourses of Dr. Cox, which he did not feel himself at liberty to print while acting for Messrs. Hodder and Stoughton, and in which "the larger hope" is set forth with much fullness. The volume is not however confined to these topics, but embraces a considerable variety of sermons on other subjects, written in the style familiar to the readers of the first and second series of *The Expositor*. We hope that this volume may meet with such success as will determine the author to fulfil his half-promise of following it up.

Sermons preached on Various Occasions at the West London Synagogue of British Jews. By Rev. Prof. Marks. Second and Third Series. (Trübner.) These volumes will be found full of interest by those who desire to become acquainted with the religious hopes and speculations of modern Judaism. Prof. Marks, in his Biblical exegesis, makes free use of the Hebrew scholarship of Christian as well as Jewish writers, and shows throughout a spirit of commendable liberality of tone. The high moral teaching of these discourses, their earnestness, and their sincerity, can scarcely fail to attract many outside the circle of the author's co-religionists. The discussion of such questions as "Was Mossaism to be perpetual in Israel, or was it to be superseded by a subse-

quent revelation?", and the series of lectures "on the prophecies of Isaiah denominated *Messianic*," are, of necessity, of a controversial character, but the controversy is never allowed to sink below the level of a grave debate. On the question with which Dr. Cox is so much concerned in the volume noticed above, we may quote the following words of Prof. Marks: "To us Jews, who are taught to know God through the attributes with which he is clothed in the Pentateuch, as 'gracious, long-suffering, merciful, and abundant in benevolence and truth,' the doctrine of a hell and of endless torments seems a desecration of the Divine name, surpassing in atrocity the pernicious tenets of paganism." Some additional significance is imparted to these volumes by the fact that they are "published at the request of the council."

The School of Life. Sermons by late and present Head Masters. (Rivington.) It was a good thought to have special sermons during the London mission for public school men, but there seems no reason why the sermons should have been printed. There is nothing in any of them which rises above the commonplace, not even the passages about Gordon.

The Sermons preached at the 700th Anniversary of the Consecration of the Temple Church (Macmillan) include one by the Archbishop of Canterbury, and one each by the Master and the Reader. No doubt those interested in the celebration desired some memorial of it, or it would be difficult to understand why the present volume was put together. Its originality ceases with its cover, which is buckram painted piebald, with a red cross.

We have also received:—*The Church of England and other Religious Communion: a Course of Lectures delivered at the Parish Church of Clapham*, by Robert Howard (Kegan Paul, Trench, & Co.); *Towards the Truth: Thoughts in Verse*, by Sir John Croker Barrow (Longmans); *The Philosophy of All Possible Revelation*, and other Writings, by Robert Corvichen (Williams & Norgate); *The Monthly Interpreter*, edited by the Rev. Joseph S. Exell, Vol. I. (Edinburgh: T. & T. Clark); *Anno Domini*; or, a Glimpse at the World into which Messias was born, by J. D. Craig Houston (Religious Tract Society); *For Family Worship*, Part I., Scripture Readings; Part II., Family Prayers; edited by Lyman Abbott (James Clarke); *The Altar Hymnal: a Book of Song for use at the Celebration of the Holy Eucharist* (Griffith, Farran, & Co.); *The Devotional Service and Chant Book* (Whittingham); *Things New and Old*, in Discourses of Christian Truth and Life, by Washington Gladden (Columbus, Ohio: Smythe; London: James Clarke); *The War of Antichrist with the Church and Christian Civilization*—Lectures delivered in Edinburgh by Monsignor George F. Dillon (Dublin: Gill; London: Burns & Oates); *The Eve of the Reformation: an Historical Essay*, by Rev. William Stang (New York: Catholic Publication Society; London: Burns & Oates); *Development: What it can do, and what it cannot do*, by James McCosh (Edinburgh: T. & T. Clark); &c. &c.

NOTES AND NEWS.

PROF. MAX MÜLLER has been ordered by his doctors to take a complete rest from work for several months. He will go first to Switzerland, and afterwards to the South of Europe, and will not return to England before the beginning of next year. He leaves behind, almost ready for publication, the three volumes of "The Sacred Books of the East" for 1885, which will probably consist of (1) *The Laws of Manu*, translated by Prof. George Bühler, of Vienna, with extracts from all known commentaries; (2) a new volume of the *Satapatha-Brāhmaṇa*, translated by Prof. Eggeling, of

Edinburgh; and (3) the *Lī Kī*, Rules of Proprietary and Ceremonial Usage in Ancient China, translated by Prof. Legge, of Oxford. Prof. Max Müller has also seen through the press another number of the "Anecdota Oxoniensia," containing the text of *Dharmasamgraha*, with notes, prepared by his late Japanese pupil, Kasawara, and edited after his death from the papers left by him by Prof. Max Müller himself and Dr. Wenzel.

PRINCE IBRAHIM HILMY, son of the ex-Khedive Ismail, will shortly publish, through Messrs. Trübner & Co., an exhaustive work on the literature of the Sudan, ancient, mediæval, and modern. The bibliography will embrace printed books, periodicals, MSS., maps, drawings, &c.

MESSRS. BLACKWOOD have in the press a volume by Lady John Manners entitled *A Sequel to Rich Men's Dwellings, and Other Occasional Papers*.

PROF. W. MINTO has prepared for publication a new edition of his *Characteristics of English Poetry from Chaucer to Shirley*.

MESSRS. WARD & DOWNEY have in the press a new translation, by Sir Gilbert Campbell, of Victor Hugo's first romance, *Han d'Islande* (1823). It will be called *The Outlaw of Iceland*.

MR. ELLIOT STOCK is engaged in making a facsimile of Vaughan's *Silex Scintillans*. The edition will be restricted to under five hundred copies.

A Prince of Darkness, a new novel by the author of "The House on the Marsh," will be ready early in August. It will be published here in three volumes by Messrs. Ward and Downey, and an edition will be issued simultaneously in the United States.

MR. ALFRED O. LEGGE, author of "The History of the Papacy," will publish immediately with Messrs. Ward and Downey a new work on the Life and Times of Richard III., which will be entitled *The Unpopular King*. It will be in two volumes, and will contain several illustrations.

A NEW series of shilling volumes, to be called "Travellers'-Joy Books," is announced for publication by Messrs. Simpkin, Marshall, & Co. The first volume will be *Don Quixote*, illustrated.

CHEAP editions of several novels are about to be issued by Messrs. J. & R. Maxwell, among them being *Fragoletta*, by "Rita"; *Parted Lives*, by Mrs. Spender; *Pure Gold*, by Mrs. Lovett Cameron; and *Unfairly Won*, by Mrs. Power O'Donoghue.

THE National Press Agency is about to publish two pamphlets by Mr. I. S. Leadam, tracing the history of the new Franchise Act in its passage through Parliament.

THE result of the contest for the Amateur Shorthand Championship in connexion with *Cassell's Magazine* is announced in the August number. We understand that Mr. Frederick Pitman acted as judge on the occasion.

THE glory of the Birmingham Public Reference Library is the Shakspeare collection, originally founded in 1864, destroyed by fire in 1879, but now restored almost to its former number of seven thousand volumes. A description of this collection, in the form of a lecture, by the well-known Shakspeare scholar, Mr. Samuel Timmins, has just been published at one penny by the Midland Educational Company.

ANOTHER interesting volume just issued in connexion with the reference department of the Birmingham Free Library is a "Catalogue of Books about, printed in, or illustrative of the History of, Birmingham," compiled by Mr. J. D. Mullins, the chief librarian. It contains

more than six thousand entries, classified under about thirty headings, of which pamphlets relating to Birmingham and books printed at Birmingham are, perhaps, the most valuable. This collection, like the Shakspeare one, has been entirely formed since the fire of 1879.

THE New York *Critic* gives, in its series of "Authors at Home," an account of Mr. Goldwin Smith in its number for July 11.

A NEW YORK publisher has issued a priced catalogue of "First Editions of American Authors," from which we select the following specimens: Benjamin Franklin's *Poor Richard* (1734), 50 dollars (£10); Longfellow's *Outremer* (1833-34), 35 dollars (£7); a complete set of the *Dial*, Hawthorne's *Gentle Boy* (1839), and Artemus Ward's *Travels among the Mormons* (1866), 30 dollars (£6) each; Poe's *Poems* (1831), Poe's *Tales Grotesque and Arabesque* (1840), and Whittier's *Moll Pitcher* (1832), 25 dollars (£5) each; Walt Whitman's *Leaves of Grass* (1855), 15 dollars (£3).

It is interesting to learn that a Hindu widow, Mrs. Ramabhai, has started in business at Bombay as a bookseller. Her husband, the late Mr. Atmaram Sagoon, was also a bookseller; but her shop is independent of the firm in which he was a partner.

M. ZOLA, in contradiction of rumours about the subject of his forthcoming book, *l'Œuvre*, writes that "il s'agit simplement d'une étude de psychologie très fouillée et de profonde passion."

IN MEMORIAM

W. S. W. VAUX, ESQ., M.A., F.R.S.

(Late Secretary to the Royal Asiatic Society.)

ذَهَبَتْ وَخَلَفَتْ الْقَمَائِلُ نَوْحًا
عَلَى عَالِمٍ أَحْيَى الْمَعَارِفَ وَالْعِلْمَا
لَقَدْ عِشْتَ فِي الدُّنْيَا فَشِدَّتْ حِكْمَةً
أَفَادَتْ بَنِيهَا الْفَضْلَ وَالْعِلْمَ وَالْفَهْمَا
وَأُظْهِرْتَ مِنْ كُلِّ الْحَقَائِقِ كُنْهَهَا
وَلَوْ عِشْتَ لَمْ تَتْرَكَ عَلَى أَرْضِنَا أَعْمَى
فَقَدْ شَارَكَ الْعَرَبَ الَّذِي هُوَ مَوْطِنُ
لَكَ الشَّرْقُ فِي حُزْنٍ عَلَيْكَ فَمَا أَسْمَى

نَنْوَحُ الْعُلُومَ لَقَدْ مَاتَ وَكُنْ

HABIB ANTHONY SALMONÉ.

(Translated by H. Cunynghame.)

Thou hast departed, but thy virtues still
Remain to mourn thy loss, for thou hast given
New life to learning. Whilst with us below
Thy constant aim was ever to promote
Wisdom, which gives her children hope and
strength.
Thou hast loved truth, and, where thy will pre-
vailed,
Her sons were free from error's blinding hand.
Thrice happy thou! for whom the Eastern world
In sorrow joins thy Western native land.
Let Learning mourn, for Vaux her son is dead.*

* This last line is a chronogram in Arabic, embodying the Muhammadan year, 1302 A. H.

VICTOR HUGO'S LITERARY TESTAMENT.

WE quote from the *Rappel* the text of Victor Hugo's literary testament. The three executors named have accepted the trust, but have declined any profit for themselves; the proceeds are to be applied to the subscription for the national monument to Victor Hugo.

"Je veux qu'après ma mort tous mes manuscrits non publiés, avec leurs copies s'il en existe, et toutes les choses écrites de ma main que je laisserai, de quelque nature qu'elles soient, je veux, dis-je, que tous mes manuscrits, sans exception, et quelle qu'en soit la dimension, soient réunis et remis à la disposition des trois amis dont voici les noms: Paul Meurice, Auguste Vacquerie, Ernest Lefèvre.

"Je donne à ces trois amis plein pouvoir pour requérir l'exécution entière et complète de ma volonté. Je les charge de publier mes manuscrits de la façon que voici: Lesdits manuscrits peuvent être classés en trois catégories: Premièrement, les œuvres tout à fait terminées; Deuxièmement, les œuvres commencées, terminées en partie, mais non achevées; Troisièmement, les ébauches, fragments, idées éparses, vers ou prose, semées çà et là, soit dans mes carnets, soit sur des feuilles volantes.

"Je prie mes trois amis, ou l'un d'eux choisi par eux, de faire ce triage avec le plus grand soin et comme je le ferais moi-même, dans l'esprit et dans la pensée qu'ils me connaissent, et avec toute l'amitié dont ils m'ont donné tant de marques. Je les prie de publier, avec des intervalles dont ils seront juges entre chaque publication: D'abord, les œuvres terminées; ensuite, les œuvres commencées et en partie achevées; enfin, les fragments et idées éparses. Cette dernière catégorie d'œuvres, se rattachant à l'ensemble de toutes mes idées, quoique sans lien apparent, formera, je pense, plusieurs volumes, et sera publiée sous le titre *Océan*. Presque tout cela a été écrit dans mon exil. Je rends à la mer ce que j'ai reçu d'elle.

"Pour assurer les frais de la publication de cet ensemble d'œuvres, il sera distrait de ma succession une somme de cent mille francs qui sera réservée et affectée auxdits frais. MM. Paul Meurice, Auguste Vacquerie et Ernest Lefèvre, après les frais payés, recevront, pour se les partager entre eux dans la proportion du travail fait par chacun: (1°) Sur la première catégorie d'œuvres, quinze pour cent du bénéfice net; (2°) Sur la deuxième catégorie, vingt-cinq pour cent du bénéfice net; (3°) Sur la troisième catégorie, qui exigera des notes, des préfaces peut-être, beaucoup de temps et de travail, cinquante pour cent du bénéfice net.

"Indépendamment de ces trois catégories de publication, mes trois amis, dans le cas où l'on jugerait à propos de publier mes lettres après ma mort, sont expressément chargés par moi de cette publication, en vertu du principe que les lettres appartiennent, non à celui qui les a reçues, mais à celui qui les a écrites. Ils feront le triage de mes lettres et seront juges des conditions de convenance et d'opportunité de cette publication. Ils recevront sur le bénéfice net de la publication de mes lettres cinquante pour cent.

"Je les remercie du plus profond de mon cœur de vouloir bien prendre tous ces soins. En cas de décès de l'un d'eux, ils désigneraient, s'il était nécessaire, une tierce personne qui aurait leur confiance, pour le remplacer. Telles sont mes volontés expresses pour la publication de tous les manuscrits inédits, quels qu'ils soient, que je laisserai après ma mort.

"J'ordonne que ces manuscrits soient immédiatement remis à MM. Paul Meurice, Auguste Vacquerie et Ernest Lefèvre pour qu'ils exécutent mes intentions comme l'eussent fait mes fils bien aimés que je vais rejoindre.

"Fait, et écrit de ma main, en pleine santé d'esprit et de corps, aujourd'hui vingt-trois septembre mil huit cent soixante-quinze, à Paris.

"Victor Hugo."

CORRESPONDENCE.

ANGLO-SAXON NAMES.

Nottingham: July 18, 1885.

Since writing my letter of July 6 I have met with confirmation of one or two points in it. I have discovered a much earlier instance of a Teutonic use of a double-name. Iornandes, *De Rebus Geticis*, c. 50, states that the Amaling *Gunthigis** was also known as *Baza*. In a dubious charter printed by Kemble, *Cod. Dipl.* vi., p. 17, dated 959, an *Ælfhelm-Wolga* (= *Wulf-gár*?) occurs; and Reginald of Durham, a popular religious writer of the twelfth century, mentions a landowner "Waltheus nomine, cognomento Aldene," *Lib. de Mirac. S. Godrici*, p. 441, § 563. This is the Anglo-Saxon *Wealth-béo*† + Anglo-Saxon *Healf-dene*.

* *Gunthigis* is from **gunþ*, war, battle (Anglo-Saxon *gūð*) + **gisal* (Anglo-Saxon *gisel*), a hostage, pledge, *gis* being shortened from **gisal*, as in Old-Norse names. See Dietrich, *Ueber die Aussprache des Gothischen während der Zeit seines Bestehens*, Marburg, 1862, p. 74. The Frankish *Gundegisilus* occurs in Gregory of Tours, *H. F.*, 389, 22.

† Not *Wealth-béof*. It is evident that the Anglo-Saxon name was *Wealth-béo*, which occurs in *Béowulf*, ll. 664, 1162, 1215, 2174, and is correctly represented by the modern surname *Wal-theo*.

In my letter I suggested that *Bata* was probably a pet form of a name in *Beadu*. I have since collected some evidence in support of this suggestion. This Anglo-Saxon *Beadu* represents an original *Badu*, the *w* in Anglo-Saxon being vocalised to *u*. This *u* in its turn has modified the *a* to *ea*, in accordance with the laws of *umlaut*. In Old Northumbrian it is quite clear that when *Beadu* or *Badu* was followed by a syllable beginning with a vowel,* half-vowel or *h*, the *u* of *Beadu* was lost. Thus in the *Liber Vitae Dunelmensis* this stem appears as *Badu*, *Beadu* when followed by a consonant, as in *Badu-frith*, *Beadu-frith*, *Beadu-gils*, *Beadumon*, *Beadu-mund*, *Badu-begn*,† *Beadu-begn*; but when followed by a half-vowel or *h* we have uniformly *Bad-* (not *Bead-*), as in *Badhelm*, *Bad-hard*, *Bad-uuald*, *Bad-uini*,‡ *Bad-uulf*, and, with change of *d* to *ð*, *Bad-hun*. The same rule applies to names in *Headu*. No doubt the same law existed in the other Anglo-Saxon dialects. A Mercian (?) *Beadheard*, *Bad-hard*, attended the Council of Clofeshó in 823 and 824.§ I think we may safely assume that when the *u* disappeared before a vowel the stem remained as *Bad-*. If we add to this the *a* of the pet form, we obtain *Bad-a*, a name that actually occurs in the *Lib. Vitae Dun.* 9, col. 2; 43, col. 2. Precisely equivalent to this is the *Badd-o* of Gregory of Tours, *H. F.* 356, 11; 369, 25, and the Old High German *Paz-o*, *Patt-o* (Grimm, *D. G.* iii. 692). I think that the *Baz-a* of Iornandes should also be referred to this root. Dietrich, *Aussprache des Gothischen*, p. 84, compares the *Patz-a* of Cassiodorus, v. 33, and the *Bat-a* of Ælfric *Bata*; but he refers the root to the Gothic *batiza*, *ga-batnan*, the first of which corresponds with the Anglo-Saxon *batra* (better). I venture to think that Dietrich is wrong in this case.

The change from *Bad-a* to *Bat-a* is not a very violent one, but it is necessary to prove it. It is evident, in Anglo-Saxon, that the voiced dental (*d*) frequently changed at the end of a syllable to the voiceless dental (*t*), (see Sievers, *Angelsächsische Grammatik*, § 224).|| In the

Besides *béo* (Gothic **bīus*, preserved only in the nom. and gen. pl. *bīwōs*, *bīwō*) is a well-known Teutonic name-particle (Grimm, *D. G.*, ii. 532); but *béof* puzzled Grimm somewhat (*ibid.*). Ivar Aasen has made the brilliant suggestion that *bjófr* in the Norse names arose from a misunderstanding by the Northmen of the *béo* of Anglo-Saxon names, and that they substituted their own *bjófr* (= Anglo-Saxon *béof*) for this *béo* (*Norsk Navnebog*, p. 54). This Anglo-Saxon *béo* is represented in Old Norse by *bér*, as in *Ham-bér*, *Sig-bér*, *Hjalm-bér*, but *bér* was shortened from the primitive Norse *þewar*. See Noreen, *Altindische Grammatik*, § 184; Anhang 20. Still, it is very probable that Earl Sigeward (= Old-Norse Sigurðr) bestowed the name *Val-bjófr*, and not *Wealth-béo*, upon his son, for Orlygr, one of the early settlers of Iceland, had a son named *Val-bjófr* (see Vigfusson's *Reader*, p. 9, 9).

* It is perfectly reasonable to assume that a vowel had the same power as a half-vowel, although there is no evidence of this in the name-system, because there are no second members of names beginning with a vowel. But perhaps *Badgils*, *Lib. Vitae Dunelm.* 31 col. 2, may be considered an instance, if the *g* be treated as soft.

† *Badu-begn* in *Beda*, *H. E.*, iv. 30.

‡ *Bad-uini* in *Beda*, *H. E.*, iv. 19; *Bad-win-us* in *Eddi*, *Vita S. Wilfridi*, c. 58 (ed. Raine, p. 87).

§ In Kentish the *u* of *Beadu* seems to have occasionally become *a*, probably through *o*. A *Bada-nōð* *diaconus* occurs in two Kentish charters of 833 and 834 (*Cart. Sax.*, i. 524, 8; i. 576, 32). Cf. Kemble, *Cod. Dipl.*, iv. 62, 1: "in loco qui *Baðalacing* dicitur," representing a *Bada-lác* for the normal *Beadu-lác*.

|| Sievers, however, by some oversight, instances *Wulf-hát*, *Poht-hát*, from a charter of A.D. 704 (Kemble, No. lii.; *Cart. Sax.* i. 164), as being from *hád*. But this *Poht-hát* is called in the body of the charter *Paegt-hath*, where the singular form *Paegt* clearly represents the *brechung* of *i* before *h*,

L. V. D. the pet form of "Ead-" in *a*, regularly *Ead-a* (11, col. 2; 12, col. 2; 21, col. 2, &c.), also occurs as *Add-a** (20, col. 3; 25, col. 1), and as *Eat-a* (26, col. 3; 35, col. 1, &c.), *Att-a* (21, col. 2). Other instances are *Ud-a*, *Utt-a*, *Uitt-a* compared with *Uit-sith*† (21, col. 2), which gives us the stem *Wid* of these forms. As *Ead-a* changed to *Eat-a*, *Wid-a* to *Wit-a*, so would *Bud-a* to *Bat-a*.

With regard to *Puttoc* being a pet form of a name, I have been fortunate enough to discover an actual instance of its use. It occurs as "Putt-uc," the name of a witness to a charter of 701 (Kemble, *C. D.* No. 497; *Cart. Saxon.* i., 149, 11). With it may be compared *Pud-a* (*Cart. Saxon.* i., 276, 8), who appears to be the same person as the *Budd-a* of p. 269, 28. Cf. also *Bud-a* (*Id.* i. 107, 13). This *Bud-a*, *Pud-a*, *Putt-uc* suggests another change of voiced to voiceless consonants. The dim. -uc, -oc of *Putt-oc* is the same as the ock of *bullock*, *hillock*. It occurs in its full form as -uca in *Bad-uca* (*L. V. D.* 24, col. 1; 25, col. 1), which would make a gen. -ucan. Grimm, *D. G.* iii. 677, says that *u* here stands for *i*, so that *uca* represents the Sanskrit -ika, Greek -ixes, Gallic -ico, Old High German -ika (see Fick, *Griech. Person.*, p. xlii.). This *ika* regularly appears as -eca in Anglo-Saxon, as *Bead-eca* of the "Gleeman," *Ead-eca* (= *Aud-ica* of Gregory of Tours, 283, 6, &c.). Cf. Anglo-Saxon *geol-eca*, *geol-uca* for a similar confusion of *eca* and *uca*.

I am sorry that I cannot satisfactorily answer Mr. Freeman's question about the double names. I am afraid that sufficient data do not exist to prove or disprove any theory as to the meaning of these double names. In the twelfth and thirteenth century I think they are sometimes patronymic, a view that is partly confirmed by the frequent occurrence in the early instances of the second name in the pet or shortened forms. Then, again, great looseness prevailed in the name-giving. Mr. Coote, *Romans of Britain*, p. 472, note, has collected instances of Anglo-Saxon names that were clearly bestowed at baptism or christening. Names were often changed in after-life. Mr. Freeman will no doubt recall the tale that King Offa had changed his name from *Wine-frið*. Bartholomew, born circa 1120, we are told, in his *Vita*, ed. Arnold, p. 296, § 3, "primo a parentibus *Tostius* dictus est, cuius nominis etymologiam sociis eius adolescentulis irridentibus, *Willelmum* dixerunt." So that Bartholomew bore the name *Tosti* for several years, then the name *William*, and, finally, upon his entering into a monastery, the name *Bartholomew*. Reginald of Durham gives instances where parents changed their children's names from *William* to *Godric*, from *Ralph* to *Godric*, from *Julia* to *Maria*; *Libellus de Mirac. S. Godrici*, p. 434, §§ 550-1. See also Stevenson's note. It is certain that the writers who record these names regarded them as nicknames, for the second name is generally introduced by a "cognomine" or "cognomento."

I have not access to the third edition of Mr. Freeman's great work, so that I am unable to peruse his notes on these double names. I have notes of several other names that may possibly come under this heading, such as *Benedict*

and hence equals the more usual *Pioht*, *Peoht*, a Pict. The Northumbrian form is *Pect*, so *Peoht-hat* is clearly the same name as the *Pect-haeth* of *L. V. D.*, p. 33, col. 1, also written *Pect-heað*. This *haed* is clearly put by apocope for *haedu* = *haðu*.

* This doubling of the consonant in the pet-form is quite usual in the Aryan name-system. See Fick, *Die Griechischen Personennamen*, p. lix., for instances.

† A study of the *L. V. D.* would have shown philologists, years before it was generally admitted, that the *Wit-sith* of the "Gleeman" is a proper name, and not an adjective.

Biscop, who was originally called *Biscop Baducing* (= son of *Bad-uca*); *Eddi*, c. 3. Here *Biscop* would seem not to mean *episcopus*, but to be an old Northumbrian personal name. A *Biscop* *Abbas* occurs in *L. V. D.*, 8, col. 3; a *Biscop presbyter*, 10, col. 2; and a *Betscop presbyter*, 10, col. 3.

As to *sætan*, *sæte*, I see that Lappenberg and Thorpe (*Flor. Wigorn.* i. 238, note) also use the unauthorised pl. *sætas*. While dealing with the ungratifying subject of these errors, I should like to draw attention to a very unwarranted assumption of Green's. In the *Making of England*, p. 156, he says, "We find in the name Folkestone the trace of another separate folk." We might well wonder why an English tribe surrounded by other English tribes should call themselves "Folk," *kar' fœxhþ*. The name Folkestone is much more reasonably explained as either the *stone* or *town* of *Folc*, a pet name formed by the first member of a name like *Folc-wine*, *Folc-here*, *Folc-heard*, *Folc-weald*, &c. Green has also evolved a tribe or nation out of the name *Snotinga-hām* (Nottingham), with which he peoples South Notts in his map at p. 202. Here again he uses the gen. pl. *Snotinga* instead of the nominative. At p. 424 Green says that "the identity of many of the Lombard and English names . . . points to closer bonds between the people than those of mere neighbourhood." The Lombards, like the Anglo-Saxons, the Franks, and the Scandinavians, used the common Teutonic name-system, and their names do not resemble the Anglo-Saxon names any more than the Frankish names, and both the Frankish and Lombard names are free from many of the phonetic changes that bring the Anglo-Saxon and Old Norse names so near together.

The correction of these errors—which, after all, do not detract from the greatness of Green's work—is anything but a pleasant task. Still, it is desirable that they should be corrected. I would plead, in the very appropriate words of the greatest master of Anglo-Saxon prose, that I do not make these corrections "þurh gebylde mycelre lare, ac forþan þe ic geseah and gebýrde mycel gedwýld on manegum Englisum bocum, þe ungelærede menn, þurh heora bilewyttnýsse, to micclum wísdome tealdon" (*Ælfric's Homilies*, ed. Thorpe, i. p. 2). W. H. STEVENSON.

"DEFNSAETAS."

8, Stone Buildings, Lincoln's Inn: July 27, 1885.

That my good friend Mr. Thomas Kerslake has a right to claim the accident of having, in 1879, detected and traced the error of speaking of *Defnsaetas* as the name of the West-Saxon colonists of Devon, I do not dispute; but I hope he will not be hurt at finding that the error was detected and traced by others before him. In a paper, written in 1877, read at Kingsbridge in July of that year, and published in the *Transactions of the Devon Association*, vol. ix., pp. 198-211, I pointed out, at some length, that Sir F. Palgrave seemed to have made a mistake about the document printed in Wilkins's *Concilia*, p. 125; that the *Dunsaetas* of that instrument were probably inhabitants of Gwynedd or Gwent, and that the notion of the Exe having been a frontier stream between the Welsh Devonshire men and the English Devonshire men was a delusion. I further observed that if *Defnsaetas* (a word, by the way, of Sir F. Palgrave's own invention, being a mistaken reading of his for *Dunsaetas*) had been really the name of the men of Devon, the county would have been called *Devonsetshire*, not *Devonshire*. At that time I had not seen Thorpe's note at p. 352 of vol. i., of the *English Laws*, 8vo edition (1840), which seems to have called attention to the question for the first time.

But what is curious is that in 1877 I believed

Mr. Kerslake to be of the same opinion as Palgrave, for in 1873 Mr. Kerslake wrote as follows:

"This is in effect to say that there was a time when the frontier-line between England and Wales actually passed through the interior of the city of Exeter, dividing it into two distinct parts, and occupied by one of these two nationalities."—"The Teuton and the Celt in Exeter," *Arch. Inst. Journal*, xxx., 216.

So far from contradicting or opposing the above view, Mr. Kerslake seemed to adopt and support it with certain modifications of his own. So that, in venturing to challenge Palgrave, I thought I was combating Mr. Kerslake's view also.

And what is more curious is that I sent a copy of my paper to Mr. Kerslake among others; and in a letter from him to me, now before me, dated December 13, 1877, Mr. Kerslake writes: "I am glad you do not accept *Defnsaetas*." So that he must have read what I had written, but, as was very natural, must have forgotten all about it in 1879.

If I may be allowed to remark on the former letter from Mr. Freeman on this subject, I may say that probably the place to which he refers, but cannot remember, where the form *Defnsaetas* has been allowed to remain, is the map which appears at p. 35 of vol. i. of the third edition (1877) of the *Norman Conquest*. That map was (unfortunately as to this particular) copied for Green's *Short History of the English People*, and repeated (not without protest) in his larger *History*. Thus the error has, one way and the other, been widely circulated. It was repeated so late as in 1883 in the text of Green's *Conquest of England*, p. 234.

May I also observe that the study of "double names" cannot be complete without taking into account Kemble's paper on "The Names, Surnames and Nicknames of the Anglo-Saxons" in the Winchester volume of the *Journal of the Archaeological Institute*.

JAMES B. DAVIDSON.

SCIENCE.

RECENT WORK IN ASSYRIOLOGY.

Muntch.

MANY valuable books on Assyriology have been brought out during the last few months. The results of the important excavations made under the superintendence of the French vice-consul, M. E. de Sarzec, are being published in an admirable collection of ancient Babylonian inscriptions, of which the first part was issued a short time ago. We may specially call attention to the photographs of a cylinder inscription of thirty columns, containing more than 2,200 lines (plates 33 and 34 of M. de Sarzec's *Découvertes en Chaldée*), in which the name of the so-called ancient ruler (*patisi*), *Gudia*, is to be read. Other new documents will be found also in M. Joachim Menant's *Catalogue méthodique et raisonné de la collection de M. de Clercq*, of which the first part has lately appeared. A beautiful cuneiform text from a recently discovered cylinder, now in the Metropolitan Museum of Art at New York, has been transcribed and translated, with introduction and notes, by Dr. O'Connor, S.J., of the Woodstock College in Maryland, the text itself being authenticated by the skilful pen of the well-known compiler of a "Wörterverzeichnis," the Rev. J. N. Strassmaier. The department of Oriental Antiquities in the British Museum has not been idle. Mr. Pinches has given several remarkable tablets with philological remarks in the *Proceedings of the Society of Biblical Archaeology*, and has continued his very useful corrections and additions to the Fifth Volume of the *Cuneiform Inscriptions of Western Asia* in the *Zeitschrift für Keilschriftforschung*, where he has published

also a tablet containing archaic forms of the Babylonian characters. In the next part of the same *Journal* (to be issued immediately), Prof. Sayce will finish his paper on the medical tablets in the British Museum, which he has called a sort of Babylonian *Papyrus Ebers*. A fragment of a Syllabary has been published by myself, and collated again and partly corrected by Mr. Pinches. As one of the most valuable works on this subject we must finally mention the admirable third edition of Prof. Delitzsch's *Assyrische Lesestücke* (Leipzig: Hinrichs), with grammatical paradigms, a full list of signs, augmented by Babylonian and archaic forms of the cuneiform characters, newly collated or entirely new texts, like the so-called Zürich Vocabulary, the interesting "reading-book" of the young Asnapper (Kouyunjik 4378), the eleventh tablet of the Nimrod series, or so-called Deluge-tablet, newly translated by Prof. Oppert, and a short Assyrian glossary.

Besides those new publications of cuneiform texts, we have had several very interesting papers containing commentaries on Assyrian and Akkadian literature. Especially useful for lexicography and comparative studies is Dr. Jensen's Dissertation on the sixth tablet of the *Surbu* series, published in *W. A. I.*, iv., 7, 8, in which the author treats very cleverly of many difficult questions of cuneiform research, and proposes a new pronunciation for Akkadian roots, adding a number of philological notes on the Assyrian grammar and lexicon. Also Dr. Zimmermann, of Erlangen, in his little brochure in *W. A. I.*, iv., 29, No. 5, with a commentary, which he calls "Babylonische Busspsalmen," more especially in the introductory notes, gives some very interesting remarks on this part of cuneiform literature, and on the transcription of Assyrian. He rejects quite rightly, as we believe, the attempt to embody the Sumerian "in a certain family of languages, viz., the Turko-Tataric," newly made again by Dr. Hommel; while he concedes to M. Halévy and the late M. Guyard, that we have in our Sumerian texts not always a *lingua pura*, but one sometimes mixed with Semitic (i.e., Assyrian) elements, and that, in certain syllabaries, there are ideograms used in a different way from the others, which we may call, with M. Halévy, a kind of *rebus* (cf., Delitzsch in the *Literarisches Centralblatt*, 1885, col. 353 ff). Prof. Haupt has published, in the January number of the Chicago *Hebraica*, the first part of an excellent paper on Assyrian Phonology, where he gives a full list of paradigms for the vowels *a, i, u; ä, ê, ö* in Assyrian, with additional philological notes. On the Assyrian and Akkadian pronouns an interesting paper, by M. Bertin, has been published in the *Journal of the Royal Asiatic Society*.

I may be allowed to conclude these few remarks by calling attention to Prof. Delitzsch's Assyriological notices on the Old Testament in the *Zeitschrift für Keilschriftforschung*, and to an admirable little book by Prof. Francis Brown, of the Union Theological Seminary at New York, on the use and abuse of Assyriology in Old Testament study. May all those Semitic scholars who intend to point out the "historical results" of the new French discoveries in Tell-Loh remember what the author says on the abuse of it, and may all those who rejected the identification of Pul and Tiglathpileser remember what he says on the use of our "noble science"!

C. BEZOLD.

ENDOWMENT OF RESEARCH IN AMERICA BY PROF. TYNDALL.

We quote the following from the New York Tribune:

"Prof. Tyndall has given to Columbia College 10,800 dollars as a foundation for a fellowship in physics to be conferred by the corporation. A

written instrument conveying the gift has been placed in the hands of President Barnard by Mr. W. H. Appleton, of this city [New York]. In a letter to the trustees, accompanying the deed of gift, Mr. Appleton narrates the circumstances which led to this act of liberality on the part of Prof. Tyndall. The professor was invited to visit this country in 1872, and to deliver here a series of lectures. These lectures were given in New York, Philadelphia, Washington, and Boston. The net proceeds in this city were paid to the professor, though elsewhere only his expenses were paid. But as he did not come to this country to lecture for money, he resolved to constitute of these proceeds a fund for the encouragement of original research in physics in the United States. He placed this fund (amounting then to about 13,000 dollars) in the hands of three trustees, viz., his uncle, Dr. Hector Tyndall, of Philadelphia, Prof. Joseph Henry, of Washington, and Dr. E. L. Youmans, of New York, providing that any vacancies which might occur in this board should be filled by appointment by the president of the National Academy of Sciences for the time being. Prof. Henry and Dr. Tyndall having died a few years later, the president of the Academy, Dr. William B. Rogers, of Boston, appointed in their stead President Barnard and Prof. J. Lovering, of Harvard University.

"The design of Prof. Tyndall as to the application of the fund was that its annual interest should be devoted to the support of one or two fellows in science, who should be young men of talent and fondness for physical research, and who should be willing to devote themselves to original research for life. The trustees found some difficulty in selecting persons fulfilling these conditions; and after some years of experience they resolved to represent to Prof. Tyndall that the object aimed at by him would probably be better accomplished by placing the administration of the fund in the hands of some one or more educational institutions, where numbers of young men are always on trial, and where suitable subjects for this benefaction would probably be more easily found.

"In the meantime, the value of the securities in which the fund had been invested had largely increased, and the fund had grown also by the accumulation of its unexpected income, so that it reached 32,400 dollars. Prof. Tyndall, acting on the advice given him, resolved to divide this sum into three equal parts, and to give one of these parts to Columbia College, one to Harvard University, and one to the University of Pennsylvania. The negotiations necessary to effect this change have occupied several months, but have now been brought to a close, and the money has just been paid over to the institutions. At their meeting in October the trustees of Columbia College will receive official notice of the transaction, and will doubtless accept willingly the trust offered to them."

OBITUARY.

RUDOLF MERKEL.

[We have received, through Mr. R. Ellis, the following obituary notice of the well-known scholar Rudolf Merkel, written by Dr. F. Polle, who knew him intimately during the last six years of his life, and who has also had the advantage of receiving particulars of his early days from one of his oldest friends, Herr Hermann Besser.]

Lauenstein, Saxony: July 31, 1885.

RUDOLF MERKEL was born on March 29, 1811, at Düben in Prussian Saxony. He received his early education partly at Zeitz, where his father had been appointed to a post in the judicial service, and partly at the famous college of Schulpforte. Being highly gifted by nature as well as most devoted to study, he learnt not only what was to be taught in the college, but also English and Italian. After Aeschylus, Dante was always his favourite poet. From Schulpforte he passed to the University of Halle as a student of philology. While at Halle he was an active member of the Burschenschaft; and in about the year 1834 he underwent a short term of confinement in the

Hansvogel prison at Berlin on the charge of "demagogische Umtriebe," i.e., for having attempted to subvert the political constitution of the state. After his release, which seems to have been caused by want of evidence against him, he remained at Berlin, occupied in examining the materials left by Nicolas Heinsius with a view to the preparation of a new edition of Ovid. In 1837, he published the *Tristia* with G. Reimer, to whom he had been introduced by Lachmann. By this work Merkel's reputation was established. Later he became a teacher in various schools, for the longest period at Scheussingen. In 1845, he published the *Fasti*, which I am disposed to consider his greatest work; and in 1845 his larger edition of Apollonius Rhodius, followed by a smaller edition in 1862. In 1863, he was enabled to realise the dream of his life and visit Italy, obtaining leave of absence and pecuniary support from the Prussian Government. The laborious collation of the Laurentian MS. of Aeschylus which he then made was afterwards published by the Oxford Press. In the meantime he had three smaller works printed at his own expense—*Abhandlungen für Aeschylusstudien* (1867), *Aeschylus in italienischen Handschriften* (1868), and an edition of the *Persae*. On his return from Italy he accepted a professorship at the Quedlinburg College; and after resigning this appointment he remained at Quedlinburg until 1879, when he removed to Dresden. Here he first occupied himself with archaeology, the result of his researches being an important essay on *Aeschylus und Phidias*, in which he strove to prove that the character and artistic principles of the two were identical. This work remains unfinished; and the same fate befell a proposed edition of the *Prometheus Vinculus*, with critical notes and a metrical translation. Twice he interrupted these studies, the first time to revise his edition of the *Metamorphoses*, and the second time to revise his third volume of Ovid. While he lived at Dresden, he was averse to making new acquaintances. With only three persons did he maintain regular intercourse: Hermann Besser (mentioned above), his brother, Moriz Besser, the Russian councillor, and F. Bessides. He also carried on an animated correspondence with the lexicographer, K. E. Georges, of Gotha, though the two men never met.

Merkel used to boast that there was no Greek word unknown to him, and, indeed, I never found one. Besides, he was a fair French and English scholar, though his pronunciation of both these languages was abominable. Nor was his German pronunciation much better. He spoke the Saxon dialect, of which Max Müller says in his *Lectures on Language*:—"The Mohawks in America and the inhabitants of the kingdom of Saxony are unable to distinguish between the *mediae* and the *tenuis*." Those who had a pure pronunciation (like myself) he used to accuse of speaking affectedly. His style, in Latin as well as in German, was heavy—I might say clumsy and confused, partly by reason of the depth of his learning and the abundance of his ideas. Nor did he care to cultivate a better style. "Let my readers make some effort," he used to say, "to understand me. My writings are worth meditation." Shallow persons, indeed, accused him (as Cicero accused Heraclitus) of writing obscurely *consulto et data opera in maiorem sui gloriam*.

His illness, due to a cancer in the kidneys, first began to show itself in September of last year. It increased slowly but steadily, until he became physically incapacitated for work. His pessimism, which had always been conspicuous, now became positively rampant. A little while before his death, on May 12, he had the pleasure of seeing the jubilee of his doctor's degree celebrated at Halle by the whole university. He died on July 8.

F. POLLE.

SCIENCE NOTES.

THE American Association for the Advancement of Science holds its meeting this year at Ann Arbor, Michigan, from August 26 to September.

THE Astronomische Gesellschaft, which may be regarded almost as an international association of astronomers, will hold its meeting this year at Geneva, from August 19 to 22, under the presidency of Prof. Auwers.

THE Paris students are making preparations to celebrate the hundredth birthday of M. Michel Chevreul, the chemist, who was born on August 31, 1786.

THE August number of the *Journal of the Anthropological Institute* contains a valuable discussion on the subject of the racial purity of the Jews. Dr. Neubauer, of Oxford, seeks to show that great admixture with other races must have taken place, while Mr. Joseph Jacobs, in an elaborate communication, argues in favour of their ethnical purity. Mr. J. G. Frazer, of Cambridge, contributes an erudite paper on ancient burial customs, while Mr. Johnston describes the races he encountered in his journey to Kilimanjaro. The *Journal* also contains several technical papers of much interest to anthropologists.

M. HENRI MILNE EDWARDS, the successor of Cuvier in the Académie des Sciences, and of Geoffroy St. Hilaire as professor at the Jardin des Plantes, died at Paris on July 29, in the eighty-sixth year of his age.

FINE ART.

EARLY GRANITE CHURCHES IN DENMARK.

Sallinglands Kirker. 1ste Afdeling. Rødding Herred, Kjøbenhavn, 1884. [Eglises Danoises en Granit, surtout à la Campagne. 1^{re} Série. Les Eglises du pays de Sallingland. Publié par les soins du Ministère Royal des Cultes.] (Copenhagen: H. Hagerup.)

THE Danish Ministry for Worship and Public Instruction is doing a noble work for architects, especially for students of Early Christian architecture in the North. In 1869 we had to thank it for the Rev. J. Helms' large tome on Ribe Cathedral; in 1878 for the great work on the Bornholm churches by H. J. Holm; and in 1880 for J. B. Löffler's goodly volume on the country churches of the diocese of Sealand. To these I drew attention at the time, and now I have the pleasure of pointing out a fresh link in the chain. Dated last year, it has only this moment appeared, kept back by various hindrances.

The "Herred" or hundred of Sallingland, whose county town is Skive, is some distance from the ocean in North Jutland, north-west of Viborg. It has four hundreds, Hindborg and Norre on the east, Havre (including Fur) and the southerly Rødding on the west. This instalment only treats of Rødding. Future parts will handle the rest in the same exhaustive fashion. Its contents are most satisfactory. The Preface and Index are by the archaeologist Burman Becker, the general Introduction by the well-known ecclesiologist the Rev. Jacob Helms, and the detailed descriptions by the architect J. F. C. Uldall, who made the drawings and presented them to the Ministry. These drawings are here photolithographed on thirty-two plates, crowded with plans, &c., and with both

Danish and French scales of measurement. To make the whole generally useful, a *résumé* and remarks by the Rev. J. Helms are added in French.

Nothing could be more welcome to British art workers, the more as these buildings betray English influence. After the wooden churches in Jutland, which lasted long here and there and were finally superseded in the fourteenth century, came—as in neighbouring Germany—first tufa and other soft stones and the leaden roof (especially along the coasts), and then the rough but ready home material—at this time still common on the land, though now such a rarity—the granite boulders ages before torn off and swept down chiefly from the Norwegian fells. This hard gray-stone was patiently and carefully hewn into more or less square or oblong smooth blocks, fine-jointed work, for the outside walls and pillars, &c. The inside walls were usually of rough granite, the space between being filled in with graystone fragments. Buildings of this kind appear in the twelfth century, and run into the thirteenth. Then comes a less costly style (ending in the fourteenth century) of rough or slightly tooled granite for both outside and inside walls, the doors and windows continuing to be built of the smooth squared blocks. The oldest example of these dressed slabs is Ribe Cathedral, whose socles, pillars, and corners, are of this material; otherwise volcanic tufa is employed. But the oldest dated example of worked granite alone is Gjellerup Church, in the diocese of Ribe, which bears a Latin inscription announcing that it was raised in 1140. The number of these early small granite churches in Denmark is remarkable. Apart from some in Fyn and Lolland, &c., we have the great mass—about five hundred—in Jutland, some four hundred of them showing the dressed graystone slabs outside. When first built, these must have given a pleasing variety of colour. They have now commonly a monotonous hue, from the fine moss of ages. Their solemn massive style, with the Romanesque round arch, and mostly very narrow windows, announcing that these temples were also intended for refuge and defence in that unruly period, were in harmony with the landscape and the people. But the Romanesque features long held on, and are seen in many Jutland churches built after the Romanesque period proper had passed away. Mr. Helms has ably treated the date of these holy houses, and has brought original arguments to aid in the solution. He also points out incoming "Gothic" in the carvings of many edifices, partly from the bestiaries and partly from plant decoration.

Ere I conclude, a word or two on the particular churches here so well illustrated.

1. *Lem*, eight plates. Apsis still left. Striking and interesting sculpture outside. 2. *Voiby*, two plates. Small and low. Raw granite. 3. *Lime*, six plates. Apsis and porch. Very curious figures and reliefs. One of these, showing Christ-Widar slaying the Fenris-wolf, was used by me in my *Studies on Northern Mythology* (Williams & Norgate, London, 1883, p. 40 of the rider). 4. *Haasum*, three plates. Only spores of the apsis left. 5. *Ramsing*, four plates. Under the wooden table was found a stone altar, with its

"sepulchrum altaris," wherein was the usual reliquary, a tiny box of lead. 6. *Batting*, three plates. In 1870 was discovered a small stone altar with its reliquary. 7. *Kreiberg*, three plates. Apsis removed at the beginning of this century. 8. *Rødding*, three plates. Tower and porch not older than late in the middle age. Remarkable and very large stone altar, now in the Danish Museum. Rests on four short massive pillars. One of the front pair is carved as a bishop with a cross on his cap or mitre, and a cross on his breast. He uplifts both hands to bless.

As might be expected, the get-up of the volume is first-rate. GEORGE STEPHENS.

CORRESPONDENCE.

ROMAN CENTURIAL STONE AT CHESTER.

Liverpool: July 27, 1885.

I have read Mr. F. H. Williams's letter on this subject in the *ACADEMY* of July 25. As I am quite sure his only object is to arrive at the truth, I must certainly say that I disagree with his reading. The only doubtful portion of the inscription has been L·M·P at its close, and the form preceding those letters. From frequent inspection of the stone, I can say it is far more likely that what Mr. Williams makes the stalk of the leaf slip is an accidental pick mark than the line that runs somewhat diagonally at its base. Dr. McCaul in 1863 (*Brit. Rom. Inscr.*, p. 119) was the first to give anything like a correct reading of the inscription. He considered the form before L as marking the direction of the *limes*, and expanded the three letters as "L(imitis) m(ille) p(assus). We have another liminary mark on a centurial stone at Manchester, thus: f., which comes immediately before the P standing for *Pedes*, and is followed by the numerals (see my *Roman Lancashire*, p. 100). Whether Dr. McCaul should have substituted *pedes* for *passus* is open to question; but with that exception, I believe him to be right, and have several times given his reading at Chester, once, I believe, in Mr. Williams's presence. Mr. Williams's expansion "*Limes millium pedum*" is structurally incorrect; so is "*Ocrati*," which stands for "*Ocrati(i)*." The *nomen* could be nothing else. The century was that of Ocratius Maximus (not Ocratus Maximus), and *fecit* must be understood, so that the close will be "(has made) one thousand feet (or paces) of the *limes*," the direction of this wall or *limes* being signified by the figure before L. Both this and the Manchester inscription differ from those on the wall of Hadrian in having this liminary mark.

W. THOMPSON WATKIN.

NOTES ON ART AND ARCHAEOLOGY.

A CAST of the Hittite lion of Marash, with a complete Hittite inscription engraved upon it, has reached the British Museum, and is now exhibited in the Egyptian gallery. A copy of the inscription, the completeness of which renders it especially valuable, will be given in the forthcoming new edition of Dr. Wright's *Empire of the Hittites*. Another cast of the lion has been presented by Mr. Mocatta to the Society of Biblical Archaeology.

MR. ERNEST RADFORD has been asked to continue in the autumn the lectures he has been delivering at Scarborough in connexion with the Cambridge University Extension Society. The subject of his next course will be Architecture. Mr. Radford, at the same time, will repeat his former course upon "The Method of Art Study" at Harrogate, Halifax, and Doncaster.

THE choice collection of Anglo-Saxon and English coins formed by the late Rev. E. J. Shepherd, which was sold at Sotheby's last week, realised as much as £5,300 for 543 lots. The following were some of the highest prices: a gold half George noble of Henry VIII., unique and unpublished, £255; a gold penny of Henry III., £205; a silver Oxford crown of 1644, by Rawlins, £110; a gold Mary rial of 1553, £80 10s.; Briot's gold crown, £62 10s.; a silver Oxford pound of 1644, £51 10s.; and a penny of Archbishop Ethered, temp. Alfred, £50 10s.

AN interesting discovery has lately been made at Sidon. Some natives who were excavating for stone, after penetrating through the alluvial soil, dug through a deposit of blown sand six metres in depth, below which they found a stratum of earth containing flint implements, fragments of coarse red pottery, and other objects, among which a clay whistle may be noted. It is clear, therefore, that the Phœnician city of Sidon was preceded by an older settlement whose inhabitants were still in the stone-age. Flint-flakes and implements, it will be remembered, have already been found in the neighbourhood of the Dog River, north of Beyrût.

THE last volume of the *Revue archéologique* contains an interesting article by Prof. G. Perrot, entitled "The Monument of Eflatûn and a Hittite Inscription," in which an account and drawing are given of the curious monument of Eflatûn near Bey Shehr, in Asia Minor, first noticed by Hamilton, as well as of a new Hittite inscription discovered on a road leading from Ikonium. The discovery has been made by Prof. Sokolowski, who has been sent with other savans on a mission of exploration in Asia Minor by Count Lanckoronaki, and to whom the account and drawing of the monument of Eflatûn are due. As was already suspected, the monument and its sculptors turn out to be Hittite like those of Nymphii and Boghaz-Keui. The copy of the inscription is unfortunately too imperfect to show more than that it is of Hittite origin, and thus to fill up a lacuna in the series of Hittite remains which extend along the southern high-road from the Euphrates to the Aegean.

THE landscape painter, Ludwig Meixner, has just died in Munich. His moonlight pictures, chiefly of Swedish and Venetian scenes, but occasionally also German, have been much esteemed for the last thirty years. Meixner was born in Munich in 1828.

MUSIC.

MUSICAL PUBLICATIONS.

Songs of the North. Edited by A. C. Macleod and Harold Boulton. The music arranged by Malcolm Lawson. (The Leadenhall Press: Field & Tuer.) The national music of the world is a subject of general interest. The songs and ballads of the people have not only proved sources of inspiration to poets and musicians, but have helped to shape customs and laws, have shaken the foundations of the Church, and at times even determined the fate of empires. They have exercised a special influence over musical composers. Haydn, in his walks through the villages around Esterhâz, heard many a ditty and many a dance tune which proved the germs whence sprang many of his most characteristic pieces. Then there was Schubert, on almost every page of whose music we find traces of gipsy song or country dance. And among living composers, Grieg and Dvorák have pre-eminently shown themselves pupils of the national school. Scottish music has received an extraordinary amount of attention. The number of collections of Scottish airs is well-nigh legion. The first was printed at Aberdeen in 1662. One of the

most celebrated is Johnson's *Museum*, for which Burns wrote some of his best songs: the first volume appeared in 1787, and the sixth and last in 1803. Among modern collections that of Sir G. Macfarren holds a high place. The compilers of the volume before us have not aimed at completeness, but have gathered together unfamiliar Scottish and Highland songs, some of which, it is believed, are here written down for the first time. The editors, following the example of Burns, have set words in the Lowland Scottish language to old Highland melodies. New words have also been written for some of the melodies, and two or three melodies are themselves new. The pianoforte accompaniments by Mr. Malcolm Lawson are often extremely happy. He has sought to make them as interesting as possible, but in doing so he has occasionally used harmonies and rhythms which do not well assort with the quaint and simple character of the melodies. Neither can we approve, in every case, of the setting in four parts. In "Helen of Kirkconnel," for example, the words "I wish I were where Helen lies," seem certainly to demand only one singer. The whole matter of writing accompaniments to old songs is beset with difficulties, and if, at times, Mr. Lawson has erred, he has done so in good company. The volume is handsomely got-up, and has been dedicated by permission to the Queen. It contains some very attractive pictures by E. Burne-Jones, Sir Noel Paton, J. Whistler, and other artists, illustrating the subject-matter of the lyrics.

Daniel: an Oratorio. By Dr. J. C. Bridge. (Novello.) The composer is organist of Chester Cathedral, and this work was performed at the festival recently held in that city. It is not fair to judge the oratorio from the vocal score before us. Some portions, especially in the solos, appear to us rather tame, but by effective orchestration these might possibly become interesting. But we do not need a full score to see how skilfully and effectively Dr. Bridge writes for chorus. The oratorio was written as a musical exercise for his doctor's degree, and he had to satisfy the examiners as to his knowledge of counterpoint and fugue. We find, therefore, a good display of learning in the choral numbers: this we admire, but still more so the freshness, variety, and vigour of the writing. There are two instrumental movements. The first represents to us, by the aid of three themes, Daniel the prophet as philosopher, martyr, and patriot; the second various episodes of his career. In these, of course, much depends upon the orchestration. In the recitatives the composer shows signs of dramatic power. We should not omit to mention a fine chorus in the first part to the words "O where shall wisdom." There are phrases in it which show how familiar Boyce's Anthem must be to Dr. Bridge. There is no plagiarism, but in one or two places marked similarity of rhythm.

The Organist's Quarterly Journal. Parts 65 and 66. (Novello.) In part 65 we would notice two smoothly written *Andante*, by Otto Dienel and Stephen Kemp; a *Pastorella*, by P. R. Barclay, which begins well, but soon loses its pastoral character; and a clever Sonata in D minor, by J. Kattenfeldt. In part 66 there are two rather pleasing sketches by J. L. Gregory. The variations on the Sicilian Hymn, by G. Hepworth, are mechanical, and the Postlude, by G. H. Lott, vague and unsatisfactory.

National Book of Hymn-Tunes, Chants, and Kyries. Edited by W. A. Jefferson. (Patey & Willis.) This work contains upwards of one thousand compositions, all of which are published for the first time. It includes examples from the pens of the professors of four universities—Oxford, Cambridge, Dublin, and

Edinburgh—and of many composers more or less known in the musical world. But we are rather surprised at not finding the names of Mr. E. Prout and Mr. J. Barnby, or of Dr. Stainer and Dr. Bridge, in the list of contributors. Space would not permit us to mention all the good tunes in this large collection, or to class them in order of merit. Neither is there any special reason for doing so. We would rather recommend the book to the notice of all organists and choir-masters. Each one can select for himself; and all, doubtless, will be glad to possess this millenary magazine of modern British musical thought and feeling. The list of contributors is given at the beginning of the book, and an index of hymns for which the tunes were specially written, or for which they are considered specially suitable.

Te Deum. By Berlioz. (Stanley Lucas, Weber & Co.) This is a vocal score of one of the French composer's most remarkable works. It was noticed in these columns when recently performed under Mr. Manns' direction at the Crystal Palace. Berlioz's music without the orchestration is much like Shakspeare's play of "Hamlet" minus the Prince of Denmark; but Mr. C. A. Barry, who has arranged this "Te Deum" from the full score, has throughout given so many indications of the instrumentation that one can really get a very good notion of the composer's method of clothing and colouring his ideas. This vocal score is particularly welcome, for the full score is expensive; and of those rich enough to purchase it, we imagine only very few would be able to read it.

Manon. By J. Massenet. Vocal Score. (Novello.) The success of this opera at Drury Lane will, of course, make people anxious to try over the songs and play the pretty dance music. This vocal score has been published with the English version by Mr. J. Bennett.

A Patriotic Hymn. By Antonín Dvorák. Op. 30. (Novello.) Dvorák's hymn for chorus and orchestra deserves the notice of choral societies. It is an early work of the composer; and, if it does not rise to the height of his "Stabat Mater," contains, nevertheless, some charming and characteristic writing. The pianoforte accompaniment has been arranged by Heinrich von Káan; and the English version of the words, from Halek's Bohemian poem, "The Heirs of the White Mountain," are by the Rev. Dr. Troutbeck.

Freedom: Choral Ode. By E. Prout. Op. 20. (Novello.) Choral societies will be glad to become acquainted with this short, but clever, work. The poem by the Rev. P. T. Forsyth is bold and vigorous, and the composer has most thoroughly reflected the spirit of the words in his music. Like all Mr. Prout's vocal compositions, it is comfortably written for the voices. It commences with a short, but effective, baritone solo.

The Child's Voice. By E. Behnke and Lennox Browne. (Sampson Low.) The authors of this little volume are well known. They have collected from musical authorities a variety of facts and opinions in connexion with the important subject of children's voices. They also give their own views, and the book, therefore, is interesting and profitable.

Voice Use and Stimulants. By Lennox Browne. (Sampson Low.) This companion volume contains the opinions of the author and of 380 professional vocalists with regard to alcoholic drinks; and, from a perusal of the most important statements, it seems that, although in some cases wine and spirits are useful, and even necessary, yet the less a singer drinks the better he will be in health, and the better the condition of his voice.

J. S. SHEDLOCK

LITERATURE.

York Plays: The Plays performed by the Crafts or Mysteries of York on the day of Corpus Christi, now first printed from the unique MS. in the library of Lord Ashburnham. Edited, with Introduction and Glossary, by Lucy Toulmin Smith. (Oxford: Clarendon Press.)

MEDIAEVAL York was a pious and play-loving city. Its gild of the Lord's Prayer, numbering over one hundred members, was specially concerned with the presentation of the play of the Lord's Prayer, in which "all manner of vices and sins were held up to scorn and the virtues were held up to praise." Every tenth year about Lammas-tide was enacted the Creed Play; and annually, at midsummer, St. George was duly honoured with play and procession. Churchmen of the Reformation, if they did not wholly condemn the old religious drama, desired at least to revise and amend it in accordance with Protestant doctrine and Protestant feeling. The play of our Lord's Prayer, handed over in MS. to Archbishop Grindal in 1572, and the Creed Play, lent in MS. to Dean Hutton in 1568, were, perhaps, displeasing to those dignitaries; certainly the MSS. disappeared and were heard of no more. Happier in its history was the MS. of the York Corpus Christi Plays—the most complete collection of its kind in our language. Some attempts, indeed, were made in Reformation days to amend the text; as late as 1580 the plays were presented; after that date—the regular Elizabethan drama now causing them to appear rude and old-fashioned—they were discontinued, but the MS. was preserved, and having been purchased a century ago by Horace Walpole for a guinea, and sold at a later date for three hundred times that sum, it passed into Lord Ashburnham's hands, and has now the good fortune to find an editor—painstaking, conscientious, and well-informed—in Miss Toulmin Smith.

The writer who transcribed the York Plays in this unique MS. probably made his copy about 1430 or 1440, but the date of their composition was nearly a hundred years earlier. Chaucer had not yet lamented the Duchess Blanche, nor had Langland dreamed his dream of Piers the Plowman; but the *Cursor Mundi* had been written. In Miss Toulmin Smith's opinion there is a certain kinship between these York Mystery Plays and portions—in spirit almost dramatic—of the *Cursor*. Lenten time having come, and the hardships of winter being now past, the crafts would bethink them of the gaudy day when the city was to become an open theatre, and would select their best qualified amateurs to be examined before the mayor, who, in this duty of examination, had the assistance

of the most discreet and cunning players of the city. One would like to have been by while some predecessor of Bottom the weaver was undergoing a trial of his powers; how fitted he was for the part of Adam, being a sweet-faced man, a proper man, as one shall see in a summer's day; yet his chief humour was for Herod and the tyrant's vein, unless, indeed, the part of our Blessed Lady would not better suit his monstrous little voice. The fact, however, that Bottom was a weaver would, in large measure, determine the part in which he must achieve distinction, for each craft held together, and had its proper play in the great collective drama—a play sometimes connected, as it were, by a natural affinity with the craft which presented it. Thus Noah, builder of the ark, could not aptly wield the saw and mallet were he, when off the stage, fine-drawing as a tailor or deft only in the barber's art; rather let Noah be indeed a well-thewed shipwright, who, instructed by Deus, can, in spite of his five hundred years, square a board, join it to its fellow, and clinch it "with nayles that are both noble and newe." Or later, when, after the oft-repeated, ever-popular matrimonial quarrel with Dame Noah, he has entered the ark and is casting the lead, let the part be played by the worthiest man of the Fishers and Mariners' Gild. Who, again, so fit to represent the gift-bearing kings, yielding homage to the royal babe in Bethlehem, as members of the Gild of Goldsmiths? Gold and incense and myrrh surely become such hands as theirs better than the hands of butchers or fullers or tile-thatchers.

On the eve of the Corpus Christi festival banners displaying the city arms were placed at the appointed stations where each play in turn was to be presented; and early next morning, between four and five o'clock, the pageants had been wheeled out of the pageant-houses into the streets, and the players were ready in their places. To avoid the risk of strife in crowded streets and consequent interruption of the play, no man on Corpus Christi day was permitted to go armed in the city "with swerdes ne with Carlill-axes," saving knights and squires of worship that have swords borne after them. And so in the early summer morning would begin the series of nearly fifty short religious pieces, the rendering of which must have occupied a great part of the day.

The York Mystery Plays represent a period when the sacred drama had in large measure passed into the hands of laymen. The unknown author, however, may have belonged, as Miss Toulmin Smith conjectures, to one of the Yorkshire religious houses, the careful concordance of the several Gospel narratives, as shown in the plays, proving at least that he was well-versed in the Holy Scriptures. Some critics of our early religious drama, desiring to present their subject in a popular form, have given undue prominence to the humorous element which occasionally appears. It is true that in some collections the humorous element occupies a larger place than in these York Plays. But in the main the intention was serious, the treatment reverential, and the comedy of the sacred story was introduced in harmless places as a needful relief from the gravity of the action, and the ethical or spiritual character of the

persons. No citizen of York, no youth or maid could witness a performance of these Corpus Christi plays without becoming acquainted with a large body of Scriptural history, told in the main clearly, vividly, and faithfully—told often movingly and with touches of grace, sweetness, or pathos, while the devout mythology and the occasional outbreaks of honest mirth were, for well-disposed folks, very simple and harmless. We need not feel surprised on learning from a sermon of the fourteenth century directed against miracle plays that men and women wept at the sights they saw; and if they passed from tears to laughter were they the worse for their wholesome merriment? From the entire representation, beginning with the Creation and the Fall of Lucifer, closing with the Day of Judgment, there must have emerged a sense of a certain unity in the history of the world and of the human race, far from scientific indeed, but not without its value as informing the life of mankind with a spiritual meaning and moral dignity. But the best gift of the mystery plays was the gift of simple and sweet humanities. "Virgo Israel germinabit sicut lilium"; and here as a lily the maiden Mary stood in the sight of toiling English men and women, the ideal of maiden, wife and mother. The loyal old man Joseph, when he fears that Mary has played him false, thinks to steal away into the woods and leave her, yet not without a pang lest the wild beasts should slay one so meek and mild; nay, he will speak with her once more, and lo! she sits at her book praying for him and us and all that have need of aught. No man has ever touched "that berde [lady] so bright"! And when, unsatisfied by her gracious answer to his question, "Whose is the unborn child?"

"Yours, sir, and the king's of bliss,"

Joseph is still sorrowful, Mary turns to God, praying that this fatherly friend and husband may be comforted:

"Now great God of his might,
That all may dress and dight,
Meekly to thee I bow,
Rew on [pity] this wery [troubled] wight
That in his heart might light
The truth to ken and throw."

Whereupon the angel Gabriel appears waking Joseph from his troubled sleep, that he may reveal to him the mystery of the incarnate God. By and by the babe is born, old father Joseph standing unaware outside the manger in a cruel December frost. A sudden light shines forth through the ruinous shed, and Joseph enters:

"Mary. Ye are welcome, sir.
Jos. Say, Mary daughter, what cheer with thee?
Mary. Right good, Joseph, as has been aye.
Jos. O Mary! what sweet thing is that on thy knee?
Mary. It is my son, the sooth to say,
That is so good."

And Joseph kneels to worship this "blessed flower" on Mary's lap. Between two beasts, who are fain to keep him warm with their odorous breath, the babe is laid; and Mary will "happe" her own dear child

"With such clothes as we have here."

Presently enter the shepherds, simple knaves, who bring the small "sweet swain" their rustic gifts—a brooch with a bell of tin, two

cobnuts on a ribbon, a horn-spoon that will hold forty peas. These scenes of the infancy of Jesus have many such pretty incidents and touches of exquisite feeling, until the tone changes when Herod steps on the stage, uttering his wrath in verse strongly reinforced with alliteration, and desperately plotting the destruction of the innocents. The plays of the trial, tormenting, and crucifixion of Jesus offend our modern feeling by their cruel realism, much as do certain early German paintings, in which the truculent glee of the rabble and the soldiery in the sufferings of the divine victim are dwelt on to the loss of higher elements in the story of the martyrdom and victory on Calvary. And here it is worth recording, as a fortunate piece of retributive justice, that the squire who lets "Calvary locus" to Pilate for the thirty pence which Judas had cast down, is cheated of his title-deeds by Sir Kayphas and Sir Pilate, loses his land, and retires mourning and consigning the rogues, Jewish and Paynim, to the fiend. Yet Pilate, as the editor notes, is on the whole dealt with in a lenient spirit; it is Annas and Caiaphas who are eagerly vindictive and merciless in their pursuit of Jesus. In the old cathedral city the religion and nationality represented by Isaac of York were not conceived in a spirit of admiring gratitude and generosity.

Students of early English literature and of English religious life will find much to reward their study in this remarkable volume, with its eight-and-forty dramatic pieces and its introduction, so well planned and so admirably executed. The large variety of metres exhibited in the plays is especially to be noted; nor must we omit to mention the play-music, set by Mr. W. H. Cummings in modern notation, a feature of this collection which is all but unique. Three English songs in one of the Coventry Plays are the only other surviving examples of the music of our mediæval religious drama.

EDWARD DOWDEN.

The Rescue of Greely. By Commander W. S. Schley and Prof. J. R. Soley. (Sampson Low.)

THE official account of the three expeditions for the relief of the United States International Circumpolar Expedition under Lieut. Greely forms a chapter which, at least so far as the first two voyages are concerned, has no parallel in the history of Arctic enterprise. The story of these voyages reveals a combination of blunders which, but for its tragical consequences, would be a veritable Arctic comedy of errors. With regard to this part of the book, the authors expressly state that their aim has been "to describe the events simply as they occurred, and studiously to avoid all criticism of those who took part in them"; and, indeed, the facts speak so plainly for themselves that comment would be almost superfluous. The third expedition forms a striking contrast to the deplorable failures which rendered it necessary; and though it was too late in the field to do more than save from total extinction the unfortunate party it was sent to rescue, it could not well be outdone for perseverance, good judgment, and courage. The Lady Franklin Bay Expedition itself is only briefly touched upon, for the

simple reason that its commander is the only really competent historian of the achievements and sufferings of himself and his followers, and until his official narrative is published we must be content with accounts which are necessarily more or less defective upon certain important points. Meanwhile it is evident that he performed the greatest amount of scientific work possible with the means at his disposal, and that he made good his retreat from depôt to depôt without losing a single man until he arrived at Cape Sabine, where he confidently expected to find ample supplies, and to be within easy reach of a relief party. The causes which led to the miscarriage of the promised succour are fully set forth in the volume before us, which furnishes by far the most impartial and trustworthy account yet published of an episode even more painful in some of its details than De Long's disaster in the *Lena Delta*.

It will be remembered that Lieut. Greely's expedition was conveyed to Lady Franklin Bay by the steam whaler *Proteus* in August, 1881. Its object was not only to take regular observations in accordance with the plan of the International Polar Committee, but to work generally "in the interests of exploration and discovery." It was arranged that a vessel should visit the permanent station in 1882 and 1883, if possible, and that in any case depôts should be left at various points specified. If not visited in 1882, Lieut. Greely was ordered to abandon his station "not later than September 1, 1883," and to retreat southward by boat. The passage north was the most remarkable on record; and this unfortunately created the false impression that the difficulties of the voyage had been exaggerated, and that the station could not only be reached easily, but that it could be reached without danger. In 1882, however, the ice was in such force in Smith Sound that the relief ship *Neptune* could not get within 100 miles of Lady Franklin Bay, and after landing two depôts, each containing 250 rations, or ten days' supply, for Lieut. Greely's party of twenty-five men, she carefully brought back the remainder of the stores to St. John's. The unsuccessful attempt of the *Neptune* was followed in 1883 by the double failure of the *Proteus* and the *Yantic*. The *Proteus* reached 78° 52' N. lat., a few miles north and west of Cape Sabine, and was there crushed by the ice, owing to unskilful handling, nearly the whole of her stores being sunk or plundered by her crew; while the *Yantic*, after playing a game of cross purposes with the retreating boats of the *Proteus* until the summer was at an end, returned to St. John's without making the slightest attempt to retrieve the disaster which had already occurred, or landing a single ration from her abundant store of provisions. The net results of these bountifully supplied expeditions were summed up by the subsequent Court of Inquiry in the pithy statement that "from July, 1882, to August, 1883, not less than 50,000 rations were taken in the steamers *Neptune*, *Yantic*, and *Proteus*, up to or beyond Littleton Island, and of that number only about 1,000 were left in that vicinity, the remainder being returned to the United States or sunk with the *Proteus*." It is true that the instructions given to the commanders are

open to criticism, but they need not have been so rigidly adhered to; and if only a little independent discretion had been shown "it would have been a most happy occurrence." Had supplies been left at Littleton Island by any of the ships mentioned, a relief party could have remained there after the loss of the *Proteus*, as Greely had requested; and, in any case, the *Yantic* might have landed a party of volunteers from her own crew. Cape Sabine and Littleton Island were unquestionably the key to the situation, and had either been properly provisioned there is no reason why any member of Greely's party should have perished. When the fatal news of the second failure was received on September 14, 1883, "there was a general outburst of indignation." It gradually dawned upon the public that it was almost a certainty that Lieut. Greely was then on his way south, and that he was destined shortly to arrive at Littleton Island with little food, and with no possibility of retracing his steps, only to find that the Government had failed to carry out its pledge, and that he and his command were doomed to starvation and death. Measures were, however, immediately taken to avert the catastrophe, if it was still possible to do so; but it was finally decided that an expedition at that time of year would only lead to fresh disaster, and the information gained by the expedition of 1884 "proves beyond a doubt that this conclusion was right."

The expedition which was so fortunate as to rescue the survivors consisted of the steam whalers *Bear* and *Thetis*, and Her Majesty's ship *Alert*, which was presented to the United States Government for the purpose as an act of international sympathy and goodwill. The despatch and conduct of this expedition was thoroughly creditable to all concerned, and the highest determination and skill were required to force the vessel through the formidable ice difficulties which were encountered in Melville Bay and Smith Sound. Lieut. Greely's last camp was found on June 22, on a small neck of land about midway between Cape Sabine and Cocked Hat Island.

"It is not easy to give an idea of the desolate and horrible aspect of this bleak and barren spot, as it looked to those who reached it on that memorable Sunday in June 1884. In front lay the sea with its ice-pack stretching away to the northward, and at the back the glaciers and rocky precipices of the mountains. On one side was the slope with its rude graves, and on the other the deserted and roofless hut, with the ice-foot below it; while between them was the wrecked tent, in which lay the remnant of the expedition, half dead with cold, and hunger, and distress."

Lieut. Colwell cut a slit in the tent cover and looked in.

"It was a sight of horror. On one side, close to the opening, with his head towards the outside, lay what was apparently a dead man. His jaw had dropped, his eyes were open, but fixed and glassy, his limbs were motionless. On the opposite side was a poor fellow, alive to be sure, but without hands or feet, and with a spoon tied to the stump of his right arm. Two others, seated on the ground, in the middle, had just got down a rubber bottle that hung on the tent-pole, and were pouring from it into a tin can. Directly opposite, on his hands and knees, was a dark man with a long matted beard, in a dirty and tattered dressing-gown,

with a little red skull cap on his head, and brilliant, staring eyes. As Colwell appeared he raised himself a little, and put on a pair of eye-glasses. 'Who are you?' asked Colwell. The man made no answer, staring at him vacantly. 'Who are you?' again. One of the men spoke up: 'That's the Major—Major Greely.' Colwell crawled in and took him by the hand, saying to him, 'Greely, is this you?' 'Yes,' said Greely, in a faint, broken voice, hesitating and shuffling with his words, 'Yes—seven of us left—here we are—dying—like men. Did what I came to do—beat the best record.' Then he fell back exhausted."

How very nearly too late the rescue party were is further shown by the fact that there was

"no food left in the tent but two or three cans of a thin, repulsive-looking jelly, made by boiling strips cut from the sealskin clothing. The bottle on the tent-pole still held a few teaspoonfuls of brandy, but it was their last, and they were sharing it as Colwell entered. It was evident that most of them had not long to live."

For full details of the work accomplished by the unfortunate expedition we must await the publication of the records; but it is evident from the outline already published that, apart from the international observations, its geographical results were very considerable, and it also claims to have beaten Markham's farthest by about four miles. Besides all this, it has furnished an additional proof of the impracticability of reaching the Pole by way of Smith Sound, and materially strengthened the arguments in favour of the Franz Josef Land route. The price paid for these results has no doubt tended to discourage Arctic enterprise in the United States for the time being, but the impression would not be likely to endure, even if the authors of this volume had not so clearly shown that the disaster which occurred was solely due to preventable causes. Up to a certain point the enterprise was a brilliant success, but the extraordinary mismanagement of the first two relief expeditions was fatal. It is hardly fair to expect a "private in general service" (p. 39), or even a "young officer of cavalry" (p. 73) to be accomplished Arctic navigators; and the Secretary of War seems to have recognised this when he returned the plan for the second voyage with the endorsement that "it seems that it would be much more desirable to endeavour to procure from the navy the persons who are needed for this relief party" (p. 49). Even in the case of Greely's expedition, which was to remain at a permanent station making observations and explorations from its base, either on land or land ice, the lack of men accustomed to boats was felt, and the survivors stated that "if they had had one or two seamen their chances would have been better, and the result might have been different" (p. 109). But apart from the constitution of the relief parties, there is a tale of blunders far too long and too involved to bear compression. Those, however, who care to follow its windings, will find sufficient materials for forming a judgment on many points that have hitherto been obscure. The whole subject is treated with admirable tact and impartiality, and the narrative is well told and deeply interesting. The illustrations are from the photographs of the relief expedition, and there are several

useful maps. An index is the only thing wanting to complete a book which will be as interesting to general readers as it is valuable to Arctic geographers.

GEORGE T. TEMPLE.

Malthus and his Work. By James Bonar. (Macmillan.)

It was time that some one should state the truth about Malthus and his work. Perhaps there is little hope of turning the tide of feeling which has set against him, seeing that few of those who malign him have ever read a page of his works; but when the audacious and ignorant caricature which the author of *Progress and Poverty* puts forward as an exposition and criticism of the *Essay on Population* not merely is treated with serious attention, but is singled out for special admiration, one feels that the attempt is worth making. It is not only the reputation of Malthus which has suffered, though that is something; there is a constant danger of forgetting the truths which he established. His principle of population has at one time been put aside as a truism, and at another time been attacked as an insult to the Creator. Malthus himself has come to be regarded as a monster in human form, who thought vice and misery deserving of encouragement, and who was half suspected of sympathising with infanticide. And even by sober minds he has been treated as a man of one idea, which he rode to death. There is a satisfaction in turning, with Mr. Bonar's aid, from his later critics to see in what light he was held by his chief contemporaries. Godwin, before controversy had blunted his admiration, said that Malthus had "made as unquestionable an addition to the theory of political economy as any writer for a century past." Ricardo, who accepted the theory of population, never claimed to have discovered the theory of rent; he professed merely to follow in the footsteps of Sir Benjamin West and of Malthus, who, working independently, and publishing their tracts in the same year (1815), were the first to trace out its nature and causes. And from Macintosh comes this graceful two-fold compliment: "I have known Adam Smith slightly, Ricardo well, Malthus intimately. Is it not something to say for a science that its three great masters were about the three best men I ever knew?"

Malthus, the economist, deserves a higher place than he generally receives, but it is as a practical reformer that he is most worthy of remembrance. The consequences of his teaching were fully appreciated in his own day, when the administration of the poor law was bidding fair to sap the strength of the people and to ruin the country. Pauperism was steadily increasing. The morals of the people were steadily deteriorating. Almost every incentive to prudence was removed, for the industrious and independent labourer could look forward to no better future than the idle and careless. It was in struggling against this iniquity that Malthus spent his life, and it was due to him more than to any other man that its causes were at length understood. Though other hands carried it out, the Poor Law Amendment Act of 1834 was his work. "Without the discussions raised by the *Essay on Population*,"

says Mr. Bonar, speaking of the principles of that Act,

"it is very doubtful if public opinion would have been so far advanced in 1834 as to make a Bill, drawn on such lines, at all likely to pass into law. The abolition of outdoor relief to the able-bodied was nothing short of a revolution. It had needed a lifetime of economical doctrine, reproof, and correction to convince our public men, and to some extent the nation, that the way of rigour was at once the way of justice, of mercy, and of self-interest."

Though, as far as we recollect, his name is not mentioned in it, the Report of the Poor Law Commissioners in 1834 is the most convincing testimony to the truth of his teaching. When we contrast its recommendations with Pitt's opinion that relief should be a matter of right and honour instead of a ground for opprobrium and contempt, we can measure the extent of the change which was due in great part to the *Essay on Population*. Of course Malthus had not fought single-handed. In contending that the poor should be left to take care of themselves, he was offering the most comfortable of doctrines to the well-to-do. But the selfish assistance that he received on this account can easily be exaggerated. If belief in individualism was growing, there was growing alongside of it a conviction that the weak and helpless were fit objects of state protection. The strengthening of opinion in favour of the Factory Acts was a real obstacle to reform of the Poor Law. Malthus himself would have gone even further than the Commissioners. His proposal was not merely the reform, but the abolition of the poor laws, to be accomplished so gradually as not to affect any individuals then living or born within the next two years; though in one of his last chapters his rigour breaks down, and he admits there would be no harm in making an allowance for every child above the number of six, "not with a view of rewarding a man for his large family, but merely of relieving him from a species of distress which it would be unreasonable in us to expect that he should calculate upon." People will always differ emotionally as to the degree to which the principle of individual responsibility should be carried. But no one can question the magnitude of the service which Malthus rendered during the most terrible period in the social history of England, when he spent his life in driving the principle home to men's minds. And his reward has been that pamphleteers dismiss him contemptuously and unread, as the author of a foolish theory that while food increases by arithmetical, population increases by geometrical, progression. The most practical and careful economist of his time, who never moved a step save by the light of experience, who merely in the extent of his information was equalled by none of his contemporaries, is condemned to bear the reputation of a crude theorist. Yet the danger of which he gave warning is present even now. His lessons having been unlearned, we are preparing to undo his work. If politicians would but read his *Essay*, or the Poor Law Report of 1834, which is its outcome, we should hear no more of the baneful and retrograde proposal to place the family which receives medical relief in as good a position as the family which does not receive it.

Mr. Bonar's work is thus a timely contribution to the discussion of social questions. He summarises the work of Malthus, follows him through the various controversies in which he took part, criticises his critics, and concludes with the briefest of biographies. To summarise and recast the ideas of another mind is generally an unsatisfactory mode of teaching, but Mr. Bonar was probably right in thinking that there is no other way of making Malthus known. If the *Essay on Population* is little read and greatly maligned, the blame rests partly with the author. As his materials accumulated he constantly modified his opinions, or saw the need of stating them afresh; and, growing more and more careless in style, he made the changes almost mechanically in each successive edition. "This gives the *Essay on Population*," says Mr. Bonar,

"a unique character among economical writings. It leads the author to interpret his thoughts to us from many various points of view, leaving us, unhappily, often in doubt whether an alteration of language is or is not an alteration of thought. Malthus adds to the difficulty by omitting and inserting instead of rewriting in full. His chapters cease to be old without becoming new."

Rewriting would have been only a partial remedy. In dealing with such a subject, where at every turn some qualification must be made, or some apparent exception explained, perfect clearness of statement could be attained only by misrepresenting the truth, or by means of a literary power which Malthus, even in his early days, did not possess. He preferred the bare truth, and almost of set purpose put aside considerations of style. Mr. Bonar's aim has been to condense, to rearrange, and to illustrate by means of recent facts and the views of other economists. Of his elaborate essay there is little to be said save in terms of praise. He has not, indeed, overcome the difficulty to which Malthus yielded. The vital principles on which Malthus insisted could have been stated, we believe, in a more vivid manner; the essential parts of his teaching, about which when understood there can be no controversy, could have been more plainly separated from such as still offer a field for discussion; and the book would have gained much thereby. The chapter, also, on the critics of Malthus might have been made more complete. We should have expected, for instance, some reference to Sadler's charges of inaccuracy and dishonesty in the use of statistics. But one is inclined rather to dwell on the merits of the book. In every chapter it shows thorough work and wide reading, while it is written with much modesty, open-mindedness, and literary skill. Occasionally we come upon expressions peculiarly happy, as when M'Culloch is described as "a writer who reached absolute truth at a very early stage of study." Mr. Bonar offers no such tempting goal to his readers; but they must know the subject well indeed if they do not learn a great deal from him.

G. P. MACDONELL.

Prehistoric America. By the Marquis de Nadaillac. Translated by N. D'Anvers. Edited by W. H. Dall. (John Murray.)

So diligently have ethnological studies been prosecuted during the last half-century in North America that materials bearing on most branches of the subject have already been accumulated in embarrassing abundance. Hence the desire that has been felt both to co-ordinate these materials and take a general survey of the work so far accomplished. M. de Nadaillac's *Amérique Préhistorique* may be accepted as at least a partial expression of this desire. It embodies a convenient summary of methods and results, combined with a critical appreciation of such conclusions as may now be regarded as fairly established. Notwithstanding the title, its scope is by no means restricted to strictly prehistoric times; it also deals summarily with the native social systems and cultures growing immediately out of the unrecorded past, such as they were found at the epoch of the discovery. Thanks to this comprehensive plan, the author is able to discuss the fundamental questions bearing on the origin both of the American races and of their respective civilisations, two subjects which in a treatise of this sort could not be conveniently treated apart. On both questions his views, expressed with the caution characteristic of the true scientific mind, are those that seem best to harmonise with all the known conditions of the problem. To the American race as a whole he assigns a vast antiquity, and to their several cultures an independent growth, a two-fold standpoint already taken up by the present writer in all his essays on the subject. Wisely distrusting the evidence of the Calaveras skull, California, and other data adduced to prove the existence of Tertiary man on the Continent, he still holds that "everything points to the conclusion that the most ancient inhabitants of America were little inferior in antiquity to the earlier inhabitants of the Old World" (p. 506).

And this is, after all, the essential point which, once established, must control all our theories regarding the whole evolution of the *komo Americanus* in his various physical, social, and linguistic relations. Admitting the diffusion of the human family throughout both hemispheres in pre-glacial or paleolithic times, we at once get for its subsequent development a starting-point sufficiently remote to account for existing divergence, but not remote enough to efface the traces of a common descent. Herein lies the solution of most problems connected with the ethnology and philology of the New World. Thus the Mongoloid features—long, lank, black hair, absence of beard, more or less yellowish complexion, salient zygomatic arches, black peaky eyes—everywhere conspicuous from the Arctic to the Antarctic waters, would be explained by the spread of the Mongol family in pleistocene times either from America westwards, or more probably from Asia eastwards, for either hypothesis might be sustained. Those who had an opportunity of seeing the Brazilian Botocudos in London two years ago, and the Nomad Lapps who have just left us, must have been surprised to notice the much greater resemblance of the former to the Mongolic type, of which the latter are nevertheless supposed to

be a direct offshoot. Since the dispersion racial changes were till quite recently due in America exclusively to differences of environment, in Europe to this cause combined with admixture of foreign elements. Hence, notwithstanding the far greater distance in time and space, the American have departed less than the European aborigines from the common Mongolic stock.

So with the American linguistic family, which had also a common starting-point, as shown by the remarkable uniformity of its peculiar polysynthetic structure, characteristic of the great bulk of languages current throughout both divisions of the Continent. But in paleolithic times human speech was still everywhere probably in its infancy. Hence the germs, which alone were held in common by the primeval Mongolic peoples of both hemispheres, have long disappeared past all hope of recovery. The wild speculations still indulged in by an obsolete school of etymologists may be brushed aside as unworthy the serious attention of scientific philology. Being far less stable than physical features, language has necessarily become far more profoundly modified during the long ages of its independent evolution in different geographical centres. Thus it happens that while most anthropologists group all mankind in three, or perhaps four, great physical divisions, themselves mere varieties of a single species, philologists reckon their linguistic divisions, each representing a true species, by the score or the hundred. In America we accordingly find a considerable number of linguistic families, most of which belong doubtless to a single morphological order, but not one of which can be brought into any specific or generic relation with those of the eastern hemisphere. The common morphological order bespeaks, like the common physical traits, a common centre of dispersion, again most probably Asiatic. The great number of specialised groups within this order argues a vast antiquity at once for the race and its speech.

Thus also are secured great time and complete isolation, the two conditions alone needed to explain the subsequent independent evolution of the various civilisations of the Mound Builders, Pueblo Indians, Aztecs, Mayas, Muiscas, Peruvians, and others in North and South America. The stray Chinese or Japanese junks fortuitously stranded on the Californian seaboard, Plato's vanished Atlantis, old Egyptian or Phœnician navigators, even the "lost tribes" themselves, and the other shadowy sources to which these cultures have been referred by distorted human ingenuity, may all be forever safely dismissed, as unnecessary and absolutely inadequate to account for the special features of the native American social systems. Take the broad fact that the paleolithic implements of the old and new world are everywhere practically identical (Virchow), while the coarse ornamentation of the pottery from the ancient kitchen middens of Georgia, Maine, Massachusetts, and other parts of the United States, no longer bears any appreciable resemblance to that of the oldest European specimens (M. de Nadaillac, p. 49). Is it not sufficiently evident from this that after the old stone age the western cultures begin to diverge at once, and are henceforth of local

development, not borrowed from those of the eastern hemisphere? The latter culminate, say, with the Egyptian Pyramids, Luxor, Babel, Nineveh, the Parthenon, the former with the Toltec Pyramids, the inscribed palaces of Palenque, the temple of the Sun at Cuco, the roads, canals, reservoirs, and other monuments of the Incas. Here there are points of resemblance, as between the Tiaguanaco and Stonehenge monoliths, but also overwhelming evidence of originality and profound divergence. The differences are due to independent evolution, the resemblances to the fundamental unity of all mankind. As our author well remarks:

"Between the men of the New World and those of the Old there exists no essential physical difference. The unity of the human race stands out as the great law dominating the history of humanity" (p. 516).

And again:

"From the nature of the human mind and the natural direction of its evolution follow very similar results up to a certain more or less advanced stage in all parts of the world. At that stage, wherever it may differentiate itself in the normal line of progress, begin those features which characterise a stock or race as opposed to man in general. Attention has been frequently called in the preceding pages to the similar manner in which similar needs were met, similar artistic ideas developed, and similar results attained by people in widely separated parts of the globe. That from these similarities no special homologies can be drawn, is a fundamental canon of scientific anthropology, from the neglect of which science has suffered much. That these facts testify to the fundamental unity of the human race and to the analogous processes of evolution, through which distinct communities have reached a higher plane of culture, is generally admitted; but in the absence of connecting links their significance goes no farther" (p. 525).

The work, which is well translated, is enriched with numerous illustrations, a full index, and some useful supplementary matter by the editor, Mr. W. H. Dall, a writer already distinguished by his contributions to the study of the Eskimo and North-West Pacific races.

A. H. KEANE.

The History of Norfolk. By R. H. Mason. Part IV. (Wertheimer.)

THE issue of this part brings to a completion the first volume of Mr. Mason's work. Its first forty pages are devoted to a continuation of the general history of the county from the Revolution to the present time. This is followed by a list of the lords-lieutenant, to which reference will be made below, and of the sheriffs of the county. For this latter, Mr. Mason has evidently availed himself of the reports of the deputy-keeper of the records, which have placed within the reach of county historians far more accurate lists of early sheriffs than they could construct for themselves. The next section deals with the ecclesiastical history from the Revolution to our own days, and comprises the lives of the successive bishops, with lists of the works published by each, and not a few entertaining anecdotes. To this section there are appended lists of the deans and chancellors, and of the archdeacons of Norwich, Norfolk, Sudbury and Suffolk.

In dealing with "Roman Catholicism in

Norfolk since the Reformation," Mr. Mason has had at his disposal a great mass of accessible material, and has given us an interesting account of the fortunes and fate of those who clung, in the days of Queen Elizabeth, to their "obstynat papystrie" and "baddness of belyffe." Historical students will be grateful to him for printing, from local records and from the state papers, some valuable documents relating to Norfolk recusants in 1585-6. Here again we see how the labours of a generation have made it possible, and indeed needful, to re-write our local as well as our national history.

"The rise and progress of Nonconformity in Norfolk" is told in a fashion which would appear meagre to those acquainted with such a work as Mr. Urwick's on the far smaller county of Hertfordshire, but is not without its merits as a sketch of a subject which requires, to kindle its story into life, not only the knowledge of a specialist, but also the enthusiasm of a partisan.

With this section Mr. Mason completes his special portion of the volume; Dr. Raven contributes the interesting essay on "The Church Bells of Norfolk," which contains some excellent engravings; and Mr. E. A. Tillett an admirable paper on "Norfolk Tokens," of which no less than 325 are enumerated in the seventeenth-century series, and more than a hundred in those of the eighteenth and nineteenth. The annotations to this paper are most painstaking, and make it a model for others of this class. A list of peculiar Norfolk tenures brings the volume to a close, and shows signs of original research. It might be wished that in recording the Butler-ship tenure at Buckenham and at Wymondham Mr. Mason had called attention to their rival claims, and given his opinion on this vexed question. An Appendix of some seventy pages deals with the natural history of the county, and contains careful lists, by various contributors, of its birds, lepidoptera, plants, &c.

Mr. Mason's work continues to present the same singular contrast as at first. In dealing, for instance, with the lords-lieutenant (or, as Mr. Mason terms them, "lords-lieutenants"), he undertakes to give us some "facts" on the origin of an office, on which he tells us "there has been but little authentic information hitherto published." We accordingly learn from him that these officers "were formerly known by the name of *Heretogs*" [sic], that Lord Morley was probably "Lord-Lieutenant of Norfolk . . . under Edward III.," but that the office is first to be definitely traced in "a commission *de arraiations et capitaines* [sic] *generali contra Frances*," issued in 1545, for which peculiar phrase we are referred to "Ryder [sic] Foedera." This commission, as a matter of fact, was issued not only as here implied, to the Dukes of Norfolk and Suffolk, but to Lord Russell as well. It referred to the van, the battle, and the rear of the army to be raised for the French campaign, and cannot be held to represent in any way the appointment for defensive purposes of an officer to a single shire. Nor is Mr. Mason more happy in his allusion to the origin of the high sheriff. We learn from him that even before the conquest, "the sheriff in the circuit he made twice yearly, for the administration of

justice, was accompanied by four freeholders, the bishop of the district, and the earl and barons"—truly, a somewhat motley crew!

In short, what this work requires is careful revision by some qualified hand, so that its many excellencies may not be detracted from by singular and unnecessary defects. Mr. Mason should really have avoided such expressions as "The first stone was laid on the 15th August 1817, by the Hon. Col. Wodehouse, and was completed in 1819" (p. 487), or "During his year of office the Sheriff takes precedence in the county of all peers or other dignities [sic], except the lord-lieutenant" (p. 531)—a point, by the way, which is surely not beyond dispute. Such a misprint as "Willelmus de Noravilla" [sic] also speaks of want of care, as does the discovery under "Loyal Addresses" of paragraphs on such miscellaneous subjects as small-pox, income-tax, agricultural children, and the unpunctuality of a high-sheriff. If Mr. Mason, undeterred by the fate of his "revised" Howard pedigree, will but call into council one of the many friends who have helped him so well, and who may be qualified to undertake the task, the remaining volumes of his work, which deals with the parochial history, may be preserved from such blemishes as those alluded to, and may yet secure for him the credit that his industry undoubtedly deserves.

J. H. ROUND.

Le Père Goriot. Par Honoré de Balzac. (Paris: Quantin.)

BALZAC has, until lately, been obliged to be read almost wholly in the "cheap and nasty" form in which it has pleased the eminent publisher to issue him; like the merely scrofulous French novelist, he has been read too much "on grey paper, in blunt type." But there are signs of improvement; and not only comparative success, but real perfection has been attained in the issue of one of his principal works by M. Quantin, within the last few weeks. The edition of *Le Père Goriot* of which we speak forms the third in the series of "chefs d'œuvre of contemporary fiction" which M. Quantin is engaged upon. Flaubert's *Madame Bovary* was the first; Octave Feuillet's more superficial study, *Monsieur de Camors*, was the second. We have not seen the *Madame Bovary*; but *Monsieur de Camors* is in every way less satisfactory than *Le Père Goriot*, for, in the first place, it was not so well worth doing, and, in the second, it is not so well done. But M. Quantin's issue of *Le Père Goriot* is a model of what the *édition de luxe* of a great novel ought to be. It is printed in exquisite characters ("du plus pur Didot," we are told) in a volume not too bulky to be held with convenience; it has a simple tasteful cover—which the careful owner will, of course, send to the binder with the rest of the book; it is printed on a "papier vélin blanc," bearing the water-mark of Rives, and specially made in that central quarter of Paris known as "le Marais"; and, furthermore, it is, as we shall proceed to explain, admirably illustrated. The illustrations consist of ten delicately wrought etchings, in which M. Abot has excellently rendered the intentions of the young artist, M. Lynch, to whom the inventions are due. M. Lynch is a suffi-

ciently exact draughtsman, and a seeker after correctness in costume—the last-named qualification is an essential in an illustrator of Balzac, the action of whose novels takes place generally between 1815 and 1835, chiefly in the fifteen years of the Bourbon “Restoration.” But M. Lynch, in this admirable edition of Balzac’s melancholy masterpiece, has shown himself possessed of something even better than accuracy—he has shown himself possessed of imagination. He has understood with completeness what the novelist intended, and so far as possible he has realised the physiognomy of the various characters. It would be saying too much to say that he has done so altogether. We cannot honestly declare ourselves wholly at one with M. Uzanne on this point, for we hold that in the *table d’hôte* of Mme. Vauquez the figure of Rastignac is but inadequately expressed. Still, on the whole, the expression is excellent; and Goriot himself—the central figure of the book—is well followed up and well comprehended, from the first illustration to the last. The almost comic element in that inwardly solitary and sordid life is expressed in the head of Goriot stooping over his soup at the boarding-house *table d’hôte*; and absolute tragedy is reached in the final scene, in which, stretched on his mean bed, the old man’s hand falls lifeless over the coverlid, and the finely-dressed daughter, who has been to him as Goneril or Regan, faints at the perception of his death. A great novelist is illustrated atrociously if he is not illustrated very well. There is no middle path—no success that lies open to question. One’s understanding of Dickens, for example, is hindered, not assisted, if he is not illustrated by Cruikshank, or Hablot Browne, or Fred Barnard, or Charles Green. We are pleased to recognise that the designs of M. Lynch are in most cases a genuine help to the understanding of Balzac. The fancy has something it can hold to, and aid is given to the memory. Balzac’s most serious students need not scorn to possess the attractive and dainty edition of *Le Père Goriot* of which it has been a pleasure to make the eulogium.

FREDERICK WEDMORE.

CURRENT LITERATURE.

Landmarks of Literary London. By Laurence Hutton. (Fisher Unwin.) As Americans are the most numerous visitors to Stratford-on-Avon and Abbotsford, so it has been reserved for a pilgrim from England beyond the Atlantic to compile the first catalogue of the holy places in the metropolis of English literature. The many volumes that treat of historic London are by no means wanting in literary allusions; but, up to the present time, there has been no book devoted to the single subject of recording the dwelling-places and other haunts of those authors whose names are associated with London. It would be difficult to praise Mr. Hutton too highly for the spirit in which he has conceived his design, and for the thoroughness with which he has carried it out. Not content with collecting the occasional references of his predecessors, he has cheerfully undertaken the double drudgery of verifying their statements (wherever possible) by means of contemporary documents, and of tracing the succession of bricks and mortar down to the year 1885. He has thus written not only for the present, but also for the future. London has been rebuilt under the eyes of men still living

almost as completely as the City was rebuilt after the Great Fire. Nor does it seem probable that the process of reconstruction will be stayed. Our children will, therefore, be grateful to Mr. Hutton for commemorating in each case the result of his own inspection of every historic house, its condition, and its present name and number. And we must ourselves thank him for having incalculably augmented the value of his book for use by two exhaustive indexes—the one of names, the other of places.

Over-pressure in High Schools in Denmark. By Dr. Hertel. Translated from the Danish by C. Godfrey Sørensen, with Introduction by Dr. Crichton-Browne. (Macmillan.) Following a well-known English precedent, a Danish physician has undertaken an amateur enquiry into the health of the scholars in certain schools in Copenhagen. Dr. Hertel’s enquiries were confined to the higher class schools for boys and girls in that city, and did not extend either to the elementary schools or to the state of Danish education generally. Within that range, the facts he has ascertained, if true, undoubtedly deserve the serious attention of the parents of scholars, as well as of the Government, in that country. But there is a looseness in his notion of evidence, and in his way of collating facts, which will go far to render ordinary readers distrustful of his conclusions. He appears to have sent out printed forms of enquiry to 3,141 boys and to 1,211 girls, and to have asked, *inter alia*, how many of them suffered from anaemia, scrofula, nervousness, headache, curvature of the spine, and casual complaints. From the answers he has constructed some elaborate tables giving the percentage of boys affected by each of these ailments. These tables show, shortly, that 62·7 per cent. of the scholars are healthy, 29·9 per cent. sickly; while for 7·9 per cent. he obtained no returns. The figures do not appear to have been verified by any personal enquiry or observation. Dr. Hertel admits that 90 per cent. of the returns were filled up by the parents or friends without consultation with the family doctor; and it is evident that under such conditions a return, grouping together all the scholars who are recorded as being nervous or suffering from headache or casual complaints, under the rather vague designation of “sickly,” is, either from a medical or a social point of view, well-nigh worthless. Of much more value is the evidence Dr. Hertel has collected respecting the hours of school-work—a point on which the testimony of parents may, of course, be accepted with less misgiving. It appears that the number of hours per day spent in school and in preparation at home is 4·6 in the lowest class, and rises rapidly to 8·9 and even 10 hours per day in the classical and natural science sections. Beside this, 908 pupils, or 28·7 per cent. of the boys, appear to receive extra private tuition, and thus the daily work of the higher scholars is brought up to 11 hours. Similar particulars are given in detail in relation to the girls’ high schools, in which there are, for scholars of the age of eleven, 8 hours, and at the age of fourteen to sixteen 9 hours of daily work, besides 4 to 6 hours per week at the practice of music. The author complains of the unhygienic conditions of many of the school-rooms, in some of which there are only 50 cubic feet of air for each child. He also bewails the slenderness of the provision for play and for physical exercise, and the indisposition of many of the more studious scholars to avail themselves of such provision as exists. In all these particulars there is a striking contrast between the conditions of school life in Denmark and those with which we are familiar in England. Dr. Crichton-Browne’s smart and rhetorical Intro-

duction adds little to the value of the book. It will not help an English reader to draw any practical inference from Danish experience. It keeps out of view the fact that the hours of school-work which Dr. Hertel complains of in Copenhagen amount to at least double of those in English elementary schools, and that in those schools there are no competitive examinations at all. Yet it reiterates, without any further verification, vague denunciations against the whole system and spirit of English education, and declares it to be pervaded through and through by false ambition, excitement, and “cram.” Throughout the Introduction the indefinite word “over-pressure” is used as a convenient term to designate any form of education which the writer happens to dislike, and his dislike extends to the whole fabric of English education, higher and lower. But the sense in which the word can be properly used, and the kind and degree of work which, from the point of view of medical science and experience, deserve to be called excessive, are not defined. On the whole, it is clear that while, to an Englishman, the amount of mental application required from Danish school-children appears to be too great, to a Dane or a German that required in English schools probably seems too little. Meanwhile, the parent or the cosmopolitan philosopher, who desires to gain from medical experts an estimate of the true and lawful claims of the bodily and mental faculties respectively in the matter of education, will derive little or no guidance either from Dr. Hertel’s treatise or from Dr. Crichton-Browne’s Introduction.

A Glance at the Italian Inquisition. A Sketch of Pietro Carnesecchi. Translated from the German of Leopold Witte by John T. Betts. (Religious Tract Society.) This is one of the minor volumes to which the Luther Commemoration of 1853 gave rise. The subject is of interest, for Carnesecchi was one of the distinguished band of esoteric reformers who gathered round Juan de Valdés at Naples, and the only one who, after more than one escape from the Inquisition, finally perished at the stake. In his translation of this work Mr. Betts has far too much effaced himself. Corrections might have been made, and additional information might easily have been given by the coadjutor of Boehmer, and the editor and translator of so many of the works of Valdés. The version, too, is so literal as to be sometimes equivocal, or almost unintelligible in English. It is difficult to conceive what an otherwise uninformed reader would make of the paragraph on the CX Divine Considerations on page 27. Mr. Betts might surely have mentioned that an edition of the thirty-nine Spanish originals was printed by Boehmer at Bonn in 1880, for Señor Brunet of San Sebastian. So Babington’s Cambridge edition (1855) of Benedetto’s treatise *On the Benefit of Christ*, might also have been mentioned when speaking of that work. The description of the “Marguerite des Marguerites” as “the sister of Francis I., the Queen of Navarre, and mother-in-law of Antoine de Bourbon, an enlightened Protestant,” almost equals that of Boyle as “Father of Chemistry, and the brother of the Earl of Cork.” Carnesecchi may in one sense be considered as the Cranmer of the Italian Reformation. The judgment whether he were the hero his friends proclaim him, or the accomplished tergiversator his enemies adjudged him, will probably depend more on the reader’s theological prepossessions than on the known facts of his life. Considering that the opinions of Valdés, his master, are in many points more in accordance with those of the Friends and of the Plymouth Brethren than of any of the more settled Churches of the Reformation, it is difficult to understand in what sense Carnesecchi proclaims “my innocence” (p. 70). That his theology was Scrip-

tural and Evangelical may be considered to be true by those who share his opinions; that he was innocent of opposition to the cherished dogmas of the Roman Catholic Church, and of returning to that opposition after liberation and promises to the contrary, the story of his life, even as here told, seems to contradict.

Suakin, 1885: being a Sketch of the Campaign of this Year. By an Officer who was there. (Kegan Paul, Trench, & Co.) The interest of military operations is now so completely forestalled by the telegrams of newspaper correspondents that they no longer afford an opportunity for officers to attempt a literary reputation. Yet it should not be forgotten that Havelock, among others, first attracted public attention in this way. The present volume does not pretend to be a contribution to history; but it is readable and (except in two or three passages) free from the besetting military vice of fault-finding. We notice that the legend of Osman Digna being a son of French parents on both sides is retailed as if it were sober truth.

The Black Forest: its People and Legends. By L. G. Séguin. Third Edition. (Hodder & Stoughton.) Whoever has looked from the old Castle of Baden over the dusky sea of pines spreading far and wide around must have felt that the Black Forest is something very different from what he has seen elsewhere. This distinction extends to the inhabitants. "With the exception of one or two palaces," says Miss Séguin, "there is no residence of more pretension or importance than a Bauer's farmhouse."

"The peasant is lord of all." So she has much to tell us of his industry, his saving habits, his ambition for his children; of the staple trade in timber, of clockmaking, and of kindred arts. Space too is found to descant on mineral baths, and "that peculiar craving after water, in some form or other, which affects the Teutonic mind at some seasons of the year," a weakness atoned for at other seasons by total abstinence. The strength of the book, however, lies in graphic description of natural scenery and villages, and in an excellent collection of legends told with remarkable skill. Of the former, one of the best to quote—as being most compact—is the description of the Wiesenthal, "the Lancashire of the Black Forest, but a Lancashire without smoke, without grime, without squalor, without ugliness," thanks to the water-power of the Wiese:

"A purling, babbling trout stream, worthy of 'meek Walton's heavenly memory'; a road that winds beside it through verdant hillsides clothed with every varying shade of green, melting away into gold, or, as the autumnal tints steal on the year, blazing out here and there into a glow of fiery crimson; peeps, too, now and again into deep forest glades, where the startled squirrel leaps from bough to bough, or the rabbit scuttles hastily away from its browse at the dainty tree-roots at the foot of the approaching traveller; the call of the cuckoo in spring, the song of the lark and the nightingale making both day and night vocal;—these are sights and sounds yet to be seen and heard in the busy, bustling Wiesenthal, which make an idyllic region even of this happy valley, which modern industry has claimed for her own, and from the stones of which she grinds golden dust."

Here again is the living portraiture of Schönauf:

"In the centre of the village, as though dropped by an artist's hand, stands the little church, its wooden spire rising picturesquely in a gap formed by the dark outlines of two mountain-masses. The houses of the village, across which swing oil lamps by way of illuminators, are very old, so old that some are, it is to be feared, approaching dissolution, but of most idyllic appearance. Enormously deep thatch that has gathered a hundred beautiful tints from time, or that may, here and there, be golden-fresh, slopes down to within a few feet, comparatively, of the ground.

The houses are entirely of wood, after the Swiss-châlet style; carved wooden balconies, for the most part of a rich sienna colour, adorn the fronts, and form the approach to the upper floor of the house by an outside stair: every tiny window, moreover, of almost every house being so crowded and heaped up with flowers—masses of scarlet geranium, of rose-coloured floss, or many-tinted marigolds—that it is difficult to imagine how the inhabitants manage to live, breathe, move, and have their being within them."

The legends are plentiful—both pathetic, as those of the Wildsee and the Castle of Lauf, and humorous, as those that tell of the doings of Poppele, or of the attempt to bottle the demon of the Feldberg. They are, however, too long to quote, and, indeed, it would be scarcely fair to remove them from their context. The book has already reached a third edition. If, as it deserves, it reaches a fourth, the portly volume might well be reduced to a size more befitting a travelling companion. The historical introduction might perhaps be dropped, including a quotation from Caesar's, "*De Gallo Bellico*!" Such blunders as "the knight rung his hands," "the treue maid," and the repeated misspelling "Heidelberg" should not have survived two editions, even if we charitably ascribe their origin to the printer. Beyond these microscopic blemishes and a grammatical slip on p. 326, there is little to carp at; and Miss Séguin's bright, clear, and graceful style forms a refreshing contrast to the slipshod verbosity of most books of travel. Hers is a work well calculated to undermine the resolution of one who had made up his mind to forego a summer holiday.

THE series of "Bell's Reading Books," which we have more than once commended for consisting of continuous selections from standard authors, has just been augmented by two more volumes. These are *Selections from the 'Spectator'*, edited by Mr. Walton N. Dew, and *Selections from 'The Arabian Nights'*, edited by Mr. George C. Baskett. The former comprises the whole of "Sir Roger de Coverley" and some thirty-seven others of the best known papers. The latter is abridged from Jonathan Scott's translation, and is illustrated. We do not care much for the illustrations, which have evidently seen service before; and what would Capt. Burton say to this description of a scimitar: "a short and sharp sword, which curves backwards towards the point"? Still, we would not like to leave the impression that both books are not admirably suited for their purpose—and, indeed, suited for many other readers than those in elementary schools.

A Sprig of White Heather. By Austin Clare. (S. P. C. K.) We can cordially recommend this simple little story of Northumberland peasant life. It is only a slight sketch, but it has more reality of portraiture in it (and more of genuine pathos, though all ends happily at last) than many a successful novel. The blue and brown illustrations are badly managed.

The Money Jar and The New Terence at Edgbaston (Kegan Paul, Trench & Co) are two pamphlets by Mr. E. Bellasis about the Latin plays at the Birmingham Oratory School, of which accounts have from time to time appeared in the ACADEMY. They seem intended for "home-consumption," but may interest others who care for the recent revivals of Latin plays in schools. The lists of "distinguished visitors" at the performances should be omitted.

NOTES AND NEWS.

WE greatly regret to learn that Mr. Ruskin, whose health during the past summer has been exceptionally good, is suffering from severe illness, which causes much anxiety to his friends.

MR. S. R. GARDINER has resigned the professorship of modern history at King's College, London, in order that he may devote himself without interruption to his History of England under the Stuarts. His successor in the chair is Mr. J. K. Laughton, of the Royal Naval College at Greenwich, whose lives of naval heroes form such a valuable feature in Mr. Leslie Stephen's *Dictionary of National Biography*.

DR. L. LOEWE, the companion of the late Sir Moses Montefiore during the latter years of his life, is engaged upon a memoir of him, which will appear shortly, with many unpublished documents and illustrations.

MESSRS. MACMILLAN announce a *Tennyson Birthday Book*, edited by Emily Shakespear.

MR. BARRY O'BRIEN's second volume of his *Fifty Years of Concessions to Ireland*, completing the work, will be published by Messrs. Sampson Low & Co. next month. It will contain much matter of interest in connexion with the Irish question.

PROF. VAMBÉRY's new work, *The Coming Struggle for India*, will be ready for publication on Wednesday next, August 12. It will be furnished with a coloured map of Central Asia, showing the successive advances of Russia towards India.

DR. WILLIAM W. IRELAND, of Preston Lodge, has in the press a work entitled *The Blot upon the Brain: Studies in the History of Psychology*. It treats of the hallucinations of Mahomet, Luther, Joan of Arc, Swedenborg, the insanity of the Caesars and of Ivan the Terrible, and the hereditary neurosis of the royal family of Spain, &c. Messrs. Bell & Bradfute are the publishers.

THE work by Prince Ibrahim Hilmy on the Literature of the Sudan, announced in the ACADEMY of last week, should have been stated to be on the Literature of Egypt and the Sudan.

THE fourth volume of the "Imperial Parliament Series," *Russia and England*, by Mr. W. E. Baxter, will be published in the course of two or three weeks by Messrs. Swan Sonnenschein & Co. The earlier volumes of the series are *Imperial Federation*, by Lord Lorne; *Representation*, by Sir J. Lubbock; and *Local Administration*, by Messrs. Rathbone, Pell, & Montague.

MR. DAVID NUTT will shortly publish a work in Hebrew rhymed prose by the Rev. Dr. Chotzner, of Harrow, called *Sichronoth*; or, Reminiscences of a Student of Jewish Theology. It will be accompanied by an essay in English on the Rise and Progress of Hebrew Poetry in post-Biblical Times.

THE Association of Old Brightonians is preparing for publication the early portion of the Brighton College Register, from 1847 to 1863, containing the names of the first thousand boys who entered the school, with short notices of their subsequent career. The editor is Mr. H. J. Mathews, The College, Brighton.

THE first two volumes of the New York Shakspeare Society will be published in September: one will contain Mr. R. S. Guernsey's paper on "The Ecclesiastical Law in *Hamlet*," in which he maintains that the description of Ophelia's funeral is a faithful representation of the old English law regarding the burial of suicides; the other will be "A Study in Warwickshire Dialect," by Mr. Appleton Morgan. The volumes will be bound in black and gold, with a facsimile of the first grant of arms to John Shakspeare.

MESSRS. WARD AND SONS, printers, of Newcastle-on-Tyne, have achieved a triumph

in the manner they have reprinted the original woodcuts in their Memorial Edition of *Bewick's Works*. Vol. i., "The Land Birds," is now before the public; vols. ii.-v., completing the work, are promised within twelve months. The entire edition of 750 copies has been secured by Mr. Quaritch.

MR. R. C. CHRISTIE's book on Etienne Dolet has been translated into French by Prof. Casimir Stryienski, and will be published immediately by Messrs. Sandoz & Fischbacher under the title *Dolet, le Martyr de la Renaissance: sa Vie et sa Mort*. It is, we believe, in no small measure due to Mr. Christie's labours that a subscription has been cordially supported to erect a statue to Dolet in one of the public squares of Paris.

M. EGGER, who has been chosen by the Académie des Inscriptions to deliver an address at the annual public meeting of the Institut on October 25, will take as his subject "L'Encyclopédie, les origines du mot et de la chose."

DR. LUDWIG MAYER, known through his association with Dr. Schliemann in Greece, is at present staying at Freiburg, where he is examining the great mass of MSS. left by the late Dr. Lasker, the German politician, with a view to the publication of some of his literary remains.

MISS FLORENCE WARDEN's *The House on the Marsh* has been translated into German, for the *feuilleton* of the *Basler Nachrichten*. At present one of the late "Hugh Conway's" tales is running its course in the same newspaper.

DR. BÜCHSEL is at work upon a fourth volume of his *Erinnerungen*, which will deal with his clerical labours in Berlin. An English translation of the first volume was published about twenty years ago, under the title of *My Ministerial Experiences*.

It seems that the state archives of Magdeburg are likely to be removed to the university of Halle. A motion to that effect will be proposed at the next Landtag, and the majority is said to be in favour of its adoption. By this transfer the city will lose the most important and extensive materials for its own history and that of the bishopric.

AUGUSTO VERA, the translator of Hegel's works into Italian, has died in Naples at the age of seventy-two.

ORIGINAL VERSE.

ZWEI BOUNDELS.

(Dem grossen Meister A. C. Swinburne, als schwaches Zeichen meiner Hochachtung, gewidmet.)

I.

In schwarzer Lebensnacht erscheinen helle Lichter:
So haast auch du—der Welt dein Lied gebracht,
O Swinburne—Wahrheitsheld und stolzer Freiheitsdichter,—

In schwarzer Lebensnacht!
Vor eines reinen Wortes edler Macht
Zeigt boese Tyrannei erschrockene Gesichter,
Wenn du ihr drohst in deiner Geistespracht:
Der Slave sieht, entzueckt, in dir den strengen Richter
Des Unterdrueckers dunk'ler Niedertracht,—
Die Siegesstunde kommt: sein altes Joch zerbricht er

In schwarzer Lebensnacht!

II.

O helle Tage stolzer Jugendzeit
Mit meinem kühnen Losungsruf: "ich wage!"—
Sie zeigten mir die enge Welt so breit,

O helle Tage!

Die Menschheit schlæft in diesem Sarkofage:
Zum ew'gen Traum' fuehl' ich mich auch bereit,—
Doch unterdrueck' ich jede Sehnsuchtsklage...
Ob ich nicht glaube an Unsterblichkeit

In eines Slaven traurig-bitt'rer Lage,—
Seh' ich sie noch, im gold'nen Hoffnungsakleid,
O helle Tage!

SERGEI BERDIAJEW.

OBITUARY.

THE REV. H. T. ELLACOMBE.

THE father of the University of Oxford, one of the oldest clergymen of the Church of England, and the chief student of bells in the western counties, died on July 30. This was the Rev. Henry Thomas Ellacombe, who has been rector of Clyst St. George, where he died, since 1855. He was descended from two prominent opponents of the Stuart rule in England during the seventeenth century. His ancestors were John Lisle, the Commissioner of the Great Seal under Cromwell, who was assassinated at Lausanne in 1664; and his wife, Lady Alice Lisle, who was executed by sentence of Jeffries. Mr. Ellacombe was born in May, 1790, and matriculated at Oriel College, Oxford, then under the provostship of Dr. Eveleigh, in 1808, taking his degree of B.A. in 1812. The academic discipline of his time he has himself told in the pages of *Notes and Queries*. All dons wore black breeches and silk stockings from morn till night, while the undergraduates were compelled to adopt breeches and white cotton stockings. The dinner hour was at four, and every one was forced to appear in silk stockings, priced at eighteen shillings a pair, and breeches with knee buckles. This was the imperative costume of 1808-10; but the practice was broken through by Bigaud, a Fellow of Exeter, who, being "of an enlarged mind," connived, while he was holding the office of proctor, at an undergraduate wearing trousers. For three years after taking his degree, Mr. Ellacombe studied engineering in the workshops and under the instruction of Sir Isambard Brunel; but his tastes were for other matters, and he soon decided to enter the ministry of the Church of England. He was ordained deacon in 1816, and priest in 1817; but his first appointment to an ecclesiastical benefice took place in 1835. In that year he was instituted to the vicarage of Bitton, in Gloucestershire, where he remained until 1855, when he was nominated to the rectory of Clyst St. George, near Topsham, in Devon. In this delicious retreat he dwelt until his death—a model parish priest ministering in a model church to the parishioners of a model village. His life in Devonshire will be familiar to all who have read the Reminiscences of the Rev. Thomas Mozley. The parsonage overflowed with engravings and caricatures of society and politics from 1790 to 1810. The gardens, which absorbed a great part of his spare hours, were the wonder and delight of the neighbourhood. Plants and flowers formed his chief hobby at home; and during his walks abroad he collected, with all the enthusiasm of a nature constitutionally ardent, every scrap of information which he could procure on bells and bell-ringers. In this pursuit he mounted into every belfry and church tower in Devonshire, and his notes and collections were embodied in 1867 in a handsome volume descriptive of the bells of Devonshire. This was followed in 1874 by a kindred volume on Somerset. In the compilation of these works, and in the answering of the scores of letters which he received on bells from clergymen and bell fanciers, a great part of his time passed away. His services on campanology were ever in request, and ever given without stint. Many of his communications, containing the reminiscences of a life long protracted beyond the usual age of man, appeared in the columns of *Notes and Queries* and the *Builder*. His wife was a niece of Henry Maudslay, the celebrated engineer; and his son is the Rev. Henry Nicholson Ellacombe, who succeeded his father at Bitton, and who is himself known as a zealous student of plant-lore and archaeology.

W. P. C.

THE death is also announced, on August 3, of the Rev. Dr. John Barron, late Michel Fellow of Queen's College, Oxford, and rector of the college living of Upton Scudamore, in Wiltshire, since 1850. He was the author of *Scudamore Organs*; or, Practical Hints respecting Organs for Village Churches; *The Anglo-Saxon Witness on Four Alleged Requisites for Holy Communion*—namely, Fasting, Water, Altar Lights, and Incense; and other works. He also edited Johnson's *English Canons*, translated from the Anglo-Saxon.

MAGAZINES AND REVIEWS.

THE *Expositor*, which, from the nature of its public, has to restrain a natural desire to keep fully abreast with the best biblical scholarship, has now opened its pages to the big question of Old Testament revision. In the July and August numbers we have the two first parts of a "critical estimate" of the new Revised Version, by the Rev. A. C. Jennings and the Rev. W. H. Lowe, and Prof. Driver's explanation of the more important alterations of the Revisers in the Books of Genesis and Exodus. Of the latter it would be superfluous to say that they are thoroughly scholarly; but they are also intelligible to any well-informed English reader. The former disappoints us. The criticism of general principles is not argumentative enough, and three important points are almost overlooked—(1) The difference between a popular and a scholar's translation; (2) the difference between a revision and a new translation, and (3) the feeble interest of the general public in the great question of Bible revision, from which it would seem to follow that it is more important to exhibit the merits of the Revision than to pull it to pieces, especially when the destructive process is carried through on principles different from those on which the Revision was conducted. It would have been very possible to criticise severely the principles of the Revision from a scholarly point of view. This has not been done in these papers; though, indeed, had it been done, the practical argument that what was ideally best was not possible would still remain to be answered. M. Godet's articles on the First Epistle to the Corinthians, Mr. Simcox's subtle essay on Dean Church, Prof. Stokes's excellent popular paper on the Fayyum Gospel Fragment, and the surveys of recent English and American literature on the New Testament, by Dr. Marcus Dods and Prof. Warfield, can here only be mentioned.

WE have received the first number of the *Revue Coloniale Internationale*, published at Amsterdam. (London: Trübner.) It is proposed that this review shall appear quarterly, and treat specially of (1) colonial trade and industries; (2) the governments of colonies; (3) colonial geography and ethnography. Articles in French, German, English, or Dutch, will appear as written; those in other languages must be translated into one of the above four. The present number contains two articles in English. A very interesting one on "Imperial Federation," from the pen of Sir Richard Temple, and a review of Mr. Stanley's *Congo International*, by Commander V. L. Cameron. It is remarkable that in the list of publishing houses in connection with the review, there is not a single colonial one, and only one outside Europe. We notice also that, though it is published in Holland, almost every advertisement is English. It is too soon to prophesy as to the probable success of this periodical, but we fear that the price, £1 per annum, will be much against a wide circulation. Were the *Edinburgh* or *Quarterly* to be started afresh at their present prices, would there be a possibility of their succeeding?

A POSITIVIST PILGRIMAGE.

OURS was a very real pilgrimage to a very real shrine, that shrine the birthplace and death-place of the greatest poet the world has seen, the son of homely English soil, William Shakspeare. Some seventy of us started on Saturday, August 1.—Mr. Frederic Harrison being our "Greatheart"—and arrived at Stratford-on-Avon too late to see much of our surroundings, except that we were in a clean, wholesome-looking country town, inhabited by a healthy and comely folk.

On Sunday morning Mr. Vernon Lushington acted the part of the "Interpreter"; and, "in a house which was built for the relief of pilgrims," gave us a fair discourse, well suited to the occasion, dwelling with much eloquence on the splendid humanity of Shakspeare, which could make us love even Falstaff, and laugh with him as well as at him. This discourse having greatly contented us, we went forth in small parties, imbued with the spirit of the place, some to worship in the church where Shakspeare, loyal to the religion of his time in its best aspects, himself worshipped. And among these Mr. Frederic Harrison and Mr. Vernon Lushington thus paid tribute to the common humanity which finds every religion pulsating with some glow of charity, some touch of nature testifying to the brotherhood of man.

Most of us, however, wended our way to Shottery—to the dear old Hathaway cottage, embowered in sweet country flowers, fragrant with jessamine—where a descendant of Anne Hathaway showed the seat where Shakspeare wooed the fair Anne:

"To charm all hearts, Anne hath a way,
She hath a way,
Anne hath a way,
To breathe the delight Anne hath a way."

It was with great pride, too, that the good dame showed the bold signature of Mary Anderson in the visitors' book; also that of Edwin Booth and many another celebrity. In the cottage garden some of our party sang old ditties proper to the time and place, our dame having been assured that they were religious—which, indeed, in the best sense they were. Across and around the fields in twos and threes we strolled and talked—talked chiefly of the great and loveable and noble man who so elevated humanity, who has charmed so many generations, and will charm all generations down the stream of time. Lying at ease in the upland meadows beyond Shottery, our sweet singers again held us charmed with old-time glees and madrigals. In the afternoon most of the pilgrim band made their way to Charlote, and were well rewarded by seeing the fine old manor-house of the Lucys, and the thronging deer in the park. On the arches, and worked in the iron-gates, the *lucy* is everywhere to be seen, while over the main entrance might also be read the Lucy motto "By truthe and diligence." It would ill have become pilgrims to enquire what kinship there is between the ravenous pike ("a full-grown pike," says Sheridan) and the wild boar, whose effigies couch at the Charlote portals, and such sober virtues as truth and diligence. In Charlote Church, within the demesne, there are many monuments of the Lucy family; while Hampton Lucy Church, almost within the park borders, is new and trim and uninteresting, but (as may be noted in passing) carries with it a living of nearly £1,300 a year. And so home—and more music and song—and a day of real rest and refreshment was ended. Some of the pilgrims were courteously entertained and escorted by the Mayor of Stratford, who showed the interesting features of the old house of the notable Clopton family (now extinct) where he resides.

On Monday our pilgrim-band was alert,

with much to see and do—the grand old church, the grammar school, the Memorial Theatre, &c., and, chief of all, the house of Shakspeare's birth and the relics gathered and garnered there. The tale is too long to tell of all we saw—the well-known effigy in the church, the warning lines; the many pictures in the Memorial building, the fair women, the motley crowd of clowns, jesters, and roysterers, mad Lear, dreaming Hamlet, delicate Ariel, and the fearsome witches of Fuseli, recalling the grim legend of his meals of raw meat. Then the old birth-house, carefully tended by two sister gentlewomen, who tell us all is as it was but for time and scribblers; and truly the scribblers have blackened the walls around, and above, and even the very bust of Shakspeare—yet one looks with interest on the scrawled "W. Scott" on the window pane. Readers of Mr. Black's *Judith Shakspeare* call to mind that charming character as they see the name written, with a strange mark between Christian and surname, and a ticket stating that the fair Judith was a "markswoman." Shakspeare's own signet-ring is there, and, alas! a picture of the bard from under a crab-tree after a circular carouse which seems to have terminated at "drunken Bidford." From the tall tower of the Memorial building many of us pilgrims took a wide survey of the pleasant land—with the gentle Avon flowing drowsily along—and were tempted to exclaim regretfully in the master's words:

"O, how shall summer's honey breath hold out
Against the wreckful siege of battering days?"
Our pilgrimage is ended, the staff and the scallop-shell are put by, but the memory of it is with us, and will be with us "a joy for ever."
JAMES HOOPER.

THE PROPOSED TEACHING UNIVERSITY FOR LONDON.

IN the ACADEMY of July 25, we printed the report of the committee appointed by the Convocation of London University in furtherance of this scheme. We now print the report of the sub-committee for the faculty of arts of the Association for Promoting a Teaching University for London, drawn up in conference with the representatives of the faculty of arts and laws of University College, and the departments of theology and of general literature and science of King's College, and with those invited by the executive committee as engaged or interested in the teaching of subjects connected with the faculty:—

"The outline of the plan for a teaching university was submitted to us, as follows:—That it should be founded on (1) faculties as constituent bodies; (2) boards of studies, representing the faculties; and (3) a single governing body.

"We approve of this plan, subject to the following observations:—

"A. (generally)—We believe it to be most desirable that the existing university should accept the proposals comprised in the above outline, supported as they have now been in general by the report of the committee of Convocation, appointed to confer with the Association.

"We cannot, it is true, regard it as inadmissible that there should exist a separate localised teaching university in London, side by side with the existing institution, the work of which has been not to impart instruction, or directly to promote knowledge, but only to examine, and that over an area co-extensive with the spread of English dominion, and not limited to London. At the same time we believe that it is both feasible and desirable to arrange for engrafting what is now proposed upon the existing university institutions of London, whether of a teaching or examining character; and we should prefer this solution of the question to the setting up of a new institution.

"We approve, in general, of the idea of associating the professional corporations in the work and government of the university, with the object, among others, as in existing universities, of establishing a faculty of laws, which shall be worthy of London. It is most desirable, in the interests of education, that the several professional bodies entrusted by the State with examining powers should act in concert with the university, and, through its medium with each other.

"B.—With reference to the several heads of the above plan, we wish to make the following observations:—

"(1) We approve of the proposal that the constitution of the University shall consist, speaking generally, of its faculties; as constituent bodies, composed in the main of persons engaged in educational work, with a view to the preparing of their pupils for graduation; secondly, of boards of studies, elected by the several faculties, to be the constitutional advisers of the governing body in matters affecting the educational work of their respective faculties; thirdly, of a single governing body, of which a substantial proportion shall consist of representatives of the faculties, to be appointed by the boards of studies.

"We accept the suggestion that the faculties of the teaching university should for present purposes be taken to be those of arts, science, medicine, and laws. In this we by no means propose to limit the development of the university, or to bar the creation of new faculties hereafter. The question has been carefully considered whether a faculty of theology should now be proposed. In view of the inclusion in the faculty of arts of some chairs which would naturally form part of such a faculty, and the difficulty which besets the arrangements for others, we agree that this question shall be left for consideration hereafter by those to whom the fortunes of the university will be committed.

"(2) In regard to the faculty of arts, its nucleus will naturally consist of the professors, lecturers, and teachers in the subjects of the faculty in the two colleges which perform the greater part of the university teaching in London. To this should be added the teachers, or principal teachers, in analogous institutions. The principal members of the teaching staffs in the institutions which provide teaching of a university character, though not covering the whole ground of a university course, should also be included, either as holders of certain offices and chairs or by name. Among the institutions which have now been brought under review in this connexion, as belonging to one or other of these two classes, are Queen's and Bedford Colleges for women, and the principal Nonconformist theological colleges, such as Manchester New College, New College, South Hampstead, and the Regent's Park College; and it would further be desirable to include in the faculty some representatives of schools of fine art, training colleges for teachers, and other institutions which take part in the higher teaching in London. There might thus be in the faculty members holding various qualifications. Some would belong to it by virtue of holding a position in the teaching staff of an institution in full association with the university; some, as holding a particular office or position in an institution in connexion, but not fully associated, with it; some, as personally added by a vote of the faculty. A fourth element of value would consist of the examiners of the university, including, perhaps, those who have held office as examiners for a few years after their term of office. Members of the faculty might in general be retained by a special vote, after their qualification had determined.

"The board of studies should consist of a sufficient number to give room for the representation of various studies and interests, and at the same time should not be allowed to become unwieldy. We approve of the limits of number being fixed, for purposes of consideration, at from 20 to 30. In the faculty of arts, it should be elected without special restrictions from, and by, the faculty at large. All seats should be held for a term of years upon this board and upon the governing body.

"(3) The representation of the faculties upon the governing body should be substantial, consisting at least of one-third. The filling up of the seats on the governing body, other than those occupied by the faculty representatives, must be, we recognise, a subject for negotiation and future settlement. While approving the principle that

graduates have an interest in the conduct of the university, and are entitled to have a voice on its governing body, we consider that the aim of the present movement should rather be to increase the influence of teachers in the administration of university matters, than of graduates as such.

"O.—With reference to the functions and work of the teaching university, when established, we wish to make the following observations:—

"The question has been considered, whether the teaching university, acting through its governing body, should be content with the work of organisation and examination, or should also undertake teaching on its own account, and have professors and teachers of its own. We consider that, if funds be forthcoming, they might be most properly employed in the development of university teaching in London, whether this be done by endowing chairs in the existing colleges, or by founding new teaching posts, which it may or may not be expedient to connect with some separate teaching institution. It appears desirable to contemplate the foundation of chairs in the university with a view particularly to the prosecution of the higher and more specialised studies, adapted to the needs of those who have already taken their degree, and supplementary to the instruction provided by existing institutions. Competition of a mutually destructive kind it will be the first duty of the administrators of the university to avoid; and, in view of the full representation of the teachers of existing institutions in the constitution of the university, we do not anticipate any dangers in this direction.

"It should be kept in view that the advantages of the teaching university ought to be accessible to all classes. Endowments of a kind, and to an extent not as yet contemplated, are urgently required for the provision of the costly appliances of modern teaching; and, in order to bring the opportunities of learning within the reach of the less wealthy, many new experiments must be tried, and many developments effected, which it would be premature for us to discuss. But the first thing necessary for the promotion of university teaching in London is, that the teachers themselves shall no longer be without their due influence in university matters, but shall be entrusted with a substantial share in the administration of the university."

CORRESPONDENCE.

A "CLOSE TIME" FOR AUTHORS.

2 Salisbury Villas, Cambridge: Aug. 5, 1885.

There is a "close time" for pheasants and game, during which they are undisturbed; I think a similar "close time" for authors would be a very good thing.

My meaning is this: I am always ready to help friends, and to meet all moderate and reasonable applications for assistance generally; but there are some correspondents, mostly perfect strangers, who expect immediate help, to which I cannot say that I think they are always reasonably entitled. Such correspondents know no mercy, and there seems to be a succession of them all the year round.

My proposal is simply this: let all who wish for information merely to satisfy themselves, and not for any immediate need, endeavour to restrain themselves during the months of July, August, and September. Give the authors, whose one chance of doing work or of getting a holiday is during the Long Vacation, the full benefit of that chance. I know of nothing more disheartening than to find the present golden opportunity cut up by trivial and needless enquiries, except, perhaps, the distressing sensation of finding that troublesome letters pursue one on one's holiday, or await (in massive piles) one's return home.

I would therefore urge that it should become an understood thing that all who "want to know," and whose thirst for knowledge can be sated at one time just as well as at another, should confine the time for their enquiries to nine months in the year, and give themselves and their correspondents sweet repose during the remaining three.

If this appeal touches no heart, I would next propose that authors should take the matter into their own hands, and be careful not to answer such trivial enquiries as reach them during the months of July, August, and September, until the first week in October at earliest.

Of course, all rules readily admit of special exceptions. A general understanding on this point would, however, make a great difference. Of course, also, I do not allude to those many kind friends who, if they at times ask for aid, know also, at other times, how to give it generously.

WALTER W. SKEAT.

ÖÖR EDDA, LÖÖ LEDDA, STÖÖ STEDDA.

Oxford: July 28, 1885.

In a former letter to the ACADEMY I said that in modern Icelandic there is a set of loan-words from English (some fifty might be gathered), mostly slang or colloquial words, but also relating to dress, crafts, and other objects of ordinary life. None of them is met with earlier than the fifteenth century, when the English began to trade and fish about Iceland (A.D. 1413); some bear the mark of English fifteenth-century pronunciation. They stand quite apart from another set of English words, adopted four or five centuries earlier, introduced with the preaching of the Gospel, and also quite apart from Norman words, brought by the trade with Normandy in St.

Olaf's time. I need only mention Sighrat. These later words were unnoticed till lately by myself, and after I came to England. I noted them down as well as I could as I was going through my Dictionary, yet imperfectly. To the English they have no great importance, unless, perhaps, as memorials of English adventure in the Arctic seas in the fifteenth and sixteenth centuries. I once thought of collecting them and giving them to Messrs. Ellis and Sweet. Some are even Gaelic or Welsh, for the crews were mixed, and Bristol was one of the centres of Icelandic trade and fishing.

Of those words *ledda* is one, the lead plummet of the fishing line. The fishers in the western peninsula of Iceland use the word. A native of that country told me so, for I had not heard it, nor, of course, seen it written. It was not used in Broadfrith, my native place. The Icelandic fishers weighted their lines with a stone, and their nets with stones and shin-bones (*kubbar*). They do so still, or did so in my youth, as I have often seen. Now, as the English new-comers used *lead*, the Icelanders must have noticed this, learnt it from them, and adapting the word, turned it into a weak feminine, a neuter would not sound well, especially with the vowel suffixed (*ledd-r*!). In short, *ledda* is a borrowed word, whether of the fifteenth, sixteenth, or seventeenth century I cannot tell, but an exotic word, at any rate (*blý* is the Icelandic for "lead"). Now we come to *löd*. It is quite a modern foreign word, but from North Germany, I should think, through Danish; it means a "bullet" for a gun. It may, in this sense, go back to the sixteenth century. In the last century (not earlier) a new fishing-tackle was introduced into Southern Iceland, where it is still in use, called *lödir* (fem. pl.), I have little doubt owing to *löd* bullets being used for weighting the lines.

Stöð, *stedda*—*Stöð* ("stud") is a good word, against which nothing is to be said; but *stedda* (the supposed counterpart to *edda*) is an unsafe word. It occurs once in the Parzival Saga, translated from the French, preserved in only a single MS., and again in a prosy manufactured verse in Grettir, most likely from this very Parzival. It has never been an Icelandic word, nor is it Norwegian. Dr. Fritsker, of Christiania, the learned lexicographer, when recording the passage in Parzival, puts a query to it, and does not translate it at all. He does not know its origin, nor do I; there is "ceval Espagnol" in the French text, that is all we can say. What I said in my Dictionary (p. 590), only one line and a quarter (*brevis esse laboro*), is yet more than I would now say about it. Yet, behold, here are the pattern words for our much-debated *edda*: as *ledda* comes from *löd* and *stedda* from *stöd*, just so does *edda* come from *ödr*. Dr. Gislason has spun out a long article to that effect—adducing no new facts, not even tracing the history of any of the words; filling fourteen pages, as is his wont, with cabalistic puzzles of spelling. I have had the pain, not pleasure, to read it. It is this etymology that Herr Mogk welcomes in the name of German scholarship.

I know not, nor do I care to know, whether I am on the "subjective" or "objective" side of this or any other question; but thus much I know, that I trust I am on the side of plain common sense—older than all German metaphysics—when I say that there is no sense in saying that a word can be derived from, or formed on the pattern of, words or forms of words that did not exist at the time in question, either in the Norse tongue or in any other tongue of that day. *Ledda*, *stedda*, were nowhere extant in the ninth or tenth centuries. Further, in the Icelandic there is no case of sound analogy to any such thing as *ödr*, *edda*; the nearest analogy I know of is *göd-r* ("good") and *gedda* ("pike," the fish). You will laugh at this, yet it is not quite so absurd as

what we were now speaking of, for both these words did exist together, and within the same language, in the ninth century and down to the present day.

It comes to this. We must not be blind to the history of words—every word has a life; nor must we be dead to the life, the faiths, laws, customs, conditions, trade, connexions abroad and at home, of the people whose language we are treating. Grammar, even abstract grammar, is good so far as it goes, but it is not all. We must look the words in the face, and see what they mean, whence they came, whether native words or loan-words, trade-words, and, if so, where and when. It may be trifling to enquire how poor fishers in Iceland weighted their lines; yet all true knowledge, no matter whether German or English, is made up of such small things. G. VIGFUSSON.

"DEFNSAETAS."

Bristol: Aug. 8, 1885.

I will not fall into one of the ungracious disputes that are apt to arise between those who have been contemporaneously in the same pursuit. I will only say that a short note of mine at p. 19 of my dissertation, "A Primaeval British Metropolis," will show that I had then been attracted by the question. Although dated 1877, this piece was issued to those who, with Mr. Davidson, were on my "list of friends," at the end of November, 1876.

Mr. Davidson quite mistakes the intention of the passage that he quotes from my "Celt and Teuton in Exeter" (1873). Sir F. Palgrave had proposed the river Exe, west of Exeter as the frontier of the two nations. The chief purpose of my paper was to show that the frontier passed through the city, which is entirely east of the river. I was "combating" Sir F. Palgrave, instead of being "of the same opinion." The cause of the error which I then simply "combated," was his inference from what he called "The Devonian Compact," and was what I afterwards pursued, as I have set forth in the ACADEMY of July 25.

In "The Welsh in Dorset," I duly recited what had been said by Mr. Thorpe, Sir F. Palgrave and others, and how far short of the truth they had left off; but to have reprinted the four pages in which this is done would have been more than I could have hoped from your liberality. I am afraid that Mr. Davidson at "Gwynedd or Gwent," is as far from home as any of them. THOMAS KERSLAKE.

THE DATE OF DANTE'S DEATH.

Taylor Institution, Oxford: July 22, 1885.

Among the forty-three *sonetti* of Pieraccio Tedaldi, a contemporary of Dante, which were recently edited by Sig. Morpurgo from a Vatican Codex (published by the Libreria Dante at Florence), there is one of special interest, as it was occasioned by Dante's death. The eighteenth sonnet bears this title: "Di Pieraccio detto per la morte di Dante, che morì a dì 5 di Settembre 1321..." As every Dante student knows, the day on which Dante, according to Boccaccio's words in his *Vita di Dante*, "rendered the fatigued spirit to his Creator" was Holy Cross day ("nel dì che la esaltazione della Santa Croce si celebra dalla Chiesa") or the fourteenth day of September, 1321 (cf. *Opere di Boccaccio*, Fir. 1833, vol. xv., p. 36; Balbo, *Vita di Dante*, p. 422; Scartazzini, *Vita di Dante*, p. 126).

Now, if we bear in mind that the old style of our calendar was not abandoned before the year 1582 by order of Gregory XIII., the difference of nine days between these two dates will be readily understood. Otherwise the date which is now commonly established would have to be tested by further researches. I need

scarcely mention that Giovanni Villani's incomplete date, viz., the "month of July," 1321 (cf. *Cronica*, l. ix., c. 134), has never met with approval.

From Tedaldi's sonnet we learn, at the same time, how greatly Dante was esteemed by his contemporaries, when he is eulogised with no less praise than Giov. Villani bestowed on him (cf. *Cronica*, l. ix., c. 134). For Tedaldi calls him: "Il dolce nostro maestro, il sommo autor, che fu più copioso in isciencia che Catone o Donato ovver Gualtieri." H. KREBS.

SCIENCE.

The Student's Arabic-English Dictionary. By F. Steingass. (W. H. Allen.)

STUDENTS of literary Arabic in this country have much reason to be grateful to Dr. Steingass for this laborious and conscientious work, which, for the first time in English, furnishes them, in a compact and convenient form, with a trustworthy authority to aid them in their progress through the wide field of Arabic prose literature. Hitherto, unless they knew Latin, German, or French, they have had to depend for the assistance they required on Richardson's (or Johnson's) Persian and Arabic Dictionary, a composite and antiquated work intended mainly for students of Persian, and now extremely scarce and costly, or on Catafago's ill-digested and very inadequate vocabulary. The superiority of Dr. Steingass's lexicon to these is so manifest that it is certain at once to take their place in the small world of Oriental study, and may, we hope, in the course of time even arrive at the unique distinction of a second edition.

The author has taken as his model the excellent *Handwörterbuch* of Arabic and German by Dr. Adolf Wahrmund, and has followed his original in arranging the Arabic words, as they would appear in a dictionary of an European tongue, according to the alphabetical order of the forms actually in use, and not, as in most Arabic lexicons, according to the alphabetical order of their roots. There can be no doubt that such an arrangement greatly diminishes the time and labour spent in looking up a word. With the customary root-order, the radicals have first to be ascertained, and the eye then carried down a list, often very lengthy, of derivatives arranged under the root. The inconveniences of this system are specially felt with words derived from weak roots and with broken plurals, which it is often difficult at once to refer to their originals. On the other hand, the labour spent in looking through a whole list of derived forms under each root is repaid by the insight which it gives into the word-building capacities of the language, and the word sought for is fixed in the mind in its natural association with other developments from the same radical, instead of being regarded as a mere isolated sound without kith or kin. The advantage of the first plan is the greater readiness with which the meaning of the text under translation is ascertained, that of the second the wider knowledge which is gained of the language. There is certainly room for both in the requirements of the student, and for this reason Dr. Steingass's book will be welcome to many who are already provided with Freytag or Lane. We question, however, the

usefulness of multiplying, as has been done here, under their servile letters forms which are perfectly regular and easy to find under the root, and are given there as well. The author has shown under each verbal root the infinitives (*nomina verbi*) of the derived conjugations. Why then was it necessary to swell the book by entering under *alif* some hundreds of infinitives of the forms *if'al*, *inf'al*, *ifti'dl*, and *istif'dl*, or under *td* those of the forms *taf'il*, *tafa'ul*, and *tafa'ul*? No one who is competent to use the dictionary at all could hesitate to look for these where they are given, under their proper roots. To eliminate such words (and other ordinary and simple formations like the *nomina agentis et patientis*), in all cases where they do not bear some special sense not referable to their position in the verbal paradigm, would reduce the bulk, and therefore the cost, of the volume without in the least taking away from its usefulness. It is impossible to show in a dictionary all the forms which can be developed, according to the rules of grammar, from an Arabic root; and there is really no more reason why such derivatives as these should be given than there is for similarly including the persons of the imperfect or imperative.

In the arrangement of meanings under verbal roots Dr. Steingass has, we imagine, generally followed his original, which is based on excellent authorities. There is, however, considerable room for improvement in the classification and grouping of the different significations, which often present a bewildering and disconnected appearance. Thus under the verb *samma* we read—"poison; grant a particular favour; be granted particularly; purpose, resolve upon; stop; mend; make peace; examine closely; meet with the poisonous wind *samām*." The last of these meanings (which, the author has omitted to state, belongs to the passive *summa* only) should evidently be coupled with the first; "poison" is hardly adequate, since the verb means to put poison into food as well as to administer poison to another person. Of the other meanings, "stop" is ambiguous, as there is nothing to show whether it means to stop a gap, to remain, or to leave off; and the rest are not properly grouped. The verb really includes two principal senses (1), to poison (a denominative from *samm*, poison), and (2) to make or mend a hole (a denominative from *samm* or *summ*, hole); from the latter are derived the tropical senses, first, of probing, examining, purposing, aiming; and secondly, of repairing a breach and making peace. There are few articles of any length under verbal roots which are not open to like criticism. Another serious deficiency under this head is the too frequent omission of the prepositions required to complete the senses assigned to the verbs. Thus *jd'a* is said to mean "come, come with, bring"; but the last two senses arise only when the verb is construed with *bi*. *Raghība* with *idā* is said to mean "desire, crave, wish for, incline to"; it should be with *fi*: the verb with *idā* means to address a petition to some one—a sense which Dr. Steingass wrongly attributes to it without any preposition at all. *Dhahaba* is said to mean "think, deem," no preposition being mentioned; it is only when construed with *idā* that the verb has this meaning. *Safsha* is

said to mean "pardon"; it does so only when followed by 'an.

While the lexical portion of the work, notwithstanding these shortcomings, is generally good and full under verbs, nouns, and adjectives, that which deals with the *huruf* or particles and other auxiliary words is often very defective, although it is on the right interpretation of these important elements that the understanding of a sentence generally depends. The treatment, for instance, of *inna*, *anna*, *an* is most confused and meagre; no one would suspect from the explanations given that these words had any relation to one another. The articles on *idh*, *idha* (*idhan* with *nūn* is omitted altogether), are unsatisfactory and incorrect. Under *hal* we are referred to *hayya*, where *hal* does not appear at all; even if it did, *hayyahal* has no connexion with the interrogative *hal*. The only rendering given for *kull* is "totality, the whole of, all of," which might do for *jamf*, but ignores the important difference between *kullun* with *tanwin*, *kull* followed by a definite substantive, and *kull* followed by an indefinite substantive. *Lau*, the hypothetical particle for that which is not contemplated as happening, is not discriminated from *in*, the simple conditional "if." All that is given under *lā* is "not; no (followed by the accusative, as *lā abā la-hu*, 'he has no father')," which is an obviously inadequate account of the *lā nāfiyatu-l-jins*, makes no reference to the omission of the *tanwin*, and adduces as an example a phrase which the grammarians have failed to reconcile with the rule (which requires *lā aba la-hu*).* It is impossible to explain the use of the particles without liberal illustrations; and to this some of the room saved by the omission of needless derived forms might profitably be devoted.

It is to be regretted that Dr. Steingass has throughout ignored the *ʿrāb*, without due observance of which no knowledge of the niceties of classical Arabic is possible; a still graver fault is the neglect of the *hamzah*, so that *imru'un* has to be looked for under *amr*, *mar'un* under *marr*. His principle has been to present the words in their consonantal form only, as they would appear in a text not supplied with vowels. But even in such a text *tashdid* and *hamzah* are generally supplied; and it is the business of a dictionary to show us the words in their complete shape, not in that abbreviated one which they assume only for the convenience of the ready writer. We have noticed some singular omissions of very common words; *ʿabnā* is not given as the plural of *ibn*; nor have we been able to find *astānah*, *kala*, *dhalama*. A few of the renderings are not exactly English: "scabious" for *qirāb* is not happy; *akī* is hardly "congelated cream"; *ist* (the plural of which is *astāh* not *istāt*) does not mean "foundation," nor is *isti* "fundamental." Perhaps it is pardonable that "guide" should have been given among the meanings of *mahdi*, though it is one which it is impossible that that word should bear. Dr. Steingass rightly gives no countenance to the recently invented form *muhdi*.

* Is it possible that this correct form is intended in the enigmatical "*lāb-a lak-a*, 'you must by all means,'" which occurs a little lower down? If so, the form and the meaning are both wrongly given.

It is unfortunate, if inevitable, that a notice such as this of so praiseworthy and meritorious a work as that of Dr. Steingass should deal rather with deficiencies than with excellencies. We can only hope that the real deserts of the book may win for it so large a sale that a second edition may soon be called for, in which the defects here noticed can be supplied. So useful a book should certainly be brought within the means of the greatest possible number of those who take an interest in its subject. We suppose publishers understand their business; but we must confess that to ask for a volume containing less than the letterpress of a single part of Lane a price more than twice as great seems to us hardly the way to effect that desirable object. They manage these things much better in Germany.

C. J. LYALL.

THE AMERICAN PHILOLOGICAL ASSOCIATION.

[We quote the following from the New York Critic of July 18:]

"Last week's sessions of the American Philological Association were held in the Sloane Laboratory at Yale. This is the second time within its existence of seventeen years that the association has met at the old New Haven college. About sixty members, with many visitors, were present at the opening meeting on Tuesday afternoon. Dr. Thomas D. Goodell, of Hartford, read the first paper, on 'The Quantity of Verse in English,' in which he maintained that quantity and not accent is the determining law in English, no less than in Greek and Latin, verse. This was a pet theory of the late Sidney Lanier. Prof. March suggested its verification or disproval by a count and classification of the whole number of syllables in Chaucer, Shakspeare and Milton, but no one volunteered to undertake the task. Prof. Bernadotte Perrin, of Western Reserve College, followed with an essay on 'Equestrianism in the Doloneia.' His conclusion was that Odysseus and Diomed both rode back to camp, bareback, on the captured chariot horses of the slaughtered Rhoeseus.

"In the evening, Prof. W. W. Goodwin delivered his inaugural address as President. After reviewing the history of the association, he spoke at length on the subject of 'The American School at Athens.' The Greek Government has presented a tract of land to the school, and twenty thousand dollars are needed to erect a building upon it. Prof. Goodwin made an eloquent plea for the necessary means to take advantage of the generous gift of the Greeks. On Wednesday morning 'The Tibeto-Burman Group of Languages' were treated of by Prof. John Avery, of Brunswick, Me. Then Prof. March read a paper on 'The Neo-Grammarians,' which took the form of a review of Prof. Sievers' part of the article on 'Philology' in the last volume of the *Encyclopædia Britannica*. Prof. Sievers is a 'neo-grammarian,' and Prof. March, who is not, criticised his theories somewhat severely. Prof. W. D. Whitney, who wrote the other part of the *Britannica* article, and was highly praised for it by *The Athenæum* at the expense of Dr. Sievers, came to his feet, when Prof. March had finished speaking, to say that the new school of grammarians had undoubtedly done much good work, although he could not feel that they had materially shaken the position of the older grammarians. An essay on 'The Genealogy of Words,' by Prof. M. W. Easton, of Pennsylvania, was read by Prof. W. B. Owen, of Lafayette College. Prof. R. B. Richardson, of Dartmouth, spoke of 'The Reluctance to Appeal to the Sense of Sight in Greek Tragedy.' The point he desired to make was, that the dramatists avoided introducing battle and murder scenes, &c., only when they could not, from physical or mechanical limitations, be presented in a way to insure illusion. Dr. Isaac H. Hall read a paper on an unpublished Greek MS. in the Astor Library, containing an introduction to Hesiod's *Works and*

Days, with numerous interlinear glosses. 'The Roots of the Sanskrit Language' was the subject of an important paper read on Wednesday evening by Prof. Whitney, who has finished, and is about to publish as a supplement to his Sanskrit grammar, a complete classified and dated list of all the genuine Sanskrit roots.

"The most popular essay of the session was one on 'Negro English,' which originally appeared in *Anglia* last year. Its author, Prof. J. A. Harrison, of Washington and Lee University, is a life-long resident of the South, and has made a special study of the whole subject of American negro speech—of which, indeed, he has constructed a grammar and compiled a glossary. In his paper read before the philologists on Wednesday last, he said that there are several distinctly marked dialects of this English, prevailing respectively in Virginia, on the seacoast of South Carolina and Georgia, and through the middle and southern States. It has been impossible to register scientifically the varied phenomena of negro phonetics, or to reproduce the quite indescribable shades of intonation with which the sounds are uttered; but an effort has been made to approximate to a correct reproduction of the pronunciation by an imitative orthography and by key-words serving to show the dialectal variations of different localities. The humour and naïveté of the negro are features which must not be overlooked in gauging his intellectual calibre. Much of his talk is baby-talk, of an exceedingly attractive sort to those to the manner born. He deals in hyperbole, in rhythm, in picture words, like the poet. The slang, which is an ingrained part of his being, as deep-dyed as his skin, is with him not mere word distortion; it is his verbal breath of life, caught from his surroundings and wrought up into the wonderful figure speech, specimens of which were given by the speaker under the head of negroisms. The results of a total abstraction of all means of self-cultivation from the field of negro life were clearly enough seen in the representations which followed of his treatment of the English tongue. Negro-English is an ear-language altogether, a language built up on what the late Prof. Haldemann, of Pennsylvania, called 'otosis,' an error of ear. The only wonder is how the negro could have caught the rapidly uttered sounds of the language spoken around him so truly, and reproduced them so ingeniously, transmitting what he had learned in a form so comparatively unspoiled. The fertility of the negro dialect is really wonderful, not only in the ingenious distortion of words by which new and startling significance is given to common English words, but more especially in the domain of imitation of sounds, cries, and animal utterance. To the negro all nature is alive, replete with intelligence; the whispering, tinkling, hissing, booming, muttering, 'zoomin,' around him, are full of mysterious hints and suggestions, which he reproduces in words that imitate, often strikingly, the poetic and multiform messages which nature sends him through his auditory nerve. He is on intimate terms with the wild animals and birds, the flora and fauna of the immense stretches of pine-woods among which for generations his habitation has been pitched. The negro passion for music and for rhythmic utterance has often been remarked. A negro sermon nearly always rises to a pitch of exaltation at which ordinary prose accent, intonation, and word-order are too tame to express the streaming emotion within. The sermon becomes a cry, a poem, an improvisation. It is intoned with melodious energy; it is full of scraps of Scripture in poem form, and to say that it becomes an orgy of figures and metaphors, sobbed or shouted out with the voice of Boanerges, is hardly going too far.

"Other papers read were by Prof. Goodwin, 'On the Relation of the *ἡρώδης* to the *ἡρώδης* in the Attic Senate'; by Prof. W. S. Scarborough, of Wilberforce University, on 'Fatalism in Homer and Virgil'; by Dr. C. K. Nelson, on 'The Gothic Bible of Ulfilas'; by Prof. Whitney, on 'The Sixth and Seventh Aorists in Sanskrit'; by Prof. T. D. Seymour, of Yale, on 'The Feminine Cæsura in Homer'; by Prof. Samuel Porter, of Washington, on 'The Position of the Larynx in certain Articulations'; by Dr. E. G. Sihler, on a Number of Scattered Passages in Euripides, Sophocles, Xenophon, and other Greek Authors'; by Mr. A. S.

Gatschet, on 'The Affinity of the Cherokee to the Iroquois Dialects'; by the Rev. Dr. Francis Brown, of New York, on 'The Revised Version of the Old Testament, and the Massoretic Text'; and by Dr. Platner, of Yale, on 'Three Recensions of the *Rāmāyana*.'

SCIENCE NOTES.

THE recently-founded Scottish Geographical Society purpose to form a loan collection of maps, plans, itineraries or guide-books, and views relating to Scotland, for exhibition at the Aberdeen meeting of the British Association next month. The address of the secretary is 80A, Princes Street, Edinburgh.

THE new volume in the "Nature Series" (Macmillan) will be *Flowers, Insects, and Leaves*, by Sir John Lubbock.

MESSRS. BLACKIE & SON will publish next week a new work on Practical Arithmetic, by Mr. John Jackson, of Belfast, containing several entirely new features, notably the "Rule of Complementary or Incremental Addition," which is substituted for the rule of subtraction. The author claims that, in addition to its being a much easier and simpler method, it is calculated to secure a saving of thirty to fifty per cent. in figures in all the rules.

THE International Geological Congress, whose meeting was postponed last year, owing to the epidemic of cholera in Southern Europe, will hold its third meeting at Berlin on September 28, under the honorary presidency of Prof. H. von Dechen.

DR. HICKS has proposed, in the August number of the *Geological Magazine*, a new classification of the Palaeozoic series. He proposes to arrange the Palaeozoic strata in three master groups—the Cambrian, the Devonian, and the Carboniferous. The Cambrian, which thus receives a greater extension than is commonly assigned to it, is sub-divided into three series. The lowest is to be designated the *Georgian* group—a new name suggested by the development of the lower Cambrian beds in the districts bordering on St. George's Channel. For the middle Cambrian, Prof. Lapworth's term *Ordovician* is employed; while for the upper Cambrian the old term *Silurian* will be retained.

MR. EDWARD STANFORD has sent us a revised edition of his large-scale map of the new London boroughs, according to the Redistribution of Seats Act. The artificial character of the boundaries is very effectively shown, though we could wish that each entire borough, with its divisions, had been uniformly coloured. On one point, in which we are personally interested, there is a mistake. The Liberty of the Rolls, here included within the borough of Holborn, was, by an amendment introduced at the last moment, transferred to the borough of the Strand.

PHILOLOGY NOTES.

THE Rev. E. Droese, of the Church Missionary Society, has published an Introduction to the Malto Language and a Malto Vocabulary. Malto is the name of the language spoken by the Paharis, or hill men, near Bhagalpur, in Bengal, who call themselves Malers, or "men." It possesses a philological interest, as being generally considered the most northerly offshoot of the Dravidian family of speech which prevails throughout all Southern India. Mr. Droese, while recognising Dravidian elements, e.g., the pronouns and the first two numerals, points out that it differs from the Dravidian type in many essential points.

THE Rev. J. Richardson, of the London Missionary Society, has nearly ready for publication a new *Malagasy-English Dictionary*. Besides

the Dictionary proper, which extends to about 750 pages, the book will also contain an Introduction to the Malagasy Language, written by the Rev. W. E. Cousins.

WE must congratulate Messrs. Gilbert & Rivington, the well-known polyglot printers, upon the specimens of oriental and foreign printing which they have recently issued in the form of a folio pamphlet, containing trade advertisements in a large number of strange languages.

FINE ART.

GREAT SALE of PICTURES, at reduced prices (Engravings, Chromos, and Olographs), handsomely framed. Everyone about to purchase pictures should pay a visit. Very suitable for wedding and Christmas presents.—GEO. HESS, 115, Strand, near Waterloo-bridge.

L'Art de la Verrerie. Par Gerspach. (Paris.)

THIS is, without exception, the best book on the history of glass-making, regarded from an artistic point of view, with which we are acquainted. Other well-known works are devoted to one or other branch or period of production, or to the methods by which this invaluable material is tortured and twisted, cut and enamelled, scratched, engraved or polished, as its application may require, and composed in every colour, from the limpid purity of the diamond to the blackness of imitated jet. The excellent introductory notices in Mr. Nisbett's catalogues of the Slade and the South Kensington collections are necessarily limited to the objects in those collections. The grand work of M. Achille Deville is restricted to the antique. Mrs. Wallace-Dunlop's *Glass in the Old World* has been favourably noticed, as it deserved, in the *ACADEMY*; while the smaller works of Apsley, Pellatt, A. Sanzay and others treat of the technical methods of the various branches of the manufacture.

This volume of the excellent series of the "Bibliothèque de l'Enseignement du Beaux-Arts" is by the same author as the equally good one on Mosaics, and is full of carefully considered and arranged matter, with abundant historical and documentary references. Without pretending to more than an introductory consideration of the subject, which thoroughly to treat would necessitate far larger and more ponderous tomes, this little book, though "full as an egg," is stimulating to the appetite for more from the same able hand.

Commencing with the antique of Egypt, Phœnicia, and Greece, the glass productions of the Romans and of those working under their sway are thoughtfully considered, and reference made to unique examples in the unrivalled collection of the museum at Naples. Of the curious and rare reticulated cups referred to at p. 48, one, not here referred to, was found in perfect condition at Cologne shortly before our Queen, then travelling in Germany, had stopped at Deutz. The discovery having been communicated to the royal party, an hour was fixed, on the morning of their departure, for the cup to be brought for her Majesty's inspection with the idea of acquisition. Its owner started with the precious glass; but, as he approached, the long bridge of boats opened, and an endless line of rafts and barges were so slow in passing through that the appointed time passed away, and the royal party had proceeded on their journey before the disappointed possessor could cross to the hotel. If our memory serves us rightly,

this cup was afterwards bought by King Louis of Bavaria, and is now at Munich.

One unique example, as we believe, of the use of glass with metal in Roman times, now in the British Museum, is not referred to here. It is an oviform cup of silver, pierced with lateral holes, into which a lining of dark blue glass has been blown; this, swelling through the orifices at the sides, projects in convex form, giving the effect of *cabochon* sapphires set on the outer surface of the cup. It was found in Italy.

Where so much is excellent we regret the necessity of differing from the author's accuracy and taste where he states that (p. 58)

"Le vase de Portland a donné naissance au genre Anglais Wedgwood, qui est le nom d'un fabricant de porcelaine; le fond des pièces est d'un bleu mat, la décoration est composée de figures et d'ornements en pâte blanche. L'aspect général est froid, terne, et sans aucune vibration; il ne rappelle le verre en aucune façon et ne fait pas valoir les qualités de la porcelaine," &c.

Such condemnation of one of the choicest productions of ceramic art is unworthy of so learned and discriminating a writer.

The division treating of Eastern glass is excellent. After reference to the statements of Theophilus and others on the glass produced in Byzantium, he passes on to the productions of Persia, Damascus, and Arabia, instancing the cup of Chosroes and other known important pieces of later date and so-called Arabian production; but hinting (p. 90) the reasonable doubt as to what real and practical native art ever existed among the Arabs, or whether they were not more apt in adopting and adapting the arts of the countries they overran. An interesting account of the dispersion of the treasure of the Fatimite Calif Mostausser Billah in 1062, and many valuable references, enrich this section of the work. The magnificent enamelled pieces produced during the twelfth, thirteenth, and fourteenth centuries gradually ceased before the rising sun of the Venetian factories in the fifteenth, whence, in later time, lamps to order were exported to the East, as proved by the document of 1569 discovered by M. Yriarte in the archives of the Frari. Thence also glass makers went to teach their art at Shiraz, as they did to their nearer European neighbours.

The section on "L'Occident" is equally well done, that portion devoted to the Venetian being enriched with much documentary references. Our space will not permit us to do more than glance at the abundant matter in this little book, which, full as it is, one leaves with the wish for more of equal excellence. The portion devoted to the glass productions of France is, however, unduly amplified, her productions before the advent of Venetian artists, to whom the rare enamelled pieces may be attributed, being of ordinary character and in no way superior to those of neighbouring countries. Writing of the glass of Poitou M. Gerspach admits, "Nous sommes obligés de reconnaître que le perfectionnement considérable introduit dans la décoration vers le milieu du XVI^e siècle coïncide avec l'arrivée des Italiens." Window-glass seems to have been a production of considerable importance; and also glass for mirrors, for which Normandy claims the important invention of moulded plate (*glaces coulées*) in 1688, by

her son Louis-Lucas de Néhon, director of the royal factory at Paris, whence the finest plates were exported to all the world.

Perhaps too little space is given in the volume to the glass of Germany, Bohemia, the Low Countries, and Spain—the latter very inadequate. We trust, however, that the valuable documents collected by the late much regretted Baron Ch. Davillier, and his MS. notes on Spanish glass, which he was engaged in embodying in an exhaustive work on the subject at the time of his sudden seizure and death, may be completed by an able hand.

The glass works of England and of China are dismissed with scant courtesy, considering their excellence in quality or in art; five pages to the former and four to the latter being but a meagre allowance. The volume closes with a good didactic *résumé* on the progress and the artistic principles on which the manufacture and decoration of glass should be conducted. All who study the history and development of this interesting branch of art industry and manufacture must secure a copy of this *multum in parvo*, which is abundantly illustrated with engravings made expressly for the work.

C. DEURY E. FORTNUM.

M. MASPERO'S REPORT ON HIS LATEST EXCAVATIONS IN EGYPT.

[WE have received, through Miss Amelia B. Edwards, the following Report by M. Maspero of his excavations in Egypt during the past winter, which we print *verbatim*.]

I.

“Mariette n'aimait pas les petites localités: c'était, disait-il, perdre son temps que s'arrêter à Gaou el Kébir, quand on avait devant soi des champs de fouille aussi riches que ceux de Sakkarah, de Thèbes et d'Abydos. Je crois quant à moi que la plupart des sites qu'il négligeait ne méritent pas ce dédain. J'ai l'habitude de leur consacrer chaque année quinze jours ou trois semaines et jusqu'à présent je n'ai pas eu motif de regretter ma peine. Quelques-uns possédaient des inscriptions royales, des stèles, des tombeaux; tous ont rendu des objets curieux pour l'étude des mœurs et de la vie privée: si peu qu'on y découvre, notre connaissance de l'histoire y gagne, et les salles du Musée se remplissent.

“C'est parfois le hasard qui se charge d'attirer l'attention sur ces points secondaires. Depuis que je leur ai accordé moitié de la trouvaille, les fellahs, toujours à l'affût des antiquités, ne manquent pas de nous indiquer les monuments trop gros ou trop lourds pour qu'il soit prudent de les voler. Au mois de Décembre, 1884, des ouvriers qui foraient un puits à quelque distance d'El-Khozâm, à six lieues au nord de Thèbes, mirent au jour des restes de murs en briques, au milieu desquels gisait une dalle longue de trois mètres ou à peu près. En Orient, toute dalle cache un trésor: les récits véridiques des *Mille et une Nuits* sont là pour le prouver. Le premier mouvement de nos gens fut de briser la pierre, afin d'arriver à l'or qu'elle ne pouvait manquer de recouvrir; mais elle était dure et résista, les voisins accoururent, puis la police, qui suspendit les travaux jusqu'au moment où je viendrais inspecter les lieux. Les murs marquaient l'emplacement d'une chapelle funéraire, construite par un seigneur thébain de la XI^e dynastie; la dalle était une stèle renversée, taillée en forme de porte et dédiée à la mémoire du propriétaire. Laisser le morceau en place eût été le livrer à une destruction certaine: nous l'enlevâmes malgré le poids et les dimensions. Plus de cent personnes s'étaient rassemblées de dix lieues à la ronde et attendaient avec impatience qu'on eût terminé l'opération; dès que la pierre fut en route vers le fleuve, elles se précipitèrent dans la tranchée que nous avions été obligés de

pratiquer pour la dégager et se mirent à défoncer le sol avec les mains. Le désappointement fut grand de ne trouver au lieu de pièces d'or, que des éclats de calcaire et des tessons de poteries; puis on se persuada qu'en creusant plus profondément on serait plus heureux. Vingt hommes perdirent deux mois entiers à retourner la terre, sans succès bien entendu: El-Khozâm n'avait qu'un monument à donner et nous le tenions.

“A Siout, l'émotion fut plus vive et mieux justifiée. Les Algériens et les Tunisiens ont en Egypte une réputation de sorciers bien établie. Un de ces Moghrébins persuada à deux Grecs qu'un trésor antique était caché dans le cimetière de Drongah, au sud de Siout: ils demandèrent l'autorisation de l'y chercher sous la surveillance d'un employé du Musée. Après quelques conjurations préliminaires, le magicien indiqua l'endroit précis: à six mètres de la surface on atteignit le rocher, à huit mètres plus bas un bloc céda sous les coups de pic et les ouvriers tombèrent pêle-mêle dans une chambre grossièrement équarrie, dont l'entrée ancienne était bouchée par un éboulement de la voûte. Un four en briques, encore muni de sa porte en métal, plus de deux cents vases en pierre et en bronze de forme diverse, quelques feuilles d'or roulées, épaisses d'un quart de millimètre et, dans un coin, un tas de terre noire, luisante, grasse au toucher: plafond et murs, tout était enduit d'une couche de suie. Les travaux avaient attiré dès le début une foule de curieux telle qu'il avait fallu la présence de deux soldats de police pour la contenir. Si tôt que la nouvelle se répandit au-dehors, le tumulte éclata; les habitants de Drongah, qui sont Coptes, accoururent en masse avec des bâtons et voulurent descendre dans le trou pour tout piller. On essaya d'abord de parlementer avec eux: ‘Le trésor appartenait à l'administration qui, seule, avait droit d'en disposer à sa guise.’ Mais ils refusaient de rien entendre. ‘Qui est votre administration? Nous ne la connaissons pas, nous ne sommes pas ses serviteurs. Cet or a été mis là par nos pères, il est à nous, si vous y touchez, nous vous frapperons et votre sang retombera sur vous, car vous êtes des voleurs et des étrangers.’ Pendant le débat, les habitants d'un village musulman étaient survenus et réclamaient leur part, mais, au premier mot, les gens de Drongah se jetèrent sur eux: ‘Cet or a été trouvé en terre copte, et nous sommes Coptes. Vous au contraire, vous êtes des musulmans et les tombes de vos pères sont en Arabie: allez chercher là-bas l'or qu'ils ont enfoui, et laissez-nous celui que nos pères ont caché pour nous dans notre pays.’ C'était une petite querelle religieuse en surcroît de l'émotion: tandis qu'elle faisait rage, un détachement de soldats, mandé en hâte de Siout, arrivait baïonnette au canon. Il n'était que temps, car musulmans et chrétiens s'étaient réconciliés et se préparaient à s'emparer du butin, sauf à reprendre la discussion au moment du partage. L'or était de bas titre et en quantité minime: on en estima la valeur à dix-huit cents francs dans un des bazars du Caire. Mais à Siout l'imagination populaire se monte aisément: le jour même on évaluait le trésor au kilogramme, le lendemain au boisseau et un mois après on ne causait dans la campagne que des seize ardebs (environ 3158 litres) d'or découverts à Siout par l'administration des fouilles.

“Restait à expliquer la présence de tant d'objets disparates dans la chambre mystérieuse. Le fourneau était d'aspect et de façon relativement moderne: je ne pense pas qu'on puisse en reporter la fabrication au-delà du VII^e ou du VIII^e siècle de notre ère. Au contraire, les vases appartiennent à la période archaïque de l'art égyptien, et ont dû être recueillis dans les tombes les plus vieilles de la montagne. Il n'est pas rare aujourd'hui encore de rencontrer chez les fellahs des objets antiques qui ont été détournés de leur destination primitive et servent aux usages journaliers de la vie; des tasses en albâtre où coula le vin des libations renfermant la provision de tabac d'une famille, et l'un des beaux vases en bronze du musée était sur le feu, plein de fèves, quand j'eus la chance de le découvrir à Qouft, en 1883, dans une hutte. L'adaptation aux besoins du ménage des ustensiles déposés dans les tombes devait être bien plus fréquente encore au temps des chrétiens et pendant les premiers siècles de l'Islâm. Beaucoup des vases de Drongah ont appartenu certainement aux

momies des princes qui régnaient à Siout, il y a quelques milliers d'années: ceux d'entre eux qui sont en diorite et en granit noir tacheté de blanc ressemblent trop aux coupes qu'on détorte à Sakkarah pour ne pas remonter jusqu'à la IV^e ou à la V^e dynasties. L'examen des lieux m'avait d'abord incliné à penser que le hasard nous avait conduit dans le repaire d'un fauconnier; mais les coins, les moules, les marteaux, les pincettes, tout l'attirail de la frappe manquait. Cette hypothèse écartée, une autre me vint naturellement à l'esprit. L'alchimie, prosaïque sévèrement par les lois chrétiennes et musulmanes, avait besoin de mystère; elle exigeait parfois des évocations d'esprit auxquelles une tombe était favorable. La chambre de Drongah était donc un hypogée ancien transformé en laboratoire par un fanatique du grand œuvre. Le tas de terre noire me fournit une preuve décisive à l'appui de cette opinion: une pincée jetée sur une pièce de cuivre rougie au feu, la teignit en blanc, comme l'*arsenic des philosophes*. J'aurais désiré le recueillir et le soumettre aux recherches des savants compétents, mais nos Arabes, plus versés que nous aux sciences secrètes, avaient reconnu du premier coup ce dont il s'agissait et avaient tout emporté.

“Il faut bien le dire, le plupart des petites localités ne nous réservent pas aussi bonne aubaine qu'El-Khozâm ou Drongah: ce qu'elles nous livrent le plus, c'est la momie et le mobilier funéraire. Le savant Poireas rapporte dans une de ses lettres, la jolie histoire d'un pharmacien de ses amis qui ne pouvait se procurer à aucun prix des Egyptiens de qualité pour fabriquer la poudre de momie dont les médecins usaient beaucoup à cette époque: ses correspondants d'Alexandrie disaient que les cimetières anciens étaient épuisés et que les indigènes, toujours ingénieux quand il s'agit de tromper le prochain, en étaient réduits à fabriquer de fausses momies pour répondre aux demandes qu'on leur adressait d'Europe. Ils allaient pendant la nuit déterrer les morts de la veille, de préférence les Juifs ou les Chrétiens, les séchaient au four, les enveloppaient de vieux chiffons, et les expédiaient à Marseille, comme momies authentiques, ce dont les pauvres malades souffraient grandement. Il est fâcheux que ce joli remède soit passé de mode en médecine, car nous avons déterré depuis le mois de Février 1884, de quoi approvisionner toutes les drogueries du monde, à Edfou, à Gébélîn à Akhmîm.

Du haut des pylones d'Edfou, on aperçoit vers l'Ouest, dans la montagne, l'ouverture de quelques grottes. Qu'elles aient été percées de main d'homme et employées comme sépultures, le fait est incontestable; mais elles ont été si soigneusement dévastées qu'on n'y voit plus aucune trace d'héroglyphes ou de figures. Au-dessous, dans la plaine, des ossements humains, des éclats de bois, des tessons épars et tous les indices d'un petit cimetière gréco-romain. Avec la meilleure volonté du monde, on ne peut y reconnaître l'emplacement de la nécropole principale, celle où reposaient les grands-prêtres d'Horus et les princes d'Apollonopolis. Après trois années de recherches, nous en avons trouvé une partie auprès du village d'El Qaçâ, à deux heures au sud d'Edfou. C'est un tertre en mauvais grès mêlé de calcaire, haut de vingt mètres à peine et à moitié noyé dans le sable. Il est traversé en tout sens par des galeries horizontales ou verticales, séparées par des parois si minces qu'elles ont cédé sous le poids de la voûte et se sont affondrées en plus d'un endroit. Un seul puits carré, de deux mètres de largeur sur six de profondeur, était encore en bon état: une porte basse ménagée au fond dans la muraille ouest, ouvre sur une chambre assez vaste d'où l'on passe dans une salle plus vaste encore. Les cadavres n'y étaient pas entassés comme ils sont dans les hypogées ordinaires: ils occupent des niches étroites oblongues, disposées en étages comme les *loculi* des catacombes romaines. Ils sont noirs, cassants, saturés de bitume, et enveloppés à peine de deux tours de bandelettes appliquées si étroitement que les reliefs du buste et les traits du visage se dessinent sous le maillet. Les deux chambres renfermaient trois cents au moins de ces momies, les unes encore étendues à leur place primitive, les autres jetées à terre et dépouillées. On releva dans la première chambre, deux beaux cartonnages d'époque gréco-romaine, peints et dorés magnifiquement, mais pourris et

tombant sous le doigt à la moindre pression, puis une moitié d'épithaphe grecque en vers barbares. La pierre qui la portait avait été brisée dans l'antiquité, et les fragments en avaient servi probablement à caler les momies pendant les dernières cérémonies, car les faces et la cassure étaient souillées de bitume. Grâce à ces menus détails et aux inscriptions mutilées des deux cartonnages, il est facile de reconstituer l'histoire de ce tombeau. Il avait appartenu vers la fin de l'époque ptolémaïque à deux membres de la famille féodale qui gouvernait à Edfou et y exerçait au rom du roi l'autorité civile et religieuse. Un ou deux siècles plus tard, vers le temps de Septime Sévère, il était déjà abandonné et fut transformé en une sorte de fosse commune où l'on emmagasina les momies des employés inférieurs du temple et de leurs parents. Tout trahit en elles la misère et l'ignorance : nulle inscription, nulle figure, nul amulette, pas même un scarabée, et leur dénuement est si bien connu des Arabes du voisinage qu'ils ne se donnent même plus la peine de les ouvrir. Elles n'en sont pas moins curieuses pour nous, car elles nous montrent ce qu'étaient devenus l'art de l'embaumement et l'observance des rites funéraires dans un des sanctuaires les plus populaires de la Haute Égypte, une certaine d'années avant le triomphe du christianisme.

"A mi-route entre Erment et Esneh le Nil était obstrué jadis par un banc de mauvais calcaire qui courait d'un côté à l'autre de la vallée et formait comme à Gebel-Silaïh une sorte de barrage naturel. Les eaux l'avaient percé dès les premières dynasties, et n'en avaient laissé subsister qu'une tranche longue et mince, dirigée du sud au nord, longue d'environ trois mille mètres, haute de soixante au point culminant, et couronnée aujourd'hui par la coupole d'un santón. Encore à l'époque romaine, elles entouraient cet îlot de roches, et, se rejetant sur la gauche, arrosaient au passage la petite ville d'Aphroditópolis; mais, depuis lors, le canal ouest a été comblé par les alluvions. De nos jours, le fleuve coule entier dans l'ancien bras oriental, et le village de Gébélén, qui a succédé à Aphroditópolis, est assez loin dans l'intérieur des terres. La nécropole est répartie sur les deux rives. Une partie des morts franchissaient le Nil et allaient s'établir sur l'autre bord, près de l'endroit où s'élève aujourd'hui le village de Mélah : c'étaient les prêtres d'Ammon-Râ, les chanteuses du dieu, les bourgeois riches, les gens à prétention. Les autres étaient enterrés à quelques centaines de mètres de la ville, au pied de la montagne. Sur la rive droite, à Mélah, les tombes sont des cellules sans ornements où les cercueils sont empilés par vingt et par trente. Les meilleurs ont la forme humaine et se rapprochent par le type des cercueils thébains du VII^e ou VI^e siècles avant notre ère. La tête, parfois assez fine d'expression, est ceinte d'une couronne de fleurs; un beau lotus bleu, épanoui, retombe sur le front. La gaine est recouverte d'un vernis jaune, sur lequel les hiéroglyphes et les tableaux s'enlèvent en bleu terne, en noir, en rouge, en vert. Tous les cercueils de ce genre ou ne portent aucun nom de propriétaire ou ont appartenu à des personnages attachés au culte d'Ammon-Thébaïn. Ces observations me portent à croire qu'ils n'ont pas été fabriqués à Aphroditópolis, mais à Thèbes même, et qu'ils ont été importés soit pour satisfaire aux caprices de la mode, soit pour remédier aux imperfections de l'industrie provinciale. Les cercueils qu'on peut regarder comme ayant été taillés dans les ateliers de la localité sont en effet d'une rudesse de style incroyable. Les traits du visage ont été hachés plutôt que découpés dans le bois par le sculpteur, et la maladresse du peintre chargé de dessiner les légendes est telle que les lettres ressemblent aux hiéroglyphes qu'on voit dans les ouvrages de Kircher ou de Paul Lucas. Beaucoup de cercueils ne sont que des boîtes en palmier mal digrossies, sans peinture, sans écriture. De pauvres petits enfants sont roulés dans des nattes grossières ou empaquetés comme en bourriches, dans des étoffes de fibre de palmier. Les momies sont jaunes et friables, emmaillottées lourdement, sans cartonnages, sans colliers, sans amulettes, sans fleurs; mais elles ont toutes une paire de chausures et un bâton, pour le voyage de l'autre monde. Les chausures ne sont pas ordinairement très soignées, de vrais souliers de fellahs, à forte semelle, en cuir rouge ou noir, déchirés, éculés, usés, ce que le mort avait de plus mauvais dans sa garde-robe;

ça et là pourtant j'ai ramassé des sandales de luxe dont les lanières sont découpées et gaufrées d'ornements du meilleur goût. Le mobilier funéraire n'est pas considérable : de mauvais chevets en bois, un coffret, et dans un cas seulement, une centaine de vases, de coupes, de plats en terre rouge cuite au feu, si neufs et si luisants d'apparence, que l'authenticité m'en aurait inspiré des soupçons, si je ne les avais trouvés moi-même. Sur la rive gauche, point de chambres et peu de cercueils : les cadavres ont été enfouis négligemment dans des fosses si peu profondes que les bêtes les ont parfois déterrés et dévorés à moitié. Vous vous demanderez ce que les chacals et les hyènes peuvent trouver à ronger sur une momie : il faut croire cependant que le linge et la chair bituminés ont une saveur appétissante, car j'ai vu souvent des chiens et même des chèvres en manger des lambeaux avec les signes de la joie intense. Les momies sont donc rares qui ont échappé à la voracité des animaux et à la cupidité des Arabes, mais le mobilier funéraire est abondant. La pièce principale en était un lit bas, de ceux que les Nubiens emploient encore et qu'ils nomment *angarebs*. Figurez-vous un cadre en bois d'acacia ou de sycomore, monté sur quatre pieds, et tendu d'un filet en cuir ou d'une toile en damier sur laquelle on posait le matelas, quand il y en avait un : la longueur est d'environ 1^m 50, la largeur de 0^m 60, si bien que le dormeur n'a pas la place de s'étendre et doit se pelotonner sur lui-même. A côté de ce meuble commode gisent pêle-mêle des vases et des armes votives, arcs, flèches, boumerangs, massues, cassées pour la plupart. C'est volontairement qu'on les brisait et pour les tuer : leur âme, leur double, dégagés de leur enveloppe matérielle, allaient rejoindre dans l'autre monde l'âme et le double du défunt. Les provisions de bouche, le pain, le blé, les grains, le miel, les cosmétiques, le fard pour la toilette, des cuillers en bois et en ivoire, des gobelets en corne, des tabourets, des guéridons à trois ou quatre pieds, des pierres à aiguiser, des flûtes en roseau, des poupées modelées en cire rouge sur armature de jonc, complètent l'équipement : à Gébélén, les tombes sont de vrais magasins où l'on peut se procurer sans trop de frais tout ce qui était nécessaire à un ménage de petits bourgeois égyptiens.

G. MASPERO.

EGYPT EXPLORATION FUND.

THE objects found by M. Flinders Petrie this year at Naukratis will be on view on Saturday next (August 8), and on Tuesdays, Thursdays, and Saturdays between 10 and 4 until the end of September, at the room of the Royal Archaeological Institute, Oxford Mansion, near Oxford Circus, by kind permission of the Council of the Institute.

The principal results of the past season's work are : (1) Discovery of the site of Naukratis and of the plan of the streets; (2) discovery of the remains of the only archaic Greek temple known in Egypt; (3) discovery of the only series of ceremonial foundation deposits yet known; (4) a large collection of archaic Greek iron tools of the sixth century B.C.; (5) a large collection of archaic Greek pottery, much of it incised with dedications of the sixth and seventh centuries B.C.; (6) the largest number of Egyptian weights yet known; and (7) a series of over a thousand stamped amphora handles.

CORRESPONDENCE.

BERNA OF SIENA.

Siena.

The recent sale in London of the collection of pictures belonging to the Rev. J. Fuller Russell, comprised an early example of the Siena school painted by Berna, representing four saints before an emperor on a gold background. Vasari devotes a few pages to this painter; but his account of him is merely a summary of what he calls a brief career, cut short by a fall from a scaffold when painting in a church at San Gimignano. A footnote com-

plaints of the silence of contemporary Siena writers with regard to Berna, attributing it to his many wanderings from his native city. I find on referring to Ettore Romagnoli, the laborious local chronicler, who compiled twelve volumes of biographical details concerning the Siena artists, dating from the twelfth to the beginning of the present century, very little additional information. Such as it is, it is contained in ten or eleven pages of the MS. copy I have before me, presented by the author to the Siena Library in the year 1835. Romagnoli, I may say in passing, gives his readers a wonderful proof of the immense fertility of the Republic of Siena in industries applied to the fine arts. Roughly counting the names in the chronological index, there are 800 of them considerable enough to merit a separate place in his records, including painters, sculptors, architects, illuminators, workers in mosaic, gold, bronze, glass, majolica, and, most renowned of all, the wood-carvers. Gaetano Milanesi, the Senese editor, who annotated Vasari's "Lives," and, judging by the initials G. M., the same who has made occasional comments on the margin of the Romagnoli MS., is disposed to deny the tradition of the death of Berna in extreme youth, and even throws doubt on the existence of any painter in Siena named Berna or Barna, as diminutives of Bernardo or Barnaba, flourishing during the period between 1355 and 1381. Adopting the form of spelling used in the commentaries of Lorenzo Ghiberti, who writes Barna (not Berna as Vasari prefers), he inclines strongly to think the real painter was Barna di Bertini, whose name is enrolled as a "decorator" in a list of the mercantile guild of Siena for the year 1340. If this supposition be correct, he to whom the people of San Gimignano dedicated a laudatory epitaph in Latin must have been far advanced in years; but the lines are without authority, having been composed in comparatively modern times, with no particulars of age inscribed therein, so we are left entirely to conjecture.

Romagnoli begins by quoting a paragraph from Sebastiano Erizzo, the Venetian writer on coins, medals, poetry, and music, whose lament on the too frequent losses to art through early death is almost verbatim the same as that afterwards made use of by Vasari. It does not appear obvious to describe as particularly short-lived the career of a painter whom we positively know to have survived fourteen years after having been chosen from his experience and reputation to adorn an important work of art in Rome in 1367. At the lowest computation we must concede him to have lived well on to forty years. On the other hand, Milanesi's suggested Barna di Bertini, on the roll of the working associates of the Siena mercantile guild in 1340, lived for a period prolonged to at least sixty years, say 1320 to 1381; and I altogether fail in such case to see cause for Vasari's complaint on his premature death.

Long or short, Berna's life must have been a very busy one. To exclude all mention of his works in minor localities, Arezzo, Cortona, San Gimignano, Florence, and Rome, count numerous church frescoes which testify to his activity. Romagnoli alludes to several frescoes which he saw in a church of San Gimignano in 1790, which, on a second visit in 1801, were utterly deformed by restoration. Possessing, as his native Siena does, so few examples of this painter, it is curious to speculate on the fortunes of the stray picture just sold in a London auction-room for the paltry sum of £23 2s. Vasari, who owned one of his paintings, speaks highly of him as the first painter who depicted animals in a natural and lifelike manner. The Abate Lanzi praises his superiority over previous painters in the drawing of hands and feet. D'Agincourt notes his progressive-

ness in the power of delineating facial expression.

The date of Berna's visit to Rome was 1367, when he was commissioned by Pope Urban V. (ten years before his successor, Pope Gregory XI., was induced, by Saint Catharine of Siena, to return from Avignon to Rome) to paint a stupendous tabernacle in the Church of Saint John Lateran for the reception of the recently discovered heads of SS. Peter and Paul. This tabernacle was embellished in a most costly fashion by Giovanni di Bartolo of Siena, a goldsmith reckoned by Romagnoli to be one of the three best known pupils of Berna; the other two being Giovanni d'Asciano and Luca di Tomè. The ornamentation is described by Romagnoli at great length, partly from a book printed at Rome in 1723, entitled *Lo stato della Chiesa Lateranense*, relating details of the treasures lavished on the interior of the shrine by King Charles V. of France, Queen Joanna of Naples, and others. Many of the jewels, pearls, diamonds, and rubies, are said to have been stolen and replaced by conscience-stricken thieves in 1435. Pity it is that the French plundered and destroyed this reliquary more effectually during their first occupation of Rome. So far as I know, D'Agincourt's *Arts and Monuments* supplies the only illustrations, easily accessible, of Berna's share in this magnificent tabernacle. Romagnoli gives an extract, filling several pages, from the account of an inspection made by Urbano Mellini on December 22, 1649. His description of the mode in which the outer doors of gilded ironwork were secured by padlocks, and the heavy chains and bars fixed within the solid structure, gives an idea of the value of the contents. The four keys were entrusted to the safe keeping of as many different officials, the maggiordomo of the Pope, the conservatore of the Roman people, the canons of St. John, and the guardians of the same church. After denouncing the robbery in 1435, D'Agincourt, in his book (French ed., 1823), alludes thus tenderly to the spoliation by his compatriots:

"Au milieu des troubles de ces derniers tems une semblable spoliation ayant encore eu place, une dame espagnole la Duchesse de Villa Hermosa a obtenu du Pape Pie VII. (aujourd'hui regnant) la permission de rétablir dans leur ancienne splendeur ces monumens de la vénération publique, travail qui a été exécuté avec succès par M. Valadier."

Copies of the originals, "d'après une ancienne peinture," are to be seen in D'Agincourt's volume of illustrations in the following order: Sculpture, plate No. 36, represents the whole design; plate No. 37 the silver busts of SS. Peter and Paul, by Giovanni di Bartolo; painting No. 129, the three pictures of Berna—viz., "The Annunciation," "The Coronation," and, in the centre, the "Madonna and Child."

To return to Berna. It appears that the Cardinal Marcantonio Zondadari (born in 1658, died in 1722), son of a sister of the Chigi Pope Alexander VII., once possessed two "brilliant pictures" painted by him. Where are they now? This great Cardinal, whose rule in Malta was signalised by expensive public works and improvements, was himself a *tasteful dilettante*, and has been called, from his capacity in literature and the fine arts, "uno degli ultimi grandi Senesi." He was selected Grand Master of the Cavalieri di San Giovanni di Gerusalemme in 1720, and wrote in 1717 the rules and duties of this order, otherwise known as Knights Hospitallers, contained in a small MS. version, now in the Siena Library. For the curious in such matters, the MS. is entitled "Breve Ragguaglio ed Istruzione del sacro Ordine Militare degli Ospitalari, istituto in Gerosolima e dei suoi cavalieri Religiosi detti oggidì volgarmente di Malta." Another Cardinal of the same family, Antonio Felice Zon-

dadari, was archbishop of Siena from 1805 to 1823, and may have inherited the two above-named pictures by Berna. A most imposing monument, surmounted by a statue, was raised to the first Cardinal Zondadari in the Cathedral of Siena; and, in the opposite transept, a modest memorial tablet, erected by himself, records the second Cardinal Archbishop, who, after presiding over the diocese twenty-eight years, died at the venerable age of eighty-three.

Romagnoli says that the prior of San Domenico at Arezzo had a "Crucifixion" of Berna in the year 1826; and he speaks of another work being in the chapel of the Santo Nome di Gesù in the Contrada of the Bruco here. The oratory of San Bernardino, rich in frescoes by Sodoma and other painters of the golden age of Siena, is understood to be the place he refers to; but he has been led into error. Alongside, in the chapel of the seminary of San Francesco, however, is an exquisite fresco, copied lately for some London art society; but it is supposed to be by one of the Lorenzetti, and I have sought for the Berna in vain in that neighbourhood. The Custode knows nothing about it. The picture gallery, he writes, contains two of Berna's pictures—a "Virgin with SS. John Baptist, Lorenzo, and two other Saints," also a small "Epiphany." It is disappointing to state that no such pictures are now to be recognised among the classified, or numerous unclassified, early masters of the Siena collection.

I will conclude this necessarily incomplete study of an imperfectly known Siena painter by saying that an attentive perusal of Romagnoli's MS. (vol. iii.) has enabled me to trace an admirable "Madonna and Child" seated on a throne (with the accustomed *Campo d'Oro*), in a condition of marvellous preservation, and undoubtedly his handiwork. I enquired, and learned that this picture was transferred a hundred years ago from the Benedictine monastery outside the walls of Siena (the same monastery whence the "Assumption," by Matteo da Siena, was last year acquired for our National Gallery), and is now in the chapel of the Congregazione dei Sacri Chiodi attached to the church of San Donato in this city. I need not expatiate on its merits, as anyone can gain ready admission; but hitherto, judging from the curate's conversation, his daily visitors are unaware that a valuable picture by a great pioneer of the Siena school hangs disregarded on their humble convent wall.

WILLIAM MERCER.

NOTES ON ART AND ARCHAEOLOGY.

SIR NOEL PATON has all but completed a religious subject which has been commissioned by the Queen for the Prayer-room at Osborne. The present picture represents Christ finding his disciples asleep in the garden—a subject which was treated by the artist several years ago, but is here dealt with in altered fashion. On an upright canvas we see the standing figure of Christ, his countenance bearing witness, in its palor and its empurpled lips and wearied eyes, to the mental agony which he has endured, and its expression indicating his perception of the further trial that awaits him in the faithlessness of his followers. One hand sustains the folds of his blue mantle, the other leans against an olive

tree—whose trunk is circled by the tendrils of a wild vine—for support to his exhausted frame. Beneath, in the immediate foreground, are the sleeping figures of the apostles who "could not watch one hour." To the right we see the form of St. John, robed in bronze-green and rose colour, stretched at full length upon the ground, his delicate beardless face thrown backwards, and supported by his bended arm. To the left are James and Simon Peter, the former leaning against the root of a tree, the latter with his head drooping between his knees, and his hand sustaining the weapon which was identified with the later incidents of the night, and has become the symbol of the saint in Christian art. On either side of the picture appear glimpses of the dim and misty slopes of Gethsemane; and through the olive stems that rise towards the centre, we see the distant ramparts of Jerusalem defining themselves against the sky of night, which is pierced by the brilliancy of a single star, and is growing soft and tender with the first faintest light of the dawn. The picture shows the finished execution and the reverent feeling which is characteristic of the painter's works. It is to be arranged, in the fashion of a triptych, along with two of Sir Noel's other religious subjects which are already in the Queen's collection.

THE Print Room at the British Museum will be closed to the public from August 10 to October 3, while the collection is being moved into the new wing of the building.

THE Society of Medallists, the formation of which was recently announced in the ACADEMY, is holding its first exhibition in the East Gallery of the "International Inventions Exhibition," South Kensington. The exhibition consists of electrotypes of Greek and Roman Coins, cast medals of the period of the Renaissance and of the sixteenth and seventeenth centuries, cast and struck medals by living artists, and a series of plaster models of medals by the students of the Slade School (London) and others. To these are added various machines connected with the striking and reduplication of coins and medals.

WE recommend to the attention of all students of art history who can manage to read Swedish a work bearing the title (an awkwardly long one, like those of too many Swedish books) of *Beskrifvande Katalog öfver . . . Målningar af äldre Mästare i Sveriges privata Tafvelsamlingar*. Af Olof Granberg. (Stockholm: Bukowski.) It contains short descriptions of paintings by old masters in the private collections of Sweden, most of them hitherto unknown or undescribed. The book is to be completed in four or five parts. The first part, which has just been published, comprises notices of 160 pictures by 62 different masters, chiefly belonging to the Dutch and German schools. All these works are described from personal inspection, a task of no little labour, as they are dispersed among seventy private galleries in different parts of Sweden. We are, of course, unable to judge of the soundness of the author's critical remarks, but his descriptions give evidence of careful study. In many instances he has given woodcut tracings of the artist's monogram or signature as it appears on the picture. The typography is extremely good.

MADAM LINDA VILLARI'S NEW NOVEL.

CAMILLA'S GIRLHOOD. By LINDA VILLARI, Author of "On Tuscan Hills and Venetian Waters," "In Change Unchanged," &c. 2 vols., crown 8vo, 21s.

"In her bright and pleasant story Madam Villari avails herself of the experience of a double nationality to blend strongly contrasted effects. . . . She writes in a straightforward and unaffected style, which makes her story satisfactory reading."—*Athenæum*.

LITERARY LANDMARKS OF LONDON. By LAURENCE HUTTON. Crown 8vo, 7s. 6d. (post-free.)

"Mr. Laurence Hutton has worked out a felicitous idea with industry, skill, and success."—*Standard*.

LONDON: T. FISHER UNWIN, 26, PATERNOSTER SQUARE, E.C.

SATURDAY, AUGUST 15, 1885.

No. 698, New Series.

LITERATURE.

Studia Biblica: Essays in Biblical Archaeology and Criticism and kindred Subjects. By Members of the University of Oxford. (Oxford: Clarendon Press.)

THIS volume appears to offer a happy answer to the question that was discussed some little time ago, as to the best means of promoting "research" at the universities. Three Oxford professors, filling chairs which represent one department of learning, that of the interpretation of holy Scripture, men who are known to be all of them themselves occupied in "research," held meetings on a few evenings during each term, at which papers on their common subject of study were read and discussed. These papers, having been revised by their authors, have been collected into a volume, which is now published by the delegates of the Clarendon Press; and the promise is held out that this volume is but the first of a series. A young student cannot be placed in circumstances better calculated to stimulate him to independent investigation, than if he is given opportunities of obtaining experienced guidance at the outset of his enquiries, of getting kind and sympathising criticism when he believes himself to have made discoveries, and is afforded the means of publishing to the world any valuable results of his researches. The volume before us would, therefore, deserve welcome, even if its contents were less interesting than they actually are.

1. The book contains papers arranged in a kind of chronological order, beginning with those relating to the Old Testament. The first, by Prof. Driver, gives an account of recent speculations concerning the origin and primary meaning of the Tetragrammaton. Some scholars, pointing out the affinities of the Hebrew name for the Deity to titles known to have been used elsewhere, have contended that the Hebrews derived their sacred name from a non-Israelitish source. It has been lately maintained that the form of the name as first imported was *Yahu*, or *Yah*, and did not include the abstract idea of being; but that the connection with the substantive verb was first established when the Hebrews gave the name the form *Yahweh*, and associated with it the meaning explained in Exod. iii. 14. Conceding the derivation from the substantive verb, it has been questioned whether the form employed has a neuter or a causative force—that is to say, whether the name is to be understood as denoting the self-existent one, *he that is*; or, rather the creator or life-giver, *he that causeth to be*. Other explanations, such as "the fulfiller of promises," have also been proposed. Prof. Driver feels no difficulty, on theological grounds, in accepting theories which, as relating to the time prior to Exod. iii. 14, in no way invalidate the revelation there given. But considering

the theories impartially on their own merits, he is unable to regard any of them as established.

2. The second paper, by Mr. N. H. Woods, contains a study of the Septuagint Version of the books of Samuel. In this he deals with some facts which Prof. Robertson Smith's lectures had already made popularly known. The same Masoretic text is found, with insignificant variations, in all extant Hebrew MSS. Hence it had been imagined that the determination of the text of the Old Testament was free from the perplexity as to various readings which besets the critical editor of the New Testament. But there are various reasons for doubting whether the horse had been safely kept before the Masoretic revisers locked the stable-door. In particular the Septuagint translation is many centuries older than the oldest existing Hebrew MS.; and it is in general so extremely literal, that it is easy to reproduce the Hebrew text from which it was derived. But the text, and especially in the books of Samuel, is found to differ considerably from that which is the basis of our English version. It is easy, then, to imagine what interest attaches to a careful study of these variations. Some of them, no doubt, may be explained as having their origin in errors made by the transcribers of the Greek text, or as due to carelessness or want of fidelity on the part of the translators; but there are others where the readings indicated by the Greek seem plainly deserving of preference to those actually found in the Hebrew text. But there are some variations of a more fundamental character, which raise a question as to the manner in which the Hebrew books of Samuel, as we now have them, were formed. To take the most striking example, it has been always a puzzle to commentators that in 1 Sam. xvi. 21 David is represented as a personal attendant on Saul, and as his armour-bearer, while in the next chapter he seems to be a complete stranger to Saul, who (v. 55) enquires of Abner whose son he is, and finds Abner unable to tell. Now, this difficulty does not arise from the narrative as told in the Vatican copy of the Septuagint, which omits large portions of the present Hebrew text; but the remarkable point is that the portions which the Septuagint retains and those which it omits, when each read separately, form two nearly consecutive narratives. Thus the solution is suggested that the present text of Samuel was formed by putting together two independent accounts of this portion of David's career.

3. In the third paper Dr. Neubauer gives an interesting discussion, which will not bear abridgment, of the dialects spoken in Palestine in our Lord's time. A few years ago Dr. Roberts, in his work, *Discussions on the Gospels*, did much to give popular circulation to the view that Greek was very widely spoken in the Holy Land, and that this was the language in which were delivered many of the discourses of our Lord, as well as almost all those of the apostles recorded in the book of the Acts. This view, however, has not obtained extensive support; and the conclusions at which Dr. Neubauer arrives are that a kind of Greek was only spoken by a small Jewish Greek colony and by some privileged persons; that in Jerusalem, and perhaps also in the greater part of Judea, the modern-

ised Hebrew and a pure Aramaic dialect were chiefly in use; but that the Galileans only understood a dialect of their own, closely related to Aramaic. He considers that the language of the Talmud of Jerusalem, which consists of discussions by natives of Galilee, represents the language which the disciples of Jesus spoke and wrote.

4. The fourth essay, by Mr. Edersheim, professes to give an account of a new theory of the origin and composition of the Synoptic Gospels proposed by Pastor Wetzel. Actually it mainly consists of an able review, for which Wetzel himself had furnished materials, of the various theories previously put forward. Of Wetzel's own theory only a brief sketch is given at the conclusion; and it does not lead us to think that Wetzel has been more successful than his predecessors in obtaining a solution, which will command general acceptance, of the extremely difficult problem with which he has occupied himself.

5. Dr. Sanday, in the next paper, presents the main points in a controversy which has lately raged between two eminent German scholars. Prof. Zahn, of Erlangen, in a work published in 1883, believed himself to have recovered a real literary treasure, namely, a commentary on the Gospels by Theophilus of Antioch, whose date is A.D. 170-180. In fact, a Latin commentary, bearing the name of this Theophilus, had been published by De la Bigne in 1576; but its claims to this assumed authorship had been rejected by several learned critics, such as Le Nourry, Fabricius, and Lardner, and at the present day had been generally regarded (as for instance, by Otto) as completely disproved. There are, for instance, some apparent anachronisms which, if not conclusive against the authorship of Theophilus, would oblige us to doubt whether it would be ever possible to disprove by internal evidence an alleged second century date. Dr. Zahn, however, made an extremely able and ingenious case for reversing the previous judgment of critics. Dr. Sanday has found it difficult to present this case adequately in the space at his disposal, and of course it would not be possible to do so here. Zahn was replied to by Prof. Harnack, of Giessen; but before his discussion of Zahn's arguments could be published, evidence came to light which gave the question a new aspect, and which he was able to add in an appendix. It had not been known from what MS. De la Bigne had published this commentary, nor had any other MS. of it been found, until quite lately the director of the Royal Library of Brussels announced that his library possessed a MS. which contained the very commentary in question. And it contained a preface apparently unknown to De la Bigne, which stated that the work was a compilation made at the request of a certain Nomedius, who was abbot of the monastery of Soissons, A.D. 695-711. This seems to settle the question of the antiquity of the commentary. But Zahn is still unconvinced; and one who has very great respect for both the disputants can only observe with regret a certain asperity of tone which the controversy has assumed. A man may form a wrong opinion as to the date of an ancient document without losing his right to be regarded as not only a perfectly virtuous character, but an able and learned divine.

6. For the sixth paper Dr. Sanday has also drawn his materials from the *Texte und Untersuchungen* of Von Gebhardt and Harnack. The paper treats of a sumptuous Biblical MS. preserved in the cathedral library of Rossano in Calabria, but hitherto unused by editors of the New Testament. The MS. is ascribed to the sixth century, and its special interest consists in a collection of miniatures representing scenes from the close of our Lord's earthly ministry. Gebhardt and Harnack published in 1880 a full description of the external appearance of the volume, reserving for a later publication an accurate presentation of the text, as they had not had time to copy the MS. on their visit to Rossano in 1879, but had merely collated it with a printed edition. The two scholars returned to Rossano in the spring of 1882, attended by a photographer, who was to copy the miniatures, and a skilled artist, who was to reproduce the colouring. But unfriendly influences had been at work in the meantime; and access to the MS. was denied, on the pretext that the Chapter were themselves about to publish a complete edition of it. Considering that the members of this learned body did not even know in what language the MS. was written, it is safe to conclude that some other reason inspired their refusal. But the German scholars were obliged to return *re infecta*, and had to content themselves with publishing the text as derived from the somewhat hurried collation of their first visit.

Dr. Sanday, in his paper, gives an account of the chief characteristic features of this text, from which it appears that the accession of this new witness will have no appreciable effect on critical judgments. In fact, the controversy now between New Testament critics is whether the preference is to be given to a small number of very ancient authorities or to the great bulk of modern witnesses. But as the date of the alleged modernisation of the text is earlier than the time of St. Chrysostom, a witness a full century later than his time does little by his accession to strengthen the modern phalanx.

7. In the seventh paper Prof. Wordsworth prints the old Latin version of the epistle of St. James, as given in the Corbey MS., a MS. now at St. Petersburg, but which originally belonged to the monastery of Corbey on the Somme, near Amiens. The MS. is not older than the ninth or tenth century, but the text which it contains can be traced back to the fourth. Prof. Wordsworth has made a careful comparative study of the text given by this version with the Vulgate, with other Latin versions, and with the Greek; and he finds so much difficulty in reconciling all the facts, that he puts forward the somewhat startling hypothesis that the versions represent two different Greek texts, both independent translations of the same Hebrew or Aramaic original. The character of the Greek of this epistle has often been thought unlikely to have proceeded from James, and it is very conceivable that what the apostle dictated or wrote in Aramaic may have been translated by his "interpreter" into Greek. But it is an immense addition to this hypothesis to suppose that the Aramaic original circulated independently, and was translated into Greek by more persons than one; and Prof. Wordsworth owns

that he has not been able to convert Dr. Hort to his opinion.

In the concluding paper of the volume Dr. Sanday returns to the subject of the Corbey St. James, and he gives some interesting particulars as to the study of the old Latin version, on which he is at present engaged. The extant specimens of the old Latin, in their general resemblance and their perpetual deviations from each other, present an aspect which it is as hard to account for by a theory as it is satisfactorily to explain the mutual relations of the Synoptic Gospels. It will require an extensive and laborious tabulation of facts before any general results can be stated with confidence. But the conclusions to which Dr. Sanday's investigations are pointing is that there were originally two main versions which were the parent stocks from which all the texts we now have were derived with different degrees of modification. He suggests that these modifications may have often arisen from differences of local usage, transcribers being liable to substitute for the words in the text before them other equivalent phrases more in use in the district in which they lived. And he ventures to anticipate that a study of the versions is likely to throw light on the variations of provincial speech, since by a comparison of the different texts with the large store of patristic quotations we may be able to assign each text to a certain fixed locality.

8. The eighth essay, by Mr. Gwilliam, relates to a subject likely to occupy a foremost place in the labours of coming biblical critics, namely, the Syriac translation of the New Testament. The printed text of the Peshito, in respect of the authority on which it rests, stands in much the same condition as the Greek printed text did at the end of the last century; that is to say, it but reproduces a traditional text originally founded on but slender MS. authority. There are now, however, in the Syriac MSS. at the British Museum abundant materials for a critical edition of the Peshito, such as might bear comparison with modern critical editions of the Greek Testament. Mr. Gwilliam describes one venerable MS. which is as old as the Alexandrian MS. of the Greek. The task of preparing a critical edition of the Peshito had been undertaken by the late Philip Pusey, but his early death obliges us now to look to his fellow-labourer Mr. Gwilliam for the completion of his work. Mr. Gwilliam announces that his collations have proceeded to such a point that the publication of a revised Peshito for the four Gospels is now within measurable distance. He gives us also to understand that the result of his labours has been to confirm in all important respects the traditional text, the corrections that will be introduced relating chiefly to matters of grammar and orthography. He uses language indeed which would seem to imply that Philip Pusey had undertaken his labours with the design of bringing out this result. But we are little concerned with the *animus*, or even with the judgments of any editor who honestly lays the evidence before us. Let him give what readings he pleases the honours of the text, provided that his margin affords the means of correction.

We must look to increased knowledge of the Syriac authorities as affording the best

means of determining the controversy raised by the publication of Drs. Westcott and Hort's Greek Testament. These scholars, finding that the type of Greek text which has prevailed from the fifth century downwards differs in important respects from that attested by earlier authorities, have arrived at the conclusion that an influential revision of the text must have taken place in the third or fourth century, in consequence of which the older forms of text ceased to be reproduced. It is true, we have no historical evidence of the fact of this revision. We can only conjecture the place where it was made, and scarcely even conjecture the name or names of the apparently very influential critics who were the authors of it; but this silence of history would not alone be sufficient reason for rejecting the legitimate results of a critical examination of the textual evidence.

But the greatest difficulty is that Drs. Westcott and Hort's theory requires us to believe that simultaneously with the alleged revision of the Greek text a similar revision must have been made of the Syriac, and with even more surprising success. For the traditional Peshito corresponds completely with the later type of Greek text; and so far as evidence has been yet published, any older forms of the Syriac appear to have almost completely perished out of existence. The only specimen of them we at present know consists of the fragments of the Gospels, published by Dr. Cureton. And, in passing, I must remark that I cannot think that Drs. Westcott and Hort have made a happy change in referring to this version as *Syriaca vetus*, for I look on the colourless nomenclature as the more scientific. It is characteristic of an unscientific person to be unable to state a fact without mixing up some theory with it. The old notation, "Syr.-cu," adequately expressed the fact that the version referred to was that published by Dr. Cureton; the new notation mixes up a theory which may be true, but which is not yet universally accepted—that this version represents the older form of the Syriac text, of which the traditional Peshito is but a later revision. Of the antiquity of the Greek text represented by Cureton's Syriac there can be no doubt; but it still remains open to question whether this version is the oldest Syriac form, or whether it is the unsuccessful attempt of a reformer to introduce what he regarded as a purer text than that generally current.

For the resolution of this question we must look to increased knowledge of the Syriac witnesses. If the Curetonian be really the "vetus," we ought to find that the older MSS. of the Peshito we could obtain the more nearly they would conform to the Curetonian type, and that the quotations of the earliest Syriac writers would approach to the same form of text. But no such result has been obtained from Mr. Gwilliam's examination of the oldest Syriac MS. at present known, which cannot be said to exhibit any symptoms of approach to the Curetonian type. This fact is far from overthrowing Drs. Westcott and Hort's theory. This Syriac MS. is no older than *cod. A.*, and if we had no older Greek MS. of the Gospels, the MS. Greek evidence would appear to be equally adverse to Drs. Westcott and Hort's conclusions. But even if the Vatican and Sinaitic MSS. did not

exist, we could find in later Greek MSS. abundant testimony to "pre-Syrian" readings. And so it is reasonable to believe that if the primitive Syriac text had been of the Curetonian type, it could not have perished without leaving some trace behind, but that we should find its readings cropping up in later Syriac MSS. The testimony of the earliest Syriac writers ought also to be carefully examined; and until the Syriac evidence has been thoroughly explored, it seems to me rash to be over-confident that we can pronounce in what form the New Testament first circulated in that language.

9. In the ninth paper Mr. Randell makes accessible to the English reader the arguments by which the French ambassador, M. Waddington, following hints previously given by Letronne, succeeded (it is not too much to say) in establishing that the date of Polycarp's martyrdom was not A.D. 169, as Eusebius had fixed it, but A.D. 155. If we dispassionately consider what means of information Eusebius had when he found himself bound to assign in his chronicle definite dates for second century events, we shall have no scruple in modifying his figures by a few years when evidence presents itself not likely to have been within his knowledge. In the present case the new evidence enables us to determine the date of the proconsulship of Quadratus, during which the Acts of Polycarp represent that martyr as having suffered. The proof is indirect, fixing with tolerable certainty, by means of inscriptions, the year of the proconsulship of Julianus, and determining by a proof not demonstrative, but offering a high degree of probability, the interval between his year of office and that of Quadratus. Of the date thus obtained there are some independent confirmations which need not here be described.

Mr. Randell, adopting Waddington's date for the year of the martyrdom, does not enter into the question of the determination of the day, and does not appear to have met with a paper on the subject which I published in the *ACADEMY* of July 21, 1883. Polycarp is related to have suffered on a "great Sabbath," and a note to his Acts gives the day as the second Xanthicus. This date has been generally understood as equivalent to February 23, and in the year 155 that day was a Sabbath; but no one has been able to explain why it should have been a "great Sabbath." The following was the solution which I offered. It is notorious that months were originally regulated by the appearances of the moon, the first evening of the month being that when the young moon first became visible, the full moon occurring in the middle of the month, which continued until the moon had waned into total disappearance. In our present calendar the months have no connexion with the moon. On February 23 the moon may be full or new, or have any other age. Now I found reason to think that in the time of Polycarp the month Xanthicus was still lunar, and had not been fixed to begin on a determinate day of the solar year, irrespective of the moon's appearance. If this be so, the question of the great Sabbath is settled at once. The month Xanthicus coincided with the Jewish Passover month. Since the Jews began their day with the evening, the first evening of the moon's

visibility would be with them, not the close, but the beginning of the first day of the month, which would include the next following morning. Thus what in Gentile computation was the second of Xanthicus, would, in the Jewish, be the first day of the month. If this day were a Sabbath, it would undoubtedly be a great Sabbath, as being not only the first Sabbath, but the first day of the ecclesiastical year, and the day from which the other feasts were reckoned. In this way I was led to conclude that the year of Polycarp's martyrdom must have been one in which the Passover moon first became visible on a Friday evening. But there is a very limited number of years which fulfil this condition, and I found on computation that far the most probable of these years was the year 155, to which Waddington had been led by another process. The only change then that I found occasion to make in his results was to place the martyrdom on March 23, instead of February 23; and in favour of this later date is to be said that the time of the vernal equinox was a very likely time for the celebration of the games at which the martyrdom took place.

The tenth paper by Dr. Neubauer gives information concerning unexpected discoveries relating to Aramaic epigraphy and philology made during the past year. Enough has been said to show the varied and interesting contents of this volume.

GEO. SALMON.

Life of Robert Fairfax of Steeton, 1666-1725.
By Clements R. Markham. (Macmillan.)

THE records of this illustrious house of Yorkshire have already done good service in illustrating the course of English history. It is nearly forty years ago since four volumes, the *Fairfax Correspondence* and the *Fairfax Memorials of the Great War*, the materials of which were drawn from the family papers of the great parliamentary general, were communicated to the world, and at once accepted by the highest critical authorities of the day as valuable additions to the literature of the Civil War. From similar documents Mr. Markham himself published fifteen years ago an elaborate and faithful memoir of Thomas Lord Fairfax; and, among the publications of the Surtees Society, there stands out conspicuously a series of Yorkshire diaries, from one of which, the diurnal of Adam Eyre, a yeoman dwelling on his paternal estate on the Don, may be ascertained the opinions and habits of the officers who followed Fairfax's standard.

The title of the present work must in some respects be considered a misnomer. There are at least three members of the Fairfax family whose lives are described in its entertaining pages, though not with the rich profusion of detail surrounding the career of Robert Fairfax, and their names might with appropriateness have found a place on the title-page. Among the Northern leaders of the parliamentary army, none could be found more courageous in action itself, or more courteous to his opponents when the fight was won, than Sir William Fairfax, who served his country either as squire on the patrimonial acres or as soldier on the battlefield with disinterested singleness of purpose. Five of his letters, addressed to his wife in

London, have been printed by Mr. Markham, and they show his deep affection for his wife and family, and his zeal for the cause for which he was in arms. One of them was written from Marston Moor on the day after the battle: and, as the scene of the fight was situated only six miles from Steeton, he was able to describe its situation to his wife with topographical precision. "The battle was fought in Marston Fields, not far from Quinton Ladston's house, the hour at five o'clock in the afternoon." Ten days after the last of these letters was dated, the brave warrior fell "literally covered with wounds, more than one of which was mortal," having plunged single-handed into the midst of the foe to encourage his followers, who had thrice attacked and thrice been repelled. The other correspondent is his daughter, Lady Lister, whose letters to her widowed mother describe the gaieties of life in London during the closing years of the Commonwealth. One of the incidents of fashionable life mentioned by this gay young wife is the match "with Jack Mordant and Carey," the father and mother of the brilliant, but erratic, Earl of Peterborough; and the correspondent, who seems to have possessed a feminine love of fun, adds, "she fasts all lent on purpose to be a fit match for him."

Robert Fairfax of Steeton, who gives his name to this volume, passed through every grade in the navy until he rose to the position of vice-admiral, and finally obtained a place on the Board of Admiralty. For four years he remained gaining the experience of a practical sailor in the merchant service, in a ship trading to the ports in the Mediterranean; but his wish was to enter the navy, and, at the close of 1687, he set about obtaining his object. His days at this time were spent in a curious mixture of work and pleasure. One morning he was studying navigation at Wapping with the champion "coach" of the age; on the next, he would borrow a horse, and follow the king into the hunting-field, riding by the side of James, and, after the sport was over, accompanying him into the hunting lodge "to eat some hot soft beef and burnt ale." At last, through the influence of a Roman Catholic admiral, a Yorkshire compatriot, young Fairfax obtained his appointment as a volunteer on board the flag-ship. From that time until the retirement of his hero into private life the pages of Mr. Markham's narrative contain a brief history of the English navy. He specifies the names of the channel fleet in 1688, depicts the corruption which prevailed in the navy under the Stuarts, and defines the duties of the captain and the services required from the various officers and volunteers. To such an extent does the biographer carry out his determination of describing the naval warfare of the period, as to give a minute account of the battle of La Hogue, although Robert Fairfax "was absent on more distant service, and could take no personal part in this glorious action." With that exception, Fairfax seems to have participated in nearly every sea fight after 1688. The ship in which he served was among those engaged in the relief of Londonderry. He was first-lieutenant of one of the two vessels that suffered in the disastrous fight off Beachy Head, when Lord Torrington was defeated and cashiered. A

few years later he commanded one of the ships in the expedition against Copenhagen, which forced the King of Denmark into concluding a treaty of peace with England's ally. His next act of importance was to join in the expedition which captured or destroyed forty-five merchant-ships and three men-of-war off Granville, on the coast of Normandy. Capt. Fairfax shared in the honours of the capture of Gibraltar; and when a French fleet attempted to retake that much-prized fortress he served under Sir John Leake in the battle of Malaga, which frustrated the enemy's purpose. When Lord Peterborough resolved to attempt the capture of Barcelona Fairfax joined in effecting the landing of the allied troops, and he commanded the seven bomb vessels which bombarded the town and secured its capitulation. During this laborious siege he overtasked his strength; and after serving afloat for a short time longer he took his seat at the Board of Admiralty, never again to command any of His Majesty's vessels.

On the death of Prince George of Denmark the functions of the council at the Admiralty ceased, and Admiral Fairfax found no place in its successor. His retirement to York affords Mr. Markham an opportunity, which he is not slow to seize, of depicting the condition of that ancient city, its eminent inhabitants and its quaint old houses, in the days of Queen Anne. The gallant admiral, with his natural propensity for fighting, was no sooner fixed in the family house at Middlegate than he plunged into municipal and political struggles. He was at one time the city's representative in Parliament, at another he was its lord mayor. Mr. Robert Davies, in his interesting *Walks through the City of York*, adds that he was "not aware of any other instance of a vice-admiral in the Royal Navy having served the office of Lord Mayor of York"; but Mr. Skiffe, the editor of that posthumous volume, quotes a passage which shows that a Lord Mayor of that city in 1412 was described, although he may not have served afloat, as admiral of the royal fleet from the Thames to the North of England.

Mr. Markham's volume is interesting to the native of Yorkshire as a record of the exploits of many members of its most illustrious house. To the student of history it will be welcome for its picture of the life of a fighting admiral at a fighting epoch in our annals. It is strange to notice, as an incidental point, how these memoirs galvanise into newness of life names which seemed dead. Col. Martin Bladen was a politician and a play-writer, but his politics and his plays were alike forgotten until they were revived by the frequent mention of his name in the *Life of Lord Hawke*, by Prof. Burrows. The vitality imparted to his career in that volume will be strengthened by the references to him in this memoir of Admiral Fairfax.

W. P. COURTNEY.

Numantia: a Tragedy. By Miguel de Cervantes Saavedra. Translated from the Spanish by James T. Gibson. (Kegan Paul, Trench & Co.)

MR. GIBSON continues his well-executed task of reproducing in English all that is worth preserving of the poetry of Cervantes. We

are already indebted to him for an admirable translation of *El Viaje del Parnaso*; and, in addition to the present volume, he promises us selections from the Comedias and the Entremeses. As Clough was careful to mark the date of his *Amours de Voyage*, written "when from Janiculum heights thundered the cannon of France," so Mr. Gibson, in his preface and in the dedication to the memory of General Gordon, stamps this volume as put forth in the year of the fall of Khartum, and he institutes a striking parallel between our British hero and Cervantes.

Cervantes as a dramatist holds somewhat the same place with regard to Lope de Vega and Calderon as Marlowe and Greene do to Shakspeare. The Spanish drama was only emerging from its infancy; yet, if we except a few false notes and some allegorical parts, it is doubtful whether any Spanish historical drama really surpasses the *Numantia* in interest. We feel at once that it is not a piece written merely for pay or from literary vanity; it glows with the fire of a noble patriotism, as well as with the fire of poetic genius. When we lay it down we cannot help thinking what a noble son of Spain Cervantes was, and wonder that such a writer and such a life should have had so little real influence.

As regards this translation, Mr. Gibson has voluntarily bound himself in strictest fetters. He reproduces as closely as possible, line for line, the metre and the rhyme of the original. As a piece of composition, his verse is excellent; but the English metre equivalent to the Spanish *redondilla* is so associated with lighter strains that the force and fire of the expression in the original is unperceived in the version, even when the meaning is really given. This will, we think, be seen by a comparison of the blank verse translations given in Roscoe's *Sismondi* with the more exactly rhythmical versions of Mr. Gibson. We do not place the former higher as translations; we cite them simply to illustrate the inevitable drawbacks, as well as the difficulty, of employing identical metres in different languages. Let us take Roscoe's speech of Scipio to his soldiers:

"Well, by your pride of feature, noble friends,
And splendour of your martial decorations,
I recognise in you the sons of Rome,
Yea, brave and valiant sons! But, by your hands,
Fair and effeminate, by the glossy shew
Of your smooth faces, rather should I deem you
Of Britain born, or Belgium."

This reads like a soldier's speech. Mr. Gibson's more exact version gives

"By that proud gesture, by the lusty swell
Of these rich trappings, with their martial sheen,
My friends, for Romans I do know you well—
Romans in build and gallant port, I mean;
But by the tale these soft white fingers tell,
And that rich bloom which on your cheeks is
seen,
Ye seem to have been reared at British fires,
And drawn your parentage from Flemish sires."

Take another passage, Morandro's spirited defence of loving:

ROSCE.

"Never did love teach lover cowardice:
Have I e'er been a truant from my post
To visit her I love? Have I e'er closed
My eyes in slumber when my captain watched?
Have I e'er failed, when duty call'd on me,
Because my heart was fill'd with her sweet image?
If, then, these things be not objected to me,
Why will you blame me for my passionate love?"

GIBSON.

"When did love, by any chance,
Make the manly bosom weak?
Do I leave my post to fly
To my lady's side instead?
Or lie sleeping on my bed
When my captain watches by?
Hast thou seen me fail to move
At the urgent call of duty,
Lured away by wanton beauty,
Or still less by honest love?
If with truth thou canst not tell
Any point wherein I fail,
Wherefore thus against me rail
Just because I love so well?"

The difference in the effect of the metre is greater still in that scene of horror when the son vainly begs for bread, and the infant draws blood instead of milk from the breast of the famished mother. There is often a simple directness in the Spanish verse, which deeply moves one there, but which is hardly felt in the equivalent English version, e.g.,

"Que tienes? Que estas pensando?"
"Why so sad, with thought o'ercast?"

Cervantes' tragedy is certainly not written in anything like either our blank or our heroic verse. It is improbable that we shall ever see a better representation in English verse of the mechanical structure of the Spanish play than Mr. Gibson here gives us. The English reader has here the most exact idea which he can have of what the original is, in form at least; but it would seem to require a more severe measure to bring home to him the force, the horror, the fire, and the pride of patriotism of many of the scenes of the original. We do not wish to imply any censure of Mr. Gibson's work; he has done it most admirably under the conditions which he has chosen, and perhaps the majority of critics will maintain that these conditions are the right ones. We have wished to draw attention to this excellent version as affording an almost crucial test of the rival theories of translation. After *La Celestina*, where the interest is quite different, the *Numantia* is the best worth reading of all the earlier Spanish dramas. WENTWORTH WEBSTER.

TWO NEW EDITIONS OF BOOKS ON SPORT.

Days and Nights of Salmon Fishing in the River Tweed. By W. Scrope. (Hamilton, Adams & Co.)

The Field Sports of the North of Europe. By L. Lloyd. (Hamilton, Adams, & Co.)

THE books of these two authors had become scarce and practically unattainable by the multitudes which summer after summer seek Scotland and Norway for the purpose of sport, especially of fishing. They were dear to our fathers, and have not yet been superseded by the numerous volumes which of late years have been written on angling. It was therefore wise to reprint them, and set them conspicuously before the eyes of the annual exodus to the North, just as Heligoland and Flamborough Head prove irresistibly attractive to the streams of our migratory birds. A fresh perusal of these two sportsmen's books shows that they deserve the honour of a second edition. Mr. Scrope's volume is reprinted in its integrity, save that the Tweed Fishery Laws of 1830, which formed the appendix of the original edition, being now repealed, are replaced by those of 1857 and 1859. The

charming illustrations by Sir D. Wilkie, Sir Edwin and Charles Landseer, and others also reappear, losing, however, the charm of colour. This is of most importance in the case of the figures of the Salmonidae, which were tinted in close likeness to nature in the first issue forty-two years ago. That Scrope's two solitary books on deer-stalking and salmon-fishing, though now really half a century old, should still hold their own among the crowd of modern books devoted to sport, is a subject worthy of consideration by those writers whose literary productiveness is insatiable.

Our old favourite, Captain Lloyd, produced three books distinctively treating of sport. These disquisitions on Norwegian shooting and fishing were relieved by accounts of scenery, description of manners and customs, and remarks on political and rural economy. The editor has exercised a wise discretion in omitting those subjects from the present issue. Even Norway has of late years lost much of its primitive freshness, and sportsmen must go far afield to find the unsophisticated Scandinavia of Lloyd's day. The *Field Sports of the North of Europe* in their present form are avowedly a compilation of chapters from the author's other books on sport, and as such form a useful compendium for those seeking Norway this summer. Lloyd was a naturalist as well as a sportsman, and by a judicious mixture of anecdote and adventure succeeds in holding his reader's attention in spite of a somewhat homely style of writing. We know of no book which will give the fisherman so much information as do these chapters on Norwegian fish and fishing. The same is the case with Lloyd's very full account of the bear. It is needless to remind the reader that he must not expect to find bears and salmon so numerous in Scandinavia as they were in Lloyd's time. The capercaillie was closely studied by the same sportsman, and his chapters on it (here reproduced) have been useful to every writer on the bird since they were penned. The hazel hen and its habits, the lynx, fox, elk, wolf and other Northern creatures are well described in these pages. The Salmonidae receive four most interesting chapters, and there is a good deal of matter scattered through the book which will prove useful to fishermen. The quaint engravings of the old edition are with advantage omitted from the present book, which is not too cumbersome to be thrust into the Northern tourist's portmanteau, while on his return it will serve as a useful book of reference on his shelves. There is an excellent account of one of the most curious fishes of Eastern England, the burbot (*Lota vulgaris*). Few people have even seen it, but it is occasionally found in the Trent. We remember a mill-dam in Lincolnshire being drained when a number of these singular fish were taken. The burbot is the only species of Gadidae which inhabits fresh water.

After Lloyd's sober descriptions there is a fine flavour of time-honoured humour and rollicking fun to be found in the pages of Scrope. He seems to have possessed as keen animal spirits as Maxwell, the author of another book which was a deserved favourite forty years ago, the *Wild Sports of the West*. There is much pleasant gossip about the Eildon Hills, Michael Scott, Tom Purdie, and

Abbotsford, where Sir Walter "dwelt in the hearts of the people, diffusing life and happiness around him; he made a home beside the border river, in a country and a nation that have derived benefit from his presence and consequence from his genius." The present generation can hardly understand the intense personal affection which Scotland felt for her own enthusiastic admirer. Scrope is still an acknowledged authority on Tweed side, although the "Durham Ranger," and other salmon flies described by Mr. Henderson, are more in favour than the "Flower of Yarrow," and "Meg wi' the Muckle Mouth," prescribed by our author. Needless to say, the leistering of salmon, whether by "burning the water" or "dunning," is not only now regarded as a poaching device, but is strictly forbidden by legislation. We would not willingly, however, lose Scrope's animated accounts of these diversions, which form a curious chapter in Border history. It is curious that the public conscience did not revolt even forty years ago from the cruelty of leistering salmon. When one escaped wounded it went down the river at once, being weak, and, if it were at all hot weather, the eels came instantly out of their lurking places and like so many wolves followed the blood, speedily eating the flesh out of the unfortunate fish's skin. "You will see the eels by dozens," says Scrope, "hanging thick on him like the sticks in a bundle of faggots." Perhaps it is no wonder that after such a sight no Scotchman will ever touch an eel.

There is no need to enter upon the excellent advice here given, and the descriptions of salmon-fishing in the Tweed. No angler in that river is ignorant of Scrope's value herein. He quotes Lloyd to prove that salmon can live entirely in fresh water; but the land-locked salmon of North America suggest that this peculiarity is only acquired by a particular variety and a lengthy lapse of time. Modern readers will find much interesting matter in Scrope besides his technical pages. His humour is of a peculiarly "canny" character, well-suited to Tweed-side and his subject. How much, for instance, does his suggestion fall in with most fishermen's experience, that a large fish generally acquires an additional pound weight each year that elapses in its fortunate captor's estimation; that being about the rate at which its natural growth might be estimated! We all seem to have known the famous rod maker who "never joyed since the price of hickory wood rose, and was soon after gathered to the tomb of his fathers." Inimitable, too, are Scrope's directions for wading: "never go into the water deeper than the fifth button of your waistcoat; even this does not always agree with tender constitutions." Again, if wading in February during the prevalence of a hard frost, "pull down your stockings and examine your legs; should they be black or even purple, it might perhaps be as well to get on dry land; but if they are only rubicund, you may continue to enjoy the water if it so pleases you." He who has waded in Tweed's bonny amber streams, and felt the force of its currents, will appreciate these happy suggestions. Whether for sound sense or a certain old-fashioned pleasantry, somewhat grateful after Mark Twain and modern and more pronounced

humour, both books are to be commended with regard to the former, and Scrope for the latter characteristic. Old and young anglers will alike welcome them. M. G. WATKINS.

NEW NOVELS.

My Wife's Niece. By the Author of "Dr. Edith Romney." In 3 vols. (Bentley.)

The Law Forbids. By Katharine King. In 3 vols. (Hurst & Blackett.)

Curly. By John Coleman. (Chatto & Windus.)

Self-Doomed. By B. L. Farjeon. (Griffith, Farran & Co.)

Comedies from a Country Side. By W. Outram Tristram. (Ward & Downey.)

The Stockbroker's Wife, &c. By Bracebridge Hemyng. (Maxwell.)

THE new story by the promising author of *Dr. Edith Romney* presents an artistic blending of tragedy and comedy, which is very happily expressed by its title. Mildred Loraine, the niece of Mrs. Norton, has all the qualities, and suffers some of the experiences, of one of those heroines who follow without faltering the path of duty and of constancy to high ideals, which leads commonly to death rather than to happiness. There could hardly be a better foil to her than Mr. Norton, who perpetually talks of "My Wife's Niece," and unblushingly offers her to every eligible young man he comes across. He is a born marplot and vulgarian. But the blue blood which he at least believes himself to possess prevents his vulgarity from crossing the frontier between grotesque self-assertive vanity and brutal coarseness. His talk, though it always jars upon the feelings of persons of refinement like Mildred Loraine, is also invariably amusing; and his shooting adventures, which strongly resemble those of Mr. Nathaniel Winkle, come as a positive relief after murder, mystery, and misery. Besides, the admirers of Mildred Loraine ought to be grateful to Mr. Norton for forcing her to show of what heroic stuff she is made. But for her overhearing him shamelessly endeavouring to "bring to the scratch" Rupert Heathcote, the man whom she secretly loves, we should not have had the fine burst of passionate scorn in which she denounces the offer of marriage that he feels bound to make to her. Nor would she have been driven from an intolerable home to seek to make a livelihood in London and to marry and nurse poor Lewis Ingram, who in a moment of temper has caused the death of, rather than deliberately murdered, his benefactor, and the father of his rival, and whose essentially weak nature clings to her affection and sympathy for support. Has it been mere kindness, or a wish to satisfy the popular love of "good endings," that has made the author of *My Wife's Niece* marry Mildred to Rupert after the death of Lewis? It would have been more in accordance with the laws of modern tragedy, if not also with the law of nature, that Mildred should have refused Rupert, and remained faithful to the memory of Lewis. Rupert Heathcote, the stern son of a sterner but also rougher father, is an excellent study in character; and his growth in moral grace, and above all things in

sincerity and tenderness, under the influence of Mildred Loraine, is admirably brought out. Gussy Heathcote is a delightful sketch of a fascinating and rather simple lawn-tennis flirt. But why is she compelled to marry the doctrinaire baronet, and not the manly curate? The weakest thing—the only weak thing, indeed—in *My Wife's Niece* is the extraordinary accident by which Rupert Heathcote discovers that the hand which struck down his father was that of the man for whom he had been almost disinherited. It reminds one too readily of a similar discovery through instantaneous photography and the melodramatic "The apparatus can't lie, Jacob!" of Mr. Dion Boucicault's "Octoroon." *My Wife's Niece* is an excellent novel of its kind, and it is written with great and commendable care.

There are several effective incidents and there is much admirable character-sketching in *The Law Forbids*. But the plot is provokingly improbable, and is tolerable only because it justifies the author's purpose, which is to demonstrate the necessity for changing the law which in England forbids a man from marrying his deceased wife's niece. Philip Brewster is no doubt as much of a modern King Arthur as a country gentleman of good family and high character, but with only five hundred a year, can be. But nine out of ten lady readers of *The Law Forbids* will vote him a tiresome fellow all the same. His chief difficulties—his bringing about the death of a jealous M.P., his marrying Mrs. Treherne while he loves Jennie Mortimer and Jennie Mortimer loves him, and, finally, his leaving his country to go where a man may marry his wife's niece with social and legal impunity—are due to sheer fatuity and blindness. It is weak good-nature that makes him dangle after the girl who fascinated the M.P. It is imbecility and nothing less that makes him marry Mrs. Treherne because she thinks him attached to her and not to her niece. But if we leave Brewster and his bungling out of consideration, *The Law Forbids* must be allowed to be a clever and amusing story. Bee and Robin, the flirting and fascinating daughters of Farmer Rose, round whom the true plot interest of it gathers, are as fresh and vigorous sketches of feminine mischievousness as we have come across for a long time. It is rather a pity that Bee, who, like everybody else, is infatuated with Philip Brewster, should be the cause of the death of any one, especially of an M.P., for tragedy seems an unwarrantable intrusion into this story. Otherwise Bee's triumphs and adventures, the jealousy she inspires in the weak heart of Mrs. Brewster, and her capture of Julius Mortimer, Jennie's brother, are very enjoyable. As for Robin Rose, she is simply an improved copy of her sister, quite as much of a coquette, but with more heart.

In *Curly* Mr. John Coleman has told a short, strong, and simple story, having all the air of reality about it. The hapless love affair of Dugald Campbell, the Edinburgh Writer to the Signet, who is, unfortunately, an Apollo, and who goes upon the stage in consequence, and of Flora McAllister, the impetuous Celtic beauty, who first sees him when he is acting in an Aberdeen theatre, is a genuine bit of tragedy. It is full of strong

situations. We have a stirring elopement, a brutal attack upon Flora's successful lover by his rival, an adequate revenge for that attack by poor Curly's best friend, and a startling scene on the stage. Yet none of these seems unnaturally melodramatic. After poor Flora and her rather weak lover, the best characters in *Curly* are "Lang Willie," the athletic and chivalrous friend of both, and Laird Deemster, who destroys the lives of both, and who yet, in spite of all his passion and brutality, commands a certain amount of respect. There is not a weak line nor a weak stroke in *Curly*; and Mr. Coleman keeps "the shop" too much in the background rather than otherwise.

Self-Doomed is by no means up to Mr. Farjeon's usual mark. It is to be regretted that he has told his tragedy in the first person, and perhaps also that he has laid the scene of it in Germany. Master Fink, the watchmaker, who relates the events which made his apprentice Gideon Wolf a murderer, and drove his housekeeper Katrine Loebeg into harmless madness, preaches and moralises too much, and is too well aware of his virtues and especially of his moral superiority over his rival Miser Pretzel. The most carefully drawn figure in the story is Louisa Wolf, the mother of the wretched Gideon, whom Fink in his youth loved in vain. She, at least, is a creature of flesh and blood. Master Fink, Miser Pretzel, and the others, are either unsubstantial or are too obviously the incarnations of certain virtues and vices. In short, *Self-Doomed* is at once too much and too little of a "masque."

The object of Mr. Tristram in giving his lively volume of country-life sketches the title of "comedies" is rather a puzzle, unless it be only what Lamb styled in the case of Coleridge "his f-f-fun." The chief characters in these stories are "The Squire," "The Parvenu," "The Heiress," and "The Parson." The squire loses every penny he possesses, is disappointed of his favourite ambition, and becomes insane. So does the parvenu, who is deserted on one and the same night by his wife and his daughter. The heiress discovers that the groom she has set her affections on is a black-guard, and shuts herself up in a convent; while worthy, old-fashioned Parson Vansittart finds himself at the end of his chapter a paralytic Lear, at the mercy of Goneril and Regan, with not even a Cordelia to fall back upon. But Mr. Tristram's sketches, whether tragic or comic, are entertaining, and his satire is genuine. It strikes us as rather too broad in "The Squire" and as falling flat in "The Heiress." But in "The Parvenu" there are two good sketches—James Higginbottom, the coarse-minded, whiskey-drinking, wife-beating Australian parvenu; and his neighbour, Lord Verulam, who imitates Byron much more successfully in life than in literature. The best and most elaborate story in the series is the last. The struggle between poor Mr. Vansittart and his son-in-law, Aguire, with his ritualistic enthusiasms, is thoroughly sustained. Mr. Tristram is strong in smart dialogue—of the kind, however, that seems more in place on the stage than in a novel. Altogether, he is capable of better things than *Comedies from a Country Side* or perhaps even than *Julian Trevor*.

The collection of "sensational tales of the Stock Exchange," which Mr. Bracebridge Hemyng, of the Middle Temple, has written, and Mr. John Shaw, Stockbroker, has "edited," deserves the title given it. There is no doubt about the "sensational" character of the stories, which are full of murders, elopements, lynchings, suicides, and what not. In spite of crudities of plot and slanginess in style, there is a good deal of rough vigour in the volume, suggestive of hurried railway travelling between city and suburb, if not of still more hurried "liquoring up" at a railway buffet before travelling. Certain of Messrs. Hemyng and Shaw's "tales" are rather too revolting, and are calculated (we hope unjustly) to encourage the impression that vulgarity in motive and coarseness in language are characteristics of the Stock Exchange.

WILLIAM WALLACE.

GUIDE-BOOKS.

AUTUMN, otherwise so sterile of literature, has brought its usual crop of guide-books, for the benefit of those whom trains are now hurrying in all directions from London and other great towns. So far as we are aware, the present season has not been marked by any special novelty, if this were to be desired in a department of bookmaking where "the old is better." So, without drawing any invidious comparison, we will content ourselves with calling attention to some familiar friends now lying on our table.

Messrs. Adam & Charles Black, of Edinburgh, whose old fame as publishers of guide-books has been somewhat overshadowed by the gigantic enterprise of the *Encyclopaedia Britannica*, have issued this week three fresh volumes. The most important of these is a new edition (the seventh) of O'Shea's *Spain and Portugal*, revised by Mr. John Lomas, who has shown us by a recent book of travel in the peninsula that he has both the eye to see and the pen to record. Unfortunately, Spain is closed to the tourist for some time to come, so that we are justified in postponing a fuller notice of what is substantially a new book. The second volume is *South-France*, written by Mr. C. B. Black, which is now in its fourth edition, and has before been noticed in the ACADEMY. The third is an altogether new volume on *North-France*, from the English Channel to the Loire and from the Bay of Biscay to the Rhine, also written by Mr. C. B. Black, about which we purpose to write more at length hereafter. We may take this opportunity of announcing that Messrs. Black will issue, in time for the winter season, a new guide-book to Rome, by Mr. J. H. Middleton, with original plans, woodcuts, &c., showing the results of the latest antiquarian researches.

Messrs. Baddeley & Ward, upon whom has fallen the mantle of the German Baedeker, have added this year a new volume, being the second part of *North Wales*, to their "Thorough Guide Series" (Dulan). As we are not sure that this series is so well known as it deserves, we will briefly mention some of its distinguishing merits. In the first place, the statements made are always based upon the personal experience of the two joint authors, recorded without fear or favour. Secondly, the maps are not a mere reprint from the ordnance survey, but have been revised upon the spot, and are engraved by Mr. Bartholomew of Edinburgh. Lastly, the size is small enough to put into an ordinary coat-pocket, and the binding is unusually strong. Wherever Messrs. Baddeley & Ward have been before us, we prefer their assistance to any other.

So much we had written without keeping daily in mind the *Practical Guide to the English Lakes* of Mr. Jenkinson, of which an eighth edition has just been issued by Mr. Stanford. This, as all know, stands unrivalled in its own field, for it is written by one who has known the Lake district all his life.

The same distinction of being without a rival attaches to Dr. J. Collingwood Bruce's *Hand-book to the Roman Wall* (Longmans), a third edition of which has followed the second with unexpected rapidity. Besides revising the whole, "under the impression that he was doing so for the last time," Dr. Bruce has added a photographic reproduction of the bronze tablet found at Chesters, with other new matter. The numerous woodcuts and the dainty etchings of Mr. C. J. Spence add much to the attractiveness of this volume, which is a lecture in archaeology even to those who cannot visit the North.

From the Roman Wall to Burnham Beeches is a far cry; but Mr. F. G. Heath's little guide to the spot which he himself did much to preserve for the public has likewise a character of its own. A "Popular Edition" (being the sixth) has just been brought out by Messrs. William Rider & Sons, with a portrait of Mr. Heath for frontispiece. We wish that Mr. Heath, in default of someone else, would be tempted to give us a handbook to the Chiltern Hundreds, which possess some of the finest—and least known—woodland scenery in England.

From Messrs. Stanford also come new editions of four of their two-shilling "Tourists' Guides," all of which we have already tested by use. They are *Kent*, by Mr. G. Phillips Bevan (fifth edition); *Norfolk*, by Mr. Walter Rye (third edition)—every page of which bears the characteristic impress of the writer; *Hampshire*, also by Mr. Bevan; and *Somersetshire*, by Mr. R. N. Worth (both second editions).

Walks in Epping Forest, edited by Percy Lindley, is one of a series of handbooks published at 123 Fleet Street, on account (we believe) of the Great Eastern Railway Company. The former volumes were noticeable for their extreme cheapness. The present one, which is sent us in a "plate paper" edition of only two hundred copies, is no less noticeable for its elegant appearance. It contains numerous engravings on wood, from drawings as well as from photographs; and special chapters on the Geology, Fauna, and Flora of Epping Forest, the first of these being written by Mr. H. B. Woodward. We can give the book no higher praise than to say it is worthy to stand by the side of the guide on the same subject by Mr. Buxton, one of the verifiers of the forest, which was issued about a year ago by Messrs. Stanford.

Mr. David Macbrayne, the owner of the well-known steamers *Columbia*, *Iona*, &c., has sent us a new edition of his official guide to the "Royal Route," which is crammed with information for tourists.

In conclusion, we would commend in this connexion an Alphabetical Railway Time Table, on the principle of the "A B C," which is issued by Messrs. Wyman & Sons for one penny. It does not include all the minor stations, though reference is made to them in the margin; and it has a separate alphabetical arrangement for the neighbourhood of London, a valuable feature of which is the tracing of the trains to and from other metropolitan stations than the usual terminus. On p. 2 there is given an instructive table of "average fares per mile," from which we gather that the London and North Western is the cheapest line—at least, for first class travellers—and the London and South Western the dearest.

TWO MODERN GREEK BOOKS.

ἱστορικὰ Μελετήματα, by Sp. Lambros (Athens), is a collection of historical essays on subjects relating to various periods of Greek history, from the earliest times to the end of the seventeenth century. The first of these is on the prehistoric remains in Greece. The second deals with the traces of Phœnician occupation on the island of St. George near Salamis, which is proved to have once been a station of the purple-fishery by the heaps of mussel-shells which are found there. This discovery leads M. Lambros to approve the Semitic derivation of the name Salamis, which has been suggested by previous writers, from *salem*, as being the "place of peace"; and this is corroborated by the occurrence of the name in Cyprus, where Phœnician influence was dominant. In passing he brings evidence to show that the purple trade existed on the shores of Greece down to the commencement of the thirteenth century. Of the remaining articles there are two which call for especial notice. One of these relates to the Chronicle of Monemvasia, which has often been cited in connexion with the question of the early settlement of Slavonic colonists in the Peloponnese. Hitherto only one MS. of this document has been known, viz., that existing in the Turin library; but M. Lambros discovered two fresh copies on Athos—one at the monastery of Cutlumusi, another at that of Iveron. The former of these corresponds most closely to that at Turin, while the latter has many insertions taken from Byzantine historians. M. Lambros thinks that the object with which it was written was to commemorate the conversion of the Slavs of the Peloponnese to Christianity, and that the greater part of it was composed between 806 and 1083 A.D. The other paper which we desire to notice is that on the report of Marin Michiel upon the state of the Peloponnese when it was under Venetian domination, after its reconquest by Morosini. This man was one of three commissioners who were sent from Venice in 1688 to make a cadastral survey of the country with a view to its reorganisation; and his report is here published from the Venetian archives. The value of this consists in its accuracy, and in the number of subjects which it embraces, for it not only gives an exact account of the topography, together with the state of the agriculture, the courses of the rivers, the forests and fisheries, but also notices the remains of antiquity.

UNDER the title of *Verses* (ᾠδὴν. Athens: Coromilas) Mr. Bikélas has published a collection of his fugitive poems, most of which had already appeared, though in many instances they were privately circulated. They consist of idylls—one of which, called "The Mother and Charon," is adapted from Hans Andersen—of epistles and addresses, of lyrics and love poems, and of translations. Among the last named there is a Modern Greek version of the sixth book of the *Odyssey*, and renderings of scenes from "Faust," and of poems by Klopstock, Victor Hugo, and Lamennais. Mr. Bikélas's long residence in England and France has given him an extensive acquaintance with the poetry of Western Europe, so that he shows evidence of being familiar even with Wordsworth's poems—a thing which is still rare among foreigners. But, whatever their source, Mr. Bikélas's compositions are thoroughly Modern Greek in their diction and style, and possess all the varied and melodious versification of which that language is capable. The tone which pervades them, like everything that he writes, is one of melancholy combined with courageous hopefulness. We are sorry to learn from his preface that the author regards the publication of these as his farewell to original poetry; and we can only hope that he will indemnify his countrymen for this loss by continuing his translations of Shakspeare.

NOTES AND NEWS.

WE are glad to receive good reports of Prof. Max Müller's health. He is now at Mainz, but hopes shortly to join his family at Pontresina.

MR. A. R. COLQUHOUN, the Indo-Chinese traveller, arrived in London at the end of last week.

It is understood in Scotland that Mr. Henry Craik, author of the latest *Life of Swift* and editor of the "English Citizen" series, will be appointed permanent head of the Scotch Education Department under the new Scotch secretary.

WE hear that Major-Gen. Chesney, late of the Engineers, has written a historical romance on the War in the Cevennes.

PROF. BRANDL, of Prag, has been paying a visit to those haunts of Coleridge which he had not seen before. Bristol, Jesus College, Cambridge, Keswick, and the Lake District, are the places he has seen lately; and in each he has got new material for his forthcoming work on Coleridge, in which he hopes to bring out, for the first time, the poet-philosopher's real relation to the German thinkers of his day.

MR. H. G. KEENE, late of the Bengal Civil Service, is making a collection of his recent verses for publication.

MR. ALEX. GARDNER will shortly publish a sumptuous edition of the *Waverley Novels*, edited by Scott's great-granddaughter, the Hon. Mrs. Maxwell Scott. The new Abbotsford Edition, as it is to be called, will be distinguished from others by specialities in type and paper, and by new illustrations.

THE same publisher has in the press *The Martyrs of Angus and Mearns*, by the Rev. J. Moffat Scott, of Arbroath; and a translation by Miss Veitch, the author of *Angus Græme*, of Felix Dahn's *Saga of Halfred the Sigskald*, a northern story of the tenth century.

THE Senate of the University of Edinburgh have lent Dr. Furnivall their copy of "Titus Andronicus"—Lord Ellesmere's copy not being available—for his series of "Shakspeare Quarto Facsimiles." Mr. Praetorius has photographed it, Mr. Arthur Symons has written an introduction, and it will be lithographed forthwith. The Sonnets are in progress. Mr. Thomas Tyler's introduction to them is printed. It gives the full argument for Mistress Mary Fitton, Pembroke's "cause" or mishap, being the dark lady with whom Shakspeare was entangled, and explains several disputed passages.

MISS JANE LEE's many engagements as teacher of Sanskrit, Old High German, Gothic, &c., at Newnham and Girton, as editor of the *Mahābhārata*, &c., have obliged her to throw up the editing of the "Contention" (1594), and "True Tragedy" (1595), and the "Whole Contention" (1689), for the Facsimile Series, so that Dr. Furnivall has had to take up the latter, and is preparing it for the stone in his temporary home on the Yorkshire moors.

AMONG the records of the ancient borough of Kingston-upon-Hull, now being arranged and calendared by Mr. T. Tindall Wildridge, author of *Old and New Hull*, have been found a number of original letters from and to the leaders in the Civil War. These are to be printed and issued in a volume by Mr. Wildridge, on behalf of the Corporation. The series includes letters from Andrew Marvel, Lord Fairfax, Sir John Hotham, Oliver Cromwell, Charles I., as well as other renowned names in national history. The volume will bear the title of *Hull Letters*.

THE late F. D. Maurice's *Lectures on the Apocalypse* will shortly be published by Messrs. Macmillan.

MR. G. C. WILLIAMSON, of Guildford, is engaged on a new edition of Boyne's *Seventeenth Century Tokens*. It will be founded on the last edition published; but will be very largely augmented by contributions from collectors in each county in England. The work will be issued in two volumes, containing about nine hundred pages, and a limited large paper edition is to be published. Mr. Elliot Stock is the publisher.

MR. HENRY COTTON's book on *New India*, which we have already announced, has now gone to the press. It will form a volume of about two hundred pages, and will be published by Messrs. Kegan Paul, Trench & Co.

MR. T. FISHER UNWIN will publish next week *A Lost Son*, by Miss Linskill, the author of "Between the Heather and the Northern Sea." This story, it will be remembered, was the serial tale in *The Leisure Hour*.

MRS. H. LOVETT CAMERON will shortly publish a new three-volume novel, entitled *In a Grass Country: a Story of Love and Sport*.

MESSRS. CASSELL & COMPANY will at the end of the present month commence the issue of a new edition of their *Gleanings from Popular Authors*. Part I. will be accompanied by a large engraving of the drawing by Sir John Gilbert, entitled "Joan of Arc."

PROF. SKEAT has nearly finished Part 2 of his edition of Aelfric's *Metrical Lives of Saints* for the Early English Text Society's Original Series. For the same society's Extra Series Dr. C. Horstmann has sent to press his edition of *The Three Kings of Cologne*, two English versions, and their unique Latin original.

DR. HORSTMANN has found among the Harleian MSS. in the British Museum another treatise by Osbern Bokenam, whose *Lives of Saints* he, and the Roxburgh Club before him, have printed. It is a *Mappula Europae*, the initial letters of whose chapters are an acrostic, revealing the author's name, as his colophon says they will.

THE Rev. J. C. ATKINSON, of Danby, has, at Dr. Furnivall's instance, agreed to let the English Dialect Society have the second edition of his well-known *Glossary of the Cleveland Dialect*. He will send it to press directly the new part of his *North Riding Records* in Elizabeth's time is out of his hands.

WE understand that Mr. C. G. Steel is preparing for publication in September next a new volume of the Annotated Rugby School Register, which will carry on the history of the school up to the appointment of the present head master. He would be glad of any suggestions or information addressed to himself, or to Mr. Lawrence, Bookseller, Rugby.

MR. J. HORSFALL TURNER, of Idel, Bradford, Yorkshire, has nearly ready for issue to subscribers *Ukley, Ancient and Modern*, by the Rev. Dr. Robert Collyer, of New York. Special use has been made of the family papers preserved at Myddleton Lodge and of the parish registers; and there will also be chapters on Prehistoric Remains, Geology, Botany, and Flora, contributed by different writers. The volume will be illustrated with about eighty engravings, woodcuts, &c.

THE *Holyrood Annual*, which made so successful a beginning last year, will this year appear in October, and, as before, under the editorship of the author of *Angus Græme*, who will contribute to it "Jacob Spragg's Romance." Among other stories in the new number will be "An Auction Experience," and "Fallen among Thieves." The miscellaneous articles will include "How to do without the

Doctor," "The Cry of the Children," and papers on General Gordon and Lord Tennyson.

THE September number of the *Scottish Church* will contain articles on "The Scotch Universities," "The Highland Question," "Victor Hugo," and "Dwellings of the Poor," besides the continuation of the serial, "The Story of a Young Life," which is now running in the magazine, and a story by Esmé Stuart, entitled "One for Another."

PROF. NOIRÉ is carrying through the press a new work, *Ueber Ursprung und Wesen der Begriffe*, which will appear in September.

MR. ALFRED W. BENNETT sends us the following translation of the first of the two German roundels to Swinburne printed in the ACADEMY of last week:

"As in Life's darkest night bright beams appear,
So, Swinburne, has thy song the world made bright,

Poet of Freedom, and of Truth the seer!
In Life's dark night.

Before a single pure word's noble might
Shrinks Tyranny away with craven fear,

If thou but threaten in the cause of right.
The slave with rapture sees in thee appear

The judge of tyrants who proclaims the right—
The hour of victory come—his yoke to tear

In Life's dark night."

Correction.—Owing to the misdirection of a proof, Dr. Vigfusson's letter in the ACADEMY of last week was printed without having received his corrections. On p. 88, col. 3, l. 1, for "Sighrat," read "Sighvat"; l. 27, for "vowel," read "article"; and, l. 50, for "Dr. Fritkner," read "Dr. Fritzer."

THIS week we must be content with merely recording the death of Lord Houghton. It may not, however, be out of place to correct a curious misapprehension which has found its way into the obituary notices of him in two daily papers. The *Times* talks of "his life of his friend Keats"; the *Daily News* says that "he had watched the declining years of Keats." The chronological facts are that Keats died in 1821, while Lord Houghton was born in 1809. We believe that Lord Houghton was induced to write on Keats by the persuasion of Landor.

FRENCH JOTTINGS.

AN examination of the papers left by Victor Hugo has revealed the following works, in a more or less complete state. (1) "La Grand Mère," a comedy in one act, written in verse, which is ready for the stage; (2) "La Forêt mouillée" and "La Légende de l'Épée," two dramas in dialogue, of the same character as those in the *Légende des Siècles*; (3) "Peut-être un Frère de Gavroche!" a comedy in one act, written in prose, the plot of which turns upon the old system of signalling by semaphore; (4) "50,000 Francs de Rentes," an unfinished farce; (5) "L'Océan," or "Un Tas de Pierres," a miscellaneous collection of prose and verse of all kinds, reflecting the daily thoughts of the writer. In addition, the MS. can no longer be found of a play in five acts called "Les Juneaux," based upon that version of the story of the Man with the Iron Mask which identifies him with a twin brother of Louis XIV. Victor Hugo is known to have finished three acts of such a play. The literary executors hope to issue the first volume of their selection from the unpublished writings by December.

KING HUMBERT has conferred upon M. Duruy the broad ribbon of the Crown of Italy, together with a gold medal bearing this inscription:

"Victorio Duruy
Qui ausus est unus Gallorum
Omne Romanum ævum explicare."

AMONG the recent appointments to the Legion of Honour is the name of M. Paul Bourget, the Paris correspondent of the ACADEMY, whose last book, *Cruelle Enigme*, M. Taine is reported to have pronounced "the strongest French novel of the past ten years."

M. OCTAVE UZANNE will publish in November the last of the series of illustrated books, which began with *L'Eventail* some three years ago. It is to be called *La Française du Siècle: Mœurs, Modes, Usages*; and it will be illustrated by M. A. Lynch.

THE third volume is in the press of M. de Beaucourt's *Histoire de Charles VII.*

AN association has been formed, under the name of the Société de l'Histoire de la Révolution française, with the sole object of printing unpublished documents, and of reprinting rare books, &c., relating to the Revolution, without notes or political comment of any kind.

THE municipal libraries of Paris, the first of which was opened in 1865, now number forty-two. The total number of books read or consulted during the past year was nearly 700,000, of which no less than 400,000 were novels; next in order of attractiveness come belles-lettres, science, geography, and history.

AN historic café in Paris has just been closed—the café Procope, in the rue de l'Ancienne-Comédie, which is said to be the oldest in France and the first where ices were introduced. During the eighteenth century it was the favourite resort of the Academicians, many of whose portraits are painted on the walls. In modern times it was the meeting-place of a political club.

A COMMEMORATIVE tablet has been placed on the house No. 120 rue de Bac, where Chateaubriand died.

AT the recent general meeting of the Société Historique de Gascogne M. Tamizey de Larroque issued an "appel aux érudits," requesting help from all who may be able to assist him in tracing the daily history and movements of Henri IV. in Navarre, before he became King of France.

THE Académie des Sciences morales et politiques has awarded a prize of 2,000 frs. (£80) for a treatise on "The Life, Labours, and Teaching of Adam Smith."

AN edition of Victor Hugo's *Le Pape* has been published by Quantin, with twenty-one illustrations, designed and etched by M. Jean-Paul Laurens.

ORIGINAL VERSE.

SOCRATES IN CAMDEN, WITH A LOOK ROUND.

(Written after first meeting the American Poet, Walt Whitman, at Camden, New Jersey.)

A PHILOPIM from beyond the seas,
Seeking some shrine where shrines are few,
I found the latter Socrates,
Greek to the core, yet Yankee too;
Feeble, for he was growing old,
Yet fearless, self-contained, and bold,
Rough as a seaman who has driven
Long years before the winds of heaven,
I found him, with the blue skies o'er him,
And figuratively, knelt before him!
Then gript the hand that long had lain
Tenderly in the palm of Death,
Saw the sweet eyes that still maintain
Calm star-like watch o'er things of breath,
And as the clear voice gave its greeting
My heart was troubled unaware
With love and awe that hush'd its beating
And pride that darken'd unto prayer.

This man affirm'd his disbelief
In all the gods, but B-l-l mainly:
Nature he loved, but Man in chief,
And what Man is, he uttered plainly!

Like Socrates he mixed with men
At the street corner, rough and ready,
Christ-like he sought the Magdalen,
Lifting his hat, as to a lady;
No thing that breathes, however small,
Found him unloving or rebelling;
The shamble and the hospital
Familiar were as his own dwelling;
Then trumpet like his voice proclaimed
The naked Adam unashamed,
The triumph of the Body, through
The sun-like Soul that keeps it true,
The triumph of the Soul, whereby
The Body lives and cannot die.

The world was shocked, and Boston screaming
Covered her face and cried "for shame!"
Gross, hankering, mystically dreaming,
The Good Grey Poet went and came;
But when the dark hour loom'd at last,
And, lighted by the fiery levin,
Man grappled man in conflict vast,
While Christendom gazed on aghast,
Through the great battle-field he past
With finger pointing up to heaven.
Socrates? Nay, more like that Other,
Who walked upon the stormy sea,
He brought, while brother wounded brother,
The anointing nard of charity!

But when the cruel strife was ended
Uprose the Elders mob attended,
Saying "This Socrates, it seems,
Denies Olympus and blasphemes;
Offends, moreover, 'gainst the schools
Who teach great Belial's moral rules,
Sins against Boston and the Law
That keeps the coteries in awe,
And altogether for his swagger
Deserves the hemlock cup or dagger!"
So said, so done! The Pharisees
Called up the guard and gave directions—
The prison opened—Socrates
Was left therein to his reflections!

A full score years have passed, and still
The good grey Bard still loafs and lingers;
The social poison could not kill,
Tho' stirred by literary fingers—
He sipped it, smiled, and put it by,
Despite the scandal and the cry;
But when, the Pharisees commanding,
They rushed to end him with the sword,
They saw, beside the poet standing,
A radiant Angel of the Lord.

A hemlock cup? Yes, there it lies,
Close to thy hand, old friend, this minute!
With gentle twinkle of the eyes
You mark the muddy liquid in it:
For the grave rulers of the city,
Who sent it, you have only pity;
For those who mixed it, made it green
With misconception, spite, and spleen,
You feel no thrill of scornful fret,
But only kindness and regret.
'Twas Emerson some folk affirm,
Who passed it round with shrug of shoulder—
Good soul, he worshipped Time and Term,
Instead of Pan, as he grew older!
And Boston snubbed thee? Walt, true heart,
Time ever brings about revenges—
Just glance that way before we part
And note the memorable changes.

There, in the "hub" of all creation,
Where Margaret Fuller ere she mated
Flirted with seers of reputation
And all the "isms" cultivated,
Where still brisk Holmes cuts learned capers
With buckles on knee breeches fine,
The sweet man-milliners and drapers,
Howells and James, put up their sign.
And there the modern misses find
The wares most suited to their mind—
French fashions, farthingales delightful,
Frills white as snow for ladies' wear;
Nothing old fashioned, fast or frightful,
Is dealt in by this dainty pair!
The stuff they sell to man or woman,
May, in itself, be poor or common,
Coarsest of serge or veriest sacking,
But they can trick it in a trice,
So that no element is lacking
To render it extremely nice.

"Ladies," they murmur with a smile,
"We pride ourselves upon our style!
Our cutter is a paragon,
Matched only by our fitter-on;
Bring what material you like,
We'll treat it in a way to strike,
Turn your old satins, and embellish
Last season's hats with feathers swellish;
In short, weave miracles of clothing
By genius out of next to nothing!
And charge the very lowest prices
For all our daintiest devices.
"We know," they add, with smirk and bow,
"Some of you like old fashion'd clothes—
The Emersonian homespun (now
Absurd as Whitman's or Thoreau's)
Or even, still ab surder, seek
Poor Shakspeare's fashion quite antique,
Fit only with its stiff brocades
For vulgar frumps and country maids.
Could Shakspeare, poor old fellow, please
With such a cut as this — chemise?
The woof he used was strongly woven,
But surely, now, his taste was shocking?
Compare our silk hose, much approved,
With Dickens' clumsy worsted stockings!
We please the dames and gain the daughters
With neat inventions of our own,
Replace George Eliot's learned garters
With our suspenders silken sewn;
While, in an annex to the shop,
Our customers will find, quite handy,
The toothsome bun and lollipop,
And superfine molasses candy!"

The busy pair! how well they patter,
Disposing of their slender matter!
The girls adore instead of loathing
These laureates of underclothing,
Delight their souls attired to model
On the last style of molley-coddle,
Eked out with sickly importations
From France, that naughtiest of nations!
Dapper they are and neatly dressed,
Insidious, tempting folk to buy goods,
But mere man-milliners at best,
Vending the flimsiest of dry goods;
Trash in their showy windows setting,
And tricking up to catch the eye
Such clothes as spoil with the first wetting
From the free rains of yonder sky!

Daintily passing by their shop,
Sometimes when it is cloudless weather,
Aldrich,* a literary fop,
In trim tight boots of patent leather,
Strolls to the quiet street, where he saw
Sun-freckled Marjorie play at see-saw;
And bending o'er her hammock kisses
That sweetest, shadowiest of misses!
His languid gait, his dudish drawl,
His fopdom, we forgive them all,
For her dear sake of his creating.
Fairer than girls of flesh and blood,
Who, never loving, never mating,
Swings in eternal maidenhood!

Meantime my sun-like music-maker,
Shines solitary and apart;
Meantime the brave sword-carrying Quaker
Broods in the peace of his great heart,—
While Melville,† sea-compelling man,
Before whose wand Leviathan
Rose hoary white upon the Deep,
With awful sounds that stirred its sleep,
Melville, whose magic drew Typee,
Radiant as Venus, from the sea,
Sits all forgotten or ignored,
While haberdashers are adored!
He, ignorant of the drapers' trade,
Indifferent to the art of dress,
Pictured the glorious South-sea maid
Almost in mother nakedness—
Without a hat, or boot, or stocking,
A want of dress to most so shocking,

* J. B. Aldrich, author of *Marjorie Daw*.

† Hermann Melville, author of *Typee*, *The White Whale*, &c. I sought everywhere for this Triton, who is still living somewhere in New York. No one seemed to know anything of the one great imaginative writer fit to stand shoulder to shoulder with Whitman on that continent.

With just one chemisette to dress her
She *lives*,—and still shall live, God bless her!
Long as the sea rolls deep and blue,
While heaven repeats the thunder of it,
Long as the White Whale ploughs it through,
The shape my sea-magician drew
Shall still endure, or I'm no prophet!

Now I conjure thee, best of Bards,
Scatter thy wisdom Bostonwards!
Tell Howells, who with fingers taper
Measures the matron and the maid,
God never meant him for a draper—
Strip off his coat, give him a spade!
His muscles and his style may harden,
If he digs hard in Adam's garden;
Or follows Dudley Warner* flying
Where Adirondack eagles soar,
Or chums with some brown savage, lying
With Stoddard† on a South-sea shore.
Tell James to burn his continental
Library of the Detrimental,
And climb a hill, or take a header
Into the briny billowy seas,
Or find some strapping Muse and wed her,
Instead of simpering at teas!
How should the Titans of nations,
Whose flag o'er half a world unfurls,
Sit listening to the sibillations
Of shopmen twittering to girls?
She sees the blue skies bend above her,
She feels the throb of hearts that love her,
She hears the torrent and the thunder,
The clouds above, the waters under,
She knows her destiny is shaping
Beyond the dreams of linendraping!
She craves a band of Bards with voices
To echo her when she rejoices,
To sing her sorrows and to capture
The Homeric music of her rapture!
She hears the Good Grey Poet only
Sing, priestly vested, prophet eyed,
And on his spirit falls the lonely
Light of her splendour and her pride.

Poet divine, strong soul of fire,
Alive with love, and love's desire,
Whose strength is as the clouds, whose song
Is as the waters deep and strong,
Whose spirit, like a flag unfurled,
Proclaims the freedom of the world,
What gifts of grace and joy have come
Out of thy gentle martyrdom!
A pilgrim from afar, I bring
Homage from some who love thee well—
Ah, may the feeble song I sing
Make summer music in thy cell!
The noblest head 'neath western skies,
The tenderest heart, the clearest eyes,
Are thine, my Socrates, whose fate
Is beautifully desolate!
As deep as Hell, as high as Heaven,
Thy wisdom hath this lesson given:
When all the gods that reign'd and reign
Have fallen like leaves and left no sign,
The god-like Man shall still remain
To prove Humanity divine!

Indian Rock, Philadelphia, Pa.: March, 1885.

ROBERT BUCHANAN.

MAGAZINES AND REVIEWS.

In the August number of the *Antiquary* Mr. Fairman Ordish continues his series of papers on the London theatres; and we have from that active writer, Mr. J. H. Round, an article on "The Attack on Dover 1067," which, if it does not contribute any new facts to history, puts what is old in a light different from that in which we have received it from our most accredited teachers. "Celebrated Birth Places" this time relates to Turner and Maiden Lane. It seems mere padding. On the other hand, Mr. Wheatley's paper on "The Fairies of Literature," very different beings from those of genuine folk-lore, is well worth reading.

THE two last numbers of the *China Review* contain some thoroughly useful articles. The

* C. D. Warner, author of *In the Wilderness*.
† C. W. Stoddard, author of *South Sea Idylls*.

earlier number opens with a contribution by Dr. Faber on the "Historical Characteristics of Taoism." Treated from a purely Chinese point of view the subject is well and thoroughly handled, but would have been made still more instructive had the intimate connexion that exists between Taoism and Brahmanism been recognised by the writer. Dr. Edkins's article on the "Names of Western Countries in the Shiki" will be found valuable for reference, as will also Mr. Parker's chapter on Turks, Tibetans, and Coreans, and his "Contributions towards the Topography and Ethnology of Central Asia" in the current number. Among the books reviewed is Mr. Colquhoun's *Amongst the Shans*, in commenting on which the reviewer takes the opportunity of finding fault with Prof. Terrien de Lacouperie's Introduction. It is naturally difficult for men who have been trained up to regard all subjects connected with China from a purely Chinese standpoint to accept wider views concerning them, and the strictures in question lose some of their point from the fact that the reviewer has not thoroughly acquainted himself with the professor's theories. Judging from the contents of Mr. Parker's note on "M. Terrien de Lacouperie as a Sinologist," it would seem that that writer is in the same parlous state as the reviewer. Dr. Edkins's article on "Chinese Word Studies," and Mr. Chalmers's on the "Chinese Ch'ih Measure," are well worth reading. The "Notes and Queries" contain much that is interesting.

We have to acknowledge the first number of a new sixpenny magazine, called *Hibernia*, containing articles by Mr. J. Huntly McCarthy, the Rev. H. Stuart Fagan (honourably known for his indefatigable advocacy of Irish manufactures), and Miss Charlotte G. O'Brien, who gives a very interesting account of Mangan, "perhaps the greatest poet Ireland has given birth to since English became the language of Irish thought." The magazine is published at the Hibernia Press, 132 Blackfriars Road.

HEARING A HIEROGLYPH.

MR. H. VILLIERS STUART, M.P., author of *Egypt after the War*, *Nile Gleanings*, &c., draws our attention to an interesting fact.

"I went yesterday [August 10]," he says, "to hear the Siamese band, and great was my surprise to see one of the musicians playing upon an instrument absolutely identical with the ancient Egyptian lute which furnished the hieroglyph *Nefer*, meaning 'good,' 'sweet,' 'excellent,' &c. It has the heart-shaped body, the long neck, and the four pegs, two at each side, for tightening the strings, precisely as we see the instrument represented in both the hieroglyph and the wall-paintings. Did this lute make its way eastwards from Egypt, or did the original Egyptian immigrants bring it with them, long before the time of Menes, from the far East? It is in any case an interesting fact that the Siamese of the present day should use the very same instrument used by the Egyptians 5,000 years ago."

CORRESPONDENCE.

SKETCH OF A CONVERSATION BETWEEN COLERIDGE AND KENYON.

London: Aug. 10, 1885.

I found this morning, among some old papers, the accompanying "Sketch" in the autograph of Coleridge—apparently a digest of a conversation between him and Mr. Kenyon, whose signature authenticates it: others may have been present, of course. Should you find it of interest, and wish to publish it, pray do so; returning me the original.

ROBERT BROWNING.

"1. The *distinct* Perception of a Whole arising out of a *distinct* simultaneous perception of the Parts, in the relations of all to each, and of each to each and to all, constitutes—the SHAPELY.—Instance—a Triangle, or a Wheel.

"When the parts are so numerous, that they

cannot be perceived simultaneously without sinking from *distinctness* into *clearness*, then

"2. The *distinct* Perception of a Whole arising out of a *clear* simultaneous Perception of the constituent Parts, in the relations of all to each, and of each to each and to all, constitutes the BEAUTIFUL.—Instance, a Moss Rose, or the inside of the Pantheon at Rome.

"Corollary.

"When this is effected by an act of abstraction, as *ex. gr.* when a mechanician declares a machine beautiful, abstracting from the Tar, accidental Inequalities of Surface, &c., &c., then the object is beautiful *quo ad abstrahitur, et quo ad abstrahentem*.—When the whole sensuous Image is taken without any such abstraction,—say rather, is abstracted totally not partially, this is the BEAUTIFUL in the *general use* of the word. The object is beautiful, *quo ad videtur, et ad omnes*.

"3. Reverse the order of No. 2, and let there be a *distinct* Perception of the Parts and only a *clear* Perception of the Whole, and we have the PICTURESQUE, as it is most commonly found in Pictures.

"Or let there be a *clear* Perception of the Parts, and a confused Perception or (what is indeed the same thing) a *Sense*, an *Impression*, of the Whole, and we have the PICTURESQUE, as we predicate it of a Landscape in Nature always, and occasionally of very large works of Art.

"4. Combine either No. 2 or No. 3 with associations of the Good, and of the Agreeable, and we have the LOVELY.

"5. Let the Parts be clear and vivid, but from their numerousness or extent without the Perception of a Whole, and we have the GRAND.—Instance, a Review, a House of Peers on a solemn Trial in all their Paraphernalia.

"6. Let the Impression of the Whole be such as to withdraw our conscious attention from the Parts as Parts, and you have the STATUESQUE.

"7. If the Impression of the Whole be constituted by Symbols, or interpenetrated by the sense of Power, or Strength, there arises the MAJESTIC.

"8. Let there be (*i.e.* as objects of our conscious attention) neither Whole, nor Parts, but an All, suspending the Comparative Power, and there results the SUBLIME.

"Corollary.

"Hence it follows, that Objects of Sense *never* can be of themselves sublime; but they may be the occasioning means of exciting certain Feelings and Ideas, as Symbols of Power, Strength, & so on, and in this sense a Cataract, a strong Sea, is sublime—tho' not in the sense in which we call God, Eternity, Free-will, Sublime.

"Sketched out by Coleridge, after a conversation on the subject."—J. Kenyon.

"THE THOUSAND NIGHTS AND A NIGHT."

London: August 7, 1885.

Will you kindly spare me space to answer sundry enquiries from friends and correspondents?

I have already stated in print that my translation of *The Thousand Nights and a Night* will be strictly limited to one thousand copies, each of which will be sent to subscribers with its own number; and I have promised that no cheaper edition shall with my consent ever be printed.

One of my principal objects in making the work so expensive (ten guineas for the ten volumes) is to keep it from the general public. For this reason I have no publisher. The translation is printed by myself for the use of select personal friends; and nothing could be more repugnant to my feelings than the idea of a book of the kind being placed in a publisher's hands, and sold over the counter. As my preface states, it is a legacy which I bequeath to my countrymen (the few who can appreciate it) in their hour of sorest need, when compelled by fate to rule in Moslem lands with an utter ignorance of Moslem manners and customs.

RICHARD F. BURTON.

"ARABIAN MATRIARCHATE."

The Museum, Oxford: Aug. 7, 1885.

The discussion raised of late by Dr. Redhouse in the *Journal* of the Royal Asiatic Society under the title "Notes on Prof. E. B. Tylor's Arabian Matriarchate," has been taken up by the writer most particularly concerned, Dr. G. A. Wilken, of Leyden, who publishes "Eenige Opmerkingen naar Aanleiding eener Critiek van mijn 'Matriarchaat bij de oude Arabiërs.'" As the *Bijdragen tot de Taal-, Land- en Volkenkunde van Nederlandsch-Indië*, in which his article appears, is not so accessible to English anthropologists as it deserves to be, it is proper for me to mention here some of its chief points. To Dr. Redhouse's attempt to explain away the remarkable importance attached by the Arabs to the relationship of *chāl* or maternal uncle, Dr. Wilken replies in much the same sense as I have already done (ACADEMY, June 27). He points out that *chāl* is used as a title of respect, suggesting the actual position held by the maternal uncle among matriarchal tribes in both the Old and New World. This indicates a stronger reason than that alleged by Dr. Redhouse from Arab etiquette in speaking of the maternal uncle instead of the mother. Moreover, Dr. Wilken notices as to this that in Arabia the women have always been more freely seen and spoken of than in other Moslem districts. Dr. Wilken finds fault with the English critic for relying on isolated facts, instead of surveying them as a whole in the light of comparative ethnography. For instance, Dr. Wilken had laid stress on a point raised by Prof. Robertson Smith—namely, the Arabic use of the word *batn* ("belly") in the sense of race or family, as probably belonging to a time when the Arabs reckoned descent on the female side, like certain Malay tribes, who accordingly use a similar word in a similar sense. Against this, Dr. Redhouse appeals to the great Arabic Lexicon, the *Qāmūs*, to show that the term *batn* occurs among the set of terms for the body and its parts, side, breast, belly, thigh, which are used also to denote the tribe and its divisions. Dr. Wilken answers that the terms in question are artificial and not even consistently carried out in the Arabic texts. Here another well-known Arabic scholar, Prof. Noldeke, comes to his support by pointing out that the word *rahim* ("womb") is also used to express close relationship, which would hardly be done by a patriarchal people unless they had inherited matriarchal ideas and vocabulary. As to the argument from prohibited degrees of kin, it is needless to discuss Dr. Redhouse's piling down of the "leading case" of Abraham and Sarah, as the one material point remains unshaken—that there was a time when Hebrew law made so little of male kinship that brother and sister on the father's side might marry. But Dr. Wilken follows this up by a suggestion, at any rate worth consideration, that there may be a relic of such ideas in Arabic custom still not prohibiting but approving marriage with the *bint-amm*, the paternal uncle's daughter. It is not easy to enter here into the arguments as to rules of descent as connected with matriarchalism or slavery, and other points must be left unnoticed for which students seriously engaged in the subject must refer to the original paper. It will be admitted on all hands that the criticism which has brought up the present discussion has not only been useful in clearing ideas, but in bringing out new facts, such as another remarkable trace of ancient matriarchalism, contributed by Prof. Noldeke—viz., the Mandaean custom, perhaps connected with ancient Babylon, that men who in ordinary life took their names from their fathers, in religious texts styled themselves after their mothers, for instance, Behrām son of Šimath.

E. B. TYLOR.

"THE PATRIARCHAL THEORY."

London: Aug. 10, 1885.

I have no wish to criticise Mr. E. B. Tylor's criticism of *The Patriarchal Theory* which appeared in the ACADEMY of August 1, but I should like to be allowed to point out that, if the ordinary anthropologist supposes (as Mr. Tylor says he does) that Agnation merely denotes kinship through males, and that every form of paternal authority is identical with Patria Potestas, the ordinary anthropologist is capable of falling into very singular misapprehensions.

It is difficult, however, to see how any intelligent reader of *Ancient Law* can fail to be aware that what is remarkable about Agnation is not the acknowledgment of kinship through males, but the denial of kinship through females; and that Patria Potestas means not any and every form of paternal authority, but one well-marked and carefully-described form of it. I think Mr. Tylor must do the ordinary anthropologist injustice. At any rate, it is not the anthropologist who thus blunders that is the subject of criticism in *The Patriarchal Theory*, but Sir Henry Maine. And Sir Henry Maine, throughout his writings, uses the words Agnation and Patria Potestas in their proper meanings, and not in the meanings preferred by Mr. Tylor.

I am sorry (if I may venture on a word or two more) that Mr. Tylor is so intolerant of what he calls legal argument. However great the demerits of the particular reasonings thus referred to, no science has ever made way without its doctrines being based upon and tested by reasoning. And the broad method of treatment which Mr. Tylor seems to recommend—while it may give conclusions readily, and plenty of them—has never been found suitable for any science. What science, by the way, besides anthropology, is required to justify its conclusions to what Mr. Tylor calls "the lay mind"—that is, as I understand him, to untrained persons who are satisfied to be without training?

I notice with pleasure that Mr. Tylor is himself inclined to believe in "an early general prevalence of the system of kinship on the female side."

D. MACLENNAN.

"DUNSETAS."

Liverpool: Aug. 8, 1885.

Is it possible that the "dun" in Dunsetas has the same meaning as the "dunes" on which Dunkirk stands—the sand-hills between that place and Ostend—and as the "downs" or sand-banks in the English Channel? If so, Dunsetas might denote the dwellers on the low-lying coast between Clevedon and Minehead; *stream*, in the eighth clause of the treaty, the Bristol Channel; and *stæth*, which occurs in several clauses, either shore or bank of the channel. The ninth, and last, clause of the treaty should apparently be construed thus:

"Formerly the Gwents were subject to the Dunsetas; but [now] it [that is, the supremacy] belongs more properly to the West Saxons: there they [the Gwents] ought to give tribute and hostages. Also the Dunsetas need, if the King [that is, of the West Saxons] will grant it to them, that peace-hostages at least be allowed to them."

There was always, probably, constant traffic between Cardiff and Burnham and other places on the coast of that part of the channel. When the Saxons first landed in Britain the Britons held Somerset, Devonshire, and Cornwall, and kept a gradually-diminishing foothold there for five centuries, until the reign of Athelstan. "Devonshire, and even the city of Exeter," says Mr. Freeman (i. 43, note 1), "remained partly Welsh as late as the time of Athelstan"; and this, he a little before says in effect, was the case to a greater degree in Cornwall and to

a less degree in Somerset. The treaty seems to have been made when the West Saxons had got the upper hand in Somerset. Sir F. Palgrave would thus seem to have been right in substance, though wrong in his rendering of Dunor Defnsætas. The suggestion in Thorpe's note that the Wye is the stream referred to is open to the objection that Gwent bordered eastwards on Mercia and not on Wessex.

S. H. BOULT.

TEDALDI'S SONNET ON THE DEATH OF DANTE.

Tendring Rectory, Essex: Aug. 10, 1885.

Dr. Krebs's letter refers to a complete edition, the first, of Pieraccio Tedaldi's sonnets. It may be worth noting that the sonnet from which Dr. Krebs quotes three lines has been published some time ago in Trucchi's *Raccolta* (vol. ii., p. 43), where the first line of the triplet is given thus:

"Cioè il sommo autor Dante Alighieri."

The triplet, as quoted from Morpurgo's edition, does not rhyme.

T. K. CHEYNE.

SIR PHILIP FRANCIS AND "JUNIUS."

Cumnock, N.B.: Aug. 7, 1885.

The experts have been at work on the question of identification. It is an interesting coincidence—how much more?—that the brothers Junius (*Quatuor Evangeliorum Versiones perantiquae, Gothica et Anglo-Saxonica, &c.*) are named Philip and Francis Junius. I do not think this accident of names has been previously noted.

ALEX. MC'CALLIE.

SCIENCE.

A GERMAN DICTIONARY OF CLASSICAL MYTHOLOGY.

Ausführliches Lexicon der griechischen und römischen Mythologie. Herausgegeben von W. H. Roscher. Mit zahlreichen Abbildungen. Lieferungen 1-6. (Leipzig: Teubner; London: Williams & Norgate.)

THE time has probably arrived for a systematic digest of the results obtained during the last fifty years by the modern scientific school of mythologists. In 1879 this work was taken in hand by a syndicate of German scholars, whose names guarantee their competency for the task. The publication was commenced last year; and six parts, forming about a fourth of the entire work, having appeared, it becomes possible to give some account of its plan and execution.

The names are arranged alphabetically. The minor notices are more numerous than in any similar work, many Gaulic and Iberic deities known only from inscriptions being, for instance, introduced; while the discussion of the important names is more elaborate than anything that has been hitherto attempted. The whole range of classical literature seems to have been exhaustively ransacked, invaluable light has been thrown on obscure subjects by the monuments of ancient art, inscriptions have not been neglected, the theories of modern writers are enumerated and discussed, while special attention has been paid to the influence on Greek mythology of Oriental cults, especially those of Babylonia and Phœnicia.

The book challenges obvious comparison with Dr. Smith's well-known *Dictionary*, and also with Mr. Lang's recent article on "Mythology" in the *Encyclopædia Britannica*. We see at once what enormous advances have been made in the scientific

treatment of mythology since the publication in 1844 of the former work, which is now completely out of date, and we also perceive how one-sided and inadequate is the method adopted in the other. It is to be regretted that Mr. Lang should have practically confined himself to the mythology of savage races, ignoring the results of recent German criticism. His treatise, brilliant as it is in its way, is sufficiently condemned by the bibliographical note in which he cavalierly passes over without mention the greater portion of the scientific literature of his subject with the contemptuous remark that "as a rule the German treatises adopt various forms of the 'meteorological' and 'solar' hypotheses," as if the very fact that German scholars are essentially agreed as to the general principles of interpretation disentitled them to consideration, whereas it would not be too much to affirm that but for the "German treatises," such as those of Welcker, Preller, Lauer, Gerhard, Mannhardt, Kuhn, Forchhammer, Schwennk, Roscher, and Schwartz, mythology would not be entitled to rank among the sciences.

The reader of the present work cannot fail to be struck with the great variety of the sources from which mythological conceptions have been derived. No single theory will suffice to explain the origin of the Greek cults and legends. There are nature-myths innumerable: the sun, the moon, the stars, the dawn, the wind, the clouds, the storms, the rivers, have been personified; rude fetish worship of autochthonous races have been adopted; infinitesimal survivals of totemism, of ancestor worship, or of human sacrifice, may possibly exist; the cults of the civilised nations of the East have been extensively incorporated; there may even be euhemeristic elements; while at a later stage we recognise the deliberate embellishments of poets, ethical conceptions introduced by philosophers, and political deifications devised by statesmen. We find temples dedicated to Nike, Concordia, and the Divine Julius, as well as to the Sminthian Apollo, and the Ephesian meteorite.

The classical mythology may be compared to a geological conglomerate—a breccia composed of attrited pebbles, among which may be recognised fragments of innumerable ancient rocks, derived from formations of diverse geological epochs, sedimentary, plutonic, and organic, cemented together by later infiltrations into an apparent unity, in which the geologist endeavours to distinguish the manifold sources from which the components have been derived. In like manner mythology is a conglomerate containing heterogeneous fragments—the oral literature and popular science of every age. The contributions of poetry, history, philosophy and fiction, of geography, ethnology, meteorology, and astronomy, have to be distinguished. We may recognise philological conjectures, speculations as to the origin of mankind and of the external world, etiological explanations of natural phenomena, legendary genealogies, nursery tales and folklore imported by foreign slave-women; all these elements, derived from the most unexpected sources, Hellenic, Italic, Pelasgic, Carian, Phrygian, Phoenician, Babylonian, Accadian, Persian, Egyptian, Celtic, or Etruscan, being firmly imbedded in a theological matrix.

A fertile source of error among mythologists has been the attempt to apply too broadly some single theory as to the origin of this complex formation. There are nature myths of the dawn, but they are not so many as Mr. Max Müller has supposed; there are numerous solar myths, but Sir George Cox will have to surrender some of his most cherished instances; storm myths have been overdone by Schwartz; moon and star myths by Mr. Brown; the Vedic hymns cannot be neglected, but the tyranny of the Sanskritists is happily overpast; while the contributions due to barbarous races have been vastly overestimated by Mr. Lang. Perhaps, on the whole, Mr. Sayce comes best out of the ordeal, as a larger part of the Greek mythology than had been supposed may be traced to Babylonian and Phoenician sources.

It follows that an eclectic treatment of Greek myths is the true scientific method, science being merely exhaustive knowledge, illuminated, but not misled, by the imaginative faculty, and guided by common sense. Without knowledge it is not science but sciolism; without imagination it is pedantry; without common-sense it must be arbitrary or fantastic.

In the light of these general principles the methods employed and the results obtained in the present work may be profitably examined.

The longer articles are mostly constructed on a nearly uniform plan. The compound myths are analysed; each element is traced to its geographical source; foreign germs are separated; the developments and combinations of the mythical ideas are then treated chronologically; the introductions of later poetical or ethical conceptions are examined historically; the local cults are described; a considerable space is devoted to the chronological development of the artistic conceptions and representations; and the various theories which have been advanced as to the origin and inner meaning of the myth are set forth and discussed in the light shed by modern philology on the primitive signification of the names of the personages concerned. We may take for examples the excellent articles on Aphrodite, Artemis, Athene, and the Argonauts.

In Roscher's article on Aphrodite the combination of Oriental and Hellenic conceptions is carefully disentangled. The Cyprian Aphrodite is shown to be the Babylonian Mylitta, the Phoenician Astarte, the Accadian Istar, the great Asiatic moon-goddess who is the queen of heaven and of love. The local cults are described, her emblems are discussed, and the artistic conception is traced from the rude Babylonian idol, through the Cypriote images, to the lovely types of the best period of Greek art. The Oriental origin of the myth having been overlooked by Mr. Max Müller and Sir George Cox, it is obvious that their explanation of Aphrodite as a personification of the dawn must be surrendered; and when she is seen to be the moon and not the dawn, the ingenious identification of her attendants, the Charites, as the Vedic Harits, the horses of the sun, at once falls to the ground. The myth of Venus and Adonis is merely another version of the Phrygian myth of Kybele and Attis (Attin), of the Phoenician myth of Baal-Tammuz and Astarte, and ultimately of the Accadian legend

of Istar and Izdubar, the moon sinking into the underworld in search of her lost spouse, the sun. Compared with this scientific and exhaustive treatment of the subject, the poverty and meagreness of the article in Smith's Dictionary is conspicuous, the significance of the Oriental clue being wholly missed.

Hardly less clear is the genesis of the myth of Artemis. As in Cyprus and Cythera the Asiatic moon-goddess, Istar, Atar, Atar-gatis, or Atar-ate, was developed under Phoenician influence into the Hellenic Aphrodite, losing most of the traces of her lunar origin, so among the Ionians she was differentiated into the Ephesian Artemis. Artemis, like Aphrodite, is the goddess of fruitfulness. The figures on pp. 647, 651, 654, 407, show that the clothed Babylonian Astarte was the type of the Artemis of the earliest Greek art, and that the naked Phoenician Astarte, with her hands upon her breasts, was the type of the earliest figures of Aphrodite, while Kybele, who is proved by the Attis myth to be the Phrygian Aphrodite, wears the mural crown which is the tiara of the Ephesian Artemis. The conjecture may perhaps be hazarded that the obscure name of Artemis may be explained as the lady Istar, the *-mis* being the *-mis* of Semiramis, and the first part of the name the Atar (Istar) of Atar-gatis. In Hellas the cult of the Asiatic moon-goddess seems to have been engrafted on local cults of naiads or dryads, Atalanta being an Arcadian Artemis in the form of a forest nymph, while the Hellenic myths were afterwards transferred to the Italic Diana, a being of wholly different origin. This transference of Hellenic myths by the Romans to Italic deities helps to explain the way in which the Greeks incorporated Oriental legends into their own mythology.

The nature of Pallas Athene has been much discussed. The wild theory of Mr. Gladstone that she was the Shechinah of the Hebrews, and the third person of the Christian Trinity, needs no refutation. Prof. Max Müller and Sir George Cox naturally believe her to be the dawn. The suggestion of Lauer, adopted by Schwartz and Benfey, that she is the brandisher of the lightning, is set forth in an article by Roscher with arguments which seem conclusive. From behind the Aegis, the shield of Zeus, which is the ragged storm-cloud, she springs from the forehead of the sky armed with her glittering lance, which is the lightning-spark, while the thunder is her battle-cry. She is called Pallas because she brandishes her spear, while the more difficult name Athene is referred to the root of *ἀθ-ήρ*, a spear-head.

The explanation of the Argonautic voyage as a solar myth, which Mr. Lang has recently endeavoured to overwhelm with his playful banter, is, however, fully accepted in an excellent article by Seeliger, who affirms that the solar interpretation "can scarcely be denied." He takes the Argo as the sun-ship, Phrixos and Helle, the children of Nephele, as the clouds, Medea as the storm, and ably discusses the geographical accretions and the gradual growth of the myth from its simpler rudiments, recognising in portions of the "Odyssey" a later version of the same myth.

The Bellerophon myth is likewise the story of the battles of cloudland; it is the conquest

of the Chimaera and other storm demons by Bellerophon, the heavenly horseman who bestrides Pegasus, the water-bringing cloud-steed, from whose hoof-mark the fountains spring.

Among other nature myths may be mentioned the ingenious explanation by Roscher of the myth of Antaeus, son of Poseidon and of Ge, a Mauritanian giant, whose strength was renewed by contact with his mother earth. As the son of Ge, he is the giant sand pillar stalking across the desert; as the son of Poseidon he is the waterspout moving over the ocean.

Disse's explanation of the story of Admetus and Alcestis as a myth of the sun and the dawn is adopted, while Forchhammer's opinion that Achilles is ultimately a river god is approved, as against the solar hypothesis of Kuhn and Max Müller. Medusa is the storm cloud, Aglauros is the dew, Aeolus the wind, and the fifty hounds of Actaeon are the fifty dog-days who destroy the beauty of the spring. The name of Mars is derived from the root *mar*, to shine, which we have in *mar-mor*, Mr. Max Müller's derivation from the root *mar*, to pound, which we have in *mar-tus*, and his ingenious attempt to connect the Roman war-god with the Vedic Maruts being left unnoticed. The wandering Dido is the Carthaginian form of the Semitic moon-goddess; and the name Aeneas, son of Aphrodite, is ingeniously explained as the "son of Aene," the Anatis of Elam, who became the Aphrodite Urania of the Greeks, an explanation supported by the fact that Ilus and Assaracus, ancestors of Aeneas, are Assyrian deities.

Where so much is excellent it seems ungracious to find fault, but it is to be regretted that attention has been given almost exclusively to the labours of German mythologists. As far as I have discovered Maury is only mentioned once; the names of Bréal, Gubernatis, Cox, Brown, Lang, Keary and Sayce not at all. The ingenious suggestion of Prof. Sayce that the Amazons of Greek legend were the armed priestesses of the great Asiatic goddess should at all events have been noticed, while in Stoll's article on Deianeira there is no mention of Prof. Max Müller's proposed etymology (*Dāsya-nari*) or of the explanation of the death of Heracles as a sunset myth; and in the still more inadequate article of Von Sybel on Daphne she is treated only as the personified laurel tree, no reference being made to the explanation of her name advanced by Prof. Max Müller and accepted by Curtius, from Sanskrit sources, as the dawn, an explanation which alone renders intelligible the myth of her pursuit by Apollo.

This book, while giving a fresh stimulus to the study of mythology, cannot fail to place it upon a firmer scientific basis. It can no longer be denied that all the greater Greek myths are meteorological—the efforts of early science or early poetry to account for or to recount the phenomena of nature. It is plain also that the influence of Oriental cults has been greatly underrated, and that the cuneiform tablets are, to say the least, as helpful as the Vedic poems. The philological method, which has of late been so much derided and ridiculed, re-asserts, when rightfully used, its value; and it is seen that theories as to the meaning of a nature-myth

can only be really clenchd by a satisfactory explanation of the meaning of the names. What I have elsewhere called the Hottentotic method—namely, the miscellaneous comparison of the folklore of modern savages with the myths of the ancient world—has recently been received with an amount of favour which can only be explained by the unacquaintance of reviewers with the methods and results of scientific mythology. A study of this Lexicon will prove how very few are the residuary problems of classical mythology left for the mere anthropologist to solve. The classical and savage myths which he compares are necessarily not the same, but only similar myths. They have no historical connexion, they can at best only illustrate the workings of the human mind, and in the absence of the philological key can only be regarded as guesses at a possible solution, and not as the scientific certainties which the orthodox method abundantly supplies.

ISAAC TAYLOR.

EARLY INSCRIPTIONS IN ARABIA.

M. PHILIPPE BERGER has just published an interesting lecture on the important inscriptions recently discovered in Central Arabia, and the inferences that may be drawn from them. Mr. Charles Doughty, in 1875-7, penetrated, at the risk of his life, as far as a place called Medain-Saleh, north of Medineh, and half way between Petra and Mecca, where he found Nabathean tombs cut in the rock, besides a large number of inscriptions. The tombs are referred to in the Korân, and are there supposed to be the petrified dwellings of the impenitent Thamudites—a proof that the Arabs of the age of Mohammed had preserved no memory of their real history. As M. Berger observes, this ought to make us cautious about accepting so-called Arabic traditions. The inscriptions brought back by Mr. Doughty are partly Nabathean, partly Himyaritic, partly in characters like those of Saba. The Nabathean texts are engraved over the tombs, and are dated in the reigns of Aretas and other Nabathean kings of the first century A.D., showing that at that time a settled Nabathean population extended into the heart of Arabia. One of the inscriptions joins with them the Shellemites, or Salemites, whom Jewish commentators identify with the Kenites, and who are known under the name of Solymi to the classical authors. Shortly after Mr. Doughty's journey, a French traveller, M. Huber, found his way to the ruins of Teima, north-east of Medain-Saleh, and there discovered an important stèle containing two bas-reliefs in the Assyrian style and an inscription of twenty-four lines in Aramaic characters, which are as early, at least, as the fourth century B.C. In 1883 he started again to explore the same region in company with Prof. Euting, but was murdered about a year ago. Squeezes and copies had, however, been already taken of the inscription, and the stone itself is now safe in the Louvre. It is engraved with a dedication to the gods of Teima by the priest, Tselem-Sazab, the son of Petosiris, whose Egyptian name must be noticed. Like other inscriptions copied by MM. Huber and Euting in the neighbourhood, it is a further proof of the former occupation of Central Arabia by Nabathean tribes. Since the Nabatheans belonged to the Aramaic branch of the Semitic race, while inscriptions make it plain that Sabæan (or "Himyaritic") influence and culture extended northward as far as their southern frontiers, little room is left, as M. Berger remarks, for "the Arabic of the Koreishites and of Mohammed." He concludes that it must

have originally been "a dialect extremely restricted in area, the language, in fact, of a small tribe, which, owing to local circumstances, reached at a particular moment an extraordinary degree of perfection." The deities mentioned on the newly-found monuments will throw much light on Semitic mythology. Tselem, as M. Clermont-Ganneau points out, is a god to whom there is a reference in Amos v. 26. The god was probably borrowed from the Assyrians, who regarded him as a solar divinity, and identified him with Anu. Sangalla, who is associated with Tselem on the stèle of Teima, may be the Assyrian Sin-gallu, "the great moon-god." M. Berger's lecture, we may add, is published under the title of "L'Arabie avant Mahomet d'après les Inscriptions" (Paris: Maisonneuve).

CORRESPONDENCE.

ALGEBRAICAL SIGNS FOR THE TERMS "UMLAUT" AND "ABLAUT" IN ETYMOLOGY.

Cambridge: Aug. 1, 1885.

We may express the German terms *umlaut* and *ablaut* by "mutation" and "gradation" in English. It is highly desirable to have some very brief method of expressing these important relations between vowel-sounds. In German it is common to express mutation by two dots over the vowel-symbol. I would, therefore, propose to use *two dots* as the symbol for *mutation*. At the same time, we may employ the symbols < and > as they are already used by some writers on etymology. The former means "derived from," and the latter means "produces by derivation."

The expression of the etymology of the English verb *to deem* now becomes extremely simple, while, at the same time, it is exact. It may be written thus: "*Deem* = Anglo-Saxon *dēman* < . . *dōm*, 'doom.'" It is to be read thus: "The modern English *deem* is the same word as the Anglo-Saxon *dēman*, which is derived by vowel-mutation from *dōm*, 'doom.'" This is brief, but not obscure.

The converse proposition is as follows: "*Anglo-Saxon dōm* = English *doom* > . . *dēman* = English *deem*." It is to be read thus: "The Anglo-Saxon *dōm*, which is the modern English *doom*, produces by vowel-mutation the verb *dēman*, which is the modern English *deem*."

When we come to consider gradation, the thing which we really want to know and to define is the degree or step of the gradation, i.e., whether it agrees with the "first" or "second" gradation of the vowel-sound. We most commonly wish to express the fact that two given words exhibit the *same* gradation in the vowel-sound. For this I would use the symbol || which every printer is sure to have. For example: "The English *bier* = Anglo-Saxon *bær* || *bær-on*, pt. pl. of *beran*, 'to bear.'" This is to be read thus: "The modern English sb. *bier* is the same as the Anglo-Saxon sb. *bær*, a word which exhibits the same gradation of vowel-sound as appears in the Anglo-Saxon *bær-on*, the past tense plural of *beran*, 'to bear.'"

It is easy to proceed to combine the symbols . . (mutation) and || (same gradation). For example: "English *burden*, also *burthen* = Anglo-Saxon *byr-th-en* < . . || *bor-en*, pp. of *beran*, 'to bear.'" This is to be read thus: "The modern English *burden*, also formerly spelt *burthen*, is the same word as the Anglo-Saxon *byr-th-en* (in which *-th* and *-en* are suffixes); and this Anglo-Saxon *byrthen* is derived by vowel-change from a base which shows the same gradation as *bor-en*, the pp. of *beran*." This is very brief, but still not obscure. Conversely, we may write that "Anglo-Saxon *beran*, 'to bear,' has a pp. *bor-en* || > . . Anglo-Saxon *byr-th-en* = English *burthen*, *burden*." Here the symbol means:

"which exhibits the same gradation as the base which produces, by mutation," &c.

It will be seen that I really employ || with its usual sense of "parallel to." I add a few examples to make all quite clear:

English *loose*, adj., Middle-English *lous*, *los* = Icelandic *lauss*, adj. || Gothic *laus*, pt. t. of *liusan*, only found in the comp. *fra-liusan*, "to lose."

English *-less*, adj. suffix, Middle-English *-lees* = Anglo-Saxon *léas*, adj. || *léas*, pt. t. of *léosan*, "to lose."

English *quell*, v. = Anglo-Saxon *cwell-an* < . . *cwal-ian* * || *cwal* * = Anglo-Saxon *cwæl*, pt. t. of *cwel-an*, "to die."

Anglo-Saxon *dréosan*, "to drip," has the pp. *drōren*, for *dros-en* * || > . . *drye* -, appearing in modern English *drizzle*.

WALTER W. SKEAT.

A "SAURAYANTRA."

London: Aug. 7, 1885.

In addition to the *Bhūmayantra*, described in the ACADEMY of April 4, 1885, Mr. Whitley Stokes possesses two *Saurayantras*, one of which, being of good execution and apparently some antiquity (say between three and four hundred years), is well worthy of a short notice. The plate is about 5½ inches square, and raised in the centre. Close to the outer rim are found invocations, showing the usual formula *Om—namah*, of the guardian deities of the eight points of the horizon and of their weapons, viz.:

1. *Indra*, *vajra* (thunderbolt).
2. *Agni*, *sakti* (spear).
3. *Yama*, *danda* (staff).
4. *Nirriti*, *khadga* (sword).
5. *Varuna*, *pāśa* (noose).
6. *Vāyu*, *amkūśa* (elephant-goad).
7. *Kubera*, *gada* (masc., club).
8. *Īśāna*, *triśūla* (trident).

At a distance of about an inch and a half from the rim there is a circle, outside of which are written invocations to the sun by the names of *Mitra*, *Ravi*, *Sūrya*, *Bhānu*, *Khaga*, *Pūshan*, *Hiranyagarbha*, *Marichi*, *Āditya*, *Savitri*, *Arka*, and *Bhāskara*, the formula being here and in the sequel the same as that given above. Inside this circle we have a second, marked by a double line, around which, again, are inscribed eight names of the sun, viz., *Sūrya*, *Divākara*, *Vaivasvata*, *Bhānu*, *Varuna*, *Mitra*, *Āditya*, and *Viśvavedhas*. The interior of the circle is filled by a pentagram, containing in the triangles the *bījamantras* (germ-spells) *hrām* (P), *hrām*, *hrām*, *hrām*, *hrem*, *hrem*, and including in the centre a very small circle, showing the syllable *Om* inscribed in a triangle.

The Sanskrit of these mantras is frequently faulty. The *visarga* of *namah* is usually left out, and the dative cases of the *a*-stems usually end in the Prakritic *āye*. The space between the outer rim and the first circle is filled with representations of flowering branches of some tree or shrub, disposed very gracefully, and serving to separate the sentences. This tablet was probably used in worshipping the sun, just as the *Bhūmayantra* in the adoration of the planet Mars.

G. BÜHLER.

SCIENCE NOTES.

At the forthcoming meeting of the British Association at Aberdeen, arrangements have been made for two special discussions in the chemical section, of which Dr. Armstrong is president. The subjects are (1) "The Determination of the Molecular Weights of Liquid and Solid Bodies," the discussion on which will be opened by Capt. Abney with a paper on the spectroscopic method; and (2) "Electrolysis," on which papers are promised by Profs. Lodge

and Schuster, Capt. Abney, and Mr. Shelford Bidwell.

At the monthly meeting of the Entomological Society of London, held on Wednesday (August 5), Mr. J. W. Dunning announced that a Royal Charter of Incorporation had been granted to the Society. It bears date July 20, 1885. Mr. G. T. Baker, of Edgbaston, Birmingham, was the first "Fellow" admitted. The Entomological Society was founded in 1833.

At a meeting of the council of the Royal College of Surgeons, held last week, it was moved by Mr. John Marshall, seconded by Sir T. Spencer Wells, and carried unanimously,

"that, in recognition of the time and thought devoted by Sir James Paget, during many years past, to the revision and completion of the catalogue of the pathological collection of the museum, and his many other important services to the college, he be requested by the council to sit for a marble bust, to be executed at the expense of the college, and placed in some suitable position in the college buildings."

A PAMPHLET on *The Geology of Belgium and the French Ardennes* (Stanford) has just been issued by the Geologists' Association. About seventy members of the association are at present making an excursion in the Ardennes, under the guidance of several members of the Geological Surveys of Belgium and France, who are the chief contributors to the pamphlet. Prof. Gosselet, of Lille, writes on the palaeozoic rocks of the Ardennes, while MM. Rutot and Van den Broeck give a general sketch of the geology of Belgium. Prof. Benney has a paper on the porphyroids and certain other rocks of the Ardennes, while Mr. Topley, the president of the association, calls attention to some points of comparison between the geology of Belgium and of England. There is, unfortunately, so grave a difference at present between the Geological Survey and the Geological Society of Belgium that the latter body will take no part in the excursions.

PHILOLOGY NOTES.

MR. CECIL BENDALL, Fellow of Gonville and Caius College, Cambridge, at present in the department of Oriental Books in the British Museum, has accepted the Professorship of Sanskrit at University College, London.

THE collection of Oriental MSS. belonging to the late Prof. Ernest Trümpf has been bought by the University Library at Munich. It is particularly rich in Pushtu and Sindhi texts, partly originals, partly copies.

THE Louvre has recently acquired about thirty-one demotic papyri, chiefly dating from the reigns of Psammetichus and Amasis, the addition of which makes the collection under the charge of M. Réveillout undoubtedly the most complete in Europe.

WE hear that MM. Szarvas and Simonyi hope to finish in about two years' time their *Historical Dictionary of the Hungarian Language*, on which they have been engaged for the last ten years. Although entitled "Historical Dictionary," it should rather be called Dictionary of the Old Hungarian Language, as it will contain only the words in Hungarian literature used before the reforms or innovations of Kazinezy. This dictionary will be published under the auspices and at the expense of the Hungarian Academy of Sciences, and will be followed by a dictionary of the neologisms invented by Kazinezy and his followers down to the present day. For this second dictionary the materials are already being collected. The third part of the same undertaking is the Dictionary of the Hungarian Dialects, which has

been entrusted to M. Szinnyei, jun. When finished, these three dictionaries will form a complete *Thesaurus Linguae Hungaricae*.

FINE ART.

Notes on Vasari's Lives. By Dr. J. P. Richter. (Bell.)

THIS volume appears as the sixth of the well-known translation by Mrs. J. Foster of Vasari's *Lives* in "Bohn's Standard Library," and deserves something more than the notice which is generally sufficient to record an addition to this useful series. Few authors have of recent years undergone more searching criticism than Giorgio Vasari, and it has remained for the nineteenth century to discover how frequently inaccurate was the information from which he in the sixteenth century compiled his celebrated biographies. After centuries of almost implicit credit his veracity has been rudely shaken, and no student can now venture to take for granted any statement which he makes without ascertaining how far it has been impugned by more recent research. But though his authority may be less, his fame remains—must always remain undisturbed. The labours of modern art scholars are substantially but supplements to his own, and it is doubtful whether the results of modern art investigation could be embodied in a more generally useful form than a well-annotated edition of Vasari. This need of modern culture is in a fair measure fulfilled by this latest work of Dr. Richter, in which he has found a field to display, in the most modest of ways, his well-known learning and critical acumen.

Dr. Richter's thorough acquaintance with recent art literature and discovery, his own not inconsiderable experience and well-trained judgment, qualify him for the difficult and laborious task which he has undertaken. Viewed only as a compilation it deserves unusual respect, but it would be unfair to regard it as no more than this. It is true that he has had the great work of Sig. Milanesi for a foundation, and his obligations to this author are properly acknowledged on the title-page; but his own personal knowledge has enabled him, in many cases, to correct the statements of the Italian annotator, and he has been able to supplement the notes derived from this source by information extracted from the pages of numerous modern critics of many nations. Among these Sig. Morelli has, as might have been expected, been most laid under contribution, and Dr. Richter has done wisely in quoting not only frequently, but fully, from the articles of that patient investigator and acute critic. Brevity may be regarded as the soul of annotation as well as of wit; but the words in which Morelli has stated the results of his study in regard to such painters as Antonello da Messina, Giorgione, and Palma could not have been safely abbreviated. Nor can objection be raised to Dr. Richter's occasional introduction of diverse opinions. With regard to Palma, for instance, he has properly stated the very different conclusions of Messrs. Crowe and Cavalcaselle.

To test the accuracy of all these notes would entail almost as much labour as the rewriting of the volume, and such a task cannot be attempted here, but without going

so far it is quite possible to testify to the general care and sincerity with which Dr. Richter has done his work, and to the important contributions which his own knowledge and research have made to the total value of the volume. On the other hand, in the first edition of a work covering so vast a field, and requiring the sifting of so much evidence from so many sources, it is impossible to expect immunity from error and inconsistency. On p. 4, for instance, the fresco-paintings in the Spanish chapel are stated to be the work of Andrea da Firenze, and on p. 21 we are told that it can only be said with certainty that they are the work of the school of Giotto. On p. 43 Dr. Richter thinks that Paolo Uccello may be considered a pupil of Vittore Pisano, and on p. 106 he quotes Sig. Morelli as an authority for considering Vittore Pisano to have been the pupil of Paolo Uccello. The celebrated bust of Marietta degli Strozzi by Desiderio da Settignano is at Berlin, and not in the Louvre. On one page Dr. Richter speaks of Simone Memmi instead of Simone Martini, and this is not the only place in which some slight slip in nomenclature occurs.

To the next edition, which will probably correct a good many more mistakes than these, it is to be hoped that Dr. Richter will add an index; to the present book there is not even a table of contents. Possibly Dr. Richter thought that in a volume of notes no other references were necessary than those to the text annotated, but this would be to restrict the practical value of his work. It is, indeed, a volume of notes to Vasari, but it will be useful and will be used as a handy, if imperfect, compendium of recent art-lore. As many artists are noticed only under the names of others (for information about Pellegrino de Daniele, for instance, we must look under Pordenone) an index is very desirable. To make the book still more complete a list of authorities quoted, and the pages on which they are referred to, should also be added.

COSMO MONKHOUSE.

M. MASPERO'S REPORT ON HIS LATEST EXCAVATIONS IN EGYPT.

II.

"**AKHMIM**, vue du fleuve, donne l'illusion d'une ville manufacturière comme Erment ou Bodah. Un moulin à vapeur, bâti à pic sur la berge, la domine de ses cheminées et en masque le front, mais derrière ces premiers plans modernes une vieille cité égyptienne s'étend indolente et silencieuse: des ruelles étroites, animées à peine par le bruit sourd de quelque métier et gardées d'espace en espace par des escouades de chiens efflanqués, cinq ou six belles mosquées dont une au moins remonte aux premiers siècles de l'Hégyre et est la copie amoindrie de la mosquée d'Amr, un petit bazar propre et discret où vingt marchands contemplatifs attendent soir et matin une clientèle qui semble n'arriver jamais. Par intervalles, un vent de fanatisme religieux souffle sur ce monde endormi et le tient éveillé l'espace de trois ou quatre jours. En mars 1882, la veille presque de mon passage, un sheikh musulman avait tué d'un coup de couteau un copte qui ne lui cédait point le pas assez vite à son gré. Vers l'Est, des blocs de calcaire et de grès épars dans un creux indiquent l'emplacement du temple, un cimetière d'aspect misérable se groupe autour de deux santonis croulants, des buttes de décombres et d'immondices accumulés tracent la ligne des anciennes fortifications. Vers le Sud, de beaux jardins touffus, séparés l'un de l'autre par des fossés profonds qui servent de canaux pendant l'été, de routes pendant l'hiver, forment comme un rempart de verdure; les murs d'enclos

sont garnis de ronces folles dont les branches retombent au milieu du chemin et font la guerre au visage des passants. La plaine environnante passe à bon droit pour être l'une des plus larges et des mieux cultivées qu'il y ait en Egypte. La première fois que je la traversai à la recherche de la nécropole en Décembre 1881, les fèves étaient en fleur et les tiges montaient si haut qu'hommes et bêtes nous étions plongés jusques au cou dans les masses de verdure. Notre chevauchée nous mena aux montagnes du Nord, mais sans résultat: les tombes sont peu nombreuses et ne nous fournirent rien que Nestor Lhôte et Lepsius n'eussent déjà signalé avant nous. L'année d'après, l'idée me vint que la nécropole pourrait bien être dans un Ouady qui débouche au Nord Est de la ville, et où Pococke vit encore au siècle dernier les ruines d'un couvent copte. Plus tard en 1884, ce fut le tour des collines qui courent à l'Est de l'Ouady au fleuve. En parcourant les villages de cette région, j'avais observé que les auges placées devant la porte des maisons à l'usage des bestiaux, étaient des sarcophages en pierre blanche, les uns carrés, les autres taillés en forme humaine. Les paysans interrogés sur la provenance répondaient de façon assez vague. Ils n'attachaient aucune valeur aux antiquités et ne faisaient pas métier de les chercher; mais quand ils avaient besoin d'une auge neuve, ils allaient à la montagne et ne tardaient pas à en retirer ce qui leur convenait. Souvent les sarcophages étaient intacts et alors les momies avaient la face dorée, souvent aussi ils étaient vides de vieille date ou ne contenaient plus que des éclats de bois et des ossements. Je laissai à Akhmim un de nos réis, Khalil Sakkaz de Gournah, avec ordre d'exécuter des sondages en face du bourg d'El-Hawawish. Cette fois la piste était bonne: quinze jours ne s'étaient pas écoulés qu'il avait ouvert vingt tombeaux renfermant près de huit cents momies.

"Jamais cimetière antique ne mérita mieux que celui d'Akhmim le nom de nécropole: c'est vraiment une ville dont les habitants se comptent par milliers et se lèvent tour à tour à notre appel, sans que le nombre paraisse en diminuer depuis quinze mois. J'ai exploré la colline sur une longueur de trois kilomètres au moins, et partout je l'ai trouvée remplie de restes humains. Non-seulement elle est percée de puits et de chambres, mais toutes les fissures naturelles, toutes les failles du calcaire ont été utilisées pour y déposer les cadavres. Les puits sont d'ordinaire assez profonds. Quelques-uns descendent à quinze ou vingt mètres et ont plusieurs étages; tel d'entre eux a huit ou dix petites chambres superposées et dans chaque chambre une douzaine de cercueils. On est tenté de croire au premier abord que ce sont là des sépultures de famille, mais il n'en est rien. Les noms, les titres, les généalogies inscrites sur les couvercles indiquent presque autant de familles diverses qu'il y a de momies, et les générations successives d'une même race sont disséminées à travers les quartiers différents. Les grottes surtout ont l'aspect de fosses communes. Les simples momies, emmaillottées mais sans cercueil sont empilées sur le sol par lits réguliers, comme le bois dans les chantiers. Par dessus, on a entassé jusqu'au plafond les momies à cartonnage et à gaine de bois: tous les objets qui leur appartenaient sont jetés au hasard dans l'épaisseur des couches, tabourets; chevets, souliers, boîtes à parfum, vases à collyre, et, pour ne rien perdre de l'espace, on a enfoncé de force les derniers cercueils entre le plafond et la masse accumulée, sans s'inquiéter de savoir si on les endommagerait ou non. Les premières momies découvertes en face d'El Hawawish étaient d'époque grecque, et je pensai d'abord que la nécropole entière était des bas temps. Mais au fur et à mesure que le champ des fouilles s'élargissait nous avons rencontré des tombes de plus en plus anciennes, une de la VI^e dynastie, plusieurs de la XVIII^e et même du règne des rois hérétiques, celles-ci violées dès l'antiquité et changées en véritables charniers. Les habitants d'Akhmim, comme ceux de Thèbes, ne se faisaient aucun scrupule de déposséder les momies d'autrefois et les familles éteintes pour s'emparer de leurs tombeaux. La plupart des chambres ont dû changer dix fois de maîtres avant de recevoir ceux que nous y trouvons aujourd'hui. En résumé, la partie que nous avons explorée aujourd'hui était plutôt un cimetière de petites gens, bourgeois aisés, prêtres de sang secondaire, gens de métier.

L'entassement des corps et le peu de soin avec lequel ils ont été traités ne s'expliqueraient pas aisément si les documents contemporains ne nous fournissaient pas les renseignements les plus précis sur la manière dont l'entretien et le culte des morts étaient réglés. Les riches seuls avaient le privilège d'occuper une chambre isolée et de s'assurer par des fondations pieuses les prières d'un prêtre spécial; les gens de fortune et de classe moyennes confiaient les momies de leurs parents à des entrepreneurs, affiliés au sacerdoce, qui les logeaient dans des magasins, et moyennant une rente annuelle, ou une somme payée une fois pour toutes, se chargeaient de veiller à leur conservation et de célébrer pour elles les cérémonies canoniques aux jours fixés par la loi religieuse. Ces magasins constituaient une propriété qu'on pouvait acheter ou vendre comme la propriété ordinaire: il fallait seulement joindre à l'acte de vente la liste nominative des momies actuellement présentes et dont chacune représentait pour les parties une valeur plus ou moins bonne, selon le sang, les conditions du contrat passé avec les familles, la position de ces familles même. Celles-ci en effet finissaient par changer de résidence ou par s'éteindre, ou se fatiguaient de payer une rente pour des ancêtres qu'elles n'avaient jamais connus; les magasins s'encombraient sans cesse de corps nouveaux, les vieilles momies étaient reléguées à l'arrière-plan puis devenaient gênantes. On les emportait alors pour les enterrer définitivement dans quelque coin, et là encore le plus ou moins d'égards qu'on leur témoignait était proportionné à leur fortune. Les riches descendaient dans les puits et avaient une place à elles dans une chambre particulière; les pauvres allaient à la tombe commune, et comme le terrain était aussi précieux dans ces cimetières qu'il l'est dans les nôtres, on les empilait les uns sur les autres sans craindre de les briser.

Les tombeaux isolés n'offrent rien qui les distingue du commun des hypogées: pour un qui porte des inscriptions, vingt sont nus et muets. Les sarcophages et les stèles sont en calcaire blanc compact et ont été extraits des carrières de Girgeh ou du Sheikh Haridi. Les stèles appartiennent presque toutes jusqu'à présent à l'époque ptolémaïque et sont travaillées d'une main habile et minutieuse: plus de cent figurent déjà dans les collections du musée, et le nombre s'en accroît chaque jour. Les sarcophages sont rares, pour le moment du moins; j'en ai pourtant recueilli une demi-douzaine. Trois d'entre eux de fort bon style; un quatrième est un immense coffret surmonté d'un couvercle en dos d'âne. Les faces ne sont point parallèles et sont visiblement déjetées; les marbriers n'avaient pas souci de l'exactitude et de la symétrie en ces matières; mais elles sont couvertes de scènes ciselées et peintes avec beaucoup de goût. Des génies à tête d'hommes et d'animaux marchent sur les côtes; aux pieds et à la tête, une Isis et une Nephthys allongent leurs ailes avec la grâce tendre et mélancolique des déesses égyptiennes. La décoration n'était pas achevée au moment où le mort vint réclamer son tombeau, et l'on distingue encore nettement le quadrillage que le sculpteur avait tracé pour placer régulièrement les hiéroglyphes et les figures. Non loin de ce sarcophage, le hasard nous a fait tomber sur un quartier où ne reposent que des familles contemporaines des Antonins, et nous y avons rencontré des momies d'un type entièrement neuf. Quelques-unes ont la forme de gaines, mais la plupart sont comme un moulage du mort et le représentent vêtu de ses habits de fête. Les hommes sont drapés dans la toge et ont la tête couronnée de fleurs ou de rameaux d'olivier. Les femmes ont le péplum et la tunique brodée, les souliers en cuir lacés sur le devant, la lourde coiffure en diadème, le fard aux joues, le noir à l'œil, le tatouage au menton et à l'aile du nez, les bagues aux doigts, les bracelets au bras et à la cheville; les moindres détails du corps se modelent sous le vêtement avec une exagération presque indécente et l'aspect général rappelle la femme de harem plutôt que la matrone grecque ou romaine. La matière de ces figures n'est ni le bois, ni la toile: c'est une sorte de carton fait de feuillets de papyrus agglutiné et recouvert d'une couche assez épaisse d'argile stucquée et peinte. Cette composition est devenue tellement friable au cours des siècles qu'elle tombe en poussière au moindre choc. Sur cent momies de ce type c'est au plus si on en

saue trois ou quatre, et c'est à force de précautions que j'ai réussi à en transporter une douzaine à Boulaq. Elles y font bonne figure à côté des momies chrétiennes que Mariette trouva jadis à Saqqarah. Je n'en finirais point si je voulais décrire les types variés que la pioche de nos ouvriers tire chaque jour du sol: les animaux eux-mêmes avaient leurs hypogées entremêlées à ceux des hommes, ici les éperviers entassés par centaines dans des boîtes en bois, là des chacals empilés dans les trous. Le chacal était en honneur dans l'Akhmim antique: on l'appriivoisait et on le nourrissait dans les temples. Un de ces chacals sacrés était dans un petit sarcophage oblong, peint et orné comme un sarcophage humain.

"Que dire maintenant des explorations rapides que nous avons entreprises le long du Nil? Beaucoup n'ont rien produit, d'autres n'ont donné qu'un objet ou deux, mais intéressant. Qui s'attendait à rencontrer au village de Helléh le tombeau d'un écuyer de Ramsès III. et le portrait des deux chevaux de bataille du roi? Mesheikh cachait un petit temple construit par Ramsès II. et décoré par lui de statues à tête de chattes enlevées au temple de Karnak: nous en avons mis une partie au jour et nous y avons recueilli deux images accroupies d'un grand-prêtre de Thinis, qui vivait sous le règne de Ménéphthah. Un couvent copte, situé près d'Assouân, a enrichi nos collections d'une vingtaine d'épigraphes monacales du VII^e siècle, et dans le nombre celles de deux évêques de Philæ inconnus jusqu'à présent. Non, en vérité, l'Egypte n'est pas épuisée, comme on l'a dit trop souvent depuis vingt ans. Elle renferme de quoi occuper vingt générations de travailleurs, et ce qu'elle nous a livré jusqu'à ce jour n'est que peu de chose à côté de ce qu'elle nous cache encore.

"G. MASPERO."

CORRESPONDENCE.

ROMAN MILESTONES IN NORTHUMBERLAND.

242 West Derby Road, Liverpool: Aug. 8, 1885.

On April 30, 1884, I communicated to the Society of Antiquaries of Newcastle a paper on "Groups of Roman Milestones," advising that wherever a single milestone had been found search should be made in the immediate vicinity for others, as from several continental discoveries, and from the fact of seven such stones having been discovered at Bittern, it seemed evident that on the accession of a new emperor a fresh stone was set up adjoining those previously existing.

This has received lately a most unexpected confirmation. Mr. John Clayton, the veteran Northumbrian archaeologist, informs me that during draining operations on his property, about a mile to the east of Chesterholm (*Vindolana*), and adjoining the Roman road called the "Stanegate," which runs within, and parallel to, a portion of the Roman wall, five complete milestones have lately been discovered; portions of two others have also been found. The inscriptions on the seven were briefly communicated to the *Athenaeum* (August 1) by Mr. Robert Blair. The complete stones are of the reign of Maximinus, Alexander Severus, Probus, Constantine the Great, and Constans. Unfortunately in the case of two which appear to have borne the name of a station, the latter has been all but obliterated through wear, and thus valuable information has been lost. The name of the Emperor Probus has not previously occurred in any Britanno-Roman inscription.

Mr. Clayton says that the "find" occurred at exactly the distance of a Roman mile from the spot where still remains *in situ* the well-known milestone described by Horsley, and which in his time retained its inscription—*BONO REIPUBLICAE NATO*—clearly visible. It is intended to make some excavations in the ground surrounding this stone, when there is every probability that the explorers will be rewarded by a similar find.

W. THOMPSON WATKIN.

NOTES ON ART AND ARCHAEOLOGY.

MR. HUBERT HERKOMER has been elected to the Slade Professorship of Art at Oxford, vacant by the resignation of Mr. Ruskin, concerning whose health the last reports, we regret to say, are far from satisfactory.

THE Rev. H. R. Haweis has given two sittings to Mr. Felix Moscheles, who has completed a life-size head of him in oils, which will be exhibited shortly at the approaching exhibitions at Boston and New York.

MESSRS. F. C. McQUEEN & SONS, whose name has for several generations been associated with the printing of engravings, have opened an art gallery in the not very artistic quarter of Tottenham Court Road. The chief attraction is a portrait of "General Gordon at Khartum writing his last Despatch," painted by Mr. Alexander Melville. The painter has had the advantage of suggestions from Gordon's family, as may be inferred from the personal memorials of him which are also on view in the gallery; and he has succeeded in achieving a likeness that is accepted by those who knew Gordon. This portrait is to be engraved in mezzotint by Mr. James Faed. The rest of the gallery is hung with a number of pictures by Mrs. Melville, among which the place of honour is deservedly assigned to a large canvas entitled "Behold the Bridegroom cometh." The effect of the light on the faces of the "wise virgins," while their "foolish" sisters are in the dark, is very effectively rendered. Messrs. McQueen also exhibit a number of Bartolozzi engravings on satin, and some screens handsomely embroidered in original designs.

THE forty-second annual congress of the British Archaeological Association will be held at Brighton next week, from Monday to Saturday. Excursions will be made to Chichester, Bramber Castle, Arundel Castle, Hollingbury Camp, and Hollingbury Copse. A conversation will take place at the Pavilion on Friday evening, August 21, where a lecture on "Sussex Songs and Music" will be given by Mr. Frederick E. Sawyer, with vocal illustrations by a small choir. It has been arranged to hold next year's congress at Darlington, under the presidency of the Bishop of Durham.

M. RODIN has completed the sketch for his group of the famous burgesses of Calais, which is to be erected in that town in commemoration of their heroism.

It is said that a Crucifixion attributed to Raphael, once in the Church of San Domenico at San Gemignano, has been discovered in the Musée Galitzin at Moscow. It is a repetition of the picture in the Ward-Dudley collection, but smaller and composed of three figures only.

ALBRECHT DÜRER's celebrated picture of the Feast of Rosegarlands, till recently preserved in the Abbey of Strahow, at Prag, and painted for the Guild of German Merchants in Venice in 1506, is now exhibited in the new Palace of Artists at Prag. It appears that this picture was acquired by the Abbey of Strahow in 1793 from the heirs of one Fillbaum, who had been the head of the postal service under the Emperor Rudolph II., in whose possession it was in 1782. How it passed from the Imperial collection to that of the postmaster is a matter of conjecture. It further appears that the picture was given to the Emperor on his coronation, and cost 20,000 florins, and that it was bought by the Abbot Wenzel Mayer for only 22 ducats.

THE Government of Basel has voted a grant of 25,000 francs, to be paid in four yearly instalments, for the erection of a "Skulptur-

halle" in Basel. The remainder of the necessary sum is to be collected by the Basel Kunstverein. The building will stand behind the Kunsthalle, next to the Elisabethenkirche, and is to be completed in 1888.

MUSIC.

MUSICAL PUBLICATIONS.

FROM Messrs. Stanley Lucas, Weber & Co. we have received an album of six songs (poems by Shelley), by Mr. Ernest Ford. There is a good deal of fancy, skill, and genuine musical feeling in them. Nos. 1 and 4 please us, especially the first. Mr. Ford in the accompaniments often employs chromatic chords with considerable effect; but let him beware lest he become their slave. *Under the Snow*, by R. B. Addison, a pleasing song with an accompaniment, which colours well the graceful words by Lady Charlotte Elliot. *Somewhere or Other*, by A. Millais; the vocal part is smooth and pleasing, but the accompaniment rather laboured. *Why so!* by F. S. Southgate, a simple but effective little song. *Over the Heather*, by F. L. Moir. This vocal duet is not one of the composer's best efforts: it is long and rambling.

FROM Messrs. E. Ashdown we have *When May is Dying*, by H. A. Muscat, a sentimental, very plain, but not unpleasing song; and *Fleur-de-lis*, by the same composer, similar in style. The key is A major, and the E flat in the second bar ought to be a D sharp.

Whereas, a burlesque ballad by F. Corder (Brighton: Chester), is clever and amusing.

A *Serenade*, by G. F. Cobb (Weekes), has a flowing melody, but the accompaniment is at times lacking in lightness.

The Bell in the Belfry, by R. P. Paine (Reeves), is a contralto song, which, if well sung, would be fairly effective.

Only to love thee once again, by G. H. L. Edwards, has a simple but elegant melody, with a pleasing accompaniment.

OF pianoforte pieces we would mention *Golden Days* and *May Breezes*, by Farley Newman (Chester), two light but graceful pieces; *Militaria*, by E. Leonardi (Ascherberg), very light, but spirited; *Notturmo* and *Le Réveil*, by G. J. Rubini (Ascherberg), two simple but, on the whole, well-written pieces. Two sketches, *Rondino* and *Novellette*, for the pianoforte, by G. W. F. Crowther (Stanley Lucas, Weber & Co.), have one or two good points, but show lack of experience. *Romance*, by H. C. Bannister (Stanley Lucas, Weber & Co.), is a short but pleasing little piece; it is not easy to play, but contains some useful work for young fingers. *Bridal March*, by K. Hahn (Schipper), is better than a song of the composer's recently noticed by us; the *trio*, with its allusion to March theme, is pretty.

Practical Notes on Harmony and Counterpoint. By Dr. J. Burns. (Wood.) This little book is intended for junior pupils. The style is neither elegant nor clear. Space will not allow of a detailed notice, but we will call attention to the latter part of section 14, which contains an example of both defects mentioned; and also to sections 52 and 110, and second rule on p. 32.

Organist's Quarterly Journal. Part 67. (Novello.) A Funeral March by Otto Dienel. Begins very effectively, but the piece as it progresses becomes somewhat diffuse. The Allegro Pomposo, by F. Tozer, and Meditation, by E. Cutler, are rather monotonous. The concluding Fantasia, by H. Katterfeldt, is lively but commonplace.

J. S. SHEDLOCK.

SATURDAY, AUGUST 22, 1885.

No. 694, New Series.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscript.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

LITERATURE.

The Works of Thomas Middleton. Edited by A. H. Bullen. In 8 vols. Vols. I.-IV. (Nimmo.)

I MUST join with a writer in the *Saturday Review* in urging on Mr. Bullen's attention a slight defect in an otherwise excellent and opportune edition of Middleton. Mr. Dyce did much to make this brilliant dramatist easily intelligible to the modern reader, and Mr. Bullen has here supplemented his labours with painstaking and judgment. But one thing is wanting which Mr. Bullen might have supplied—there might have been an argument prefixed to each play, or even a table of the main action of the successive scenes. Even such a table is not too much to ask for from an able editor. It would be a help not merely to the irresponsible indolent reader or casual dipper into Elizabethan plays. For him it may be said to be, not a luxury, but a necessity, if he is to pick and choose within a limited time, reading only where there is some fair prospect of entertainment. Plays at the best are but dreary reading, especially if they are good as plays, unless the reader is so familiar with the stage or so accustomed to imagine tone and gesture along with words that the characters stand before him as he reads. To get much really dramatic enjoyment out of printed plays requires a special education; and Middleton's plays, being eminently acting plays, with a development suited to the stage and not to the study, are eminently difficult to read. But, with a plan of the scenes to guide him, the general reader might be tempted to make the requisite effort to get full enjoyment of a scene here and there.

It is not, however, mainly for the general reader that a table of the scenes would be an advantage. Few general readers care to visit often the delightful but mazy land of Elizabethan drama; the lovers of these plays are mostly special readers. It is in their interest that we press for this convenience. The action of comedies of intrigue and practical jest, such as most of the plays in these four volumes, is nearly always intricate, even when there is a simple main plot, as in "The Old Law," or "The Phoenix," or "Your Five Gallants." It is not easy to remember all the incidents in their order, especially if we happen to know a good many plays of the same family. We may remember that a scene struck us as particularly good, and yet not be able to open at the right place when we wish to read it again. In such a case a table would save a great deal of time. Besides, if we wish to compare two dramatists as "plotters," to use the Elizabethan term, that is, to compare them in one of the main points of their craft and best tests of their ingenuity,

we must draw out for ourselves a scheme of the action, either mentally or in writing. Of the intricacy of some of Middleton's plays we have a striking illustration in the fact that two such specialists as Mr. Bullen and Prof. Ward are at variance concerning a cardinal incident in the action of "Blurt, Master Constable," the dramatist's first conspicuous success. Was Fontinelle unfaithful to Violetta, or did he only pretend to be? We take it that Mr. Bullen's main motive for defending the constancy of the gay Frenchman was that Mr. Ward had stigmatised the plot as "vile." We should sympathise with Mr. Bullen as against Mr. Ward on this point. The plot is not vile, judged by the Elizabethan standard. It is not viler than scores of other plots that have not been so stigmatised. It is simply an example of Middleton's realism, and he would probably have defended it as Fielding defended similar—but worse—realism in the case of *Tom Jones*. Fontinelle attempts to justify himself on the lines of Lovelace's "Paradox"—a sprightly defence of inconstancy which may have been suggested by this passage in Middleton's play. It is quite consistent with this defence—it is, indeed, a part of it—that he should make the interjection in praise of Violetta, upon which, partly, Mr. Bullen relies as proving that Fontinelle's heart did not veer even for a moment from his first mistress. That Fontinelle was for a moment overcome by Imperia's beauty is plainly the dramatist's intention; otherwise, there would be no point in Fontinelle's remorseful blushing, and half the point of Violetta's cleverness in outwitting the base designs of her other suitor would be lost. A table of the scenes would make clear any obscurity there is in the plot. The short, but compact, second scene of the third act shows how the situation in the fifth act came about, though something is left to the imagination. The truth is, that in a bustling comedy like this, with lively banquetting, masquerading, and practical joking to occupy the audience, Middleton would have shown less stage-craft than he proved himself to be master of if he had expressed every turn in the action. It was not a defect that he should send the audience home to wonder how Frisco got out of the dungeon and back for the tricks of the fifth act, or why Fontinelle was rash enough to keep his promise, on his word of honour, to go to Imperia, or to obey his impulse to thank her, or why Hippolito and Camillo taunted Violetta too soon. He took good care that they should not have time to raise such questions while they were in the theatre. He made sure that his scenes should hold the audience. There is no apparent necessity, as Mr. Bullen argues, for the two lovers to find a shelter in Imperia's house; but it was necessary for the dramatist to get all his characters there in the fifth act, and he managed it very cleverly. The rapid brevity with which he indicates the steps is an example of that careless, imperious, force which stood him in good stead in weightier matters of the drama.

It is characteristic of Middleton that he never stuck at improbabilities of behaviour on the part of his personages when the unlikely conduct was necessary to a good situation. He knew human nature, probably, as well as most of his compeers; but "the

base fellow," as Jonson called him, would not always take the trouble to write up to his lights. Provided he could run the stream of action through a succession of effective stage scenes, he was not scrupulously particular about fidelity to men as they are. It is this that renders it so difficult to make a conjecture of the slightest value concerning Middleton's full share in the plays that he wrote in conjunction with W. Rowley. Such apportionments are generally made with far too much confidence. Unless the diction is markedly characteristic, it is but very uncertain guess-work. Anybody that has ever tried to guess the authorship of unsigned articles in a periodical, even when he has the advantage of personal knowledge of the contributors, of their tricks of phrase, their turn of thought, their favourite subjects, must know how easy it is to be deceived in such matters. The critic who prides himself on his acuteness should put it to this test. If he detects with infallible acumen all the contributions of his most intimate friend throughout his own summer holiday, he may be allowed to go to work on the Elizabethan dramatists without hesitation. Middleton's verse is so much superior to Rowley's, his power of expression so much more masterly, that there are many scenes in any play in which the two co-operated that may be assigned without question to the greater dramatist. The great scenes in the "Change-ling," for example, must have been written by the author of "The Mayor of Queenborough." There is a distinctive power in them, both of conception and of phrase, that goes beyond any possibility of imitation. So in "A Fair Quarrel" the Hamlet-like soliloquies of Captain Agar, and the dialogue between Agar and his mother, are marked as Middleton's by the diction alone. But when it comes to saying that Rowley can get credit or discredit only for the comic scenes in these plays, it is another matter. Why should poor Rowley be restricted to this poor share of the honour? Mr. Bullen says that the comic part of "A Fair Quarrel" is not Middleton's, because Middleton's humour was "much quieter." "Quiet" is not exactly the adjective that I should apply to the fourth act of "Blurt," or to the various practical jests of Glistor, the physician, in "The Family of Love." The common theory, which assigns only comic business to Rowley, the collaborator-in-general of James's reign, does but scant justice to that industrious playwright. It may be all that he deserves; but another theory is at least equally plausible, namely, that he, as an actor, was often struck with happy thoughts of effective situations, good ideas for plots, and called in the assistance of abler pens to help him in working them out. For example, take the most striking and memorable incident in "A Fair Quarrel"—Capt. Agar's refusal to fight in defence of his mother's honour, because it suddenly occurs to him, without any other ground for suspicion than the general frailty of womankind, that the impeachment may be true. That this should happen is fantastically improbable, and absurdly degrading to a serious personage, but it leads to some capital acting situations, and these are managed with such power as to hide the inherent improbability and absurdity. Now it might be

argued that an actor, familiar to weariness with ordinary effects, but not capable of striking out extraordinary effects within the probable or normal range of human passion, would catch at the unusual, the eccentric, the abnormal, when it offered a chance of an exciting and impressive scene. That this and some of the other clever situations in "A Fair Quarrel"—each act, it may be remarked, has some ingenious novelty through which the plot is forced—were all conceived by Rowley before he called in Middleton, is at least as probable as that Middleton called in Rowley to help him with the "roaring" scenes, more particularly seeing that Middleton co-operated with Dekker in another "roaring" play. May it not have been Middleton that suggested to Rowley that the risky solemnity of Capt. Agar must be balanced by the humours of Chough? There is really no predominant likelihood, much less certainty, one way or the other, the speculation being so much complicated by the fact that Middleton proved himself as willing to subordinate consistency of character to stage effect, and as clever in devising laughable situations, as the most unconscionable of ideal actor-playwrights. On the whole one is inclined to give Rowley the credit of the main idea, though not of the execution, because in "A Cure for a Cuckold," in which he co-operated with Webster, and in which the style is unmistakably Webster's, there is, both in the serious and in the comic portions, a similar fantastic but theatrically profitable eccentricity of motive.

Four more volumes are wanted to complete this edition of Middleton. The issue is doubly justified: first, by the interest and scarcity of the plays, which would have warranted a mere reprint of Dyce, and, second, by the substantial additions Mr. Bullen has made to Dyce's elucidation of the text. We hope he will take in good part the suggestion about a prefatory abstract to each play. One more illustration of its use may be taken from what is in several ways the most interesting play in the present issue, the "Mayor of Queenborough." The leading characters are repulsive, and the action is of bewildering rapidity, but the best scenes in it rank with Middleton's best work. There is nothing more terrifically grand, more tragically horrible, in the whole range of the Elizabethan drama, than the last scene between Vortiger, Horsus, and Rowena. It is a really magnificent conception, worked out with unflinching power, and shows what Middleton, with all his easy dexterity and deep reserve of confident strength, was capable of when he had a great situation to call forth the full measure of his abilities. But the changes of scene are so frequent, there is such an antiquated air about the subject, such a want of greatness in the general design and the motives of the characters, that few readers seem to have had patience to persevere to the end. In such a case a plan of the scenes would be invaluable, and would make clear besides that, in spite of the straggling appearance of the play, it has really a very even development to the catastrophe, and this, too, although a good deal was evidently added on to Middleton's original after the Restoration, and possibly he had himself an earlier version of the story to reconstruct. W. MINTO.

TRAVEL AND TOIL IN WESTERN AMERICA.

To Canada with Emigrants. By J. Ewing Ritchie. (Fisher Unwin.)

A Trip to Prairie Land. By Francis Jameson Rowbotham. (Sampson Low.)

UNLESS for the fact that Mr. Ritchie crossed the Atlantic in the same steamer with some emigrants—a fact which is not at all singular—we do not quite see how he justifies the title of his pretty little book. He saw the usual Canadian sights, and took the ordinary run along the Pacific railroad so far as it extended eighteen months ago, and generally conducted himself very like any other tourist without the pretence of a "mission." Indeed, we have still to ascertain what Mr. Ritchie's "mission" was. He went out, we are told, "to see the nakedness or the reverse of the land." But we should have imagined from the rather crude little "puffs" which are every now and again lugged into the text, that the object of his journey was to recommend somebody's patent inks, or some other person's patent medicine, or a third individual's hotel, or hop bitters, or books, or papers, or magazines, or mortgage company, or restaurant. This is a detestable practice, which we regret to see growing among the smaller fry of travellers since poor Burnaby set the example. Mr. Ritchie may possibly be only guilty of a piece of execrable taste, but as many of the articles so heralded are also by a peculiar coincidence noticed in the advertising pages at the close of the volume, we are precluded from believing that the clumsy notices in the text are altogether disinterested. Otherwise the book is not badly written, if only the writer had anything to write about. Without having a standard by which to compare one colony with another, it is useless praising or abusing Manitoba or Ontario. Mr. Ritchie has not, it appears, visited any other wild region. It is of no earthly interest to the world to learn that he was entertained to tea by some one who had heard of his name before, or that when he replied for the press in the smoking room of the *Sarnia* (Mr. Ritchie it seems is "connected" with a religious weekly in which these papers appeared) he received quite an ovation. Nor is it at all worthy of the immortality of print that the author had turtle soup with a Toronto alderman (after the emigrants had been sent about their business), while such silly jocularities as "I suppose most of us were babies once—there is every reason to believe that I was," is apt to be called by another name. On the other hand, those of us who search Mr. Ritchie's pages for information may be startled to learn that Canada is larger than the United States—the Polar Basin and the Palaeocrystic Sea being included—that by this time there must be a million of people settled in the North-West, that the French Canadians are vainly dreaming of a restoration of French rule, or that there is nothing to interest an Englishman in Quebec. We hear also of the Accadians of Nova Scotia sympathising with the French of Lower Canada, of Riel being at once a French Canadian and a Half-breed, and of a certain Dr. Wilson who was a "Fellow of the University of Oxford." A Western traveller will learn with amazement that "humour is a thing unknown in Canada and the North-

West." He may puzzle over a Sioux chief called "Black Bull" and only guess that our old friend "Sitting Bull" is the dignitary referred to, and might fail to make himself understood in Manitoba if he talked, as Mr. Ritchie does, of "a blorrard" (p. 165), and it is perfectly certain that whatever the writer (p. 252) saw in the Atlantic, it was not a "tortoise." Nor can I recall any "ancient road to British Columbia" (p. 203), though Mr. Ritchie talks about "some remains" of it. These errors of the pen and of good taste aside, the book is written in an easy, if occasionally flippant style, and is sometimes amusing if only for the self-complacency of the author.

Now and then he tells some plain truths; for example, when he warns the English mechanic that he must not expect a very cordial reception from his Canadian brethren, that immigration is far from popular with the townsmen, and that in Montreal, Toronto, and Ottawa there is "a pauper class as badly off as any of the denizens of the London slums." It is also well in view of the frothy talk which we occasionally hear from Canadian politicians, who "orate" in one key at the Empire Club and in quite another fashion nearer home, to be assured that when the much-discussed question of Canadian independence is

"settled you may be sure that sentiment will have little to do with it. On this side of the Atlantic, at any rate, that sort of thing goes a very little way when the almighty dollar is at stake."

On most other questions Mr. Ritchie is equally sensible, and, with the exception of the points indicated, very fairly accurate. Altogether, though we do not quite realise why the book was ever disinterred from the pages of the religious periodical in which it was originally buried, it may serve as a useful companion for a hurried run as far as the Rocky Mountains, though, as the line is now well into British Columbia, the official guide-book will make an end of volumes such as this. However, when it comes to be reprinted, it would be well to have it revised by a judicious friend, with a view to eliminate the "puffs" of hotel-keepers and quack medicines, tourist agents and restaurateurs, superior inks and invigorating tonics. Then, aided by the well-selected cuts—which, however, are for the most part very old friends—the book may be read with some satisfaction, although an index has not been supplied for the convenience of those who may not care to avail themselves of the whole of Mr. Ritchie's "actual experiences"—albeit an "experience" which is not "actual" must be somewhat peculiar.

Mr. Rowbotham—who also sins in *re indicis*—is a tourist of a different and a better type. He and some friends "actually" settled in Northern Dakota, with the intention of trying their fortunes as farmers, and, after a year's experiment, appear, so far as we can make out, to have abandoned a life for which they were unfitted. As may be readily presaged, the picture he paints of men with a slender purse, and little or no experience, trying to extract a livelihood out of the Western soil, is far from flattering, though equally far from untruthful. Hundreds of young Englishmen could tell much the same story. Unfortu-

nately, however, for their countrymen who are beguiled by the lying pamphlets of land agents, railroad companies with "alternate sections" to dispose of, and even of State Governments anxious to attract capital and immigration, it is not everyone who has the courage, the ability, the opportunity, or the inclination to tell how he fared. Yet, though Mr. Rowbotham did not prosper as a rancher, he is ready to acknowledge that practical farmers, possessed of the elements of success, may do very well in Dakota. But money is quite as essential there as here, and the new arrival is certain to be closely shorn if he is too ready to become a landowner.

"We did meet," he informs us, "with a single settler who could tell us that he had found farming on a small scale pay even after several years. On the other hand, we could mention several with whom we became acquainted in the towns who had formerly taken out claims, and after sticking to them for a greater or less time—generally speaking until their capital had become exhausted—had thrown them up, or disposed of them as 'improved farms' to new comers, and sought work in the towns. If you expressed a desire to purchase a claim of this description, there were always plenty of vendors anxious to accommodate you. In fact, we found that a kind of trade was actually being carried on with respect to the taking up of claims. Several of our 'neighbours,' we learnt, were simply holding on to, and working a portion of, their land in order, when it became their own, to dispose of it to advantage to an unsuspecting emigrant as an 'improved farm.'"

In the south-western states of Canada, "a man can no more easily make a home for himself and his family without capital, and that, too, a considerable one, than he can by expending the same amount of energy, and under similar circumstances, procure for himself and family in England" (*sic*). In brief, it seems to be Mr. Rowbotham's opinion that even with depressed agriculture and the landed interest the prey of every demagogue, England is after all a better country for the farmer than any portion of America. His profits though low here are as high as there, and the toil, hardships, and rough surroundings infinitely less in England than in any portion of the much-vaunted region of which he writes. We are not prepared to offer an opposite opinion. On the contrary, we regard Mr. Rowbotham's little volume as a useful antidote to some of the deleterious stuff which knavish or ignorant or foolish people have been forcing down the throats of those only too ready to swallow their pleasant tales. Its good nature and moderation is likely to commend it to many readers; and though with no literary pretensions the book is generally well written, and full of useful information, which, if now and then coloured by the author's disappointment, is, as a rule, perfect trustworthy.

ROBERT BROWN.

Memoirs of Dora Greenwell. By William Dorling. (James Clarke.)

THERE is much that is interesting in this unaffected and unpretentious memoir, but one cannot help doubting for a moment whether there be any sufficing reason for its existence. Miss Greenwell's life was entirely uneventful, and her books were so spontaneous, so sincere,

and so intimately personal that they left little to be learned concerning her character and individuality. Still this very fact of complete correspondence between the writer and her work contributes a strong element of interest to the memoir. Biographies of literary persons are wont, in proportion to their truthfulness, to be somewhat eiconoclastic productions. From the books of this or that writer we extract materials for an ideal portrait; and then comes some veracious biographer with his real portrait, which so discredits our lovingly-painted canvas that we have regretfully to turn it to the wall with a sigh for another lost illusion. No such disappointment is in store for readers who may turn from any of Miss Greenwell's books—*Lacordaire*, *Two Friends*, *The Patience of Hope*, or *Carmina Crucis*—to the pages of Mr. Dorling's simple record. It does not destroy any previous impression, it does not even modify it; it simply bites it in more deeply and gives it greater permanence. As a mere narrative, either of external events or of spiritual development, the memoir has little importance: its charm is the indefinable charm of those hours or days during which acquaintance with a gracious and finely-touched spirit ripens into intimacy and friendship.

Of mere facts, Mr. Dorling is more sparing than he need have been, and it seems probable that his knowledge, at first hand, of Miss Greenwell's life, was confined to the latter portion of it; for he makes, at least, one mistake which, though not important, is sufficiently glaring to give one an unpleasant impression of carelessness. The fourth chapter is headed "Golbourne," and it professes to deal with the life of Miss Greenwell and her parents "at Golbourne Rectory, her brother, Mr. Alan Greenwell, having been appointed the rector of the parish." It would perhaps be hypercritical to do more than mention the superfluous "u" in the name Golborne, as there may be some respectable authority for it, strange as it looks to a Lancashire reader; but a much more extraordinary error is made concerning a matter of simple fact. The Rev. Alan Greenwell was never rector of either Golborne or "Golbourne," or, indeed, of any parish at all: he was the incumbent, or, as we should now say, the vicar of a little district church at Haydock, about two miles distant, if my memory serves me rightly, from the parish church which Mr. Dorling assigns to him. Of course it may be said that the difference between Golborne and Haydock, or between the rectory and the very humble lodging which Mr. Greenwell chose to occupy in order to be in the midst of his flock, is not a very important one; but if a biographer of Carlyle, for example, told us that the latter part of his life was spent at Wandsworth, the fact that Wandsworth is very near to Chelsea would hardly hinder us from regarding his biography with some amount of suspicion.

A good deal might be said in the way of adverse criticism concerning Mr. Dorling's literary style, which is at times decidedly slipshod; but it is not hard to forgive such sins as these when we see that a writer is honestly enamoured, not of himself, but of his theme, and that he is simply doing his best, according to his lights, to bring his

readers into sympathy with his own emotion. In the present case, this task is not a difficult one. Miss Greenwell was not a great writer, not even a brilliant writer, but she was, in many ways, an extremely interesting woman; and the reflection in her books of her own winning personality is so clear and so undistorted that any reader who cares for her writings at all will care for them very much, with that peculiar kind of affection which we give only to literary work that seems to bring us face to face with some congenial human spirit. There are two sayings quoted in this volume, one from Miss Greenwell herself, and another from her friend, Miss Ingelow, which hint at that combination of completeness and incompleteness in her work which has much to do with its peculiar attractiveness. Miss Greenwell said of herself, "One word would alone tell my story—inadequacy"; while Miss Ingelow, on the other hand, seems to deny this inadequacy point blank when she says of Miss Greenwell's poems, which were perhaps her most characteristic utterances, "they do not fascinate but they satisfy." The sayings seem inconsistent with each other, and yet in their measure they are both true. There is in all Miss Greenwell's books a certain inadequacy: there is also a certain satisfying quality which for a time prevents the inadequacy from making itself felt. The inadequacy found its cause in a manifest lack of self-reliance and self-sufficiency. Her personal instincts and perceptions may have been convincing to herself, but she never seems to have felt that they could have the same convincing power for others unless supported by authority weightier than her own. Some of her prose writings are a perfect network of quotations, not given to eke out poverty of original thought, but simply to stamp upon the gold of her own finding some revered image and superscription. There is no evidence that she failed to rely upon herself, for herself; her vision was clear and sufficing enough for her personal needs: it was only for others—for her unknown audience—that she seemed to feel the need of some buttresses of approved strength. In her poetry, however, and in such of her prose as possesses the lyrical abandon of verse, she loses consciousness of an audience; speaks out simply and spontaneously her inspiring thought and emotion; and becomes, not what she called herself, "inadequate," but what Miss Ingelow calls her, "satisfying," and even fascinating as well. It is, indeed, probable that there could be found readers of Miss Greenwell's books who may be said to be fascinated rather than satisfied. She was a true mystic, though she may never have thought of herself as one; and there are people who have sufficient of the mystical bent to feel attracted by the utterances of the seers, and yet not enough of it to dare to trust themselves off the solid ground of ordinary "fact," and rely upon those intuitions which make light of commonplace "experience" because they have an experience which is all their own. This, however, is not the place for an estimate of Dora Greenwell's work as poet and spiritual thinker. She has found her audience, and those who belong to it will accord a hearty welcome to Mr. Dorling's volume. Its shortcomings are not very serious, and it has one

merit which overcomes a multitude of sins: it makes us feel that we know Dora Greenwell, the woman, as well as we know Dora Greenwell, the writer.

JAMES ASHCROFT NOBLE.

THE DESPATCHES OF MERCY-ARGENTEAU.

Briefe des Grafen Mercy-Argenteau k.k. Bevollmächtigten Ministers in den Oesterreichischen Niederlanden an den k.k. Ausserordentlichen Gesandten zu London Grafen Louis Starhemberg (vom 26 December 1791 bis 15 August 1794). Originaldocumente aus dem schriftlichen Nachlasse des Letzteren gesammelt und geordnet nebst Erläuterungen von dessen Enkel A. Graf Thürheim. (Innsbruck: Wagner.)

The letters and despatches contained in this volume are well worth perusal by those interested in the diplomatic history of the years to which they relate. The editor, Count Thürheim, has written a short but useful introduction, giving an account of the lives of both ambassadors. The writer of the documents, Mercy-Argenteau, after filling for twenty-four years the post of ambassador at Paris, was in 1790 removed to the Austrian Netherlands, where, during the absence of Albert, Duke of Sachsen Teschen, he practically occupied the place of governor-general, and after the breaking out of the war between France and Austria was constantly at the head-quarters of the army, taking counsel with the generals, and reporting the course of military as well as diplomatic undertakings. In 1792, Starhemberg, the recipient of the documents, was appointed ambassador at the Hague, and in the spring of 1793 received the more important post of ambassador at the English Court. Frequent allusions are made to the operations of the allied armies; but the main interest of the correspondence lies in the clearness with which it reveals Mercy's opinions on the most important questions of the time. Although the story told is not new, it comes with freshness from the hand of one of the principal actors in the events which he describes, and gives a peep behind the scenes, which largely increases our power of realising the feelings with which the evacuation of the Austrian Netherlands was regarded by the servants of the Emperor. Moreover, whether he is writing official letters, or whether he is stating his private opinions, Mercy's words are of the greater interest, because the policy which he advocated was in essentials the policy of Thugut, who in 1793 became the Emperor's chief adviser in foreign affairs; and, in fact, the interest of the book much increases after Thugut's accession to power, when the despatches, evidently inspired from Vienna, become more frequent, and their contents of greater importance.

A man turned seventy, and grown grey in the service of princes, could have no sympathy with revolutionists who took first the life of the king at whose court he had resided for so many years, and then also that of the queen who, when she came almost a child to Versailles, had been placed by her mother under his special charge. Mercy regards the Revolution something in

the light of a cancer, eating its way into the healthy life of Europe, which must be cut out pitilessly by sharp remedies unless the whole of Europe is to suffer. Shortly before the execution of the king, with the hope in his heart that England and Holland would shortly be drawn into the struggle, he thus expounds to Starhemberg the policy which from his point of view it would be expedient for the powers to adopt:

"Je conclus que ce ne seront ni une ni plusieurs batailles gagnées qui réduiront une nation, laquelle ne peut être domptée qu'autant que l'on en exterminera une grande portion de la partie active et la presque totalité de la partie dirigeante. Faire main basse sur les clubs, désarmer le peuple, détruire cette superbe capitale, foyer de tous les crimes, de toutes les horreurs, produire la famine et la misère, voilà les déplorables données de l'entreprise à remplir, vous allez me juger digne d'entrer au conseil des Nérons, des Caligulas: c'est bien en gemissant que je prononce leurs hideuses maximes, que n'est-il possible de les écarter, mais leur usage devient indispensable à la gravité, à la nature du mal, il ne sera extirpé par aucune autre voie; si on la néglige l'Europe est perdue, et vous sentez parfaitement que le second point (celui de notre intérêt particulier) se trouvera alors enveloppé dans l'abîme commun" (p. 37.)

Mercy's personal attachment to the unfortunate king and queen, as well as the imminent danger which threatened Belgium, no doubt largely contributed to his intense desire for the suppression of the Revolution in blood. He believed that if the French arms were successful, the fall of other monarchies must ensue, and he therefore regarded the defence of Belgium as a European as well as an Austrian interest. He regarded it also as a special English interest; and this made him eager to obtain an alliance with England, and caused him to believe it possible by her support very largely to extend the dominions of the Emperor. Mercy, indeed, regarded the retention of Belgium by Austria as so important to England that the mere threat of abandoning the country would obtain for the Emperor very important concessions. In a letter to Starhemberg, of January 4, 1793, this policy is propounded with out disguise:

"Certes il vaudrait mieux renoncer tout à fait à la Belgique, que de s'y voir dans une tutelle aussi gênante que l'est celle où on nous a tenus jusqu'à présent, mais il s'agit d'une grande et utile possession, de laquelle au fond il est bien difficile de se détacher, néanmoins la politique exige, ce me semble, d'en faire le semblant, et de tâcher par là de rendre ses conditions meilleures."

Two aims appear in view—the one to bring the Netherlands more completely under the Emperor's control, the other to extend the frontier at the expense of France. If these results were attainable, Mercy was ready enough that the plan for exchanging Belgium for Bavaria should fall into abeyance, though meanwhile he was not ready that the Emperor should bind himself to its renunciation. In the end the mark was overshot. So much was sought for Austria, while so little disposition was shown to make concessions demanded in the special interests of England and Holland, that the English Cabinet became afraid of being made the tool for the accomplishment of unknown plans for

the extension of the Emperor's possessions and influence; while the incessant harping on the Emperor's intention to abandon Belgium unless England supplied efficient support to the Austrian army, combined with military disaster, led finally to the belief in the minds of English generals and diplomatists that the Austrians were playing false, and that their army retreated in 1794 because there was no real intention of holding the country longer. On May 31, 1793, Mercy wrote to Starhemberg instructing him to impress upon the English cabinet the advantages which would accrue to England, Holland, and Europe if the frontier traced in the following lines was secured for the Austrian Netherlands:

"Il conviendrait que nos possessions s'étendissent jusqu'à la Somme; que des sources de cette rivière notre frontière se portât sur une ligne directe vers Sedan ou Mezières: le cours de la Meuse deviendrait notre limite, qui se lierait avec les parties de territoire suffisantes à couvrir l'Allemagne, c'est à dire, les Evêchés, avec partie de la Lorraine et de l'Alsace" (p. 86).

This is the same frontier as that to which, as Von Sybel has shown, Thugut at the end of the year was seeking to obtain the support of Russia (*Geschichte der Revolutionszeit*, iii. 42). If the other side of this correspondence were in print it would be interesting to know how far Starhemberg ventured to lay these large demands before the English cabinet. If Pitt and his colleagues were ready to concede the line of the Somme, they intended to retain Dunkirk for England, to which Thugut and Mercy were both strongly opposed; while it is more than questionable whether they were prepared to allow the incorporation of Alsace and Lorraine with the Austrian Netherlands. Another point of contention stands out in Mercy's letters in strong relief—the indemnity to be received by the United Netherlands. At Vienna, a money payment to be wrung from France was regarded as a sufficient compensation. Probably enough, jealousy of the support given by England to the claim made by the states for a stronger frontier influenced Mercy's judgment on the conduct of their contingent. "Cette partie de l'armée coalisée," he contemptuously writes in September 1793, "ne peuvent pas de soutenir, elle est toujours en retraite." Reversely his letters are full of praises of the gallantry of the English troops and of their commanding officers, which, let us hope, spite of the bias of the writer, were not wholly unmerited.

Intense hatred, if it sometimes blinds, sometimes also gives keenness of vision, at least on special issues. Mercy was more alive than most of his contemporaries to the difficulty of overcoming the Revolution, and continued from first to last to urge the necessity of immediate action as well as the wisdom of lending aid to insurgents within France. He foresaw also that the Prussians, whatever the sum paid for their co-operation, would merely defend the empire, and that the English ministers would be duped if they hoped to get more out of the treaty negotiated by Malmesbury. In opposition to Von Sybel's view that Thugut did not care to defend Belgium, because he desired to acquire a portion of Poland for Austria, Mercy's despatches tend to show that the

retreat of the Austrians was in reality the result of the military situation, and of the belief that no effectual support would be obtained, either from Prussia or England—in other words, that the English only cared to defend Holland, and that the Prussians only cared to defend the Rhine; and that, therefore, defeat was inevitable. On June 24, 1794, Mercy wrote as follows:

“M. de Thugut est partie ce matin pour Vienne, il a des doutes que je partage sur les vraies intentions d'Angleterre; ses agents au dehors ont une marche si extraordinaire, que l'on n'y comprend rien, aucun ne s'explique. . . . Il me semble que l'on nous soupçonne à Londres d'un projet fixé, d'abandonner les Pays-bas, et il seroit peut-être bon de s'en expliquer nettement, avec franchise et vérité. Dans le fait, nous ne voulons point abandonner la Belgique, si on nous procure des moyens efficaces pour la défendre, pour la conserver, et si nous voyons la possibilité de nous y maintenir, sans que cette possession entraîne la ruine de la monarchie.”

Later, on July 12, he writes:

“Toute la sollicitude d'Angleterre est visiblement tournée vers la conservation de la Hollande; ce point obtenu, on paroît peu en peine de ce qui arrivera de nous; d'après ce système on voudra peut-être attirer toutes nos forces dans le Brabant hollandais, nous y serions coupés de notre armée du Rhin, absolument dans la dépendance des deux puissances maritimes et uniquement voués à leurs convenances, au plus grand détriment des nôtres, ce à [sic] quoi certainement nous ne nous prêterons jamais.”

From these as well as other passages it is evident that Mercy at least did not entertain the idea that events in Poland necessitated the withdrawal of the Emperor's army from the Austrian Netherlands. His argument throughout is that the army must retreat, because the military situation is bad, and the Emperor can place no trust in his allies.

B. M. GARDINER.

NEW NOVELS.

A Family Affair. By Hugh Conway. (Macmillan.)

The Verge of Night. By Percy Greg. (Hurst & Blackett.)

Camilla's Girlhood. By Linda Villari. (Fisher Unwin.)

An Ill-regulated Mind. By Katharine Wylde. (Blackwood.)

Betrayed. By Dora Russell. (White.)

A Family Affair may be said to give probably as good an opportunity of estimating its late author's real capabilities in novel-writing as could have been given had he lived. There is no mark either of hurry or of incompleteness about it, the story develops itself at ease and leisure within the compass of the usual three volumes, and the dialogue and writing generally appear to have been produced with all due care. The result will not be disrespectfully spoken of by any competent critic. As a specimen of the ordinary circulating library novel of the better class *A Family Affair* deserves praise and is certain to “give satisfaction.” There is some originality and, at any rate for a time, not a little amusement in the sketches of the household of the Talberts. These are a pair of brothers

in the most comfortable circumstances, and enjoying all possible advantages of education and social repute, who have gradually given themselves up to the minor cares of house-keeping after a fashion which would have exposed them in ruder days to the penalty of having a dish-clout pinned to their tails. While their beautiful niece, Beatrice Clauson, who has quarrelled with her father and stepmother, is staying with them, a mysterious child arrives, directed to “Mr. Talbert,” by rail, and having been deserted in the carriage by its attendant. Probably the experienced novel reader has not much difficulty in guessing to whom this child really belongs, and what is the nature of the plot which he will have before him—at least after a visit of the child's nurse to Portland Prison. But, on the whole, the author keeps down the veil with ingenuity and success. That a distinguished Oxford coach should arrive and fall in love with Beatrice is a circumstance so generally necessary that the mentioning of it cannot be considered to infringe the rule of not unduly laying bare plots. The *dénouement* is brought about by the half savage devotion of the above-mentioned nurse, a Calvinist of the extremest type, and only here does Hugh Conway's predilection for melodrama break out. The whole book is exceedingly readable, the chief faults of it being, in the first place, that the effeminacy of the Talberts is too constantly dwelt on, so that its manifestations produce nearly the irritating effect of Carker's smile in *Dombey* and Pancks's steam engine performances in *Little Dorrit*; in the second, that the author is prone to the mannerism (rather irritating in the same way) of finishing up chapters or paragraphs with a kind of *pointe*, formulating generally something which he has already said particularly. These are not great faults. On the other hand, it is impossible to call *A Family Affair* a novel of the first class, or to think that the writer of it could ever have produced a novel of the first class. Nothing in its situations, its character drawing, or its style makes any distinct mark on the memory. We cannot conceive ourselves taking it up of free will and deliberate preference a second time. No part of it is, properly speaking, literature, but only very fair circulating library pastime. Its merits, as well as its defects, make it evident that much as everyone must regret a premature death, Mr. Fergus had nothing better to give the world than he gave it, and that in all probability he has escaped the most mortifying of all literary fates—the gradual subsidence from wide popularity and great expectations to a merely tolerated performance of respectable journey work.

Mr. Percy Greg's novels *sibi constant*; and even if the personages of several of his former books, both in fiction and essay, did not reappear in *The Verge of Night*, it would have something of the character of a sequel. Except in two or three passages (describing a fight with an Irish assassin, a dynamite explosion, and so forth) the author has not attempted any of the more stirring business for which he showed so considerable an aptitude in *Errant* and *Sanguelac*. The interest is on the one side political, on the other it centres in the character and experiences of a man of great ability but nervous temperament (hence the title), which tem-

perament is tried deliberately by the machinations of an unnatural father and unconsciously by the temper and jealousy of a devoted but rather unreasonable wife. Mr. Greg has been by no means unhappy in depicting this last character—the generous, affectionate, and intelligent, but exacting Meta Erne. Her experiences and those of her husband may be thought to show that there are inconveniences (as well as the conveniences which Lord Iddesleigh extolled the other day) in possessing a wife who is an excellent private secretary. We have said that many, if not most, of Mr. Greg's old characters appear: Ivy Glynne and her husband, the cynical but redoubted journalist Lestrangle, the Cleveland (husband and wife), and others. One thing which speaks very well for the book is that the second volume is, as it should be, much the most interesting. But the very evenness of Mr. Greg's work, and the strong belief which he has in his own notions, ensure the reappearance of defects as well as merits. There is a little too much politics, for even the most ardent of politicians must confess that a little of this goes a long way in novels. And the dialogue, though by no means deserving the word stiff, is somewhat apt to display the fault commonly called “talking book.”

The beginning and end of Madame Villari's book deal with Italian scenes; but the great bulk of it is English, while the heroine, Camilla Ronati, despite her Italian name and descent, is to all intents and purposes an English girl. The interest of the book—which is an advance on Madame Villari's former work in fiction—is almost entirely domestic, and lies in the relations of Camilla (who is half an orphan when the story opens, and wholly one before it has gone very far) with the family of one of her guardians, the Kynastons, with the wife of the other, Mrs. Groves (this vulgar and tyrannical personage is perhaps the least successful in the book, being decidedly conventional), and with a certain Italian-English adventuress calling herself Mrs. Ives. A sufficient second plot is provided by the loves of Mabel Kynaston and an agreeable but at first rather idle artist. Madame Villari succeeds with a good deal of skill in getting into her pages pictures of very different scenes and kinds of life, all firmly though quietly painted, and all thoroughly lifelike. Perhaps the best part of all is the Kynaston household, which is drawn somewhat in Miss Yonge's fashion, but with less mannerism and more general knowledge of the world. To have introduced a musical enthusiast and maestro who is not a bore is, perhaps, the fairest flower in Madame Villari's crown; unless it be that she has been equally successful in her slight touches on the almost equally dangerous subject of Italian patriotism. The book is a very good piece of work.

We cannot say quite so much of Miss Wylde's book, which, however, though it does not seem to be a first novel, is evidently the work of a novice, and contains something that may not unfairly be called promise. The hero, the well-educated and intelligent son of a bookseller who has made some money, finds when he comes of age that a young woman is growing up for him somewhere, destined for

his wife by his father and her dead mother. He is recalcitrant, but at last consents to pay her a visit of exploration. He finds her very beautiful, almost too amiable, and possessed of every virtue, and for a moment thinks himself a lucky fellow. Unfortunately there is in the house a younger girl, little more than a child, of curious history and wayward temperament, with whom Lewis Cole falls in love. The course of that love naturally does not run smooth, and that is all we need say. There are some remarkable minor improbabilities in the book, and as a whole it is ill planned. But the author seems to have a certain amount of romantic imagination and, what is more important, an idea (which she has as yet not succeeded in practically expressing) of character.

We mean no bad compliment to Miss Dora Russell when we say that she is a writer well enough suited to the scrubby little shilling books which have come in like the Solway and will, we trust, go out like its tide. She is good at villains, not bad at plots, and possessed of the faculty of what (again with no impolite intentions) we can only call hustling a story through. It is the first duty of the critic of the shilling book not to say anything about its story; and, therefore, we shall only say that *Betrayed* begins with a trial for murder and a young lady of good family knocking frantically, at twelve o'clock on a snowy night, at a house not her own, and that it ends with an abduction and a death. What can lovers of shilling books wish for more? It may, indeed, be delicately pointed out to Miss Russell that "Major Dundas better mind his own business" and "I felt if I got here I would be safe" are not, strictly speaking, English. But this is not likely to make the lovers of shilling books unhappy.

GEORGE SAINTSBURY.

CURRENT LITERATURE.

School Hygiene and Diseases incidental to School Life. By R. Farquharson. (Smith, Elder & Co.) Dr. Farquharson's experience as medical officer during three years at Rugby School; his varied professional practice in the children's and other hospitals; and, we may add, his knowledge of public life and public business, have enabled him to write with much moderation and good sense on a topic on which there has lately been a good deal of exaggeration on the part of other medical writers. The six chapters of this book deal respectively with school buildings, diet, work, play, the duties of the school doctor, and school diseases; and on each of these points he gives in detail many wise and practical counsels. The most valuable chapters relate to diet, play, and school diseases. On the subject of buildings, some of the plans he suggests are impracticable; for instance, he says that while in a dormitory from 800 to 1000 cubic feet of space should be allowed for every boarder, half that amount is required for every day-scholar—a counsel of perfection which, if followed, would oblige school boards and managers to provide nearly four times the school accommodation now existing in England. Some of the advice given respecting school lessons also betrays want of practical familiarity with educational work; and the teacher who looks into the book with a view to find definite guidance as to the number of hours which may be lawfully devoted to school work and home preparation by scholars of different ages and in different conditions of health, and as to the best way of adjusting

various kinds of intellectual and mechanical effort, will be disappointed. With regard to meals, and the best forms of physical exercise, the book is fuller and more helpful. Some space is devoted to a candid and careful discussion on the vexed subject of "over-pressure," on which it is evident that Dr. Farquharson accepts only to small a degree the allegations of many of his professional brethren. He recommends to his readers a careful perusal of Dr. Crichton Browne's report, for the singular reason that the "style is forcible, flowing, and picturesque in the highest degree." It would have been more to the purpose if Dr. Farquharson had been able to say that the facts were trustworthy or the reasoning sound in that well-known document. But this he carefully avoids saying, since, in fact, all his own observations tend exactly in the opposite direction. "It is a matter of common notoriety," he says, "that longevity is more usually met with among those who have exercised their brains fully and regularly than under conditions of apparently typical health." At Rugby "the result of my observation was that the amount of lessons was by no means excessive." Again, "some of Dr. Browne's methods of investigation were, to say the least, open to exception, and the enquiry was conducted too rapidly and superficially and on too narrow a basis to be really authoritative." These and many similar admissions are well calculated to reassure timid parents who have been alarmed by recent controversies; and, at the same time, they tend to increase the confidence which will be generally felt in the judicial spirit, the care, fairness, and ability displayed in this book.

Quest. By Thomas Sinclair. (Trübner.) In form *Quest* is a volume of *pensées*, and in title and substance it recalls partly by similarity and partly by contrast the *Guesses at Truth* of the brothers Hare. The characteristic of such books often is that, while professedly suggestive and tentative, they are in essence very positive and dogmatic. Mr. Sinclair, for example, says in the first sentence of his preface, "The thought indicated by the title of these essays is that in speculation there may be search but no absolute finding"; and yet we have never come across a writer more apt to fall into the *ex cathedra* tone or to assume the authoritative air of a finder. To a certain extent this is inevitable. No man can live without a stock, howsoever small, of subjective certitudes, though he may doubt the possibility of a single objective certainty; and a hypothetical manner of putting things soon becomes irritating and wearisome. But there is a medium between this kind of thing and the setting-down of private paradoxes as if they were universal axioms. We will not say that Mr. Sinclair is nothing if not paradoxical, for this would be unfair to an occasionally vigorous and subtle thinker, but it may truly be declared of him that where his paradox is there his heart is also. Then too, like most people with this bent, he is given to the occasional talking of nonsense, and very objectionable nonsense some of it is.

"What we call prostitutes," he gravely remarks in one of his sociological *pensées*, "are not the worst, but generally the best, of the lower classes; people of fine physique (and, as Spencer says, the soul, if it get fair play, corresponds to the body), who cannot get their true match in the sphere where born, and must, by the holiest of all instincts, that of truth, seek upward by any means." Unfortunately for Mr. Sinclair this offensive drive, for really we can call it nothing else, comes very near the beginning of this volume; and some readers may be tempted to close the book in disgust, and to think, not quite inexcusably, that they will gain nothing by going further. This will be a mistake, for some of the writer's thoughts on life, literature, and art do really go to the heart of the matter

in hand and are accordingly well worth considering. There is an often-told story of a young writer who was advised by an old critic to educate himself in writing by striking out of his own compositions anything that seemed to himself particularly fine. If Mr. Sinclair will study moderation, and strike out anything that seems to him specially original or startling, he will gain much and lose nothing by the process of excision.

The Russian Revolt. By Edmund Noble. (Longmans.) The author of this pleasantly written little work, who is evidently a citizen of the United States, has given us a faithful picture of the growth of Nihilism and of the problems presented to the historical student by the peculiar condition of contemporary Russia. Mr. Noble is, perhaps, inclined to attach too much importance to the vague and scarcely reliable records we possess of the independence and freedom enjoyed by the ancient Slavs. But, if his theory be once accepted, that Russia originally possessed every privilege of self-government, we may admit that he has treated with great skill the history of the gradual growth and organisation of autocracy. In the latter portion of his work, he shows that the despotism of the autocrat has ceased to be a vital force in the country, or rather that it is already giving signs of decomposition, and that the renaissance of Russian liberty may be looked forward to, at no great distance of time. Nevertheless, Mr. Noble does not underrate the enormous difficulties which lie in the way of this renaissance, and the apparent hopelessness of attempting a successful revolution. On the whole, his book is well worth reading, and will suggest to the student of political evolution many new and luminous ideas.

WITH the publication of the fourth volume of the *Gentleman's Magazine Library* (Eliot Stock), a volume devoted to the subject of English traditional lore and to the customs of foreign countries and people, Mr. Gomme completes the series dealing with folklore, and his next excursion will be into the realms of archaeology. Some of the contents of this volume, witness the accounts of the Devil's Jumps at Thursley, might have been classed under the latter head; but into whatever system of classification they may be admitted, their presence will be welcome. Reading the Rev. John O'Hanlon's well-written communications on Irish folklore has reminded us of Wordsworth's lovely lines in the "Excursion," where he attributes to the natural objects around the Grecian peasant the creation of his deities. Pan and the satyrs were but the embodiments of the fancies created in his mind by the waving boughs on the trees. The "Oreads sporting visibly" had their origin in an imagination touched by the "sunbeams upon distant hills." The chapter in Mr. Gomme's volume on legends and traditions groups together many curious articles on topics of perennial interest in the popular mind. They range from the "origin of Whitstable" to the "legend of Cheddar Cliffs," from "Fair Rosamond" to "St. Keyne's Well." It is one of the omissions of Mr. Gomme's notes that, in reproducing the ballad on that well, he has not informed the world that the authorship of the lines was due to the sportive fancy of Southey, a fancy never more happy than in the task of clothing in verse the traditions of the people. On the fragments of Erse poetry collected in the Highlands before 1760, Mr. Gomme may well plume himself. They are the first draughts of the "world-famous" collections of Macpherson, and they avowedly inspired Mr. T. F. Hill with the desire of obtaining the Erse poems which appeared in the *Gentleman's Magazine* some twenty years later, and are now reproduced by Mr. Gomme. In the letters on foreign customs are many amusing communications

on Eastern countries. Of this volume, as of its predecessors, we may safely say that it contains much to amuse and instruct.

MR. SKOTTOWE'S account of England under *Our Hanoverian Kings, 1714-1830* (Sampson Low) is an excellent summary of the longer histories, now almost numerous enough to form a library by themselves, of our country during that eventful period. Its distinctive feature is the admirable common-sense which is conspicuous in the treatment of the domestic and foreign questions of the past. There is no section of the work which has been expanded at the expense of another; and we doubt if there is more than one sentence—a hasty reference on p. 82 to an expression often attributed to, and often denied by, a distinguished writer of our own time—which should have been expunged by a pen of strict impartiality. The tables of events, the brief genealogies of some of the royal houses and some of the parliamentary families, such as the Grenvilles, the lists of contemporary princes and of the chief personages in political life in England, the digest showing the growth of our colonies—all these are details of unusual excellence which are too frequently omitted in more pretentious volumes. We have often recognised, while reading the works which arise to the minds of most men as describing the events of the last century, how easily such additions could have been made to their contents, and how greatly their presence would have increased the utility of these elaborate histories. Mr. Skottowe may fairly claim the merit of having compiled a handbook which is likely, for many years, to maintain its value unimpaired by future competition.

England on the Sea; or, the Story of the British Navy, its Decisive Battles and Great Commanders. By W. H. Davenport Adams. In 2 vols. (White.) Out of the abundant materials at his disposal for writing a popular history of the navy, Mr. Davenport Adams has succeeded in making a very readable book. He does not pretend to any original research, or even to give a fresh study of important epochs in maritime warfare; but he has added to the value of his work by reprinting some interesting documents, and by following closely the words of his authorities. We observe that the record practically stops with the year 1815.

Suicide: its History, Literature, Jurisprudence, Causation, and Prevention. By W. Wynn Westcott. (H. K. Lewis.) The author is deputy coroner for Central Middlesex, and has here enlarged a paper which he read before a society of medical men in London. The full title fairly enough represents the subject of the book, which is largely indebted to the more elaborate works of Legoyt and Morselli, the latter of which recently appeared in an abridged translation in the "International Scientific Series." Suicide is one of those subjects which admit of statistical treatment, but it cannot be said that the statistics lead to any fruitful results.

MESSRS. WILLIAM BLACKWOOD & SONS have published, in a very handsome volume, the official *Records of the Tercentenary Festival of the University of Edinburgh*, which was celebrated in April of last year. The book contains four chapters: (1) preliminary arrangements; (2) description of the festival, together with the speeches, &c., delivered; (3) congratulatory addresses from universities, other learned bodies, and individuals, filling no less than 145 pages; and (4) miscellaneous documents and lists of names. A full index is not wanting to complete a worthy memorial of a great occasion, which has no parallel in this country.

MESSRS. E. AND G. GOLDSMID, of Edinburgh, have now ready for issue to subscribers the first volume of their reprint of *Hakluyt*, edited

by Mr. Edmund Goldsmid, and illustrated with facsimiles of maps and portraits. It is expected that the entire series will form about fourteen volumes. We observe that Messrs. Goldsmid have been unable to give a reproduction of Mollineux's famous "Map of the World on a New Plane Projection," of which a facsimile was made by the Autotype Company in 1874, but only twenty-five copies were printed. *Hakluyt* himself has never been reprinted, except in the limited edition of Woodfall and Evans in 1809-12. The present editor has taken the liberty of altering the order of the voyages, grouping together those which relate to the same part of the globe. He has also added a few notes, and a useful index.

A Short Enquiry into the Formation of Political Opinion, from the Reign of the Great Families to the Advent of Democracy. By Arthur Crump. (Longmans.) Unless we are mistaken, Mr. Crump's name is best known as a writer of treatises on financial questions. When he takes up politics, therefore, it is natural that he should adopt the quantitative method. This is represented on the cover of his new book, which is divided between red and blue according to the aggregate duration of Liberal and Conservative ministries since 1832. So again with a diagram for frontispiece, which continues the same picturesque method to the beginning of the present century. Mr. Crump's own sentiments are frankly democratic. The most interesting chapters are those which deal with the growth of the press (again from the statistical point of view), and with the comparatively modern, but now deep-rooted, Toryism of the City. The chapter entitled "Liberal Converts" does not seem to us very logical, either in its argument or in its arrangement.

MR. GEORGE MOORE, the author of *A Mummer's Wife*, has published a pamphlet entitled *Literature at Nurse* (Vizetelly), in which he discusses, with special reference to the case of his own novel, the censorship of fiction which is practically exercised by the circulating libraries. His argument that this censorship has not been exercised with impartiality seems to us proved, supposing that the facts are as he states them. But as he seems to be proud of having introduced the realism of Zola into English literature, we fail to see the justice of his complaint that he has met with exceptional treatment in his new venture. To be excluded from Mudie's, and to be bought instead of being borrowed, is the very distinction which he ought to have desired. His pamphlet has not changed our opinion concerning the character of his novel.

WE ought to have included in our notice of "Guide Books" last week the *Official Guides* to the three great railways of England—the London and North Western, the Midland, and the Great Western—which are published by Messrs. Cassell. They form substantial volumes of nearly 400 pages each, profusely illustrated with woodcuts of more than average merit, besides several series of maps. The text contains descriptions, for the most part without unnecessary verbiage, not only of the towns at which there are stations, but also of the country through which the railways pass, which should be useful to a stranger. In some cases, of course, the descriptions have to be repeated. We have noticed one or two matters that call for correction in future editions. To talk of "the elder Coleridge" (*Midland*, p. 39) seems as odd as would "the elder Wordsworth." In the same volume, which is dated in the present year, we read of "the future bishop of Southwell" (p. 238). And if it is correct (*ib.* p. 311) that the population of Bristol was 206,503 in 1881, it must be by a

slip that in the companion volume (*Great Western*, p. 74) exactly the same number of inhabitants is assigned to Bristol for 1883. We should not have drawn attention to these little points, if the general execution of the enterprise had not been so uniformly careful.

NOTES AND NEWS.

MR. BROWNING has gone again to the fine wild place at which we reported his stay two years ago, Gressonay Saint Jean, in the Val d'Aosta. He was to reach it to-day, having started on Tuesday, and journeying *viâ* Bâle, Milan, and St. Martini.

WE hear that the Rev. Dr. Abbott is at work on a new book.

MR. J. S. CORTON has finished the work upon which he has been engaged for some months past at the India Office. Technically, it is a "Statement exhibiting the Moral and Material Progress and Condition of India during the year 1882-83," being the eighteenth of an annual series. But, in substance, it is a historical and statistical examination of all the departments that make up the administration of India, with special reference to the work of the past ten years. It forms a bluebook of about 370 pages. As an appendix to it will be issued a special report upon the agriculture of India by Mr. J. A. Baines, of the Bombay Civil Service, together with a series of maps compiled by Mr. Trelawney Saunders, of the India Office.

VERNON LEE is preparing for publication a new volume of essays on aesthetic and ethical questions, to be called *The Opinions of Baldwin*. It will include the dialogue on "The Responsibilities of Unbelief" which appeared in *The Contemporary Review* two or three years ago, together with a continuation of the argument. Mr. T. Fisher Unwin will be the publisher.

WE understand that Messrs. Cassell & Co. have in the press a biography of Prince Bismarck, by Mr. Lawe, the correspondent of the *Times* at Berlin.

MR. T. FISHER UNWIN will publish next week *The New Godiva, and other Studies in Social Questions*, a volume of essays dealing with several aspects of the question which is just now agitating the public mind. Other contents, besides the essay which gives the book its title, are "The Sanction of Purenness," "Puissance Oblige," "The Western Harem," and "Zola in England." One, at least, of these essays has appeared in the *Westminster Review*. The book is issued anonymously.

MR. ELLIOT STOCK announces a new series of "Popular County Histories," intended to furnish readable chronicles of each county in England in a handy form. The volumes will be demy octavo size in roxburgh binding. Large paper copies will also be issued in quarto in restricted numbers. The first volume, which will be published very shortly, will be *Norfolk*, by Mr. Walter Rye; to be followed by *Devonshire*, by Mr. R. N. Worth; *Berkshire*, by Major Cooper King; and *Yorkshire*, by the Rev. R. V. Taylor.

MESSRS. HURST & BLACKETT will shortly publish a new work by the Rev. A. G. L'Estrange, entitled *The Palace and the Hospital; or, Chronicles of Greenwich*, in two volumes, with illustrations.

THE same firm have in the press: *Dorothy Drake*, by Mr. Frederick H. Moore, in two volumes, and *A Faire Damzell*, by Mr. Esmé Stuart, in three volumes.

WE understand that Mr. Charles Welsh's *Life of John Newbery*, under the title of *A Bookseller of the Last Century*, which we announced some time ago as in preparation, will be published this autumn. The work has grown very

much beyond the originally anticipated dimensions. Mr. Welsh will be glad of any information with reference to the books printed by Carnan & Newbery and Newbery & Micklewright at Reading between 1737 and 1747.

MR. G. A. GRIERSON, of the Bengal Civil Service, has devoted himself during a ten years' residence in India to studying the language and people of the Province of Behar. Quite recently we received the first part of a Comparative Dictionary of the Bihari language, compiled by him in collaboration with Dr. Rudolf Hoernle. He has also written a more popular work, *Bihar Peasant Life*, which is now being printed at the Bengal Secretariat Press. It contains an elaborate account of agriculture and domestic customs, with a list of several thousand words in daily use, and is illustrated with a number of lithographs prepared at the Calcutta School of Art from photographs taken by the author. The publishers in this country will be Messrs. Trübner.

MR. WILL CARLETON, the author of *Farm Legends*, has nearly ready a new volume of poems.

MR. T. J. NORTHY, an Exeter journalist, has in the press a *Popular History of Exeter*. The object of the publication is to place in the hands of the citizens and visitors a history of old "Semper Fidelis" in an attractive form, and at a moderate price. The work is in the hands of the printers at the *Western Antiquary Office*, Plymouth, and it will be dedicated to the Mayor of Exeter.

THE Rev. J. C. Atkinson, of Danby, is preparing an edition of the Cartulary of Furness Abbey, Yorkshire.

A NEW Browning Society has been started at Scarborough, in consequence of the "Browning evening" held there by Mr. Ernest Radford during his course of art lectures for the Cambridge Extension Scheme last spring. At the committee's special request, Mr. Radford will give an address at the inaugural meeting of the society in October.

M. ADOLF PATERA, of the Czech Museum, Prag, has undertaken to edit Wyclif's *De Potestate Papae* for the Wyclif Society. Miss Alice Shirley will english his Forewards and Notes.

A TRANSLATION, by Mr. C. C. Massey, of Dr. E. von Hartmann's recent work on *Spiritism* is now appearing in *Light*. The translation will also be issued in a separate form by the Psychological Press.

THE September number of *Book-Lore* will contain a paper on the "Penzance Public Library," by Mr. W. Roberts. It will also give a further contribution on "Sham Almanacs," by Mr. Cornelius Walford.

THE September number of *Walford's Antiquarian* will contain the conclusion of the Rev. Joseph Maskell's paper on "William Thynne, Chaucer's First Editor," an article by the editor on the house of Milton at Chalfont St. Giles, and also a further instalment of "England in 1689," being extracts from a diary written by Samuel Sewall, the American judge, communicated by Mr. James Greenstreet.

IN addition to the well-known series of Pettitt's Diaries, the transfer of which we announced some time since, Messrs. Griffith, Farran & Co. have purchased the entire set of Blackwood's Diaries. They will publish both series together, in good time for Christmas and the New Year.

MR. JUSTIN MCCARTHY'S *History of our Own Times* has been translated into French by M. Léopold Goirand.

WE have received vol. iii. of the *Estudios Históricos* of Padre F. Fita. The varied learning

of the author is well shown in this volume. There is a Galician translation of Lib. IV. of the Codex Calixtinus, containing the Carolingian Romance, the inedited Latin poems and minor works of Gil de Zamora, mediaeval Hebrew letters and documents, Catalan mediaeval histories, and a number of Latin inscriptions, supplementing or correcting those of Hübner's *Corpus*, vol. ii.

AMERICAN JOTTINGS.

It is rumoured that Messrs. Charles Scribner's Sons, of New York, the original founders of the *Century*, will start next year a new illustrated magazine, to be called *Scribner's Monthly*.

MESSRS. ROBERT BROS., of Boston, announce the *Life and Letters of John Brown*, "Liberator of Kansas and Martyr of Virginia," edited by Mr. Frank B. Sanborn, with two portraits and facsimiles of documents. More than half the book will consist of John Brown's own writings; and there will also be a brief autobiography of his father, giving an account of life in Connecticut a hundred years ago.

MESSRS. G. P. PUTNAM'S SONS, of New York, have in preparation a series of historical volumes to be called "The Story of the Nations." The subjects are planned so as to cover, so far as possible, consecutive periods or epochs; but it is not intended to issue them in chronological order. Among the volumes already arranged for are *Greece*, by Prof. J. A. Harrison, of the Washington and Lee University; *Rome*, by Mr. A. Gilman; *The Jews*, by Prof. J. K. Hosmer; *Carthage*, by Prof. Alfred Church; *Norway*, by Prof. H. H. Boyesen; and *The Goths*, by Mr. Henry Bradley.

THE new publishing firm of Messrs. Ticknor & Co., of Boston, which was constituted on the failure of Messrs. Osgood, announce for early publication a long list of books inherited from their predecessors. Among them we notice the *Life of Longfellow*, edited by his brother; novels by both Mr. Howells and Mr. James, now running in magazines; *Social Silhouettes*, by Mr. Edgar Fawcett; *The Young People's Tennyson*, edited by Mr. W. J. Rolfe; and an illustrated edition of *Childe Harold*.

MR. WILLIAM ANDREWS'S *Modern Yorkshire Poets* is being reprinted for early publication in the United States. The American press noticed favourably the English edition.

THE New York *Literary News* thus arranges the books of the month in its usual prize competition:—Lord Lytton's *Glenarvon*, 36 votes; Miss Jean Ingelow's *Poems*, 28 votes; Mr. Hall Caine's *The Shadow of a Crime*, 25 votes.

MR. LOWELL has presented to the library of Harvard College a collection of more than six hundred volumes, mostly Spanish, which he had acquired during his residence in England.

IN reply to a petition of the Toronto Trades and Labour Council to have the Canadian copyright law changed, so as to place publishers in that country on the same footing as American publishers, the Dominion Government has declared that it would be inexpedient to alter the present law, as it furnishes means of excluding from the market all American reprints of the works of British authors which Canadian publishers may find it advantageous to republish in the Dominion; that it gives the Canadian public facilities for procuring cheap editions of such books as Canadian publishers do not desire to reprint; and that it gives Canadian authors, Canadian publishers, and the Canadian public, the advantage of participating in copyright benefits co-extensive with the whole British empire and territories covered by international treaties.

MR. CASPAR, of Milwaukee (a place we have hitherto associated only with the export of wheat) has sent us an elaborate Directory of Antiquarian Booksellers and Dealers in Second-hand Books in the United States. The names and addresses are arranged under three headings; but for English readers the most valuable features are the lists of bibliographical works published in America, England, France, and Germany, and the hints how to discover the author, title, &c., of any book that may be wanted.

ORIGINAL VERSE.

BY A NORWEGIAN STREAM.

(*Husum in the Laerdal.*)

On these high fells tempest and cloud have been,
But now the winds are hush'd, and soft the sky,
Upon this golden morning of July—
White barks afloat amid the blue serene.
Alone I watch this vast and sombre scene,
And yet not all alone; those pines on high,
This cataract's roar shall be my company,
And the wild hills that fold the dark ravine.

Ah, Nature! not where most thy bounties bless—
Cornfields and pastures and green forest-glade—
Most at the sight of thee man's nature thrills;
But, from the dismal town, the buzz of trade,
His spirit seeks the gorge-rent wilderness,
And finds a home amid th' unpeopled hills.

July 22, 1885.

C. E. TYRER.

OBITUARY.

LORD HOUGHTON.

I HAVE been asked to write something about our latest loss, Monckton Milnes (Lord Houghton)—a loss which will be deplored far and wide as the English language is spoken. But the bereavement is too recent, the wound is still too sore. All I can say of him at present is that, during the course of a long, busy, and fruitful life he never said an unkind word, and he never did an unkind deed.

RICHARD F. BURTON.

IF the love of personal reminiscences should be as prolific of literature during the forthcoming fifteen years as it has been during the past eighty-five years, it seems probable that Lord Houghton will one day enjoy the distinction of figuring in more biographies and autobiographies than any man of his century. It appeared to be one of his chief aims in life to know, and to be known by, everybody who was of consequence in literature. And he was admirably furnished by nature with the qualities needful for the rôle of universal friend. Without anything like envy, with the largest appreciativeness, with a proper sense of the limit of his own literary claims, he was as well able as a man can be to make and sustain the acquaintance of authors. He attached himself to no coteries, and tried to live on terms of peace with those who were at the deadliest enmity with each other. Adopting the rôle of universal friend, he was judicious enough to avoid the other rôle of universal peacemaker. In his intercourse with men who, from any cause, had fallen apart, he rarely tried to "do away the marks of that which once had been." He could sincerely accept David Gray as a poet, and welcome with no lack of spontaneity the other poet to whom Gray was but a "feeble Scotch poetaster." Even a passive appreciativeness of all kinds and conditions of literary talent is not always without its pains and penalties, but Lord Houghton had the trick of escaping them. Probably his social eminence contributed more towards his exemption from serious attack than certain of us would care to allow. It is one of the dubious qualities of the literary character that it sometimes appears to find pleasure in the act of castigation in propor-

tion to the acuteness with which each stroke is felt. If felt on the side of wounded pride and baffled ambition, then it is well; but if on the side of daily bread and butter, then so much the better. Lord Houghton's susceptibilities wore a tolerably thick skin, and he was not liable to material injury as a professional author. So he went through his long life as the friend of all, and the enemy of few or none.

Of Lord Houghton's early relation to the Tractarian movement I do not feel myself qualified to speak. I have read his *One Tract More*, and have found it vigorously written, and from an independent standpoint. His essays on current political and social questions were few. The most notable of them was as much theological as political in intellectual bearing, being a plea for the concurrent endowment of Protestant and Catholic Churches, as a method of cementing a real union between England and Ireland. Lord Houghton's literary interests and ambitions come somewhat more within my range of knowledge and sympathy. He was at Cambridge in 1830, and, therefore, could not resist the attracting power of Coleridge. Once at least he saw the old man eloquent, and it was in that room overlooking London which Carlyle has described in a bit of his most vivid writing. That Wordsworth had a strong influence over Lord Houghton's poetic adolescence is clear enough, though Tennyson's influence is even more apparent.

Lord Houghton's reputation as a poet stood so high at one stage of his career that it is not altogether easy, perhaps, for his contemporaries of a later generation to realise by what agency of competitive pressure it has in recent years been permitted almost entirely to disappear. His poetry is at least distinguished by feeling and taste. It cannot be said to possess many of those highest qualities of beauty and strength which are the first and last qualities of poetry that abides. It is certainly wanting in vital human passion, and does not lay hold of any powerful emotion. It is destitute of those evidences of uncontrollable impulse which give life, at all events, to the ultra-rhetorical utterances of some rhapsodical poetasters. But in lucidity of thought and of expression, in hopefulness of tone, in sweetness of temper, it is often eminent; and these are not qualities in which modern poetry is so rich that we can at once afford to forget the poet who possessed them. Most of all, Lord Houghton, as a poet, had usually something to say, which, amid all this attention to metre and millinery, is apparently the rarest quality of all. *Poems of Many Years* and *Palm Leaves* were accepted on their publication as denoting the advent of a new and genuine, if not a great and lasting, poet. This cordiality of reception was probably due in part to a favourable juncture of circumstances. The earlier volume appeared at a time when, after a lull in poetic production, the public mind was in a condition to accept whatever new voice had the promise of excellence. The "London" school had gone, with the exception of Hunt, and he was practically silent. The "Lake" school had disappeared, with the exception of Wordsworth, and he had long ago produced his noblest work. Scott was dead. Tennyson's fame had not yet attained to that supremacy which has since been above question. Sir Henry Taylor and R. H. Horne alone were quite on that level which Lord Houghton, as a poet, occupied. But then came the great school of sub-Wordsworthian and sub-Tennysonian poets, and Lord Houghton's unambitious volumes of verse were too soon lost. He accepted his rejection amid this crowd of aspirants without a word of anger or any exhibition of envy. Nor is it likely that another day will yet come for him.

It was in 1848 that Lord Houghton published his *Life of Keats*. The poet had then been dead

twenty-seven years, and had already become a notable figure in literature. He was, indeed, where he had predicted that he would be—among the English poets. The tardy *Edinburgh* article of 1820 had been followed by more than one warm and important eulogy. Hence it would be an error to say, even in the most elastic sense, that Lord Houghton discovered Keats. But he helped forward the strong tide that was flowing in Keats's favour, and perhaps he lived to see that tide reach the full flood. Towards a proper understanding of the poet's character Lord Houghton undoubtedly contributed, and this constitutes no light claim to the gratitude of his time. But the primary object with which he is said to have undertaken his task—namely, that of disputing the injurious idea that the soul of Keats was "snuffed out by an article"—was, I venture to think, just that part of his purpose which he did not achieve. Keats's masculinity requires no defence. It is perfectly evident in nearly all he did and said. But that the friends who were nearest to Keats at the end were the most likely to understand him, and that the 'poet was, at least, a witness worthy to be heard in any inquiry into his own character—these obvious arguments and the few palpable facts that go with them were not disturbed by Lord Houghton. And Severn, Hunt, and Keats himself are surely clear enough as to the injury sustained by the poet from criticism that was outrageous enough to be laughed at, but was at the same time too damaging to all hopes and aims and chances in life to be ignored by a young writer who was clearly setting out to live by his pen.

Lord Houghton's interest in Keats never ceased and never flagged. One of his last public acts was to induce Mr. Gladstone to give Keats's sister a small pension. To this act of grace he was good enough to say that the present writer had prompted him; but I believe it is a fact that long before I had any knowledge of the circumstances, Lord Houghton had made a similar application to Lord Beaconsfield. On that earlier occasion he failed, partly because Mr. Buxton Forman had in the same interests, but in another direction, been successful.

T. H. C.

MR. WILLIAM JOHN THOMS, antiquary and booklover, died on Saturday last, August 15, in the eighty-second year of his age. His name will always be associated with *Notes and Queries*, which he founded in 1849, and of which he remained editor until 1873. He was also at one time secretary to the Camden Society, and almost to the last deputy-librarian to the House of Lords. The tendency of his mind was towards the by-paths both of history and literature; and concerning these his knowledge was unrivalled, as well as readily available. Among many books that he wrote or edited, the best known is his sceptical treatise on *Human Longevity* (1873), the main drift of which has been since refuted by the evidence of ascertained facts.

We have also to record the death of the Rev. Dr. John Griffiths, some time warden of Wadham College, Oxford, and Keeper of the Archives of the University since 1857. It will be remembered that his choice collection of prints was sold two years ago, when a first state of Rembrandt's etching of the "Advocate van Tol" fetched the extraordinary price of £1,510.

MAGAZINES AND REVIEWS.

THE current number of the *Journal* of the Statistical Society (Stanford) contains two papers of more than usual interest. The one is on the "The Laws of Migration" by Mr. E. G. Ravenstein; the other is on "Indian Railways and Indian Wheat," by Mr. A. K. Connell.

Mr. Ravenstein's paper occupies sixty pages, and is illustrated with twelve coloured maps. Its object is to show the *currents*, rather than the *laws*, of migration in the United Kingdom by means of the returns of birthplace given in the census of 1881. In the investigation of this subject, the method usually adopted hitherto has been to compare the estimated increase of births over deaths with the ascertained increase of inhabitants between the dates of two enumerations, and then to infer that the balance consists of immigration. The fallacy of this method is that it makes no allowance for emigration. The superiority of Mr. Ravenstein's method consists in the fact that it distinguishes emigration as well as immigration, and also determines within certain limits the destination of the one and the source of the other. As this paper will doubtless be republished in a more permanent form, we will content ourselves with calling the author's attention to two minor points. In the table on p. 189, the word "Selkirk" has been inadvertently substituted for "Peebles" in the heading of the columns. When explaining the curious fact that females are found to be more migratory than males, Mr. Ravenstein omits to take into consideration the prevalence to the present day of exogamy. Women leave their homes not only for domestic service and to work in factories, but also to follow their husbands. Mr. Connell's paper is to support the paradox that the Indian Government, by encouraging railways, has injured the people in two ways: (1) by taxing them to support an unremunerative enterprise; (2) by causing a depletion of their stores of food. It seems sufficient to reply (1) that the railways of India are on the whole as remunerative as those of any other country in the world; (2) that there is no evidence of depletion in the particular tracts from which the exports of wheat come. The paper, however, is well worth reading, owing to its perverse ingeniousness.

THE *Revista Contemporanea* for July contains a sketch of the last days of the Templars in Aragon, by Hernández Sanahuja; the most interesting portion is a translation from a Catalan chronicler whose name is not given. Dionisio Chauli concludes his addition to his "Cosas de Madrid," by an account of the popular songs of the reign of Fernando VII., noting the variations of taste. Lorenzo Benito reviews Señora Pardo Bazan's last novel, *El Cisne de Vilamorta*, declaring it superior to its predecessors. A paper on the condition of the working classes, by B. Antequera, paints the state of the factory worker and the agricultural labourer in Spain as very bad, and declaims against present social laws as unjust to the poor. Señor Gutierrez has an article on literary sports, anagrams, acrostics, logogryphs, &c., which are declared to be the mark of a period of decadence. He also continues his chapters on the Ode; as F. Merino does his on the Catcombs, deciding that they are almost wholly the work of Christians.

THOREAU'S WILD WOOD PHILOSOPHY.

AT the recent gathering of the Concord School of Philosophy, Mr. H. G. O. Blake, Thoreau's latest editor, read some extracts from the unpublished writings of Thoreau, from which we quote the following:

"You wander indefinitely in a beaded coat, wet to the skin of your legs, sit on moss-clad rocks and stumps, and hear the hisping of migratory sparrows amid the scrub oaks. Sit long at a time, still, and have your thoughts. A rain which is as serene as fair weather, suggesting fairer weather than was ever seen. You could hug the clouds that defile you; you feel the felicitating influence of the rain in your mind. The part of you that is wettest is fullest of life, likethelichens. You discover evidences

of immortality not known to divines. You cease to die. You derive some buds and sprouts of life. Every step in the old rye-field is on virgin soil. And then the rain comes thicker and faster than before, thawing the remaining frost in the ground, detaining the migrating bird, and you turn your back to it full of serene, contented thoughts, soothed by the steady dropping on the withered leaves, more at home for being abroad; more comfortable for being wet; sinking at each step deep into the thawing earth, gladly breaking through grey, rotting ice. The dullest sounds seem sweetly modulated by the air. You leave your tracks in fields of spring rye. Seeing the fox-coloured sparrows along the wood-sides, you cannot go home yet. You sit still in the rain; you glide along the distant wood-side full of joy and expectation, seeing nothing but beauty, hearing nothing but music, as free as the fox-coloured sparrow.*

"In the presence of my friend I am ashamed of my fingers and toes. I have no feature so fair as my love for him. There is more than maiden modesty between us. I find myself more simple and sincere than in my most private moment to myself. I am literally true with a witness. We should sooner blot out the sun than disturb friendship.*

"There sits one by the shore who wishes to go with me, but I cannot think of it. I must be fancy free. There is no such mote in the sky as a man who is not perfectly transparent to you, who has any opacity. I would rather attend to him for half an hour or more on shore, or elsewhere, and then dismiss him. He thinks I could merely take him into my boat and then not mind him. He does not realise that I should by the same act take him into my mind, where there is no room for him, and my barque would surely founder in such a voyage as I was contemplating. I know very well I should never reach that expansion of the river I have in my mind with him on board with his broad, terrene qualities. He would sink my barque and never know it. I could better carry a heaped load of meadow mud and sit on the thole pins. There would be more room for me, and I should reach that expansion of the river nevertheless. I could better afford to take him into bed with me, for then I might perhaps abandon him in my dreams. Ah! you are a heavy fellow. But I am well disposed. If you could go without going, then you might go. There is the captain's state-room empty, to be sure, and you say you could go in the steerage. I know very well that only your baggage would be dropped in the steerage, while you would settle right down into that other snug recess. Why, I am going; no, staying. I have come on purpose to sail, to paddle away from such as you, and you have waylaid me on the shore. If I thought you were steadily gazing after me a mile off, I could not endure it. It is because I trust that I shall ere long depart from your thoughts and so you from mine, that I am encouraged to set sail at all. This company is obliged to make a distinction between freight and passengers. I will take any amount of freight for you cheerfully, anything, my dear sir, but yourself. What is getting into a man's carriage when it is full, compared with putting your foot into his mouth and popping right into his mind, without considering whether it is occupied or not?"

CORRESPONDENCE.

LORD HOUGHTON AND KEATS.

London: August 15, 1885.

The newspapers (as you remark this week) have made a singular error in describing Lord Houghton as the personal friend of Keats. But your statement that Landor induced Lord Houghton to become Keats's biographer does not, I think, quite cover the facts. I have recently had occasion to examine the question in connexion with an article that I am writing for the *Dictionary of National Biography*, and my conclusions (partly founded on a communication from Lord Houghton himself) are as follows.

In 1833, Lord Houghton—then Mr. R. M. Milnes—met for the first time in Landor's villa at Fiesole Keats's intimate friend, Charles Armitage Brown. Brown, who was the poet's daily companion between 1817 and 1820, had come into possession of a large number of Keats's papers (including many unpublished poems) on the latter's departure for Rome in 1820, and, since Keats's death in the following year, had contemplated writing a life of his friend. There is reason to believe that he completed a brief memoir (which was never published) soon after Keats's death. But he was living in Italy from 1822 and 1835, and during that time did little towards producing an elaborate biography. After 1835 he resided near Plymouth, and was engaged in literary work of various kinds. He then seems to have returned to his original plan, and gave public lectures on Keats in the neighbourhood of Plymouth. But he was at the same time preparing his well-known book on Shakspeare's sonnets, and had made no very satisfactory progress with the long-projected life, when in 1840 he suddenly emigrated to New Zealand. Before leaving England Brown handed over his collections for Keats's biography to Lord Houghton, with whom he had been on friendly terms since their first meeting seven years before. Lord Houghton, in the first edition of his *Life of Keats* (1848), fully acknowledges his indebtedness to Brown, and he repeated much of that acknowledgment in a letter written a week or two ago. It is possible that Landor, who visited Brown at

Plymouth in 1837 and was at all times very intimate with him, suggested the wisdom of inviting Lord Houghton to continue and complete the biography. But Brown, rather than Landor, should be regarded as the effective promoter of Lord Houghton's book.

I have obtained for my notice of Brown much information from both published and unpublished sources, and I find his career to be of greater interest than any literary historian has hitherto credited it with. He was a literary critic of no mean ability, and was the intimate associate of most of the men of genius of his time. A contemporary of his, who still survives, identifies him with the writer described by Leigh Hunt (in the *Tatler* for January 14, 1831), as "one of the most genuine wits now living." But had his sole service to literature been that of forming the link between Lord Houghton and Keats, his name would not deserve to be quite forgotten.

SIDNEY L. LEE.

THE EGYPTIAN "NEFER" AND THE SIAMESE "SAW TAI."

London: August 19, 1885.

Mr. Stuart (*ACADEMY*, No. 693, p. 104) considers these two instruments to be "absolutely identical." This arose from a hasty impression. The resemblance consists merely in a long neck and heart-shaped body. The "nefer" was an instrument of the sitar and tambura species. It had apparently four strings, with a finger-board like a guitar, and no foot beyond the body. The "saw tai" has no finger-board, is played with a bow (an enormous bow, bigger than our double bass bow), and has a foot projecting beyond the body on which the instrument rests when it is played, and it has only three strings. It much resembles the Arabic "rabab," which, however, has only two strings. In both, as in the Chinese fiddles, which the Siamese also use, there is no finger-board, but only a long round neck, carrying the pegs to screw the strings to pitch. They are tuned in very fair fourths. The three strings are tied to this neck at some distance below the pegs, leaving a sounding length between the ligature and the bridge of 360 millimetres (about 14½ inches). The strings are of twisted silk. The body is of cocoa-nut, and the sound-board is merely parchment, with a jewelled disc about as big as half-a-crown, but thicker, attached possibly for the purpose of destroying the proper tones of the parchment skin. The instrument I examined at the Siamese legation, in presence of its player, was very elaborately and beautifully ornamented. The foot was of carved ivory. The lower part of the neck was also of carved ivory, but the upper part of enamelled gold. Jewels were placed where convenient. But the curious part of the instrument is the absence of a finger-board. The strings are limited merely by the pressure of the fingers on the strings, and not, as in the violin class, by nipping the string between the finger and the finger-board. Thus the note produced at any place was not of a fixed pitch. It varied with the pressure of the finger. The tone was not sharp and defined as in the violin species, but rather hazy. The instrument, however, allowed of considerable execution, but should be heard in a moderately sized room, and not in such a colossal place as the Albert Hall.

ALEXANDER J. ELLIS.

BOSCHER'S LEXICON OF GREEK AND ROMAN MYTHOLOGY.

Scrayingham Rectory, York: August 18, 1885.

Being virtually in hearty agreement with Mr. Isaac Taylor's remarks on Roscher's *Mythological Dictionary* in the current number of the *ACADEMY* (August 15), I should, perhaps,

be scarcely justified in reviewing a review, unless I felt that I might be able to remove some misconceptions which may hinder the progress of mythological science in this country.

Of Roscher's work in itself I do not propose to say anything. Mr. Taylor has spoken of it with perfect fairness as a book which was much wanted, and which seems likely to meet the want admirably for German readers. It would be absurd to pretend that it can do so for readers who think that some things may deserve notice which lie beyond the limits of German learning and research. It is true that only a small portion of Roscher's Lexicon has thus far been published; but enough has appeared to make it a matter for regret that the work of many of the most diligent workers in the field of comparative mythology has been left altogether unnoticed. It may, I think, be safely said that in the vast multitude of treatises which have dealt with the most important questions connected with the science not one has appeared more masterly, exhaustive, and conclusive than M. Bréal's monographs on the myths of Hercules and Cacus, and of the Theban Oedipus; and, so far as his published numbers go, neither Dr. Roscher nor his colleagues seem even to have heard of M. Bréal. It may also be reasonably said that some of the writers in the new lexicon have allowed themselves a large license of somewhat arbitrary speculation.

That the general result of the work, so far as it has gone, should exhibit the general consensus of comparative mythologists against the haphazard mode which explains the myths of the ancient Aryan world by references to those of modern savage tribes, is only what we might have looked for. This mode has no method, and is simply a fashion, which, as resting on essentially imperfect comparisons, must soon pass away. But it would have been better if the general agreement of mythologists had been brought out more clearly than in the new dictionary it seems to have been. Mr. Taylor speaks, necessarily, of the great variety of the sources from which mythological conceptions have been derived; and certainly I never supposed that I was putting forth any new conclusion when, in the preface to my *Mythology of the Aryan Nations*, I insisted on the fact that "the mighty mass of popular myths in every Aryan land has been shaped by words and phrases describing all the varied and complex phenomena of day and night, of summer and winter, of earth and heaven." In the latest edition of this book I have been especially anxious to show, in Mr. Taylor's words, "that a larger part of the Greek mythology than had been supposed may be traced to Babylonian and Phœnician sources."

That of the myths which have clustered round the name of Aphrodite some may be traced to such sources, I have no wish to dispute; and I am quite ready to place the name itself in the same class with Melikertes and Palaimon, so soon as reasonable grounds are given for so doing. But if the Semitic myths thus imported into the West speak of her as the moon-goddess, it does not follow that the Aphrodite of the Greeks is not, in many of her aspects, the dawn, and seemingly the dawn only. Mr. Taylor speaks of Prof. Max Müller and myself as having overlooked "the Oriental origin of the myth"; but surely myths, or clusters of myths, which may be traced to the banks of the Indus, or further eastwards still, are in their origin very Oriental indeed. But perhaps Mr. Taylor may by the term Oriental denote only what is Semitic. If so, the restriction of meaning may hereafter prove very inconvenient.

But Mr. Taylor has himself shown how a Babylonian or Egyptian myth may become

modified in its westward course. Thus he says that, as "the Asiatic moon-goddess was developed under Phœnician influence into the Hellenic Aphrodite, she lost most of the traces of her lunar origin." Of this last fact there can be no doubt. What seems to me most doubtful is that the Greeks had no notion of Aphrodite until they came under Phœnician influence.

In dealing with Athene Prof. Max Müller naturally sought for the name as well as the thing in the land which revealed Varuna as answering to the Greek Ouranos and Dyaus to the Greek Zeus. There he found both the thing and the name; and by the first principle of comparative mythology he was bound to take both into account. To put these facts aside and to refer the name to the root of *ad-hp* a spearhead, is violently arbitrary. To the notion that Pallas Athene was so-called as the spear-brandisher, we might be tempted to reply, *Credat Judæus*. She was so-called as much and as little as Palaimon was so-called from his powers as a wrestler. When the name of the Latin Mars is derived from the root *mar*, to shine, we have to ask whether the root *mar*, to pound, is not after all the same. Before we come to a different conclusion, we must first dispose of Prof. Max Müller's lecture on this root, and its varied adventures through the world. Scarcely less arbitrary seems the fashion which treats Achilles as a river-god. Either he is such, or he is not. The incidents recorded of him in the twenty-first book of the *Iliad* seem to answer the question decisively in the negative.

These, however, are minor matters. It would have been well if Dr. Roscher and his colleagues had worked in a larger spirit; and it is possible that some of their speculations may retard the growth of the science. But of the stability of the science there is no question. All that is done only seems to bring out more and more clearly the nature and value of the materials with which we have to deal, and to discredit what Mr. Taylor has well called the Hottentotic method of accounting for the myths of the ancient world through the folklore of modern savages. The residuary problems left for the mere anthropologist to solve are, as he says, very few. In the ground thus left open he may, and, we need not doubt, will do good service. But on the solid foundations of the science, his efforts, if they should be hostile, will make no impression.

GEORGE W. COX.

"ARABIAN MATRIARCHATE."

London: August 17, 1885.

It would, maybe, afford relief to the minds of students accustomed to place reliance on his opinions, if Dr. E. B. Tylor would give full effect to the inference, and admit that he was not sufficiently guarded in his words at Montreal when he stated that among the Arabs to this day there survives that most matriarchal idea that "one's nearest relative is not one's own father, but one's maternal uncle."

This assertion was the only point on which I wished to record a decided objection in my paper to the Royal Asiatic Society. I gave in that paper a sketch of Prof. Wilken's treatise, merely to show that he had not enunciated such a conclusion, and that to my mind all his arguments for an ancient Arabian matriarchate were inconclusive. His new treatise appears to me of the same character.

The *batn* and *khal* questions are collateral to my main contention, and are too large to be argued in your columns. They may, perhaps, be minutely examined by a younger generation. Meanwhile, I do not commit myself, one way or another, to any decided view on a conceivable prehistoric Arabian or Semitic matriarchate.

J. W. REDHOUSE.

"OFFPRINT."

2 Salisbury Villas, Cambridge: Aug. 15, 1885.

Various terms, such as "deprint," "ex-print," &c., have been proposed to denote a separately printed copy of a pamphlet distributed to friends. Neither "deprint" nor "exprint" conveys any intelligible idea. But, by comparison with "offshoot," I think we might use "offprint" with some hope of expressing what is meant.

WALTER W. SKEAT.

SCIENCE.

A History of British Birds. By William Yarrell. Fourth Edition, in 4 vols., illustrated by 564 wood-engravings. Revised and enlarged, Vols. I. and II., by Prof. Alfred Newton; Vols. III. and IV. by Howard Saunders. 1871-85. (J. van Voorst.)

At length the fourth edition of "Yarrell" is complete. But the revision and enlargement of the book which has long been the standard work on the ornithology of the British Islands fills one with a certain measure of regret. One cannot but think how much more representative and more useful a similar *Ornithologia Britannica* would have been if it had been undertaken by Prof. Newton, untrammelled by the necessity of following in the lines of a book first published so long ago. The completion of the present republication in June has been obviously due to the law of copyright; for in that month the copyright lapsed, and it is now legal for anyone to republish the book as it was last issued by its author. But with this improved re-issue before the world, bibliographers are not now likely to be confused by such a reprint. The fourth edition of "Yarrell" will remain for many years a classic without a rival.

The history of the book is interesting. Its success has found no parallel in the nineteenth century; even the *Birds* of Bewick, whose merit lay rather in his drawings than in his letter-press, takes lower rank. Extensive as is the literature of British ornithology, there is no book which is entirely comparable to Yarrell's, whether we take the popular or the scientific standpoint. The first edition was commenced in July, 1837, and the work was completed in three volumes in May 1843, just forty-two years ago. The repute of Bewick's woodcuts at that time, and especially of his tail-pieces, stimulated a keen emulation; but the skill of the late John Thompson was not sufficient to ensure anything like the results of the master who had made woodcutting an art worthy of his own artistic power. However, the efforts of the publisher were rewarded by a rapid sale, and in two years it was found necessary to issue a second edition—in 1845. Within a few months of the author's death, which occurred on September 6, 1856, a third edition appeared. In March 1871 it was announced that a fourth edition was in preparation by Prof. Newton, perhaps the most learned and accurate ornithologist of our day in England; and the issue of the first part, in June 1871, was eagerly welcomed. But it soon became apparent that, between Prof. Newton's anxiety to equal, and even to exceed, the reputation of the previous editions, and the many calls upon his erudition from other sources, it

was impossible for him to make such rapid progress as the publisher demanded. Consequently, Prof. Newton, to the regret of every ornithologist, abandoned the editorship on the completion of the second volume, in May 1882. The remainder of the work was entrusted to Mr. Howard Saunders, who is to be congratulated on having completed his contract within the appointed time. In his preface, dated April 30, 1885, he confesses that he undertook the office "not willingly or with a light heart"—a frame of mind natural to any one who essayed to follow in the professor's wake.

The present edition of "Yarrell" describes and figures (with the exception of the American stint, vol. iii., p. 396, which has no figure) 363 species of British birds, which are grouped in fifty-nine families. But of course, in a work which has taken fourteen years to complete, much of the information in its earlier parts is already out of date. Accordingly Mr. Saunders, in his Preface, enumerates the names and reported occurrences of twelve additional species which have also "some right to be enumerated in the British list," "excluding certain New World *passeres* which cannot reasonably be supposed to have reached our shores without human agency." Among the former we may call attention to Pallas's grey shrike (*Lanius major*), the introduction of which to British ornithologists is mainly due to Mr. H. Seebohm, who gives an exhaustive account of it in his *History of British Birds*, with coloured illustrations of their eggs (vol. i., p. 595, 1883). The authenticated occurrence of the wall-creeper (*Tichodroma muraria*) in Lancashire on May 8, 1872, recorded by Mr. F. S. Mitchell, is also worthy of notice. The only other published instance of this bird having been seen in Great Britain, at least since Willughby's time, was made known by Marsham in a letter to Gilbert White in 1792. As a proof of the advance of ornithology in recent years it may also be mentioned that two species of wheat-ear (*Saxicola stapezina* and *Saxicola deserti*) distinct from the form said to be familiar to epicures (*Saxicola oenanthe*) have been obtained in Great Britain; and it is possible that several examples of the barred warbler (*Sylvia nisoria*) have escaped notice, seeing that at least two have been identified since Prof. Newton, in 1879, exhibited a specimen obtained in a garden at Cambridge many years ago. Previous to the system inaugurated by Prof. Newton in this work, local ornithologists had been content to describe only such species as were found in the country of which they were treating; but it is a distinction of the present edition of "Yarrell" that allied species are also generally noticed, and the marks by which they may be distinguished are given. Consequently we may expect to find future observers from time to time recording the occurrence of birds in Great Britain which were not hitherto known to extend their range beyond the continental parts of Europe.

With regard to Prof. Newton's execution of his portion of the work, his fame is sufficient to warrant that it is of the highest quality. The only impression which a re-reading of it leaves is that it could only have been better if it had been all his own and none Yarrell's. The professor's account of

the starling, the rook, or the cuckoo, to take some of the most obvious and popular examples, is enough to convince anybody of the excellence of his editorship.

Some readers will be surprised at the alterations which the advance of science has introduced. It was a bold step, to treat the carrion crow and the hooded crow as members of the same species, yet the identification is entirely justifiable. To those who know the two birds only from an ordinary English experience, they appear to belong to two valid species. But they interbreed so freely in countries, such as Siberia in particular, where they both abound, that every intermediate form between them can be met with, so that it is impossible to say, in a long series of examples, which belongs to the one form and which to the other. Herein we see a typical instance of the value of so-called "trinomialism," a practice which is now almost universal among American zoologists, and which is gradually winning favour in England, although it has not yet found its way into "Yarrell." Prof. Newton wrote his article so long ago (in 1878) that he leaves us in doubt as to how we should designate the fused species systematically. But a trinomialist would call the species *Corvus corone*; and, if he wanted to distinguish the black or carrion crow from the hooded or grey crow, he would name the former *Corvus corone corone*, and the latter *Corvus corone cornix*.

Whether it is an advantage for the jackdaw and the magpie to become respectively the daw and the pie is perhaps doubtful. It is seldom expedient to set aside familiar names of common objects for the sake of what may be greater literary correctness. But, however many of Prof. Newton's successors may follow him in these instances, it is to be hoped that none will be forced by his example to spell cuckoo "cuckow."

Mr. Saunders appears to have edited the two volumes allotted to him with his usual care. It is hardly just to compare the result of his three years of labour with Prof. Newton's eleven, especially since he seems to have had to write against time. The best part of his work, as might have been expected, is seen in his account of the gulls and terns, a group to which he has for years devoted especial attention. A little more care might have prevented such an eyesore as symphysis (vol. iii., p. 573), and two such misprints as occur on p. 34 of vol. iv.; and the brackets enclosing the name of Linnaeus after *Colymbus glacialis* (vol. iv., p. 96) are misleading. Perhaps too much credit is given to the late Messrs. Garrod and Forbes for the source of our knowledge of the anatomy of the *Tubinares*, valuable as their labours undoubtedly were in familiarising us with the work of their predecessors, and in materially adding to it. Most of Mr. Saunders's remarks about the derivations of the scientific names might have been omitted with advantage; partly because they are so incomplete, and often misleading by their brevity, and partly because they are plainly taken at random from the notes supplied by the present reviewer to the so-called "Ibis" *List of British Birds* published by the British Ornithologists' Union in 1883, where no difficulty was left without an attempt to unravel

it. With Greek accents he makes sad havoc; witness *phalāpis* (vol. iii., p. 310). Possibly the last word has not been said about the etymology of sheldrake. With all deference to Prof. Skeat, the simple meaning of "shelled," viz., marked like tortoise-shell, seems to afford the real clue.

To Mr. Saunders attaches the credit of being the first ornithologist to introduce the Flamingo (*Phoenicopterus roseus*) as a veritable British bird. But perhaps the evidence of its having occurred in Britain in a truly wild state, if applied in every instance, would swell the list of birds which ought to have been described in "Yarrell" to a greater extent than has been the case. Still, every species added to a fauna, even on the slenderest grounds, serves to stimulate future observers to confirm or to disprove the right of its inclusion. If it does nothing more, it familiarises naturalists with other species than those proper to their own country, and thereby possesses an educational value of more importance than any confusion it can cause the geographical zoologist.

The number of illustrations in "Yarrell" has always been a great commendation in the eyes of the public. In the first edition there were 510 wood-engravings, in the second 535, in the third 550, while in the fourth there are 564. Purveyors of old books and scarce editions are full of praise of these woodcuts—of much more, indeed, than they deserve. Compared with Bewick's, or with those by Wolf in the late Rev. C. A. Johns's *British Birds in their Haunts*, they are painfully wanting in artistic merit. It is, therefore, a pleasure to notice that those added to the present edition attain a far higher standard than presumably satisfied the last generation of ornithologists. A comparison, for instance, of Mr. E. Neale's lesser grey shrike (vol. i., p. 205), or of Mr. J. G. Keuleman's tawny pipit (vol. i., p. 592), with the curiously distorted red-footed falcon (vol. i., p. 69), or the preternatural robin (vol. i., p. 305), will substantiate this estimate. These are perhaps extreme examples to cite, since they are so plainly copied from badly stuffed specimens; but the artist who could pass them could have little idea of the look of a living bird. To those, however, whose eyes are not offended by an impossible background, or by the representation of a bad taxidermist's results, the mechanical skill in the delineation of the plumage and general appearance of most of the birds is enough to render these figures acceptable to the majority of readers. If seldom artistic, they are always truthful.

In the present uncertain state of classification, it is perhaps fortunate that no very great departure has been made from that adopted in the old editions. Many of the new names of groups of fairly differentiated types are unostentatiously introduced, but the fewest possible changes have been made. In his preface (p. vii.) Mr. Saunders justifies the alterations which he has made in this respect, and Prof. Newton has generally done so in the course of his portion of the work. The swifts are still kept next to the swallows, for instance, but the professor (vol. ii., 365) succinctly gives the reasons which have induced all modern systematists to refuse them any genetic affinity. Without the violent

introduction of recent changes in arrangement, indications are given throughout the work of the current ideas of those who have given the deepest attention to the difficult questions which surround the classification of the class *Arves* from an evolutionary point of view.

However advantageous it might have been to future ornithologists for the new "Yarrell" to have been entirely independent of the old, it must be candidly confessed that it would have been difficult for the editors, fettered as they have been, to do their work much better than they have done it.

HENRY T. WHARTON.

CORRESPONDENCE.

INTERCOURSE OF CHINA WITH EASTERN TURKESTAN.

Shanghai: June 18, 1885.

M. Terrien de la Couperie, in the *ACADEMY* of May 2, with a courtesy unfortunately too common among the students of Chinese, warns the scholars who venture to make quotations from my paper on the "Intercourse of China with Eastern Turkestan" that they expose themselves to repeat "egregious blunders." This is perhaps only a *façon de parler*, but hardly one to be held up to commendation. Passing this over, however, I may proceed to the particular error indicated. M. de la Couperie attacks a statement somewhat guardedly put forward that Tin yüt was "apparently the ancient Sthānesvara." I am still of the same opinion; but I am open to conviction, as although the evidence seemed to me sufficiently strong to lead to the conclusion, it still was only *prima facie*, and hence my use of the term "apparently."

I am content to state the evidence. The Emperor, anxious to open communications with the Yueh ti lately settled in Bactria, ordered Chang k'ien to test the various roads leading westward; and four parties were sent from Kia ting fu in Szechuen. One, the southern by Mang in Yunnan, is interesting, as in a great measure that pursued by Margary with a similar object. The two central led through Tibet; and the northern by Kiung pih up the valley of the Min, with the probable intention of proceeding through Chaidam. The northern party was stopped by the Titso tribe. The southern came in contact with the K'ivenming, a truculent tribe dwelling about Sui, now the district of Li kiang fu in Yunnan, who stopped their advance, as not many years ago Cooper was stopped in the same locality. The party had, however, heard rumours of a country lying west where people rode on elephants. This Chang k'ien evidently associated with Shentuh (Sindhu, the Vedic Saptasindhava), where elephants were used in war, and which he presumed was "not far" from Szechuen. The distances puzzled him, so he states them in the vaguest terms. The Tahia lay some 12,000 li from China. The explorers had only advanced "one or two thousand li," so he exercises caution. Shentuh lay "it might be some thousand li S.E. of the Tahia" in Bactria (*Ta-hia tung-nan k'o sho t'sien li*); and Tin yüt was situated "it might be a thousand or more li west" of the place to which the expedition had penetrated (*k'i si k'o t'sien yü li*). If he could get to the one elephant-using country he might fairly expect little difficulty in gaining the other, as he had evidence that a left-handed trade was being carried on by both with the tribes of Szechuen. This is all the information he could get, and even this apparently at second-hand, for his explorers had been seized and killed near Li kiang.

Next, as to the philological question, Chang k'ien shows all through his work a wonderful consistency in his rendering of foreign names. It so happens that he has made use of the *tin* of Tin yüt in another instance where no doubt exists as to the identification. Yü tin is his rendering of the old name of Khotan, where the character for *tin* is identical. Now we have the direct statement of Yuen chwang that the name of that city was Kustana, and, to avoid all doubt, he tells us that the meaning is *mamelle de terre*. If *tin* then stands for "stan" in the one case we are justified in giving it a like power in the other. In M. de la Couperie's statement that in Han times *yüt* was pronounced "viet," I may state that I am quite prepared to agree. Yütnam was the ancient name for Annam, and is still pronounced in the vernacular Vietnam. *Yüt* occurs in many Chinese names, especially about the southern and south-western provinces, but in no one instance can it be rendered as he suggests by "trans." True, *yüt* means in ordinary language "to overpass," but in proper names it seems simply to mean "district." Yüt was the name of the kingdom formerly existing in South Cheh kiung; afterwards Yüt nam, "Yüt in the South," was the name by which the present Annam was known. Sui yüt in Kwansai was the district of the Sui tribe, Y'eno yüt or Momein of the T'engs or T'ams. It was the analogue and possibly the etymological representative of the Sanscrit *varsha*, "a country." Tin yüt would thus be the regular transliteration of a form Stan(a)varsha. Now, such a form for Sthānesvara is by no means impossible or improbable. Indian grammarians are divided as to its etymology: it is usually derived from Sthāna-Iswara, the abode of Iswara or Mahadeva; but this inversion was not considered satisfactory, so Sthānu-Iswara, a junction of both names of the divinity, was suggested (Cunningham's *Ancient Geography of India*, 331). If the proposed identification with Tin yüt be accepted, then we may find its origin in Sthānu-varsha, by metathesis Sthānu-shvara. Anyhow, Staneshwara was an ancient place. It was the original settlement of the Pāndus, and was already losing its prestige in the time of Yuen chwang when it had become tributary to Kanauj.

T'eng yueh, on the contrary, has never been other than a comparatively insignificant frontier town, and, most assuredly, could never have been described as an elephant-riding country, *Shing-siang kuoh*, for two good reasons: first, it was not a *kuoh* at all and, secondly, elephants are never used there.

I will leave it, therefore, to the readers of the *ACADEMY* to decide—if either M. de la Couperie or myself have been guilty of egregious blunders—which is the erring party.

I am sorry M. de la Couperie should be so engaged that he has no time to proceed further with his strictures; but I may be permitted to make some remarks on two statements of his. First, Chang k'ien, I may inform him, was very particular in calling Scinde Shentuh. It was under "Buddhist" influence, most probably, that his commentators imagined that *Shen* should be pronounced "K'ien." They mistook Scinde for Gāndhāva.

Further, I should like to know on what evidence he shows that the characters on the seal found at Harapa were in Shuh writing.

THOS. W. KINGSMILL.

P.S.—I would like to take this opportunity of indicating an error in my paper which has been pointed out by Mr. E. H. Parker. The characters for Kiao-ts'ze and Aujen are not proper names. The sentence should read: "Westward of Yuan, all the states, on account of their distance, were haughty and indifferent, and not to be moved by compulsion; all that could be done was to attach them by means of politeness."

T. W. K.

THE HISTORY OF SHÁH ISMÁ'IL I. AND SHÁH TAHMÁSP I.

Tehran: July 16, 1885.

The *Athenaeum* of May 31, 1884, in a notice of some "Recent Acquisitions of the British Museum" mentions a MS. "history of Persia, and especially of Khorisán, under Shah Isma'il and Shah Tahmasp, composed by an unknown writer in A.H. 957." This MS. appears to be identical with one now before me, in which, however, the author calls himself in the preface "Mahmūd Khānd Amir," adding that he began it, through the patronage of the Vālī of Herāt Muhammad Khān, in A.H. 955. In the Khatimah to the "Ranzat us Safaviyah"—a history of the Safavis from their origin to Sháh 'Abbāss II., by Mirzá Beg B Hasan Hasani, composed in A.H. 1023—will be found a further note on this author; Mirzá Beg informing us that he is indebted for his own work to, among others, the "history of Sháh Isma'il and Sháh Tahmasp" by Khawjeh Mahmūd who called himself a son of the author of the *Habib us Siyar*. He adds that this work is dedicated to Muhammad Khān Aūghlī Taklū, the same who was appointed deputy of Sultān Muhammad Mirzá Safavi, when that Prince, in A.H. 943, was given the government of Herāt. Khawjeh Mahmūd's transcriber, in the colophon to my MS., calls him: "Amir Mahmūd B Amir h wānd Mir ul Muvarikh."

SIDNEY J. A. CHURCHILL.

SCIENCE NOTES.

THE original MS. of the lectures delivered by William Harvey before the Royal College of Physicians in 1616 and the following years, which were discovered a few years ago in the British Museum, are to be published in a facsimile reproduction, together with an interleaved transcript made by Mr. J. S. Scott, of the MSS. department of the Museum. The work will be issued by Messrs. Churchill, probably in the spring of next year.

AT the meeting of the French Association for the Advancement of Science, held during the past week at Grenoble, M. de Mortillet read a paper on "Man in the Tertiary Epoch." The evidence of chipped flints, &c., that he adduced from the lower tertiary strata at Thenay, and from the upper tertiary strata at Otta, in Portugal, and Puy Courty, Cantal, in favour of the existence of an "antropopethique" or apeman appears to have convinced the majority of savants present, though no trace of a skeleton is yet forthcoming.

AT the meeting of Anthropologists now being held at Karlsruhe, Prof. Virchow has communicated the final results of the statistical observations made in all German schools as to the colour of hair and eyes. These results are exhibited in maps which have been most carefully prepared, and give a clear view of the distribution of the blonde, black, and brunette varieties of the German Empire.

PHILOLOGY NOTES.

IN the last two numbers of Trübner's *Literary Record*, a beginning is made of an "Index to Articles relating to Oriental Subjects in Current Periodical Literature"—a work which has long been wanted by scholars, but which it is nobody's business in particular to supply. The list of periodicals is limited to those published in England, America, India, and China; but even so there are some notable omissions. Both the *Times* and *Nature*, as well as the *Journal* of the Bengal branch of the Royal Asiatic Society, ought certainly to be added to the list.

PROF. GEORG CURTIUS, the veteran scholar

and philologist, died at Leipzig on August 12, in the sixty-sixth year of his age. Next week we hope to give some notice of his life and work.

FINE ART.

GREAT SALE of PICTURES, at reduced prices (Engravings, Chromos, and Oleographs), handsomely framed. Everyone about to purchase pictures should pay a visit. Very suitable for wedding and Christmas presents.—GEO. HESS, 115, Strand, near Waterloo-bridge.

The Prehistoric Stone Monuments of the British Isles.—Cornwall. By the Rev. W. C. Lukis. (Society of Antiquaries.)

THE study of British prehistoric monuments has been for centuries one of the favourite fields in which the framers of wild hypotheses have been accustomed to disport themselves. Perhaps there is scarcely any other subject with regard to which such enormous fabrics of speculation have been erected on such utterly unsubstantial foundations. Of late years sounder methods of investigation have begun to be employed, although books on the subject are still occasionally published which repeat the old fancies about druidical sacrifices, sun and serpent worship, British Buddhism, the Persian Mithra, and the Phœnician Baal. It cannot be said, however, that the positive results of recent research, except so far as relates to the "barrows," are as yet very abundant or very interesting. Most of the problems which so many generations of antiquaries have eagerly discussed with regard to the principles of construction and the original purpose of our rude stone monuments are still unsolved; and the opinion of those who are best qualified to judge is that the time is not yet ripe for their solution. It is useless to speculate on such questions until we are in possession of accurate drawings, plans, and measurements, if not of the whole of these relics of an unknown past, at any rate of some considerable proportion of them. When such a body of trustworthy materials is before the world it will be time to construct theories. For the present, "what we want is facts."

It has long been generally understood that the Society of Antiquaries had undertaken to meet the demand for substantial data for the study of our ancient stone monuments, and that a large number of drawings and measurements, both of British and continental remains, were already in the possession of the society, and were intended some day to be published. That learned body, however, is not remarkable for the promptitude of its movements, and it has been feared by many persons interested in the subject that it would be long before any portion of this collection would see the light. Happily this anticipation has been falsified by the appearance of the volume devoted to the Cornish remains, and it is to be hoped that the succeeding volumes will follow as rapidly as is consistent with the satisfactory execution of the work. The society has decided to issue alternately the portions of the collection dealing with British monuments and those dealing with the similar monuments on the Continent. This course has obvious advantages, as a comparison with foreign examples may be expected to throw valuable light on the prehistoric remains of our own country. It would be a pity, however, if the society should consider it neces-

sary to adhere rigidly to the plan they have laid down at the expense of seriously delaying the publication of the British portion of the work, which, after all, is the part most urgently needed. There is special appropriateness in commencing the series with the monuments of Cornwall, inasmuch as both geographical and historical considerations would lead us to anticipate good results from a comparison of them with the Breton remains, which, it may reasonably be supposed, will form the subject of the second volume.

The interest of the work resides, of course, principally in the forty folio plates, the few pages of letterpress being strictly confined to the briefest possible explanations of the drawings. The enormous amount of labour which Mr. Lukis has expended on the preparation of the book may be estimated from the fact that every single stone, whether standing apart or forming part of a circle, is represented both in elevation and ground plan, all the dimensions being given in feet and inches. In addition, there are plans of the circles, and horizontal and vertical sections of the barrows and mound-dwellings, not only drawn to scale, but furnished with statements of the measurements; and the compass-bearings and the slope of the ground are in all cases accurately indicated. The drawings are, of course, intended for instruction, and not for pictorial effect, and are in simple outline, the elevations being for distinction coloured brown and the ground plans and sections pink.

The stone circles figured in the volume are eleven in number, and vary from a diameter of 36½ feet to one of 148½ feet. Among the most remarkable monuments of this class are those known as "The Hurlers," near Liskeard, where we have three circles in a straight line, which are over a hundred feet in average diameter, and are separated from each other by intervals of about ninety feet. The alignment of the centres is so nearly exact that it is evident that this feature was not only intentional, but was regarded as important enough to justify a considerable expenditure of pains in securing accuracy. The line connecting the centres is moreover very nearly due north and south, and the two outer circles, which are smaller than the middle one, were clearly meant to be of the same size. These facts, which are not without parallels in other districts, will have to be satisfactorily explained before any theory respecting the purpose of these erections can be regarded as established. Another interesting question is the design of the singular arrangement found in "The Stripples Stones," Blisland, where a stone circle was fortified by a circular ditch, outside which is a bank, also circular, but having three demilunar recesses in different parts of the circumference. The Duloe circle, from its altogether exceptional smallness (36½ feet) is regarded by Mr. Lukis as being "probably the enclosing ring of a cairn that has been entirely removed."

The Cornish monoliths are of no particular interest, with the exception of the well-known stone at Madron bearing the Latin inscription *RIALOBHAN CVNOVAL FIL*. There is in Cornwall only one example of the lines of pillars which are frequently found elsewhere. This is "The Nine Maidens," St. Columb (not to be confounded with the

monument at Wendron bearing the same name). The line, which is perfectly straight, now contains eight stones, and is 262 feet in length; but Mr. Lukis thinks it may originally have extended to another monolith which stands 800 yards further to the north. It seems evident that such lines were intended as boundary marks, while the isolated pillars were doubtless designed for some commemorative purpose—in most cases probably sepulchral. Much more noteworthy are the many granite slabs pierced with circular holes, varying from three to twenty-one inches in diameter. A hypothesis which still finds advocates is that these "holed stones" have some sort of connexion with sun-worship; but Mr. Lukis points out that in the most remarkable example the aperture is so much larger on the eastern than on the western side that it must have been intended to be used from the east, so that the actor in the supposed religious ceremony would be turning his back on the rising sun. At Tregaseal there are five such stones arranged in a straight line. The holes are at the same height from the ground, and are nearly of the same size. It may be worth while to notice that the slabs are not so placed as to give a continuous view through the holes, but that the apertures are parallel, looking north and south.

The sepulchral barrows of Cornwall are not very numerous or of great size, and the relics found in them are scanty and of little interest compared with those obtained from the Yorkshire barrows explored by Canon Greenwell and Mr. Atkinson. Several of the Cornish mounds are, however, remarkable for the elaborate masonry employed in their construction, and the stone "cists" which they contain are of extraordinary size. Perhaps the most interesting of all the remains described in the volume is the subterranean dwelling known as Chapel Euny Cave, Sancered. It consists of a tunnel about seventy feet long and seven feet wide, walled and roofed in stone, with two lateral offshoots, one of them opening into a circular chamber fourteen feet wide, which had originally a domed roof. The objects found in the cave indicate a comparatively recent period, among them being "an iron spear-head, iron crook and rivet [trivet?], stone spindle-whorl, black pottery in fragments, animal bones, a piece of red ware resembling Samian, and fused tin." There are several other specimens of ancient dwellings figured in the book, the most remarkable being that at Chysoister, which consists of seven chambers of different shapes and sizes, communicating directly or through passages with a large central court.

Mr. Lukis's unrivalled acquaintance with the facts gives peculiar weight to any opinions expressed by him with regard to the questions in dispute among British antiquaries. There are, however, only one or two instances in which he has departed from his customary reticence on such points, and even in these cases his own views are rather implied than distinctly stated. It may be gathered that Mr. Lukis is opposed to the opinion that any of the monuments known as cromlechs were intended to be exposed to view. Respecting the original purpose of the stone circles, after referring to their frequent collocation in twos and threes, he writes as follows:

"If they were temples, as supposed by some

antiquaries, and not sepulchral enclosures or protection walls for herds of cattle as supposed by others, why should the worshippers have been divided into so many different congregations? The largest of the three circles of Stanton Drew, Somersetshire, was sufficiently capacious to accommodate all the worshippers of the district."

Mr. Lukis does not refer to the theory, which has received respectable support, that the circles were designed as places of deliberative assembly.

In addition to the descriptive articles referring to the several plates, Mr. Lukis has furnished a tabular arrangement of the most important particulars respecting the situation and characteristic features of each monument, with brief notices of the history of its exploration, and—what is especially valuable—a list of the books and articles in which it has been described. Mr. Borlase's *Naenia Cornubiæ* is, however, omitted in the mention of the works which refer to the Chapel Euny Cave. There is also a map of the monuments of the Land's End district, containing two or three blunders of the engraver, which are almost the only faults discoverable in this admirable work. If the Society of Antiquaries is able to carry through its great undertaking in the same thorough manner in which it has been begun, the study of our prehistoric monuments will at last have been placed upon a firm scientific basis. Dreamers will still continue to dream, and doubtless some questions will remain for ever unsolved; but it is not too much to hope that, when the whole evidence has been rendered accessible, the points of disagreement among sober investigators will become few and unimportant.

HENRY BRADLEY.

THE NEWCASTLE SOCIETY OF ANTIQUARIES.

THE Newcastle Society of Antiquaries had a field day on August 14, when Rock, Embleton, Dunstanborough Castle, Craster, and Long Houghton were visited. At Rock, the interest centres in the little Norman church (with its curious monument to Colonel Salkeld, a royalist officer) and the Hall. In the latter, which was rebuilt in the early part of the present century, portions of two older buildings are incorporated—one, the "pele" tower, and, perhaps, an oratory of an early date; the other, the Jacobean mansion, held successively by the Lawsons and Salkelds, and now by Mr. C. B. Bosanquet. At Embleton, as elsewhere in the county, the pele tower, remodelled in the sixteenth century, forms part of the Vicarage house. The church has some fine Norman work, and the modern chancel contains excellent specimens of stained glass by Mr. Kempe. Of course, the great feature of the excursion was the visit paid to Dunstanborough Castle, one of the grandest and most picturesque ruins on the Northumbrian coast. Buck's view is altogether untrustworthy, and Turner's well-known picture does better justice to the scenery than to the castle, which Mr. Bates had some difficulty in accurately describing. Conjecture and inference had to supply the want of reliable data. Archaeologists would do well to diverge from the beaten track, and, quitting the North Eastern Railway at Little Mill Station, inspect for themselves these little visited ruins which overlook the sea from the summit of a basaltic cliff. The castle seems to have been built in the thirteenth, or early part of the fourteenth, century; to have suffered

much in the Wars of the Roses; to have been patched up in the time of Elizabeth only to fall soon afterwards into a state of decay from which it has never been rescued. The gateway, Queen Margaret's Tower above the sea, and the Lilburne Tower on the west, are the most conspicuous features. Within a short walk from the castle is a curious mediaeval building known as Dunstan Hall, or, from its occupant in the seventeenth century, Proctor's Steads. Its claim to be recognised as the birthplace of Duns Scotus is scarcely worth examining; but it possesses some peculiar features worthy of more lengthened examination than the antiquaries could bestow upon it. On the west side is a rather decayed pele tower, and attached to it a Jacobean mansion of no particular beauty. At the east end, however, of the latter are indications of much earlier work; and two lancet-windows or slits in the eastern external wall have been lately brought to light. Much discussion took place upon their significance. Mr. Wilson maintained that much of the stone work had been brought from Dunstanborough Castle, and that these particular windows had been transferred thence to their present position. The improbability of such careful work having been executed for little or no purpose was pointed out by Mr. Bates, who also stated that an Edwardian fireplace attached to the same wall could be seen and was a further indication of its early construction. At Craster (*olim* Crancester)—still the seat of a family of that ilk—the old pele tower is embedded in a modern residence, the vaulted basement being used as a cellar. The church at Long Houghton, recently restored, is very characteristic. A low, massive tower is attached to a really noble building, in which the chancel arch is certainly of early Norman construction. Mr. Wilson, differing from Mr. Longstaffe, held that in it and also in the tower there are distinct marks of Saxon work; but the evidence did not carry conviction to his hearers' minds.

C. J. R.

ART IN LOUVAIN.

Louvain: August 1, 1885.

THE worthies of Louvain are not forgotten in this bigoted and sleepy little city, once so celebrated for art and learning. M. Hennebicq, director of the Academy of Mons, is now occupied in painting a series of decorative panels for the Chamber of Civil Marriage, a large hall on the first floor of the beautiful Hôtel de Ville. This hall has been recently restored in a manner worthy of the magnificent exterior of what is, perhaps, the most perfect and the richest specimen of florid Gothic architecture in Belgium. At one end is a new fireplace and high mantel, with a door on either hand leading into a small ante-chamber, where is a very beautiful fifteenth-century wooden ceiling, the drops on which are ornamented with bosses rudely carved in high relief with scenes from the Passion. At the other end is M. Hennebicq's fine composition of some seven life-size figures, representing Antonia van Rosmael defending the Catholic faith, and expounding the Bible to ministers of the Reformed Religion. The noble widow stands with triumphant finger on the open book, faced by approving priests, Protestants, who cover their faces in confusion, or gaze speechless and confounded at the fair controversialist. M. Hennebicq is a fine draughtsman and colourist, but the picture is perhaps rather too modern in sentiment. The seven panels already completed between the narrow windows on either side of the long hall are charming in conception and colour, and of excellent decorative effect: Quintyn Massys, as a slender youth in leather apron, hammer in hand, before love (according to

tradition) had made an Apelles of him; Dirk Bouts, of Haarlem, whose best work was done at Louvain—a tall, serious, almost stern figure in straight gown and high red cap, just as he stands as servant at the buffet in his celebrated "Last Supper" that hangs in St. Peter's on the other side of the Grand Place; Layens, the architect of St. Peter's Church; Mercador and Justus Lipsius, the learned professor of the university in the sixteenth century; Beyaert, the sculptor, chisel in hand; and a fair damsel who illuminated manuscripts some hundred years earlier.

ANNIE EVANS.

CORRESPONDENCE.

GREEK INSCRIPTION FROM EGYPT.

'Queen's College,' Oxford: Aug. 7, 1885.

A Greek inscription I copied in Egypt last winter was published in the ACADEMY of February 21. It consists of a set of elegiacs engraved on a stone, brought from the ruins of Antinoë, which has been long lying close to a deserted pumping-engine near Mellawî on the western bank of the Nile. The stone has the shape of a Roman altar, but is adorned with two martyrs' palm-branches and a Maltese cross placed within a wreath. The letters are tall, closely packed together, and lightly engraved in the calcareous stone, which makes it difficult to read them. They are similar in form to those of the Brough inscription, and belong to a comparatively late period. As my absence from England prevented me from correcting the proof of the inscription, I now give a transcription of it, supplying missing letters, in the hope that one of the readers of the ACADEMY may be able to identify "the father-in-law Theodôros" mentioned in it. The verses are divided by two slanting lines, which I represent here by an obelus:

Ὁ κλυτὸς ὁ χρύσιος Ἐρ(κου)ρ* . . .
ὁ πρόμος οὗτος † ἐν χρυσῇ στε(φάνῃ)
πολύ τι παμφάνων † τοῦ(το)
γὰρ ἐκ βασιλῆος ἔχει γέρας ἄξιο(ν)
ἔργων † ὅς θῆβη μὲν ἐ(κ)ὰς αὐτ(ὸς)
ἐπέμφε πρόμον † τὸν δ' ἐκυρῶ(ν)
Θεόδωρον ἀριζήλην ἐπ' ἀπῆλ(η)
+ Ρώμης ἀπλοτέρης θῆκατο κηδεμόνα.

The Maltese cross and palm-branches come below the last line. I suppose the "younger Rome" means Constantinople.

A. H. SAYCE.

THE SITE OF FERENTUM (OR FORENTUM.)

Combe Vicarage, near Woodstock: Aug. 15, 1885.

In Dr. W. Smith's *Dictionary of Greek and Roman Geography*, vol. ii. (1854), Mr. E. H. Bunbury writes thus as to the site of Ferentum or Forentum, a town of Apulia, about ten miles south of Venusia:

"It is still called Forenza; but from the expressions of Horace ("arvum pingue humilis Forenti," *Carm.*, III., iv. 16), to whom it was familiar from its proximity to Venusia, the ancient town appears to have been situated in a valley, while the modern one stands on the summit of a hill."

On June 1 Cav. Avv. Alessandro Bozza (formerly in the Italian Ministry)—in whose house at Barile, a town just below Monte Vulture (the ancient Vultur), and between it and Venosa (the ancient Venusia), I had, by his kind invitation, stayed since the evening of May 30—took me to Venosa, and to its old castle, which belongs to a brother of my Barile host. From the top of the castle I had a fine view, comprising Monte Vulture (which I had ascended on May 30), Forenza, and Acerenza

* The traces that remain of these three letters look like κων. in which case the name would be Ἐρκούλιος. The third letter may, however, be μ.

(the ancient Acherontia). While Acerenza, situated "like an eagle's nest" (to use the expression of Macaulay) on its lofty island-like rock, is admirably described, with his "curiosa felicitas," by Horace ("celsae nidum Acherontiae," *loc. cit.*), Forenza is not "on the summit of a hill," but on a plain lying at the foot of a high ridge. In comparison with Acherontia, Ferentum (or Forentum), if on the site of Forenza, might be spoken of as "humile." Mr. Bunbury goes on thus:

"According to local writers, some remains of the ancient Ferentum may be found in a small plain two miles nearer Venosa (Romanelli, vol. ii., p. 236)."

The following is the passage referred to:

"Secondo la riportata topografia Oraziana, nella quale Ferentum è riposta presso Bantia ed Acherontia, non possiamo dubitare, che sia l'odierna Forenza, circa otto miglia al mezzogiorno di Venosa. Essa però era situata alquanto più lontana nel mezzo di una pianura verso Venosa, dove se ne ravvisano i segni, e non già sull'erto colle, dove oggi s'alza Forenza, da non combinare colla descrizione di Orazio, da cui si appellò *umile*, e bassa per la sua situazione" (*Antica Topografia Storica del Regno di Napoli* dell' Abate Domenico Romanelli, Prefetto de la Bibliotheca de' Ministeri e Sociodi varie Accademie, Parte Seconda. Napoli, 1818).

Orelli, who substituted the "Forentum" of Livy (ix. 10, 20) and Pliny (iii. 11) for the "Ferentum" of Horace—Diodorus Siculus having *Φερίντη*—writes thus:

"Forentum, hodie, ut videtur, vicus dictus i *Castellani* sive i *Castelli*, tria vel quattuor mill. pass. ab hodierna Forenza."

Perhaps Ferentum (or Forentum) was originally on the site of the small place spoken of by Orelli.

The village in which I live seems to have been originally in the valley below it. There the church stood, in a field now called Bury Field, in which are traces of the old churchyard; it was rebuilt of the same materials on the high ground above (see Kennett's *Parochial Antiquities*, vol. i., p. 149). In an old map—which is at Blenheim Palace, and which I have seen—the village runs up from the old site of the church, along a lane that now contains but two houses close together, while at some distance two more houses act as another link between the original and the present site of Combe. J. HOSKYNs-ABRAHAM.

NOTES ON ART AND ARCHAEOLOGY.

THE jury in the department of fine art at the Antwerp Exhibition have made the following awards to Englishmen: Sir Frederic Leighton, a medal of honour; Mr. Watts, a medal of the first class; Mr. P. R. Morris and Mr. H. Thornycroft, medals of the second class; Mr. H. Moore, an honourable mention. In addition, Mr. Alfred Stevens, of Paris, has received an extraordinary medal of honour, the highest distinction of all.

SOME of the pictures brought from the Duke of Marlborough by the Prussian Government, will soon be exhibited at Berlin. Among them are the great "Bacchanal Procession," by Rubens; "The Andromeda" by the same artist—a picture which Rubens is said to have kept in his own room till his death: the so-called "Fornarina," and several others.

Two fine mosaic pavements of the Roman period have recently been discovered at Sainte-Colombe-les-Vienne, in the department of Isère. The pattern of one is a vase in the middle, with fishes at the corners; of the other an arrangement of birds in their natural colours, extremely well preserved.

THE New York *Critic* for August 1 makes the following *amende* for a series of attacks which it has previously published against the Egypt Exploration Fund:

"The most recent document in the controversy as to the identification of the Biblical Pithom is a letter of Ebers in the London ACADEMY of May 23. Ebers accepts without reserve, as do all other Egyptologists of note, Naville's discovery of the city at Tel el-Maskhutah, and devotes his letter chiefly to exposing the weakness and unfairness of a reviewer who, two or three months ago, took up the opposite side, with more zeal than discretion. It does not appear that the truth of Naville's identification can any longer be denied; and the matter is one of great and wide-reaching interest. If there can thus come to light a city possessing the name by which it is called in the Exodus, used for the purpose there stated, and even appearing to reflect in the style of its material (though upon this Naville lays no stress) the curious story of the Hebrews' difficulties with their brick-making—then a different kind and degree of authenticity is seen to belong to the stories of the early fate of the nation from what many men have of late been inclined to admit. It will take a long time to work these verifications into ancient Hebrew history, giving them their true place and value there; and as to how much is to be inferred from them, we must be content to wait for their full discussion by special scholars."

WITH reference to his letter on "Berna of Siena," in the ACADEMY of August 8, Mr. Mercer writes that some thirty or forty photographs of Berna's frescoes may be obtained from Lombardi, at Siena—among them a beautiful group adoring the Madonna and Child, in the church of the "Servi," and several from San Gemignano.

Correction.—In the review of Gerspach's *L'Art de la Verrerie* in the ACADEMY of August 8, for "Nisbett" (p. 91, col. 2., l. 14) read "Nesbitt"; delete the comma between Apsley and Pellatt (ll. 21-2); and for "Mostausser" (col. 3, l. 41) read "Mostansser."

THE STAGE.

CONCERNING the new piece which Mr. Wilson Barrett has had the courage to bring out in the very dearest week of the dead season, it seems sufficient to record that it was received with every manifestation of favour. "Hoodman Blind"—for so it is called, after a not very intelligible allusion in "Hamlet"—is a melodrama of the type we should call old-fashioned, if it were not that it has recently gained a fresh lease of popularity. Not a character, not a scene but is perfectly familiar to generations of playgoers. Nor can it be said that any particular ingenuity is shown in the development of the plot, or in the introduction of side issues. While it is unnecessary, therefore, to criticise the writing of the play, we would not deny that the representation of it was efficiently carried out. The beauty of some of the later scenes contributed to the pleasurable impression left on the audience. But something also is due to the energetic acting of Mr. Wilson Barrett himself, to the genial performance of his brother, Mr. George Barrett, and to the graceful personality of Miss Eastlake. The piece would probably have lost more than it would have gained if the parts had not been specially written for the company that acted it.

MUSIC.

GOUNOD'S "MORS ET VITA."

AS the number of novelties to be produced next week at the Birmingham festival is unusually great, and as there will therefore be plenty to write about, we propose to say a word or two in advance concerning Gounod's new trilogy, "Mors et Vita." In a short preface the com-

poser explains the apparently illogical title. In the order of temporal things life precedes death, but in the order of eternal things death precedes life. The work is divided into three parts: the first, entitled "Mors," contains a prologue, followed by an elaborate setting of the "Requiem Mass." The second part, entitled "Judicium," opens with an instrumental prelude intended to depict the sleep of the dead. This is followed by another instrumental movement, in which is heard the sound of the last trump. We then have the judgment first of the elect, and then of the rejected. In the third part ("Vita") we pass from those solemn scenes to the bright vision of the heavenly Jerusalem.

As in the "Redemption," so here, the composer has made use of representative themes. The principal one consists of four notes presenting a sequence of three major seconds. It is intended to express "the terror inspired by the sense of the inflexibility of Justice." It is first heard in the opening chorus, "Horrendum est incidere in manus Dei viventis," given out by voices and instruments *fortissimo*, in unison and octaves. Afterwards it is used with harmonies, and we hear it now in ascending, now in descending, form, and also combined with other melodies. In the opening chorus it is repeated three times in succession, and each time a semitone higher, after the manner of Berlioz in his famous "Judex crederis." We meet with it for the last time in the quartet of the third part, after the words "for the first things are passed away." Another short melodic form, of which much skilful use is made, is supposed to express sorrow and tears, and, by a slight transformation, also consolation and joy. And then there is the "call of the angelic trumpets." Mozart was content with a simple diatonic phrase, but Berlioz racked his brain to produce a novel and startling effect. Gounod pursues a middle course: he adopts an ordinary trumpet call, but imparts character to it by means of his favourite device—a chromatic interval.

From a purely musical point of view "Mors et Vita" is far more interesting than the "Redemption." In both works the composer has endeavoured to bring out and intensify the meaning of the words, but in the later one the technical workmanship is far more conspicuous. As in the "Redemption," so here, there are movements of studied brevity and simplicity, but there are others of large dimensions and elaborate developments. The "Redemption" was after the manner of a sacred drama: "Mors et Vita" is more like an ordinary mass or oratorio. The earlier work stood, as it were, alone; whereas, the later one, especially so far as its first and most important part is concerned, invites comparison with the Requiems of Mozart, Cherubini, and Berlioz. We are not yet in a position to speak of the effect produced by the music; but, if we are not very much mistaken, "Mors et Vita" will rank among Gounod's highest efforts. Chromatic chords and chromatic passing notes are frequent, and at times betray weakness rather than strength, but they are less extravagant and harsh than those employed in the "Redemption." The instrumental movements in the first work were, to our thinking, the weakest portions, but it was not surprising that the composer should fail in attempting tone pictures of "The Creation," the "Darkness at the Crucifixion," or even the "Apostles in Prayer." So in the new work, we feel, although unable to judge of the orchestral effects, that the Prelude, attempting to depict the sleep of the dead, the movements entitled "Tubae ad ultimum judicium," and "Resurrectio Mortuorum" will prove more or less disappointing. Such pieces express either too much or too little, J. S. SHEDLOCK.

SATURDAY, AUGUST 29, 1885.

No. 695, New Series.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscript.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

LITERATURE.

SOME BOOKS ON SHAKSPEARE.

Is an inductive science of literary criticism possible? To this question Mr. Richard G. Moulton boldly answers "Yes" in his volume *Shakespeare as a Dramatic Artist* (Oxford: Clarendon Press). It is his purpose to map out a Science of Dramatic Art, and to give a popular illustration of the principles of scientific criticism by means of certain studies of Shakspeare's plots and characters. Of judicial criticism, which acquits and condemns, which separates good from evil and the higher from the lower, we have had, he thinks, perhaps too much; now we chiefly need the criticism which does not blame or praise, but seeks above all to investigate and understand. As a plea for disinterested, patient, and complete observation of literary facts and objects, as a protest against the solemn dogmatism, or pert omniscience, or pretty absoluteness of members of the critic tribe, Mr. Moulton's argument has much value; and he makes a meritorious effort to think into clearness, to analyse and arrange the various topics which offer themselves to the study of the dramatic critic. But he fails to show that the criticism of literature is an inductive science. Precisely where induction proper begins his examples of scientific criticism stop short. Observation and description are important, but neither is induction. To sit down before a work of Ben Jonson or Shakspeare and examine all its parts, and inquire how each part is related to the rest is admirable, but it is not an inductive process. To gather from the facts a general conception which, as we commonly say, "explains" them is not induction; such an explanation is only a generalised description of the facts embodied in a conception which serves to colligate them. Some critical Kepler, observing point after point in Hamlet's orbit, announces that the orbit is an ellipse; if all the observations coincide with this statement, we may accept it as true, at least provisionally, but still there is no induction. Macbeth, we are told by Mr. Moulton, is a type of the practical man; Lady Macbeth is a type of the inner life. Such formulæ as these serve to colligate certain facts; but, I fear, they tend to make criticism rigid and *doctrinaire*, unless the critic be ever ready to escape from his own hypothesis of Shakspeare's play, and observe the facts anew. In truth, Shakspeare's men and women are not to be expressed in formulæ; their fluent vitality escapes such criticism; they mock your solution from afar with ironical laughter; to avoid the necessity of declaring themselves they will change in your grasp from a man or woman to a cloud, a fire, a wave of the sea.

"People seek a central point in Wilhelm Meister," said Goethe, "and that is hard and not even right. I should think a rich manifold life brought close to our eyes would be enough in itself, without any express tendency, which, after all, is only for the intellect." A rich manifold life brought close to our eyes—that is the simplest and truest account possible of any one of Shakspeare's plays; no other statement will adequately express the facts.

A tendency, an idea, a critical formula is, "after all, only for the intellect." A science of literature may be possible, may be legitimate, but it will miss the special gain which literature brings—the emotional gain, the purification of the passions of which Aristotle speaks in his definition of tragedy. Science, as Mr. Moulton observes, does not recognise a distinction of higher and lower. To it Shadwell, never deviating into sense, is as proper an object of study as Shakspeare; but to approach literature in such a spirit—that which accepts Shadwell as contentedly as Shakspeare—is to lose the proper gain of literature. Where induction may most fitly enter into aesthetic criticism is, first, in the attempt to ascertain the laws of the emotions and to connect effects with their causes in literature and art—to ascertain, for example, the law of the pathetic; and secondly, in the attempt to connect literary or art products with certain states of society from which they spring; but while the intellectual attitude remains scientific the peculiar gain of literature is missed. It would, doubtless, be possible to view our friends and relations as material for an inductive science. We could, doubtless, calculate the number of molecules in a cubic inch of our mother's heart. But it carries us farther to love those that love us, and where we love it is right and natural that there should be a hierarchy in our affections. So with books—

"Round these with tendrils strong as flesh and blood

Our pastime and our happiness will grow."

And the play of passions around what is beautiful or lovable or hateful carries us farther than all knowledge unvitallised by emotion. It is true, however, that we ought to know aright the object of our love or hatred, and Mr. Moulton has good warrant for pleading on behalf of a disinterested and complete study of facts—a study impossible without some restraint of impatient egoism, which is eager to mar the purity of critical discernment. And Mr. Moulton is himself an excellent and original critic, bringing admirably to light new depths of the riches of both the wisdom and knowledge of Shakspeare, and being especially happy in exhibiting Shakspeare's constructive skill in the treatment of plot. No critic of Shakspeare is more fortunate in colligating the facts of a play under an ingenious hypothesis. When we have gained the gain of such an hypothesis, we can dismiss it, and plunge among the crude facts once more. "The Merchant of Venice," "Macbeth," "Julius Caesar," "King Lear," are the special subjects of Mr. Moulton's study; and, if one might venture to be judicial rather than inductive, it would be right to say that the author is a skilful exponent of character, plot, and passion in each of these plays.

The Portraits of Shakespeare, by J. Parker Norris (Philadelphia: R. M. Lindsay), far in advance of the work of Boaden, of Wivell, and of Friswell, leaves little to be desired, except that the material for such a study were of higher artistic quality and of more authentic value. Thirty-three well-executed illustrations make the possessor of the luxurious quarto acquainted with almost every likeness and unlikeness of Shakspeare which he would care to inspect or from which he would choose to avert his eyes, from the Stratford bust to Ward's statue in Central Park, New York. Mr. Norris in his text sets forth all the facts connected with the several portraits—genuine or spurious—fully, exactly, and without waste of words. The work was worth doing, and has been worthily done; but it is a melancholy reflection that of the portraits—upwards of thirty—described by Mr. Norris only two, the First Folio Droeshout and the Stratford bust, are certainly likenesses of Shakspeare, and that neither of these has caught the spirit in the face. The Dutch poet, Bilderdijk, and Robert Southey, in his epistle to Allan Cunningham, were moved to sing their wrath on sight of a collection of their unlikenesses. We can imagine that even Shakspeare's gentleness might give place to humorous indignation were he to set eyes on the Jennings imbecile, the Dunford cut-throat, or the Zincke impostor, who smiles and smiles and is a villain. To Mr. Norris's question, "Shall we open Shakespeare's grave?" I am sentimental enough to reply, Not while Englishmen can defend their dead poet's repose. That skull had a tongue in it and could sing once; no knave shall jowl it to the ground as if it were Cain's jawbone, nor shall any connoisseur poise it on palm, and measure its bumps of ideality and wonder and wit. We are content—we sentimentalists—to imagine in what fashion Alexander, and imperious Caesar, and Shakspeare—higher emperor of spirits—look i' the earth. Besides, if Transatlantic students were to open the grave, who knows but that Shakspeare would have sidled out of his place to make room for Bacon or some politic committee of skulls? Mr. Norris supposes that Shakspeare, lapp'd in lead, may have lain in the earth two hundred and seventy years with face unmarred by time. A king, as he shows, will last you three hundred years, and why should not your poet last you as long? For a few seconds before falling for ever into dust, the face of the royal poet might lie open to the sun, and might submit to the photographer's skill. Heave, therefore, the mattock, and place the camera in position! Why not add that the artist should request the subject of his art to put on an agreeable smile? The reference to Schiller's skull by those who agree with Mr. Norris is an unfortunate one. It was recovered from the *Cassengewölbe* in 1826; the gravedigger could swear to it; Goethe recognised the beautiful setting of the teeth; Schiller's son presented it to August Goethe for the library; comparative anatomists recovered and brought together the several bones; the death was recent, and every means of identification was employed. And now a learned German publishes an elaborate treatise with measurements and illustrations to prove that some eyesless imposter usurped the place

of Schiller, and lies at this moment by Goethe's side in the *Fürstengruft* as one of the lost Dioscuri of his land. What if some Stratford Combe or Quiney, or the asshead of some provincial Dogberry, were to receive the homage of England and the world? While protesting against Mr. Norris's proposal, I must, however, acknowledge gratefully the reverence and zeal with which he has followed the traces of Shakspeare in the hope that we might see him not in the cerecloth, but in his habit as he lived.

Once again—now for a fifth edition—Mr. Halliwell-Phillips has enlarged his *Outlines of the Life of Shakspeare* (Longmans). It is a rich storehouse of accurate information, and promises, as edition succeeds edition, to grow into a picture gallery of old Stratford views. Thoroughly trustworthy, it is also anything but dull or dry. Six sketches of the "Birth-Place Cellar" appear at the close of the appendix. Every other room in the Birth-Place has been materially altered since the boyhood of the great dramatist, but the Cellar remains much as it was in the sixteenth century. I am thankful to have become acquainted with this obscure shrine; yet my enthusiasm does not overflow the bounds. I have long lived under the same roof with Shakspeare—this most excellent canopy the air, look you, this brave o'erhanging firmament, this majestic roof fretted with golden fire; therefore the Shaksperian Mecca, and its Kaaba, the Cellar, move me less perhaps than is meet.

EDWARD DOWDEN.

Russia under the Tsars. By S. Stepniak. Translated by W. Westall. (Ward & Downey.)

It is generally reserved for foreigners to revile a country. Seldom do we find natives abusing the land of their birth. There may be physical peculiarities, particular customs, or national characteristics which the individual may regret, dislike, and inveigh against; but, as a rule, he will acknowledge his own nation to be second to none other, and practically perfect, but for the points he has criticised. From all such prejudices Stepniak appears to be entirely free. He could not have written in a more cosmopolitan tone. There is no evidence of national prejudices, no sneaking fondness for the institutions of his country underlying his attacks. His book is an unimpassioned dissection of the institutions, the people, and necessarily the government, of his own country; and it is a terrible indictment against the existing state of things. No foreigner would have dared, at the present day, to write so frankly about a country not his own; indeed, no foreigner could have seen and mastered so minutely every detail of Russian life and law. The indictment is a heavy one, the charges brought are terrible, and yet the case made out is perfectly good, and the defence very desperate. The Russian Government, indeed, can only plead guilty and urge extenuating circumstances as a recommendation for mercy. What the difficulties of that government are, the contradictions it has to reconcile, the anomalies with which it is surrounded, the impossibilities that are expected of it—these are considerations with which Stepniak has nothing to do. He simply points to the facts, and

practically asks the Russian Government to show cause why it should not be annihilated. If by the present methods satisfactory results cannot be arrived at, that is only a stronger reason why these methods should be changed. We may reply that sudden radical reforms cannot be expected, that history moves by evolution, and that liberty and prosperity are not acquired by leaps and bounds, but by slow, steady, and laborious plodding. Such views Stepniak will accept as probably correct; but he will say they do not apply to Russia.

Where there is no germ there can be no growth. And the policy of "masterly inactivity" only means, and can only lead to, complete stagnation. First sow the seed, see that it gets light, air, and nourishment, and then wait for its natural growth. Talking of Russian Liberals, he says:

"Having made moderatism the basis of their political faith, refusing to admit even in theory the idea of any effective protest against tyranny, our so-called Liberals have doomed themselves to complete sterility. For in a country like Russia, where law violates justice, and justice disregards law, moderatism has no place. All that these Liberals can do is to implore the Government to be good enough to resign; and their shameful servility to the powers that be has alienated them from the best of our Russian youth and all the most potent progressive forces of the nation."

Indeed there are two kinds of growth: there is the "improvement for the better," and there is such a thing as degeneration. In the history of most European nations we can trace the growth of the germ of freedom, we can watch the evolution of constitutional government; but the history of Russia, read in the light of Stepniak's work, is the history of the deliberate extermination of the freedom and independence which Russia formerly enjoyed. The great argument urged in justification of autocracy is of course the plausible statement that the complications of civilisation make it desirable that the business of government should be carried on by technical experts, and that centralisation is indispensable to ensure regularity of working. This is a question to which we shall have, within a very few years, to pronounce a definite answer in England; but the fact remains that in Russia the bureaucratic system has proved a failure. The results of the present régime are—no contemporary literature, no press, no education, no industrial or commercial achievements, no scientific triumphs, barrenness on every side. If we are to believe Stepniak, the policy of the government has been to discourage education by all kinds of difficulties, and if it were possible to crush it out. This is only logical. When people are not permitted to use their brains it is not only unnecessary, it is even dangerous, to educate them. The Emperor Nicholas consistently acted up to this principle. It is probably owing, in a great measure, to the lamentable weakness of Alexander II. that a return to the old tactics has become necessary. A government that is afraid to educate its subjects, lest peradventure they should cease to see its utility, can not be regarded as a success. The question is, how can such a government be overthrown? By constitutional methods? What are they; and how are they to be employed in a country where there is no liberty

of the press, and where the will of the autocrat is superior to any established law? This last consideration makes life particularly uncertain in Russia, for, as Stepniak points out, no one is safe. Anybody may be exiled to Siberia or imprisoned by "administrative procedure," that is without trial; and it frequently occurs that people are exiled by mistake. They are taken up on suspicion, and punished, in place of others who have possibly escaped. When the mistake is discovered, rather than acknowledge it, the police allow their victims to remain under the delusion that they are suspected. There is a simplicity about such a system which has its grimly humorous side, and its drawbacks. Obviously, from Stepniak's point of view, the only remedy is revolution. But again comes the question of how, where, and when. Towns there are none of sufficient importance to allow an urban insurrection much influence over a widely scattered rural population of eighty millions. A peasant war is out of the question. The army is the only vulnerable point in the empire; and this view, which many English students of the Russian revolutionary movement have taken all along, Stepniak fully adopts.

This is the spirit which underlies the book. These are the practical suggestions that we can gather from it. They are hinted at rather than plainly laid before us, because the habit of writing for the censor is so strong with Russians that they have lost the power of expressing themselves openly. The Russian is allowed to discover between the lines the real meaning of apparently inoffensive sentences, in which the censor can find nothing to suppress. The first volume reads like a novel—very much better than the majority of novels—and is highly sensational. It is this sensational element which may possibly lead an Englishman to distrust the author's veracity. This is unfortunate, for there is very little exaggeration, if any; indeed, in some respects, Stepniak might have heightened the colours and "piled on the agony" much more before he would have overstepped the boundaries of sober fact. The case of No. 39 is not at all imaginary. I myself knew a young lady in Moscow who had been guilty of the serious misdemeanour of founding a free school for poor children, whom she herself instructed in the elements of knowledge. Whether she instilled into the minds of her pauper pupils the rudiments of Nihilism, or otherwise "compromised" herself, I never learned; I only knew that she mysteriously disappeared, and I was informed that she had been fetched away from her father's house one night by a party of police, nor have I heard of her since. Needless to say that the result to her parents (she was an only child) was disastrous. Russian friends of mine, by no means "advanced," but sober members of the bureaucratic class, have told me they could not say at what hour or for what reason they might not be sent off to Siberia by administrative procedure, without any vexatious ceremony. A feeling of insecurity is necessarily generated by such a condition of affairs, and this feeling frequently develops into an extraordinary recklessness, somewhat perplexing to the foreigner.

The picture of Siberia which Stepniak

gives us differs materially from that held up in Dr. Lansdell's interesting *Through Siberia* (see ACADEMY, February 11, 1882). Dr. Lansdell saw everything through the rose-coloured spectacles of the official authorities, and everything was made nice for him on his way; for, as Stepniak truly says, the Russian Government dread foreign comment much more than native criticism. The latter can be suppressed, the former cannot. Besides, Russia likes to pose as an enlightened, humane, and civilising power. We have the authority of Prince Krapotkin on Stepniak's side; but, of course, it is difficult to form a just estimate of a place from which so few ever manage to return. The vulgar brutalities that Mr. Lansdell looked for may not be practised; but there is no reason for disbelieving Stepniak's description on that account, according to which the old, coarser methods have been replaced by a cruelty all the more oppressive because more refined. An interesting part in this section of the book is the description given of what is called a hunger strike. The prisoners resolutely starve themselves till the concessions they asked for are granted. This system implies an amount of heroism on the part of the prisoners worthy of the greatest admiration, and in the result reveals a refinement of cruelty among the officials bearing out the suggestion that the prison authorities have changed their methods.

The chapters on education and the press are excellently written. Here and there the reader may perhaps stumble across a piece of unconscious exaggeration, but the main facts are correct. Education in Russia is a huge practical joke played by the government on a public whose sense of humour has not been sufficiently developed to appreciate the fun. The great object is how not to do it. Boys are sent to school to have their intellects fogged by mechanical exercises in Latin and Greek, so that by the time they arrive at man's estate they may have lost the power of thinking independently. The article on the press is equally amusing. An instance is given of a daily paper at Tiflis which, owing to the decision of the government that all its proofs must be revised by the Moscow censor before going to press, can only appear once a year. There will also be found a chapter devoted to the commercial operation of Russian banks. But there is one great omission. What are we to say of a work on Russia under the Tzars that does not deal with the army? Perhaps Stepniak did not wish to advance matters. This chapter will probably appear in a later edition, when the army may be more ripe for discussion.

Though the backbone of the book is composed of a series of letters published at intervals in the *Times*, the materials have been so well woven together that this fact is not apparent. Stepniak has been fortunate in securing the services of so good a master of English as Mr. Westall, whose translation is bright and readable.

E. A. BRATLEY HODGETTS.

The Renaissance in France. An Introductory Essay. By A. Tilley. (Cambridge University Press.)

At the close of what has long been among the

classical histories of the Italian Renaissance, Voigt insisted somewhat peremptorily on the relatively feeble interest of Humanism in the Latin lands, where it involved in some degree only the gradual restoration of a half-obliterated tradition compared with that of Germany or England, which had to overcome the profounder resistance of an alien race. Such a distinction, from the laborious historian of the most Latin land in Europe, savoured, perhaps, of the bias of a satiated specialist. But, Italy apart, and looking only to the opening phase of the movement, the fact is beyond question. Whether or not the shock of native and Humanist culture was more violent in Germany than in France, it had certainly evolved, soon after the year 1500, a far more striking discharge of literary electricity. North of the Alps, at any rate, the genius of Rome proved most rapidly fertile where there was least of Roman blood. The descendants of the conquerors of Varus might show few very scrupulous scholars, few laborious compilers of Ciceronian phrases, but they were the first to turn mere antiquarianism into a vigorous original literature, and to create, if not a resuscitated Cicero and Plato, Terence and Lucian, at least no bad substitute for what might have been looked for if any of these, according to Frischlin's pleasant fancy, had craved Pluto's leave to "absent them from felicity awhile" for the study of the manners of the modern world. Neither France nor Spain could have offered Plato any "Republic" so congenial as the *Utopia*, nor Lucian any satirical dialogues so worthy of him as Hutten's, nor Terence Latin comedies so much livelier than his own as the *Hecastus* and the *Aclostus*; nor even Horace any Odes so delicate and sparkling as those of Celtes.

Time, however, had in store a splendid compensation for the relative tameness of the early French Renaissance. In England the main currents of national literature took a direction only partially determined by Humanist ideals; in Germany the Humanist movement abruptly succumbed to the turbulent offspring it had helped to "hatch"; France alone produced in Rabelais, the Pléiade, and Montaigne, a literature which was at once steeped in Humanist culture, and profoundly national; while, by an equally rare good fortune, Protestantism itself, too often a very stepmother of the higher poetry, yielded in the hands of d'Aubigné and Du Bartas inspiration of a kind only to be paralleled in Milton. The connexion of France with Humanism was, like most intimate unions, not to be judged by the *éclat* with which it opened, but by its potency in bringing to the birth what was most vigorous and original in each.

This peculiarity of the French Renaissance makes Mr. Tilley's Introductory Essay more valuable for what it promises than for what it actually performs. Dating the decisive opening of the movement at the accession of Francis, he proposes in a future work to write its history at large; and, in the meantime, offers the present volume of two hundred small pages, which contains, besides a general discussion of the scope of the Renaissance, chapters on French mediæval literature and learning, the early annals of the Paris press, and a tincture of political history. On the

opening chapter space forbids us to say more than that anyone who defines the Renaissance as "the transition from the mediæval to the modern spirit," owes his readers a far more exhaustive and luminous definition of these vague and pretentious terms than Mr. Tilley has given. And, to touch merely one detail, is there not a certain obliquity in the sort of criticism which suggests that "the Reformation was not primarily a moral movement" (we do not criticise the conclusion), because John Hawkins "inaugurated the slave-trade," and Ulrich Hutten wrote a treatise *De Guicaco* not wholly inspired by a disinterested taste for natural history?

The late rector of Lincoln once prescribed for a young graduate who was bitten with the idea of writing a life of Selden: "Sit down for twenty years and read the whole contemporary literature through, and then you may begin to think of it." It is this heroic ideal of scholarship, this generous prodigality of labour, that we miss in Mr. Tilley's following chapters. His canon appears rather to be: "Read as much as possible of your immediate subject for yourself; for the collateral and introductory parts use the best text books, and get the highest authorities to look over your proofs." No great book was ever written by that method. The present one certainly contains a fair first-hand study of the beginnings of the French Renaissance, but we should not suspect Mr. Tilley of being on very intimate terms with that of Germany, England, or even Italy. He deals too exclusively with one country, and with one city. The excessively long chapter on French mediæval literature—the close of which is by a bad piece of construction treated over again in the last chapter—hardly compensates for the singular neglect of the Italian Renaissance, the foundation, in spite of all local differences, of the Renaissance everywhere else. Scarcely a hint is given of its relatively immense contributions to the presses and the libraries of Paris, long before the golden days of Francis;—of Boccaccio's *Fall of Princes*, and the *Decameron* itself, of Poggio's *Facetiae*,—one of the very earliest Parisian prints—and Aeneas Silvius's striking tale of *Euryalus and Lucrece*; of Filelfo's Satires, and the Eclogues of Petrarch and Baptista Mantuanus; of Valla's *De Elegantia Linguae Latinae*,—a classic manual in every country to which Humanism penetrated. The whole chapter on mediæval learning, again, though good in its way, is rather unsympathetic, and fails to distinguish the veins of positive and fruitful knowledge which were interwoven in the mass of arid speculation, and which had more to do with the birth of Humanism than Humanism was at all willing to allow. The influence of Paris University certainly, on the whole, told heavily against the new learning; but, as the mother of the entire university system of Germany, its share in Vienna and even Erfurt is as real, though less palpable, than in Cologne and Louvain. Through Gerson's great predecessor, Langenstein, who was scarcely less remarkable as a mathematician than as a theologian, Paris had indeed directly shared in the establishment of the first, the earliest of all transalpine universities to court the new learning, though it is true the courtship did not lead to a permanent union. Strangely meagre, too, are the

glimpses at the provincial life of France, which at so many points affected the chequered career of the French Renaissance: literary Lyons, already preparing to be a fit sojourn for Dolet and Rabelais; Toulouse, to which the immortal Obscurity of Cologne was light itself; Touraine, where Jean Fouquet was bringing painting to the service of the Renaissance of letters; Orleans, where Nicholas Beraldu, the cherished friend of Erasmus and the master of Dolet, professed law in a fashion which inspired so stout a Humanist as Badius to hail him as the future purger of the "sacrae leges."

Space forbids further detail. We should be sorry to convey the impression that Mr. Tilley's book does not contain much hard and honest reading, and careful, though not very original or striking, exposition. Our quarrel with it is not that it is not all that it pretends to be, but that it does not "pretend" to be much more than it is. It is the sort of history which men conceive in a genial moment over a volume of Rabelais (with or without the "bottle of Chablis") and carry out industriously enough, with much turning over of text-books and dipping into original texts, but with little of the prolonged effort of combined intellect and imagination, *sich in die Geschichte hinein zu leben*, of which alone great histories are born. At the same time we sincerely trust that Mr. Tilley's somewhat doubtful promise of a sequel may sooner or later—only, in the name of Horace and Pattison, not too soon—be fulfilled.

C. H. HERFORD.

Studies Re-studied. Historical Sketches. From original sources. By Alex. C. Ewald. (Chatto & Windus.)

THE authors are always grumbling at the publishers for pushing their books, like quack medicines, by labelling them with vulgar and bombastic titles. But the publishers know best. Between them and the public there exists a secret understanding, as between business men, into which the man of ideas cannot enter. A few readers—myself among them—would have at once settled down to a courageous study of "Historical Sketches from original sources," and at least have given it a fair trial. But then we are few, and mostly shabby folk who read but do not buy, while the Mob Regnant would have spurned the horrid dry rubbish. "Studies Re-studied," "Patches Re-patched," "Heel-taps Re-tapped"—we catch the useful hint at once. As the puff has it, "Reader, do you suffer from"—well, a sort of sinking feeling at times, as though for very decency's sake you ought to read something more solid than novels? If so, try our new Historical Preparation—warranted solid ingredients—agreeably flavoured—recommended to ladies—children like it, &c. And so long as the buying public demand this stuff so long must the authors supply it; and it is really very good of the publishers to mark the goods in plain figures, that we who do not like them may leave them alone, which is precisely what we are about to do here. The Many-throated never reads the ACADEMY; those who do want either accurate learning, though sometimes couched in barbarous German, or else fine writing, even though it be about

trifles. They do not want *Studies Re-studied*, or to hear more about them than that they are what they are, namely, magazine articles of the usual popular style. A few lines in proof of this, and no more need be said.

Yet, to prevent misunderstanding, be it understood that all this implies no impertinent reflections on Mr. Ewald. His papers are an undoubted success, and cleverly adapted to their purpose. What is more, they each contain a core, often small enough, of unpublished matter, which we account for thus. Mr. Ewald is evidently connected with the Record Office or British Museum, and in the course of his researches he picks out any interesting little document. These we should have welcomed in *Notes and Queries* or in a brief communication to some historical society. Instead of this, he has woven round each the flimsy meshes of a Neo-Macaulay essay—the motley tissue of flippancy, smartness, familiarity, irrelevancy, and random errors which the slaves of fashion try to enjoy under the name of popular writing. I only wish I could read it through, for there are many interesting facts, and very carefully worked out, embedded in the work. For instance, the minutes of the council of October 22, 1688, are of great value; and the paper on "The Rye House Plot" throws new light on a difficult question.

Not to pick and choose, let us take the first paper, "A bas les Juifs," and from one learn all. In this history of the Jews in England I have not found anything new of any moment, and it is apparently founded on the old work of Dr. Tovey. It begins with three pages of the old leading article on the modern Jewry, which recurs in the daily papers whenever a Hebrew of note is murdered or ennobled. Then comes the obsolete enquiry, which smacks of Tovey and his times, as to our Jews in Phœnician and Roman days. Mr. Ewald thinks the Roman legions contained many Jewish recruits, and that "it is probable" Caesar's Jews settled in Britain. "A curious discovery supports this assertion." In the seventeenth century was dug up "in Mark Lane (the place where the Romans"—why the Romans?"—used to barter their goods, now called Mark Lane) a strange Roman brick," with "a bas-relief representing Samson driving the foxes into a field of corn." Then follows some childish ruminations of old Leland about the wanderers from the destruction of Jerusalem recording in London the story of their deliverance from the Philistines. Note that this brick tale is here inserted as history. Leland is merely quoted afterwards as "commenting" on it. I suspect the whole affair comes from Leland. If so, it should have been thus stated, and the reader would lay the Samson nonsense to Leland, and not to Mr. Ewald, as he may now fairly do. If better authority, or even the brick itself, exists, we ought to have been told. At any rate, I feel pretty certain that if I saw that brick I should find it only represented Bacchus and his pards, or Acteon and his hounds. In fact, there is not the tiniest shred of proof of a Caesarian Jewry; it rests on the old-fashioned historians' mania for beginning before the beginning. But these offhand random remarks are innocent compared with the perniciously wanton remarks which follow

next. "By many antiquaries and ethnologists"—thus he dignifies a few muddled fumblers—

"it is supposed that the Welsh are the descendants of those Jews who at this time found a home in the Principality. [Not a word of protest or doubt—indeed he goes on to bolster up this monstrosity on his own account.] Certainly the physical attributes of the Welsh—their dark hair, olive complexion, and often beaky noses—favour this theory, whilst their language possesses numerous words of Hebrew origin, not to say anything of the corruption of purely Judaic patronymics, such as Levi's-son into Lewis, David's-son into Davis, and Jonah's-son into Jones."

After this precious display of erudition, he skips gaily off to the Saxon period, leaving these pestilent errors to incubate in the mind of the light reader, like the butterfly which has just deposited nine eggs on my pet nasturtium. Of course, one feels that Mr. Ewald does not seriously mean what he says (if he did, I would ask how he explains Williams)—in fact, knows just nothing at all on the subject; but he purloins these frantic ravings from some old book or other and—well anything will do to pad an article. As I know of no lower depth to which critical imbecility can fall than Ten-Tribism, I am ashamed to drag these matters into a serious review, and will not pursue the Jews and their volatile chronicler any further.

Among the many flattering notices of Mr. Ewald's previous works which appear on a flyleaf, the ACADEMY is conspicuously absent. May it remain so. I should indeed be vexed if any words of mine were ever quoted in praise or even condonation of a historical method which I reasonably condemn, and that conveyed in a style which I detest. After all, it is as easy to do the right thing as the wrong, if one knows oneself. Let him who has access to facts record them carefully, arrange them logically and handily—no false shame about drudgery—it is a grand work, and needs no flashy padding to set it off. Then let him who can—and nobody else—weigh those facts, reason on them, and draw conclusions. Lastly, let him who has the bright fancy and the graceful pen of the ready writer familiarise, popularise, re-present, and bring home to our minds those facts and conclusions, at once teaching us and entertaining. Then would dawn the literary millennium, when every cobbler should stick to his own particular last, when the grand work of recording human history should go steadily on—and Mr. Ewald, too, should help, as I am sure he well can—when no more bad books should be written, and the ignoble army of reviewers be improved off the face of the land.

E. PURCELL.

THE HIBBERT LECTURES, 1885.

Lectures on the Influence of the Apostle Paul on the Development of Christianity. Delivered in London and Oxford, in April and May, 1885. By Otto Pfeleiderer. Translated by J. Frederick Smith. (Williams & Norgate.)

WHILE our English divines are congratulating themselves on the death and burial of the Tübingen theology, German theologians of the liberal school, like Prof. Pfeleiderer, seem to be quietly going their way, quite uncon-

scious of any such melancholy event having taken place. Not, of course, that Prof. Pfeiderer is a blind follower of Baur, or adopts, without modification, all his conclusions. He only believes, as many others do, that it was that great scholar,

"distinguished equally for his learning, his critical acumen, and his constructive genius, who first succeeded in for ever scattering the thick mists of traditional illusion which had settled over the early years of our religion, and in obtaining a connected and critically established view of the actual development of primitive Christianity, and especially of the decisive part Paul took therein. However, much," he adds, "there may be in the results of his labours to correct in detail, at all events they supply the solid groundwork upon which the scientific examination of primitive Christianity has been since building."

These words, occurring near the close of Prof. Pfeiderer's last lecture, at once express the spirit in which he has worked, and indicate the line of thought he has followed. The first lecture, accordingly, puts before us the first Christian church and the Apostle Paul in their profound antagonism to one another; and, while protesting against any such extreme view as would make Paul virtually the founder of Christianity, at the same time maintains that without him it would never have assumed the character of a universal religion. This, of course, is to reject the mythical history of Peter as contained in the Acts; yet the Hibbert lecturer considers that the account of the Council of Jerusalem in the Acts is not inconsistent with the statements of Paul in the Epistle to the Galatians, but rather that the two supplement one another. Paul's conversion, it need scarcely be said, is treated from a purely naturalistic point of view, unless, indeed, the supernatural shall be thought to be saved by the remark that however that event is to be explained, and quite apart from the hypothesis of an "objective Christophany," it remains certain "that it was God who in the soul of Paul caused a light to shine to give the light of the knowledge of the glory of God in the face of Jesus Christ." And as the conversion is psychologically explicable in connexion with Paul's life, so is his doctrinal system assumed to rest on the basis of his early Pharisaic training. This subject is ably dealt with in the second lecture, in which it is shown that Paul simply adopted the Rabbinical theory of substitutionary atonement, according to which the sufferings of the good were always believed to have a vicarious efficacy, connecting, it, however, with the doctrine of the disciples' union, through faith, with the risen Christ, by which all believers become "sons of God." Christ was, in Paul's view, the celestial man, the antithesis of the earthly Adam. But whether Paul ever calls him "without reserve 'God who is over all'" is at least a disputed and disputable point; and the passages cited by Prof. Pfeiderer [1 Cor. viii. 5 (?6); 2 Cor. iv. 4 (?5)] in support of this reading of Rom. ix. do not seem to have any decided bearing on the question.

From "the Conflict of the Apostle to the Gentiles and the Jewish Christians," which forms the subject of his third lecture, Prof. Pfeiderer now passes on to treat in the fourth of "the Reconciliation of Paulinism

and Jewish Christianity." And here several important books of the New Testament come under discussion, with results not easily reconcilable with the comfortable theory that the Tübingen theology is dead. The Apocalypse is not, indeed, regarded as representing the views of the extreme Judaists—circumcision, for instance, is never insisted on—nor is it the work of the Apostle John. Its Christology is closely akin to Paul's, and had its origin at Rome in Pauline influences; but its antagonism to the extreme Paulinists, and even to the Apostle Paul himself, is, nevertheless, very strongly marked. On this last point, indeed, Prof. Pfeiderer might have expressed himself more decidedly than he does, for in saying that Paul's condemnation of eating things sacrificed to idols is completely ignored by the author of the Apocalypse, he seems himself to forget that almost in the same breath in which Paul forbade this indulgence (1 Cor. x. 21), in the case of public festivals to the gods, he practically sanctioned it when he said, "Whatsoever is set before you, eat," and that at the table of an unbeliever. With the Apocalypse, as indicating the same tendency, though there is here to be found no trace of the Pauline Christology, must be taken the Epistle of James, in which Prof. Pfeiderer certainly does not hesitate to see a direct attack on Paul's doctrine of justification by faith.

Particularly interesting from this point of view is the treatment of the Gospels. The lecturer sets little value on the tradition which ascribes our second gospel, indirectly, to the Apostle Peter, whose interpreter Mark is said to have been. On the contrary, this work, with its depreciation of the Twelve, and especially of Peter, is distinctly the Pauline gospel. Not the less, however, may it have come from the pen of Mark, Paul's companion, who was with him during his imprisonment. The Gospel of Mark was thus "a reply to the glorification of the Twelve in the Apocalypse, at the cost of the Apostle to the Heathen," but was itself replied to by Jewish Christianity, in the Gospel according to Matthew. The Gospel of Luke was, of course, the gospel of reconciliation. The Epistle to the Hebrews and that to Barnabas, as well as the deuter-Pauline Epistles to the Ephesians and Colossians, fall now to be treated under the head of "Paulinism and Agnosticism"; while the sixth and last lecture traces, in the Epistle of Clement, the Pastoral Epistles, and the pseudo-Ignatius, the transformation of Paulinism into Catholicism, discusses the perversion of Paulinism in Augustine, and its re-appearance in Luther, and distinguishes its eternal from its perishable elements.

This brief summary, it may be hoped, will sufficiently indicate that these lectures contain a great deal of very interesting and valuable matter. If they are necessarily a little superficial in their treatment, they will still be welcome to many as containing a restatement, in a shorter and more popular form, of the views worked out in greater detail in the author's well-known treatise on Paulinism. Prof. Pfeiderer, as an independent critic, has not shrunk from applying the principles of the Tübingen theology to a fresh investigation of the early Christian records; and the results at which he has arrived, whether they shall be accepted in their entirety or not,

must be examined with the respect always due to learning, ability, and candour. The book, I may add, if showing no extraordinary insight into the mind of the great apostle to the Gentiles, at least offers us an intelligent criticism of his doctrinal system; and, if it cannot boast any special charms of style, it is, nevertheless, written in excellent English, which stands in no need of the apology made for it in the first lecture. On the title-page, however, it is said that the work is "translated by J. Frederick Smith," from which it would seem that we have not the lectures exactly as they were delivered. However that may be, thanks are due to the Hibbert trustees for this important addition to their valuable series of lectures.

ROBERT B. DRUMMOND.

NEW NOVELS.

The Ill-tempered Cousin. By Mrs. Elliot. In 3 vols. (White.)

The Heir Presumptive. By Florence Marryat. In 3 vols. (White.)

Mrs. Hollyer. By Georgiana M. Craik. In 3 vols. (Bentley.)

Mother Darling. By A. S. Bewicke. (Field & Tuer.)

The Cabman's Daughter. (Maxwell.)

A Summer Day-Dreamer. By Julian Ord. (Simpkin, Marshall & Co.)

Mrs. ELLIOT made her mark some time ago as a bright and amusing writer of travel. She has a rich talent for description, and possesses a happy faculty of drawing out the romantic associations of old-world places. We do not think she was well advised in straying out of the path in which she had won distinction into the realm of fiction. As a novel *The Ill-tempered Cousin* is disfigured by serious blemishes. The characters have a general lack of reality, and the narrative is somewhat disjointed. On the other hand, there are descriptive passages of much intrinsic merit, and in Mrs. Elliot's happiest manner, though they impede the action and occupy a disproportionate space. We may instance her picture of Twickenham as it was in the days when Swift found Pope and his favourite spaniel upon the trim-kept lawn. Or, again, the sketches of the Berkshire scenery surrounding Lady Danvers' house are refreshing. But to terminate the view from this Berkshire house with "a wide-stretching level horizon, high above which rolled the sea," is taking a considerable liberty with geography. "The Ill-tempered Cousin" who gives her name to the book is the daughter of an Anglo-Indian and of a "Brahmin Princess." Of course, Miss Escott is gifted with a fatal beauty, besides being full of waywardness and strange impulse. She falls in love at first sight with the hero, who strikes us as a very irresolute and procrastinating young man. Mr. Maitland is forbidden to return her affection by a vulgar and unreasonable mother. Much as the great historian of the *Decline and Fall*, Mr. Maitland "sighs like a lover and obeys like a child." Gibbon, however, did not leave a broken heart and a mortified spirit behind him. Unsophisticated Miss Escott is naturally unable to understand her English lover's temporising, and is maddened, more-

over, by anonymous hints proceeding from a very disagreeable person who herself worships the hero, and adopts a very direct way of expressing her passion. The inevitable conclusion is not a very satisfactory one, but Mrs. Elliot manages it fairly well. There is a pleasant English girl given to climbing trees in strong contrast with her ill-tempered cousin; and the humour which lights up her *Diary of an Idle Woman in Spain* does not desert Mrs. Elliot in her description of Mr. Winter, the zealous musician, speculator and hunter after *bric-a-brac*. But we have too much of his broken and Teutonic English.

In *The Heir Presumptive* Miss Florence Marryat gives us another of her fluently written novels. The idea worked out is a tolerably familiar one. A girl with naturally affectionate instincts is schooled into an artificial cynicism by a worldly mother, and marries a man for his title whom she knows to be incapable of giving her love. In Miss Marryat's language Miss Ford declares herself with some vigour, and sufficient vulgarity, "not one of those spooney girls who are always talking about love, and men, and kisses and all that kind of rubbish"—a statement which rather confounds her father, a simple old Indian officer. But as Lady Mountcarron, and abandoned to *ennui*, she has the overmastering need of love dangerously suggested to her by his lordship's cousin, The Heir Presumptive. The part Mr. Brooke plays is hardly creditable to his manliness or his gratitude. Fortunately, lingering good feeling and the recollection of her father save Lady Mountcarron at the critical moment. Her lover, too, is brought to a sense of the irreparable injury he was about to inflict upon her by a timely experience. Miss Marryat is never scrupulous about extraordinary incidents and situations to serve her purpose. Having got the lovers so far, and having set their feet in a slippery path of duty, the next thing, of course, is to get rid of Lord Mountcarron, and reward them for their virtue and their patience. Miss Marryat goes about this in a very prompt and cold-blooded manner. A hunting accident is an expedient always ready to hand. So Lord Mountcarron is mounted upon an ill-tempered beast which conveniently bolts with him over the edge of a chalk-pit, and the lovers have their reward. Apparently the reader is intended to draw a moral from this conclusion. But we do not think that the story is likely to work in the interests of morality. Miss Marryat's sentiment strikes a false note, and her cynicism is hardly refined.

The author of *Godfrey Helstone* introduces us to a large gathering of young people in a hospitable country house. As the party is allowed considerable freedom, and conveniently divided up into pairs, a good many incipient flirtations soon begin. Mr. Keith Hollyer, a young giant with a taste for poetry, who is going out to seek his fortune in the Californian gold fields, is the best of the men, and his simple and ingenuous character is certainly well drawn. Who will win this prize? Such is the question we naturally put to ourselves, and the title of the novel suggests. We are not kept long in suspense about an answer. But a dangerous Will o' the Wisp in the person of Miss Sylvia

Shepton comes athwart the course of true love. While Mr. Hollyer is away in America, the object of his devotion, who has some of the characteristics of Becky Sharp, very adroitly builds up her fortunes. He returns to find her a fashionable widow, and fights against the disillusionment as obstinately as he can. Then Mr. Hollyer, with all the clumsiness inherent in his sex, pours out the tale of his sorrows into Miss St. John's ear, a confidence which she finds provoking for more reasons than one. However, misunderstandings are ultimately cleared up. It may be gathered from this that the story makes no pretence to a plot. But the characters, though slight, are not unskillfully delineated; and the novel, which is written with considerable freshness, is redeemed from the commonplace by one or two touches of genuine cleverness.

"This story," so Miss Bewicke adds in conclusion, "the critics must condemn as written with a purpose." A good deal of fiction of no mean order has, however, been written with a purpose. But it is always exposed to the risk of the author unduly subordinating plot and character to the moral which has to be conveyed. Miss Bewicke has not altogether escaped this danger. As a work of fiction her story can hardly be successful. As a piece of special pleading it is not ill calculated to enlist sympathy against the testamentary power which allows a man, under certain circumstances, to dispose of his children's guardianship without reference to the mother. Miss Bewicke constructs an extreme case, and Lady Clara Hastings certainly appears to give all possible hostages to fortune. Apart from this the Hon. John Portadown and the typical old Family Lawyer are agreeable characters enough. But we have a low opinion of Mr. Snagger's astuteness. The book is brightly written; but to compare the heroine at one time to Lionardo da Vinci's Medusa, and at another to Guido's Beatrice Cenci, will produce in most people a contradictory impression.

The Cabman's Daughter cannot boast of much originality or much ingenuity of plot, but it is a pleasantly written little book. The Reverend Jabez Judge and his daughter, who deserts the hero in order to fling herself into the arms of his father, are conventional but exaggerated portraits, and the attached housekeeper, who addresses her master as "a gooseberry-eyed old Don Juan," somewhat exceeds even the freedom of speech indulged in by her class. The hero himself is saved, at the last moment, from throwing himself over Waterloo Bridge by a cabman, who seems rather out of place in the ranks. The cure which the cabman's admonitions had begun is completed by his daughter, and Mr. Storam is led into the paths of a truer religion and a sincerer love by the same agency. Things are then set right by the prompt intervention of a paralytic stroke which delivers Mr. Storam, senior, from his entanglements and reconciles him to his son.

Mr. Ord insists, in rather an obscure preface, that his three stories are studies taken from life, "the life we banish from the stage and from the novel as lacking interest and dramatic force to-day." After this, it is rather disappointing to find that Mr. Ord's themes

are the most common-place of fiction, and that his treatment is only singular in an attempt to deck them out in semi-philosophical trappings. To take the second story, we are beset at the beginning with a prolix explanation, which is no explanation, of what is meant by force of character. Than this quality, or rather something very much like its reverse, is illustrated in a Mr. Reginald Eden. The other stories have similarly discursive prolegomena. Mr. Ord once chides himself "for arguing, or rather non-arguing, in a circle." There is a good deal of this in the book. His descriptions of scenery, however, would not be so much amiss if they were not laborious enough to suggest the estate agent's catalogue. A little selection and elimination is greatly wanted.

C. E. DAWKINS.

FOREIGN LITERATURE.

La Marine Française sous Louis XVI. Par A. Moireau. (Paris: Hachette.) If a historian were to write anew the grand dead-roll of the British navy, he might find little difficulty in dividing his story into three periods. These epochs of development would fairly correspond with those of a man's life growth, if, with George Eliot, we remember that natural growth eludes the barriers of system. Thus, the first period—infancy—would end in the earlier Tudor reigns, comprehending some six hundred years of slow advancement, from the time when the king owned only his "esnecca" (as seems probable) to that in which he had a small squadron of well-built "king's ships." Then we were, as Shakspeare words it, "that nook-shotten isle of Albion." The end of the second era might safely be placed at the Revolution, embracing roughly two hundred years. It was the transition stage of youth, when growth became somewhat erratic and when the experiences and responsibilities of "plantations" and an over-sea trade were first felt. Lastly we have the time of steady increase of strength and march of mind, betokening no break of continuity or of progress—namely, the age of manhood, not yet at its climax, we trust. Thus the secret of our naval strength is manifest. Steady growth, though slow, has been England's motto for centuries, and she still wears it on her crown of glory. When we turn to the French navy the case is different, and M. Moireau places the truth before us when he writes:

"L'histoire de notre marine nous offre donc, au lieu du développement continu qui a porté la marine anglaise au point de perfection où l'ont vue arriver les temps modernes, une série alternée de périodes brillantes et d'éclipses plus ou moins prolongées."

Richelieu, with ambitious purposes in view, set about forming a state navy on a permanent basis; but what he had accomplished was completely wrecked by the neglect of his successor, the "red" cardinal. Colbert's elaborate plans and skilful organisation were carried on and worked out by his son, only to totter into ruin when placed under the care of Pontchartrain and Fleury. So things continued. The Treaty of Paris left Great Britain in the plenitude of her power, with a fleet formidable enough to support increasing commerce and an expanding colonial empire—a contrast to the shrunken feebleness of her rival. But under Louis XVI. a resurrection took place, for which Choiseul and Sartines deserve the greatest credit. It was, as our author remarks, only a brilliant and ephemeral revival of the navy of the "Grand Roi," yet French naval officers of to-day point back with pride to the time of Suffren and De Grasse as the period when their navy attained its acme of glory and importance. English writers have rather neglected

the history of our naval war with France and her subsequent allies from 1778 to 1783. Perhaps it is because they have been so much occupied in discussing the question of "breaking the line," and in criticising the tactics of various admirals, that the broader strategical value of events occurring simultaneously on five sea-theatres of war has been overlooked. Yet to strategy rather than to tactics, may we not say, historical importance attaches, for the latter science is in a state of constant modification, while strategy contains lessons for the future which are ever new. M. Moireau's book is an excellent introduction to a study of this war, taking, as it does, a brief but comprehensive and interesting conspectus of the different "campaigns." From home waters, where the first shots were fired, we pass to D'Estaing and Howe on the American coast, and then to the longer struggle in the West Indies between Rodney, Hood, and Byron, and their antagonists, De Guichen, De Grasse and Lamotte-Picquet. Whence, noting affairs at Gibraltar, the reader is taken to the doings of the Bailli de Suffren, the first French sailor of his time. In Indian waters he fought five successive battles with the gallant Sir Edward Hughes during the space of seventeen months, and, by his indefatigable exertions, preserved to France her Indian settlements of to-day. A capital portrait of Suffren forms the frontispiece of the book, and the author does not hesitate to compare the genius of Nelson, "ce Suffren anglais," with that of the Bailli. Speaking of De Grasse, M. Moireau says:

"Il avait pour principale qualité une admirable intrépidité, une bravoure à toute épreuve. Ses marins disaient de lui, faisant allusion à sa haute taille, 'M. l'amiral De Grasse a six pieds: mais il a six pieds un pouce les jours de bataille.'"

This irresistibly recalls Gillray's early caricature. Again, in remarking on some of d'Estaing's lost opportunities, our author writes:

"De Suffren aurait attaqué hardiment, mais il avait précisément les qualités qui faisaient défaut à d'Estaing: il savait oser à propos, et ne reculait pas devant les plus lourdes responsabilités du commandement."

And in commenting on the admirals (if we may coin the word) of Rodney and other English officers, M. Moireau displays a candid judgment—free from bias, and untainted by partisan feeling. Altogether we have a pleasant, useful volume, which ought not to be despised even by students who have mastered Captain Chevalier's elaborate *Histoire*, and the many other French works on the same war.

Bibliotheca Normannica. Herausgegeben von H. Suchier. III. Die Lais der Marie de France. Von K. Warnke. (Halle: Niemeyer; London: Nutt.) We have sometimes protested—not we hope in any unscholarly spirit—against the very common habit of re-editing texts, early French and other, which are already available to the student, when so great a mass of matter still remains in manuscript. This process does not affect the edition which Herr Warnke has produced (under Prof. Suchier's editorship, and with a literary introduction on the subjects of the volume signed by Herr Köhler) of the well-known *Lais* of Marie. It is true that Roquefort's edition of that poetess is of much value intrinsic and other. It was one of the earliest fruits of nineteenth century interest in mediæval poetry. It came into the hands and excited the attention of Goethe and Scott; and its two neat volumes, with their elegant and conventional frontispieces (we have never ourselves understood how that wreath of very fat roses sat so undisturbedly on the brow of the *Amante* after her rough journey up the hill), will not soon be displaced from the shelves of those who love literature and know what literature means. But it is nearly seventy years old, it has long

been out of print, it does not pretend to be a critical edition of all the MSS., and its loose and somewhat commonplace modern French version, is, to say the least, superfluous and sometimes irritating. Prof. Suchier must fight out for himself the battle with M. Gaston Paris, which he half indicates in his preface. For our part we shall say nothing more about his remarks than that they confirm us in an opinion long since held, that the effort to mark off dialects in Mediæval literature with hard and fast divisions is, if not a fundamentally erroneous one, certainly more productive of logomachy and lost labour than of any solid gain to letters. The edition itself deserves to be well-spoken of. The fact that one hand is responsible for the text and the *apparatus criticus*, and another for the comparative and so far literary part of the introduction is "for thoughts"; but as it is nothing new there is no need to dwell on it. We gather from some words of Herr Warnke's that yet another hand is going to re-edit the *Fables* and (we suppose) the *Purgatory*. Judging from a habit which we cannot but think a very mistaken one, a really literary introduction to the whole, of the critical rather than the merely erudite kind, must not be expected. But even without this, a new, handsome and scholarly issue of a work so charming in itself and so important in French literary history as Marie's can only be welcomed.

Le Fiabe di Carlo Gozzi. A cura di Ernesto Masi. (Bologna: Zanichelli.) Students of the Italian drama will welcome this collection of forgotten plays. Count Carlo Gozzi, the antagonist of Goldoni, and like him a popular dramatist in eighteenth-century Venice, has not shared the lasting fame of his great rival. After some years of brilliant success, both he and his fairy plays were completely forgotten in Italy. The present selection of his best burlesques is the first reprint from the original edition of 1797—now a very scarce work. To many Gozzi will be best known by the praises of Goethe and Tieck, and the translation of his "Turandot," executed by Schiller for the Weimar stage. But now, at last, he is revived in a manner befitting the earnestness of modern Italian research, and receives full justice at the hands of Sig. Masi. The critical and biographical essay serving as Preface to the collection is a masterly piece of work—the result of much learning and analysis arranged in the pleasantest form. We see Gozzi in relation to his times, and—by the light of contemporary judgment in Italy and abroad—are helped to an appreciation of his true place in literature. Scraps, too, are given from the Venetian's unpublished memoirs, *Memorie Inutili*; and these are no less curious and wonderful than the whimsical plays that sent Goldoni into voluntary exile, and—for some years—banished his realistic comedy from the Venetian stage.

HERR PAUL KIENE, of the Realschule at Kempten (Bavaria), sends us a "Programm" entitled *William Forrest's Leben und Werke* (Kempten: Kösel), which is a model of laborious and scholarly research. William Forrest was an English poetaster of the sixteenth century, who gained some celebrity by his verses on subjects of religious controversy. His "Hystorye of Grysilde the Seconde," a parallel between the lives of Katharine of Aragon and Griselda, was edited in 1876 for the Roxburghe Club by the Rev. W. D. Macray, together with "An Oration Consolatory to Marye our Queene," by the same author. The remainder of Forrest's writings, with the exception of a few short specimens, exist only in MS. Herr Kiene has given a careful account of these works, and a summary of the few facts that are known respecting Forrest's life. Although Forrest's compositions are destitute of literary merit, they seem, from Herr Kiene's

quotations, to possess considerable historical interest, and on that ground would be worth printing.

THE excellent series of "Englische Sprach- und Literaturdenkmale," edited by Prof. Vollmöller, of Göttingen, and published by Henninger, of Heilbronn, was begun with Miss Toulmin Smith's edition of *Gorboduc*. The second volume, which is now before us, consists of Marlowe's *Tamburlaine*, edited, with introduction and notes, by Dr. Albrecht Wagner, privatdocent at Erlangen. The text chosen for reproduction is the first edition of 1590, which has been reprinted *literatim*, with the variants of the editions of 1592 and 1605 at the foot of the page. The introduction of forty pages gives an elaborate account of the sources of the play, and of the relative value of the several editions used for the text. The notes, which are brief and to the point, chiefly deal with the explanation of words and with questions of prosody. Those who already possess Mr. Bullen's handsome edition of Marlowe in three volumes, published in the early part of the present year, will be perhaps the most disposed to welcome this scholarly little book, which is to be followed by the remainder of Marlowe's works, in six more volumes, edited either by Dr. Wagner or by Prof. Bräumann, of Munich. It is right to add that the printing seems to be most accurately done.

THE first instalment of Dr. G. Poletto's *Dizionario Dantesco*, including the letters A, B, C, has lately appeared. (London: David Nutt.) It promises to be a most important and valuable work. Its chief characteristics are: (1) it includes in its range all the works of Dante, and not (as Blanc, Bozzi, &c.) only the *Divina Commedia*; (2) it aims especially at giving references and illustrations throughout to the *Summa* of St. Thomas Aquinas, whose direct and pervading influence on Dante is greater than that of any other author; (3) it is not limited to words actually occurring in Dante, but under such words as *anacronismi*, *attimo*, *botanica*, &c., brings together references illustrative of the general subjects thus indicated: some of the larger and more disputed questions are reserved for a series of appendices, which are promised for such subjects as "Selva," "Veltro," "Tre Fiere," "Papato e l'Impero," &c. Though it is of course too soon to pronounce a general opinion on the merits of this work, the present instalment includes some highly important articles (such as *Anima*, *Allighieri*, *Aristotele*, *Beatrice*, *Celestino*, *Cieli*, *Cristo*, &c.), the elaborate character of which gives high promise of the probable value of the complete work. The author is an ardent disciple of the late Prof. Giuliani (*Dante spiegato con Dante*), and also apparently his literary executor, since he promises hereafter to complete and publish Giuliani's unfinished notes for his edition of the *Divina Commedia*.

WE have also received: *Johann Wiclif und seine Zeit*, zum fünfihundertjährigen Wiclif-jubiläum, von Rudolf Buddensieg, Achte Tausend (Gotha: Perthes); *Das Buchhändlerische Konditions-geschäft*: ein Beitrag zum Rechte des Deutschen Buchhandels, von Konrad Weidling (Berlin: Weidling); *Kinder des Hochlands*: eine Dichtung aus Schottlands Bergen, von John Henry Mackay (Leipzig: Friedrich); *Aus England*: Bilder und Skizzen, von Leopold Katscher (Leipzig: Reclam); *Il Tipo Estetico della donna nel Mediævo*, appunti et osservazioni di Rodolfo Renier (Ancona: Morelli); *Storia di Nocera de' Pagani*, par Gennaro Orlando, Vol. I. (Napoli: Tocco); *Vita di San Carlo Borromeo*, rapportata alla Storia, per Cino di Villafiora (Milan: Civelli); *Giuseppe Mazzini*, nell'Arte e nella Letteratura, per Salvatore Sacrodotte (Bologna: Zanichelli); *Almindelig*

Krigshistorie, af Didrik Schnitler, IV, Krigshistoriens 4^{te} Periode eller Krigskunstens Gjenfaldsestid (Christiania: Cammermeyer); &c., &c.

NOTES AND NEWS.

WE understand that Mr. John Morley is succeeded in the editorship of *Macmillan's Magazine* by Mr. Mowbray Morris.

MR. T. HUMPHREY WARD has been engaged for some time past in compiling a biographical dictionary of notable personages of both sexes who have died during the reign of Queen Victoria. It will be published immediately under the title of *Men of the Reign*, uniform with *Men of the Time*.

UNDER the title of *What I Believe*, a somewhat unusual volume will be published in a few days, written by Count Leo Tolstoi. The work, which has already been published in Germany and France, but has been forbidden in Russia, is an exposition of the Christian life in relation to its social aspects and duties, apart from theological teaching and systems of ecclesiastical government. The volume is to be published by Mr. Elliot Stock.

KATE GREENAWAY's Christmas book this year will be entitled *Marigold Garden*.

COL. SECCOMBE, of whose *Comic Sketches from English History* we spoke favourably last year, will publish for this Christmas *Military Misreadings of Shakespeare*, printed in colours.

THE author of the biography of Prince Bismarck, which Messrs. Cassell have in the press (as announced in the *ACADEMY* of last week), is Mr. Charles Lowe, M.A., the correspondent of the *Times* at Berlin. It will be in two volumes.

THE Rev. Thomas Cox, of Hipperholme, purposes to publish by subscription (at 6s.) a work called *Clerical Halifax*, which will give, so far as practicable, an account of all the vicars and lecturers of Halifax, and of the incumbents of the twelve old chapelries, since 1538. There will also be lists of the masters of the three grammar schools of the parish; and mention will be made of a large number of local families, which supplied clergy during the sixteenth and seventeenth centuries.

MR. FREDERICK W. P. JAGO, author of the *Glossary of the Cornish Dialect*, has just compiled a Cornish-English Dictionary.

WADDING's *Annales Ordinis Minorum Fratrum* is at length to be continued, and vol. xxv. is already in the press. Mr. David Nutt receives subscriptions in this country. The first edition, in eight folio volumes, was published at Rome during the author's lifetime (1628-54); eleven more volumes were added in 1731-45; and the number was brought up to twenty-four by the Ancona edition (1841-60). We may add that a life of Father Luke Wadding, written chiefly from the point of view of Irish patriotism, has just been published by Messrs. Gill & Son, of Dublin. The author is the Rev. Joseph O'Shea, who was a student in St. Isidore's College, founded at Rome by Wadding. As a frontispiece there is a photograph of the portrait by Carlo Maratti (from an engraving), showing Wadding pointing to a picture of the Immaculate Conception, with which doctrine his name will always be associated.

THE forthcoming number of the *Quarterly Review* will contain a general index to the last twenty volumes.

MR. F. D. MATTHEW, on reading through Wyclif's *Dialogus* or *Speculum Ecclesie Militantis*, now at press for the Wyclif Society, finds

indications, apparently conclusive, for assigning the date of 1378 to the treatise. This will give us an expression of the Reformer's views on the Eucharist two years earlier than any writer has hitherto supposed he published them, and three years earlier than the date given in the *Fasciculi Zizaniorum*, which some of Wyclif's biographers have considered authoritative.

THE natives of Ceylon have begun to act Shakspeare. Among the latest acquisitions in the British Museum is a translation of the "Two Gentlemen of Verona" in Singhalese, arranged for the native stage by the addition of verses to be sung in chorus.

MR. WALTER ROGERS FURNESS, the son of the well-known editor of the new Variorum Shakspeare, has produced fifty copies of an interesting little volume, *Composite Photography applied to the Portraits of Shakspeare*. Acting on Mr. Francis Galton's suggestion on the general subject in his *Inquiries into Human Faculty*, Mr. W. R. Furness has composed into five "Composite Photographs" these portraits of Shakspeare: (1) the Chandos, Droeshout, Jansen, Stratford, Felton, and the Bust; (2) the Chandos and the Jansen; (3) the Chandos and the Droeshout; (4) the Felton and the Stratford Bust; (5) Marshall's copy of the Droeshout, the Ashbourne, and the plainly spurious Death-mask. Separate copies of all the portraits follow. Unfortunately the only composite photograph of Shakspeare which strict English students would care to have—that of the only two representations which they acknowledge to be genuine, the Droeshout and the Bust—Mr. Furness has not given. We hope he will add it to his second edition.

THE library at Lambeth Palace will be closed as usual for the recess for six weeks, from August 29.

ACCORDING to a letter from Rome, the Pope last week distributed among the cardinals copies of an edition of his Latin poems, which he has had printed on rose paper, in fine elzevir type, with a border of engravings. The poems are arranged in chronological order, beginning with 1828. Their total number is thirty-three, including translations into Italian verse by the Pope himself. The volume is an octavo, bearing the title *Leonis XIII. Pont. Max. Carmina*.

M. PAUL MEYER is editing for the Société des anciens textes français a MS. discovered two years ago at Courtrai, containing a life of Thomas à Becket in French of about five hundred verses. This differs from two other similar lives already known in that it describes an interview between Becket and Pope Alexander III. at Sens in 1165, after which the two travelled together to Bourges. But the chief interest of the MS. is linguistic and archaeological. From certain peculiarities of style M. Meyer is led to believe that the author was an Englishman, writing at the beginning of the thirteenth century. On every page are one or two illuminations, showing interesting details with regard to the dress of the time. Some of these illuminations will be reproduced by heliogravure.

WE hear that a play, by Mr. George Moore, the author of *A Mummer's Wife*, has been accepted by the manager of the Odéon.

THE Swiss poet, August Corrodi, died at Zürich on August 17. He was born in 1826, and studied theology at Zürich and Basel; but after completing his course, went to the Kunstakademie in Munich and devoted himself to art. His poems and popular stories for children were written while he was working as drawing master at Winterthur. His dialectal poetry is remarkable for its humour and naturalness.

AMERICAN JOTTINGS.

THE following letter has been received from Walt Whitman, in connexion with the subscription that is being raised for him by English friends, as announced in the *ACADEMY* of July 11:

"323, Mickle Street, Camden, New Jersey,
August 1, 1885.

"Dear Herbert Gilchrist,—Yours of July 21 just received, soliciting some definite word from me about an English or Transatlantic 'free will offering'—a proposed affectionate and voluntary gift to me from my friends there. I feel deeply even for the prompting of it, and should decidedly and gratefully accept anything it produces. (My publisher, David McKay, of Philadelphia, has just been over to pay the last half-annual royalty on my two volumes, *Leaves of Grass* and *Specimen Days*, which amounted to twenty-two dollars and six cents—this being the income to me from the sale of my books for the last six months.) Fearfully hot weather here. I have had a sunstroke which has made me weak, and kept me indoors for the last twelve days; but I move around the house, eat my rations fairly, write a little, and shall quite certainly soon resume my usual state of health, late times—doubtless lowered a slight notch or two, as I find that is the way things go on year after year. Fortunately I have a good, faithful young Jersey woman and friend, Mary Davis, who cooks for me and vigilantly sees to me. Give my love to W. M. Rossetti and to all inquiring friends, known or unknown. You are at liberty to make any use of this letter you see fit.—WALT WHITMAN."

THE death is announced, at San Francisco, of Mrs. William S. Jackson, better known as "H. H." According to the *Critic* she "stood first among American female poets." In this country she will be best remembered for her novel *Ramona*, a pathetic story of the wrongs of the Indians, which was published by Messrs. Macmillan towards the end of last year. A new edition is announced of her *Century of Dishonour*, containing the materials upon which that novel was based.

MR. HENRY ABBEY, of Kingston, New York, has become his own publisher, and will issue in the autumn a revised and enlarged edition of his poems. The book will contain all the poems he has ever written that he wishes to have live, and some heretofore unpublished. It will be sold by subscription only, and will be sent, postage prepaid, to any address on receipt of the price, 1 dollar 25 cents (5s.).

MESSRS. HARPERS have published in their "Handy Series" a novel by Mr. T. Hall Caine entitled *She's all the world to me*, which, we believe, has not yet appeared in book-form in this country. The scene is laid at Peel, on the coast of the Isle of Man, some thirty years ago.

MESSRS. ROBERTS BROS., of Boston, announce a new translation of *Père Goriot*, which is intended to be the first of a series of Balzac's novels.

WE observe that Mr. and Mrs. Pennell's *Canterbury Pilgrimage*, which was published here for one shilling, sells in America (where, of course, it is copyright) for 50 cents., or 2s.

THE Philadelphia *Weekly Press* has been taking the votes of its readers upon literary questions. Living story writers are thus arranged:—Mrs. Beecher Stowe (113), Mr. E. P. Roe (112), Mr. W. D. Howells (91), Mr. W. Black (65), Mark Twain (43). Mr. Henry James, Mr. R. D. Blackmore, Mr. Thomas Hardy, Mr. Julian Hawthorne, and M. Jules Verne are alike "nowhere." The most popular poems are:—"Evangeline" (125), Gray's "Elegy" (113), "Thanatopsis" (80), "The Raven" (58), "The Psalm of Life" (55), "The Lady of the Lake" (43), "Paradise Lost" (40).

WE quote the following lines on Grant by Walt Whitman from the *New York Critic* of

August 15, though we are not sure that they appeared there first:

"As one by one withdraw the lofty actors
From that great play on history's stage eterne,
That lurid, partial act of war and peace—of old
and new contending,
Fought out through wrath, fears, dark dismays,
and many a long suspense;
All past—and since, in countless graves receding,
mellowing,
Victors and vanquish'd—Lincoln's and Lee's—
now thou with them,
Man of the mighty days—and equal to the days!
Thou from the prairies!—tangled and many-
vein'd and hard has been thy part,
To admiration has it been enacted!"

ORIGINAL VERSE.

A REMINISCENCE OF THE SACK OF ATHENS, B.C. 86.

So long ago! O golden head!
O level brows whereon the dread
Of coming years was shadowed!
When, with white robes and sandalled feet,
The maiden train swept down the street;
She walked among them, fair and sweet—
My sister Leocorion.

All worthy of thine ancient name,
O Athens, fallen from ancient fame,
Were those clear eyes untouched of blame!
Why, when thy doom came down on thee—
The whitest soul of all, did she
Drink deepest of thy misery—
My sister Leocorion?

So long ago! Yet still I hear
The trumpets ringing brazen-clear—
The roaring flames—the shrieks of fear;
And I, down-beaten to my knee,
Struck wildly, blindly, helplessly,
What time the spoilers rushed on thee,
My sister Leocorion.

One moment swayed the throng aside—
One cry of anguish thrilled and died—
I saw thy grey eyes starting wide;
The legionary's hands blood-red
Were twisted in thy locks:—I said,
"Twere better far that thou wert dead,
My sister Leocorion!"

They trailed thy white limbs o'er the stone—
I sought to thrust my way,—a moan
Called me to help—then all was gone
In mists of blood. . . . The tiremes bore
Full many a captive from the shore;
But I have never seen thee more,
My sister Leocorion.

And now, a rhetor bent and old,
A slave by Romans bought and sold,
I sell them wisdom for their gold;
But where art thou? O sweetest one—
I may not hope thou lookest on
The brightness of the summer sun,
My sister Leocorion!

A. WERNER.

MAGAZINES AND REVIEWS.

THE August *Livre* (Fisher Unwin) contains but one article of any note—but that is a long one and of the best kind. It is a notice by M. Adolphe Racot of Gustave Planché, a critic far too little known in England, where the angry depreciation of certain Hugolaters (we fear we must add the undignified flings of Hugo himself), and the half jealous insinuations of Sainte-Beuve, have given a very unfair idea of a writer whose critical faculty was great and his literary faculty worthy of it. The only fault to be found with M. Racot's notice is that it does not contain any succinct and definite account of Planché's method. It is true that it refers to M. Montégut's excellent study, than which nothing much better can be wanted.

M. RENAN IN BRITTANY.

THE following is the text of the speech delivered by M. Renan at a "dîner celtique," given to him at Quimper, on August 18:

"Que je suis touché, messieurs, de tant de bonnes paroles, et que je sais gré à nos jeunes amis, qui, me rendant Breton une fois par année, m'ont fait faire connaissance avec cette ville antique et charmante, que je désirais connaître depuis si longtemps. Ainsi va la vie. Né à Tréguier, j'ai poussé mes voyages du côté de l'Orient, jusqu'à Antioche; du côté du Nord, jusqu'à Tromsø; du côté du Sud, jusqu'à Assouan; et, hier matin encore, je n'avais pas dépassé Saint-Michel-en-Grève, du côté de l'Ouest. Notre race est coutumière de courir ainsi le monde, quand le devoir l'appelle. Elle a raison. Le monde nous écoute volontier, quand nous lui parlons de ses intérêts généraux; car nous avons le don de la sympathie, cette intuition, cette illusion, si l'on veut, qui, dans tout homme, je dirai presque dans tout être conscient, nous fait toucher une vie sœur de la nôtre, dans toute fleur nous montre un sourire, dans l'univers entier nous fait voir un grand acte d'amour. Ainsi, tout petits que nous sommes, nous avons notre place dans l'agitation générale et nous servons.

"Laissez-moi même dire que le monde ferait peut-être bien de nous écouter davantage et de tenir plus de compte de nos timides observations. Le mal de notre temps, c'est l'appétit dans les jugements; quelque chose de rogue et de dur, un ton tranchant, que l'on n'aurait raison de prendre que si l'on était en possession de la vérité absolue. (Et encore! Je crois que celui qui aurait ce privilège serait fort modeste.) Nous autres, que beaucoup de raisons ont tenus jusqu'ici en dehors de la grande arène du monde, nous avons des nerfs moins excités, un sens plus rassis. On oublie qu'à la Revolution la Bretagne, avant la chouannerie, avait été girondine. Nous sommes en tout des modérés. Voilà une attitude que nous ferons bien de garder; car le monde à force d'intransigeance, comme on dit, m'a l'air de dégénérer en pugilat. Chacun croit avoir trop raison; heureux celui qui se résignerait à n'avoir raison que modérément!

"La démocratie, par exemple, est certainement un des besoins légitimes de notre temps. Eh bien! je trouve que nous sommes de très bons démocrates. Je ne connais pas de pays qui ait plus que le nôtre le sentiment de l'égalité. Je passe l'été près de Perros, au milieu d'un hameau de très pauvres gens; notre petite aisance doit leur paraître de la richesse; mais, comme dit Dante, 'cela ne leur abaisse pas le cil.' Dès que je leur ai parlé breton, ils m'ont tenu absolument pour un des leurs. Comme il est reçu que, dans les 'hauts pays' (*er broiohael*), où j'ai été, il n'y a qu'à se baisser pour récolter l'or, ils trouvent tout simple que je sois un peu plus riche qu'eux. L'idée ne leur vient pas plus qu'à moi qu'il y ait par ailleurs entre nous quelque différence.

"J'en dirai autant de la liberté. Nous passons dans le monde pour d'affreux réactionnaires; nous sommes, je vous l'assure, de très bons libéraux. Nous voulons la liberté pour nous et pour les autres.

"Ce terrible problème religieux qui pèse comme un spectre sur la conscience du dix-neuvième siècle, nous le résoudreons si nous étions seuls au monde. Nous sommes très religieux; jamais nous n'admettrons qu'il n'y ait pas une loi de l'honnêteté, que la destinée de l'homme soit sans rapport avec l'idéal. Mais nous admettons parfaitement que chacun compose à sa guise son roman de l'infini. Nous allons plus loin: nous admettons pour ceux qui croient, bien à tort, qu'eux seuls ont raison, le droit à l'intolérance, pourvu que cette intolérance ne se traduise pas en actes. La Bretagne a pu, à quelques époques, paraître superstitieuse; elle n'a jamais été fanatique. Pour moi, j'aime mieux la superstition que le fanatisme. Toutes nos vieilles races de l'Occident et du Nord ont été et sont encore superstitieuses; c'est l'Orient, le mauvais Orient, qui est fanatique. Oui, si nous étions maîtres, nous résoudreons le problème de la liberté religieuse, que ne résoudreont jamais les sectaires ni les irréguliers. Nous ne croyons nullement manquer à nos pères en faisant autrement qu'ils n'ont fait. Nos pères ont fait ce qu'ils ont cru le meilleur en leur temps. Nous essayons d'agir de

même. Que feraient de notre temps saint Co-rentin et saint Tugdual? Je n'en sais rien vraiment! Tâchons de faire le mieux possible. C'est de cette façon que nous avons le plus de chance d'être leurs imitateurs.

"Je crois donc qu'en restant fidèles à notre vieil esprit nous pouvons rendre au monde de réels services. Notre vieux fonds d'honnêteté, du train dont vont les choses, pourra être plus que jamais utile. C'est là une qualité qui jusqu'ici n'a pas fait grande fortune dans le monde. Mon opinion est que sa valeur montera, par suite de la rareté de la denrée. Le monde se vide de dévouement, d'esprit de sacrifice. Nous en aurons longtemps à revendre. On aura besoin de nous. Ce n'est pas le moment de changer.

"J'en dirai autant du courage. Nous sommes tous fils de marins et de soldats; nos pères ont combattu, ont monté à l'abordage. J'ai voulu m'enquérir de ce qui reste de Renans, dans le Goëlo, le pays d'origine de ma famille. Il y a encore tout un clan. Ils n'ont pas oublié que leurs aïeux, depuis des siècles, avaient pour profession de casser la tête à des Anglais ou de se faire casser la leur; c'était honorable, car c'était réciproque. Sur le bateau-torpille qui est venu, il y a quelques mois s'amarrer au pont de Solferino, à Paris, il y avait un torpilleur du nom de Renan. Ce doit être un bien honnête homme, et qui ne sait pas ce que c'est que la réclame, car il n'est pas venu me voir. Je vous demanderai tout à l'heure de boire un verre de cet excellent cidre à la santé de Renan, le torpilleur. Qu'elle était vraiment appropriée à nos aptitudes cette invention! Elle a l'air d'avoir été faite pour nous! Elle attribue sa pleine valeur aux deux grandes choses de ce monde, l'intelligence (c'est-à-dire la science) et le courage. Je voudrais que l'état de torpilleur devint la profession noble par excellence, celle des grands idéalistes, à qui l'on donnerait le moyen de rêver tranquillement en ce monde, sauf à les engager, aux heures héroïques, avec quatre ou cinq chances contre une de n'en pas revenir.

"Voici encore une autre découverte que j'ai faite au pays de Goëlo. On me parla d'un Renan qui était mort en laissant une épargne de 50,000 fr. Cela me parut surprenant; ils sont tous pauvres comme Job. On m'ajouta qu'il avait tout donné à l'Eglise, ce qui ne m'étonna pas; mais je voulus savoir comment il avait gagné ce capital énorme. Eh bien! je vous assure que voici ce qu'on m'a répondu: il était taupier, il se faisait cinq sous par taupe qu'il prenait! Cela m'a fait faire des réflexions sur moi-même. Moi aussi, j'ai détruit quelques bêtes souterraines assez malfaisantes. J'ai été un bon torpilleur à ma manière; j'ai donné quelques secousses électriques à des gens qui auraient mieux aimé dormir. Je n'ai pas manqué à la tradition des bonnes gens de Goëlo. Voilà pourquoi, bien que fatigué de corps avant l'âge, j'ai gardé jusqu'à la vieillesse une gaieté d'enfant, comme les marins une facilité étrange à me contenter.

"Un critique de beaucoup de talent me soutenait dernièrement que ma philosophie m'obligeait à être toujours éploré. Il me reprochait comme une hypocrisie ma bonne humeur, dont il ne voyait pas les vraies causes. Eh bien! je vais vous les dire. Je suis très gai, d'abord parce que, m'étant très peu amusé quand j'étais jeune, j'ai gardé, à cet égard, toute ma fraîcheur d'illusions; puis, voici qui est plus sérieux, je suis gai, parce que je suis sûr d'avoir fait en ma vie une bonne action; j'en suis sûr. Je ne demanderais pour récompense que de recommencer. Je me plains d'une seule chose, c'est d'être vieux dix ans trop tôt. Je ne suis pas un homme de lettres, je suis un homme du peuple; je suis l'aboutissant de longues files obscures de payans et de marins. Je jouis de leurs économies de pensée; je suis reconnaissant à ces pauvres gens qui m'ont procuré par leur sobriété intellectuelle de si vives jouissances. Là est le secret de notre jeunesse. Nous sommes prêts à vivre quand tout le monde ne parle plus que de mourir. Le groupe humain auquel nous ressemblons le plus, et qui nous comprend le mieux, ce sont les Slaves; car ils sont dans une position analogue à la nôtre, neufs dans la vie et antiques à la fois.

"C'est ce que je me disais ces jours-ci à Perros, en retrouvant toutes sortes de vieilles petites connaissances, des oiseaux, des fleurs dont j'avais

oublié le nom. On ne comprend rien à l'humanité si l'on s'en tient aux vues d'un individualisme étroit. J'ai demandé à un de nos confrères du Muséum la vérité sur ce rocher du groupe des Sept Îles qui est, au printemps, rempli d'innombrables oiseaux! Ce sont les oiseaux des îles Shetland, qui viennent déposer leurs œufs en terre tiède; là, ils éclosent; puis les oisillons, tout d'une volée, regagnent leurs rochers des mers du Nord. Ah! voyez, je vous prie, comme ces petits êtres sortent de l'œuf maternel avec une profonde sagesse! Ainsi, ce qu'il y a de meilleur en nous vient d'avant nous. Une race donne sa fleur quand elle émerge de l'oubli. Les brillantes éclosions intellectuelles sortent d'un vaste fond d'inconsciences, j'ai presque envie de dire de vastes réservoirs d'ignorance.

"Ne craignez pas que je vienne vous engager à cultiver l'ignorance; c'est là une plante qui pousse fort bien toute seule; malgré l'instruction intégrale et obligatoire, il y en aura toujours assez. Mais je redouterais pour l'humanité le jour où la conscience aurait pénétré toutes ses couches. D'où viendrait le génie, qui est presque toujours le résultat d'un long sommeil antérieur? D'où viendraient le sentiment instinctif, la bravoure qui est si essentiellement héréditaire, l'amour noble qui n'a rien à faire avec la réflexion, toutes ces pensées qui ne se rendent pas compte d'elles-mêmes, qui sont en nous sans nous, et forment la meilleure partie de l'apanage d'une race et d'une nation?"

"Merci donc, chers amis d'avoir ramené pour moi ces occasions, qui me sont précieuses, de me rejouer avec vous et de me retremper au vieil esprit. Votre jeunesse m'enchantait, me soutient. Merci, dignes représentants d'une ville qui me sera désormais chère, de cet accueil qui m'a été profondément au cœur. Merci, cher Hémon,* merci, cher Luzel,† de cette fête qui me laissera un délicieux souvenir. Je ne sais si j'en verrai d'autres de ce genre. Comme mon âge me conseille de penser à la vie future, je me surprends parfois occupé à garnir ma mémoire des pensées qui devront l'occuper durant toute l'éternité. Eh bien! je vous assure que cette journée sera des meilleures entre celles dont je veux me souvenir. Votre cordialité, vos marques d'estime compteront entre les récompenses de ma vie, et, quoi qu'en disent les critiques qui voudraient me confiner dans un *De Profundis* perpétuel, je continuerai d'être gai. Votre accueil m'assure, en effet, que, depuis quarante-sept ans que j'ai quitté la Bretagne, je n'ai pas, en somme, démérité."

CORRESPONDENCE.

"PRIMER" OR "PRIMER."

Kensington: Aug. 22, 1885.

To my Speech in Song, forming one of Messrs. Novello's "Music Primers," the circumstance of having heard several of their writers call them "Primers," induced me to prefix a note: "Pronounce the word *Primer* to rhyme with *simmer*, and not with *rhyme*. It is an old English word, *liber primarius*, and is not formed from the verb to *prime*."

As an A B C book, originally containing short prayers for teaching to read, the pronunciation *primer* is given by Walker, Smart, Ogilvie (Cull), Hyde Clarke, Webster, Worcester, Soule, and Wheeler, although in another sense some dictionaries also give *primer*. Only Chambers gives both *primer* and *primmer* for the A B C book. For a type all printers say *long primer*, though I do not find this in dictionaries. A gentleman who said *primer* wrote to me about the word lately, and said he had consulted a "Cambridge M.A." on the subject, who asked "What else could *primus* give but *primer*?" They do not teach English pronunciation at Cambridge, and so there is some excuse for this M.A. not knowing the usual pronunciation of *prim*, *primrose*, and *primitive*. Perhaps he said *crime* and *criminal*, *equity* and *iniquity*, just as I was once reproached for not saying *inimical* in an amicable conversation. The change of pronunciation of words having *i*, when derived from both Latin and Anglo-Saxon, from the Italian long *i* sound to the present English diphthongal sound, took place during the fifteenth and sixteenth centuries in England, and at the same time for indigenous words in Germany and Holland. It has never taken place in Scandinavia, Italy, Spain, or France. See my *Early English Pronunciation* (part 1, pp. 270-97), for most of the history of the change; the end of it will be given in my *Existing Phonology of the English Dialects*, on which I am now at work, where the missing links of the change are shown to be still in existence. But, whenever Latin *i* or Anglo-Saxon *i* is shortened in pronunciation the old sound is retained. Compare *child*, *children*, to *wind* a *windlas*, *wild*, *wilderness*, *hinder* to *kinder*, *kind*, *kindred* (in all of which the *i* is a modernism), and in names *Wid-*, *Wich-*, *Whit-*, *Swit-*, *Wig-* (where the *i* was originally a long vowel). As for our English pronunciation of Latin itself in this respect it is purely frightful in its inconsistency. We say *Sic vos non vobis*, marking three perfectly unnecessary false quantities, and most English Latinists would make two more in continuing the line as *nidiscatis aves*. The late Prof. Hewitt Key insisted that, though our diphthongal sound of long *i* in

Latin was, of course, purely English (no other nation having ventured on this frightful pronunciation in Latin), yet it was justifiable as marking the quantity to English ears; and he himself pronounced *quis* (for *quibus*) to rhyme with *ice*. Yet I cannot recollect his saying *sic* as a rhyme to *pike*, though of course he said *sicut*, rhyming to *my cut*, which in both vowels would have been unintelligible to a Latin. It is hopeless to reform our English pronunciation of English, and absurd to attempt that reformation on the basis of the English mispronunciation of Latin; but there were hopes a few years ago of reforming the latter, and I endeavoured then to give its principles in my *Practical Hints on the Quantitative Pronunciation of Latin* (Macmillan). I am afraid, however, that the inertia of schools and "Cambridge M.A.'s," who only know *primus* (rhyming to the cockney *limeus*), have rendered all such attempts abortive, while Greek pronunciation remains a still more horrible quagmire. I trust, however, that I have shown good ground for *primer* as an A B C book in the universal testimony of pronouncing dictionaries. *Primer* is one who *primes*, as a gun was primed before central fire came in. And one must distinguish very carefully between a *prime minister* and a *prim minister*, though both are ultimately *primus*.

ALEXANDER J. ELLIS.

IMPRESS OF THE SHAPE OF A METAL TYPE OF 1487.

Ootessbach: August 20, 1885.

In a copy of the *Summa Angelica* (an alphabetical cyclopaedia of Cases of Conscience) by Friar Angelo Clavasio, printed (*editio princeps*) at Venice in 1487 by Nicolas de Franckfort—a volume which has recently come into the possession of the Ven. Archdeacon Pownall, F.S.A.—there is a *flaw in the printing* of one leaf, caused by the accidental presence on the face of the "forme" of a metal type.

The printing is very neat and small (Gothic), with fifty lines in a page of 6½ inches, exclusive of margin; and the type (a thin one, probably 1) is just an inch long. It must have become inked on its side by the "ball" or inking-pad, which had extracted it and laid it down, and the ink (together with the great extra pressure to which from its prominence it would be subjected) must have made it adhere to the paper. Before, however, the other face of the sheet was printed, it was evidently discovered; and the printer, in detaching it (apparently with his nail, and doubtless while the paper was damp), tore a hole nearly the width of its impress, and extending a little beyond it to a narrowing point. But he did not throw away the damaged sheet. To do this, it must be remembered, might often be to waste not that one sheet only, but, perhaps, one of each of several other sheets already printed; for the types used for the earlier sheets were distributed and set up again many times over.* But even apart from this, it was usual in early printing that the publishers should make MS. corrections; and so that course was adopted—the flawed lines of the text being re-written in full at the foot of the page, both on the side where the type adhered, and on the other, where the hole caused by its removal partly injured two lines of the text. And the rubricator has marked with red the capitals occurring in this handwriting at foot, just as he has done in the text, thus proving the MS. correction to have been made by the publisher, or original bookseller, and not by a purchaser or owner.

This instance, as many will be aware, is not

* The volume has 800 pages, or 1,600 columns of 50 lines; and since there are about 35 characters to the line, there would be needed nearly three million types if the whole were set up at once.

the first that has been found of this particular accident. When the present writer drew attention, at the Bodleian, to the flaw he had found, and its apparent origin, he was shown, in the bibliographic work of De Vinne (*Invention of Printing*, London and New York, 1877), a passage (p. 520, London Ed.) which he bases on a discovery by a French savant, J. P. A. Madden of Versailles, described in his *Lettres d'un Bibliographe* (Paris, 1875), vol. iv., p. 231.

It was in a work, eleven years earlier than this Venetian one, printed at Cologne in 1476, that M. Madden discovered the very same accidental blemish; and he gives a facsimile (copied in De Vinne's work) of the flawed passage, and the following account of it:

"Voici comme je me rends compte de l'origine de cette empreinte: la balle, reconverte d'une encre visqueuse, appliquée avec force sur la page métallique, dont une ligne avait ses lettres faiblement serrées les unes contre les autres, enleva de cette ligne . . . la lettre 'probablement,' et la coucha sur la forme, à laquelle elle resta adhérente. Comme cette lettre n'a qu'une très lente épaisseur, elle n'empêcha le contact du papier et de la forme, qu'à une très petite distance à l'entour."

To have proof of the shape of the early printers' types is interesting, for several reasons. The earliest types had not the notch or notches which have now so long guided the compositor's finger; but M. Madden's imprint shows a depression on the side of the type which, he says, answered the same purpose. The hole in the paper, in the present instance, prevents the possibility of any evidence on the existence of this depression; but the outline is sufficiently clear to make it almost certain that the notches had not yet been introduced. One important improvement however, may with some certainty, be now assigned to the ten years 1477 to 1487, viz., the substitution of square for sloping shoulders to the type—a change of great value for the taking of waxen impressions with a view to stereotype, whether first adopted with that object or not.

As in M. Madden's instance, the printing is perfect to within an astonishingly short distance of the edge of the superimposed type.

The flaw does not exist in the Bodleian copy of the same edition; nor was the absence of a letter noted there. But it might be possible, in any such case, to identify with certainty the lifted type by comparing copies printed off before and after the flawed copy.

The blemished page has been photographed by Messrs. Hills & Saunders, Oxford, from whom copies may be obtained by post for 1s. 7d.

J. S. WATSON.

THE MYTH OF ANDROMEDA.

Higher Broughton: Aug. 8, 1885.

Ibn Batuta, in the course of his narrative of experiences in the Maldives, recites a curious tradition, which has all the appearance of being a distorted variation of the myth of Andromeda:

"Trustworthy men among the inhabitants, such as the juriconsult Ica Alyamany, the juriconsult and schoolmaster 'Ally, the Kāzi 'Abd Allah, and others, related to me that the population of the islands used to be idolaters, and that there appeared to them every month an evil spirit from among the Jinn, who came from the direction of the sea. He resembled a ship full of lamps. The custom of the natives, as soon as they perceived him, was to take a young virgin, to adorn her,

and conduct her to a boudkhānah, i.e., an idol temple, which was built on the sea-shore, and had a window by which she was seen. They left her there during the night, and returned in the morning; then they found the young girl dishonoured and dead. They failed not every month to draw lots, and he upon whom the lot fell gave up his daughter. At length arrived among them a Maghrabin called Abou'lberécāt, the Berber, who knew by heart the glorious Kurān. He was lodged in the house of an old woman of the island Mabal. One day he visited his hostess, and found that she had assembled her relatives, and that the women were weeping as if they were at a funeral. He questioned them upon the subject of their affliction, but they could not make him understand the cause. An interpreter coming in informed him that the lot had fallen upon the old woman, and that she had one daughter, who had to be slain by the evil Jinni. Abou'lberécāt said to the woman, 'I will go to-night in thy daughter's stead.' At that time he was entirely beardless. He was conducted the night following to the idol temple, after he had done his ablutions. There he set himself to recite the Kurān, then by the window he perceived the demon, and continued his recitation. As soon as the Jinni came within hearing of the Kurān, he plunged into the sea, and, when the dawn was come, the Maghrabin was still occupied in reciting the Kurān. The old woman, her relatives, and the people of the island came to take away the girl, according to their custom, and to burn the corpse. They found the stranger reciting the Kurān, and conducted him to their king, by name Chénouázah, whom they informed of this adventure. The king was astonished. The Maghrabin proposed to him to embrace Islām, and inspired him with a desire for it. Then said Chénouázah to him: 'Remain with us till next month, and if you do again as you have just done, and escape the evil Jinni, I will be converted.' The stranger remained with the idolaters, and God disposed the heart of the king to receive the true faith. He became Musalman before the end of the month, as well as his wives, children, and court. At the beginning of the following month, the Maghrabin was conducted to the idol-temple; but the demon came not, and the Berber recited the Kurān till the morning, when the Sultan and his subjects arrived and found him so employed. Then they broke the idols, and razed the temple to the ground. The people of the island embraced Islām, and sent messengers to the other islands, whose inhabitants were also converted. The Maghrabin remained among them, and enjoyed their high esteem. The natives made profession of his doctrine, which was that of the Imān Mālic. Even at present they respect the Maghrabins for his sake. He built a mosque, which is known by his name. I have also read the following inscription, graven in wood, on the enclosed pulpit of the grand mosque: 'Sultan Ahmed Chénouázah has received the true faith at the hands of Abou'lberécāt the Berber, the Maghrabin.' This Sultan assigned a third of the taxes of the islands as alms to travelling foreigners in recognition of his reception of Islām through this agency. This share of the taxes still bears a name which recalls this event. Owing to the demon in question, many of the Maldivian islands were depopulated before their conversion to Islām. When I reached the country I was not aware of this matter. One night, when I was at one of my occupations, I heard of a sudden people crying with loud voice the formulae, 'There is no god but God,' and 'God is very great.' I saw children carrying Kurāns on their heads, and women rapping the insides of basins and vessels of copper. I was astonished at their conduct, and said, 'What is happening?' and they replied, 'Do you not see the sea?' Upon which I looked, and saw a kind of large ship, seemingly full of lamps and chafing-dishes. They said to me, 'That is the demon; he is wont to show himself once a month; but when once we have done as you have seen, he turns back and does us no harm.'

I have quoted the translation given in the *Journal* of the Ceylon branch of the Royal Asiatic Society, 1882. Mr. H. C. P. Bell, the hon. sec., adds that vestiges of this tradition still remain in the legends of the islanders. I am not aware that the resemblance of the story

to that of Andromeda has been pointed out. In any case, the Maldivian legend is a curious addition to folklore.

WILLIAM E. A. AXON.

SCIENCE.

The Phenomena or "Heavenly Display" of Aratos. Done into English Verse. By Robert Brown, jun. (Longmans.)

MR. BROWN needs no apology for introducing the *Phainomena* of Aratos to English readers in an English dress. The work is not only curious and interesting in itself, but also valuable for the history of astronomy. It is, in fact, a versification of the astronomical lore of Eudoxos; and, though the astronomical knowledge of Eudoxos was probably but slight, while that of the poet was still less, it embodies the traditional information of the Greeks about astronomical matters which we now know to have been derived by them from the East. It consequently formed the starting-point of later scientific Greek astronomy, and, as Mr. Brown says—

"Numbers of commentators, at the head of whom stands Hipparchos, have exercised their learning and ingenuity upon it; whilst Cicero and Germanicus turned it into Latin verse. With the former it was evidently an especial favourite, and he remarks: 'Constat inter doctos hominem ignarum astrologiae, Aratum, ornatissimis atque optimis versibus de coelo stellisque dixisse.'"

Mr. Brown has published his neat and faithful translation in an attractive, not to say sumptuous, form, and has embellished it with numerous illustrations from a German MS. of the fifteenth century and other sources. A few needful explanatory notes are added at the foot of the page, and the work is provided with an ample introduction and with appendices on some of the chief points raised by the poem.

Mr. Brown believes that the poem not only embodies the astronomical ideas ultimately derived from Babylonia, but that the configuration of the stars as described by Aratos is itself of Babylonian origin, and belongs to the beginning of the second millenium before the Christian era. It is certainly inconsistent with the position of the constellations in the time of Eudoxos or Aratos, while a map attached by Mr. Brown to his third appendix shows how closely it agrees with the position of the principal stars near the equator at the time of the equinox 2084 B.C. In the *Phainomena* of Aratos, consequently, we have to see, not a Greek chart of the heavens as they appeared in the fifth or third century B.C., but a traditional representation of the stellar sky as mapped out by the Babylonians about two thousand years before.

The decipherment of the cuneiform inscriptions has proved two things, both of them, indeed, already divined by scholars, but from the nature of the case previously unverifiable. One of these is the fact that the signs of the zodiac were of Babylonian invention; the other that the configuration of the celestial globe took the shape in which it was received by the Greeks between B.C. 2500 and 2000. The precession of the equinoxes prevents our placing it earlier than about B.C. 2500, since before that date the sun at the vernal equinox would have entered Taurus and not the first point of Aries, while the zodiacal cycle as we

* The present writer ventures to think the lifted type must, from its impress, have been, not *l*, but the period point: a type which would also be considerably thinner than *l*. There is surely no necessity, as M. Madden appears to assume, that the type should be one of those immediately below the place where it lies.

find it in Babylonian and Greek astronomy begins with Aries. Accordingly, in my memoir on Babylonian astronomy, published eleven years ago, I concluded that the invention of the Babylonian Calendar, and the beginnings of systematised Babylonian astronomy must be assigned to about B.C. 2000, though I admitted that the numerous records of eclipses incorporated in this systematised astronomy implied an enormous antiquity for the star-gazing of the Chaldeans.

Since my memoir was written we have had to amplify very considerably our starveling notions of Babylonian chronology derived from the miserably short period to which authentic European history dates back. Sargon of Accad, whom eleven years ago I placed in the sixteenth century B.C., and whom the most adventurous of my colleagues did not dare to refer to an earlier date than B.C. 2000, now turns out to have reigned as early as B.C. 3800; and as it was for his library that the standard Babylonian work on astronomy and astrology was compiled, we have to trace the commencement even of systematised astronomy in Chaldea to a much older period than that in which the year began with Aries. Sargon himself, moreover, marks only the rise of Semitic domination in Babylonia; and behind him lies the greater part, if not the whole, of the Accadian period which witnessed the development of Babylonian culture, and of which contemporaneous monuments have been found by the French at Tello. Now the original names of the signs of the zodiac are not Semitic, but Accadian, like the names of most of the fixed stars; the mapping out of the sky, therefore, and the invention of the zodiacal signs must be assigned to the remote age when the spring was introduced by the sign of the Bull.

This is confirmed by the cuneiform inscriptions themselves, as has been stated in a paper contributed by Mr. Bosanquet and myself to the Monthly Notices of the Royal Astronomical Society (January, 1880), at a time when the early date of Sargon of Accad was not as yet known. In the Babylonian calendar of later times, the second month of the year was Iyyar, the Accadian name of which signified "the month of the Bull the Director," a phrase which seems to indicate the fact that the Bull ushers in and directs the year. This is supported by the further fact that "the Bull" was intimately connected with "the path of the Sun," or the ecliptic. Thus the name of Jupiter was Lubat Gudibir "the planet (literally 'old sheep') of the bull of light," Gudibir, "the bull of light," being further identified with the god Merodach. The word is further explained as equivalent to "the furrow of heaven," or the ecliptic, as Dr. Oppert long ago pointed out, the sky being regarded as a reflex of the alluvial plain of Babylonia, where the stars were "the heavenly flock," with Arcturus or Boötēs as their shepherd, and the sun the divine bull which ploughed its way through the months of the year. Hence the eighth month (Marchesvan) of the later calendar was called in Accadian "the month that is opposite to the foundation," which can only mean that Iyyar and the sign of "the directing bull" that presided over it were the foundation of the calendar and the beginning of the year.

I have left myself no space for discussing Mr. Brown's appendices, in which, among other points, he shows convincingly that the reigns of the ten antediluvian kings of Bérossos correspond to the distances between certain stars near the ecliptic, and demolishes "Herr Georg Knaack," giving occasion to the wish that editors would not entrust books, dealing with Assyriological matters, to reviewers who, however excellent their scholarship may be in other respects, are innocent of Assyriological knowledge. But these points will doubtless be dealt with elsewhere by those who combine an acquaintanceship with Greek and astronomy with some knowledge of cuneiform research. A. H. SAYCE.

CORRESPONDENCE.

"IRISH LEXICOGRAPHY."

London: Aug. 21, 1885.

A friend has just sent me a pamphlet, by Prof. Atkinson, of Dublin, published by the Royal Irish Academy, and bearing the above title. It consists chiefly of a series of disconnected attacks on the dead Ebel and O'Donovan, and the living Windisch and Ascoli, with Prof. Atkinson's explanations of certain Irish words which, in his opinion, those excellent scholars have mistranslated. At p. 19 I find the following passage:

"In his translation of *Cormac's Glossary*, Stokes (*sub voce fídhell**) has the following passage:

'Cetharcoir cétamus in-fídhell 7 dirge a títhe. dub 7 find forri.'

'The fídhell is four-cornered, its squares are right-angled, and black and white are on it.'

Further on:

'Is direch ambasaib 7 hífíthib na screptra.'

'It is straight in the morals and points of the Scripture.'

Prof. Atkinson adds that he believes *tí* means a line. But he does not say what he knows perfectly well, namely, that "Stokes" never made a translation of *Cormac's Glossary*, though I printed, and presented to each member of the Irish Archaeological Society, a copy of O'Donovan's version, with a few corrections of obvious slips. If, then, the renderings above given are wrong, O'Donovan is to blame, not I.

Another instance in which Prof. Atkinson's memory seems to have failed him is in the note to p. 27. There he gives as his own an ingenious and, I think, correct explanation of the *c* in the Old Irish adjective *ruclé* (conspicuous). But this explanation (from *rug-glé*) is Ascoli's, who in his *Note Irlandesi*, Milano, 1883, p. 49, compares *rug-etrachtaib* (gl. *praeclaris*), *rug-solus*, (gl. *praeclara*). Prof. Atkinson also seems to have taken ("conveyed the wise it call") from p. 38 of the same *Note*, of which there are probably not many copies in Dublin, the explanation of *fordiuc laimmim* as the dative sg. of *fordiucclaim* (swallowing-up). This really belongs to Count Nigra.

Prof. Atkinson (p. 31) regrets, as a Celtic philologist, "the baleful results of literary vendetta." Let me ask him who is more persistent than himself in keeping up this vendetta, and who has suffered more sadly by doing so?

WHITLEY STOKES.

"INDEX TO ORIENTAL SUBJECTS IN PERIODICAL LITERATURE."

London: August 25, 1885.

In reference to the remarks in last week's ACADEMY concerning the "Index to Articles relating to Oriental Subjects in Current Periodical Literature," lately started in our *Literary*

* Prof. Atkinson means *fídhell*—the Welsh *gwyddbyll*, commonly rendered "chessboard."

Record, will you kindly allow us to say that the Index is fully recognised, and is stated in each number, to be an "attempt" only.

So far as the *Journal of the Asiatic Society of Bengal* is concerned, no numbers for 1885 have as yet been received; and, as the starting date for the Index was fixed at January 1, 1885, the contents could not have been indexed. These will appear in due course.

The omission in connexion with *Nature* shall be rectified as quickly as possible; but, as regards the *Times*, the sub-editor thinks this is too leviathan a task for him, working as he does single-handed. If any kind friends will assist him he will be very pleased.

TRÜBNER & Co.

SCIENCE NOTES.

MESSRS. MACMILLAN & Co. announce a new series of geographical text-books, based upon the principle that geography can only be taught practically by means of familiar local illustrations. In a preliminary volume, the teacher is taught how to lay a solid geographical basis, founded upon the pupil's own personal experience. Throughout the series the fundamental idea will be to present the essential facts in such a way as will show their relationship to each other. The physical features will be connected with the climatology of a country, and both will be shown to affect the distribution of life, while the bearing of all these influences upon human history and commercial progress will be constantly kept in view. The boundaries of parishes and countries, the positions of towns and the diffusion of population, will be linked with their geographical explanation. A knowledge of the topography of a country, and of the local names by which it is expressed, will be shown to be the necessary accompaniment of an adequate knowledge of the history of the inhabitants. In short, it will be a constant aim to represent geography not as a series of numerical tables or a string of disconnected facts, but as a luminous description of the earth and its inhabitants, and of the causes that regulate the contrasts of scenery, climate, and life. The editor of the series will be Dr. A. Geikie, Director-General of the Geological Survey of the United Kingdom, who has secured the co-operation of (among others) Mr. H. W. Bates, Mr. Clements R. Markham, Mr. A. R. Wallace, and Dr. E. B. Tylor.

THE German Association of Naturalists and Physicians will meet this year at Strassburg on September 17.

MRS. ELIZABETH THOMPSON, of Stamford, Connecticut, who is already well known for her benefactions to churches and charitable undertakings, has vested in a board of trustees the capital sum of 25,000 dollars (£5,000), the income of which is to be devoted to the advancement of scientific research in its broadest sense, with the understanding that the maintenance of an International Scientific Association, when founded, shall have a prior claim. In the meantime, the trustees are ready to receive applications for the first distribution of the income, which will probably be made next autumn. The secretary is Dr. C. S. Minot, Boston, Massachusetts.

THE students of the Academy at Neuchâtel have collected a sufficient sum for a marble bust of Agassiz, to be placed in the new academy buildings. The commission has been given to the sculptor Iguel.

THE new volume in the "Bibliothèque Anthropologique," published by MM. Delahay and Lecrosnier, will be *Darwinisme*, by M. Mathias-Dewal.

PHILOLOGY NOTES.

AMONG the Sanskrit MSS. collected by Mr. Cecil Bendall in Nepal, as noticed in the ACADEMY of June 6, is a palm-leaf copy of Nārada, written in A.D. 1407, which turns out to contain an entirely new recension of that law-giver's code. The title of the work as here given (*Mānava-nyāya-cāstram Nārada-proktū-samhitā*) confirms the Indian tradition as to its connexion with the celebrated "Institutes of Manu." The discovery has been made opportunely, as at present the text is being printed by Prof. Jolly, of Würzburg, to whom Mr. Bendall has accordingly lent the MS.

A LONG inscription of Nissanka Malla (twelfth century), which has just been discovered at Anuradhapura in Ceylon, will be published in the *Journal* of the Pāli Text Society for this year.

CLASSICAL philology, and the University of Leipzig in particular, have suffered another heavy loss in the death of Ludwig Lange, shortly after that of his colleague, Georg Curtius. Lange was born in 1825, and appointed professor at Leipzig in 1871. His chief work was a great *Handbuch der Römischen Altertümer*. Students of Homer are familiar with his treatise on the participle *Ei*.

THE forthcoming course in Semitic languages at the Johns Hopkins University, under the superintendence of Prof. Haupt, comprises no less than thirteen series of lectures for advanced students—three in Hebrew, two each in Arabic and Assyrian, and one each in Biblical Aramaean, Syriac, Ethiopic, Babylonian, Akkadian, and Sumerian. This is in addition to lectures for beginners.

THE current number of *Hermathena* (Dublin: Hodges, Figgis, & Co.) opens with an interesting paper by the Bishop of Limerick, Dr. Graves, on "Two Fragments of a Greek Papyrus," illustrated with four photographs. The fragments evidently belong to a cyclic poem, which the bishop conjectures may have been by Proclus, the Neo-Platonist. The date of the handwriting may lie between the third and fifth century A.D. The papyrus was bought by the bishop at Luxor in 1882 from an Arab dealer in antiquities, together with several other fragments in Coptic. The other papers include, besides the usual critical notes on Latin and Greek texts by Profs. Tyrrell, Palmer, and others, an examination of the "Cross-References in the *Philosophumena* of Hippolytus," by Prof. George Salmon, in which he contends that there must have been some relation of interdependence between the heretical documents quoted in that work; and a sixth paper by Prof. George A. Allman on "Greek Geometry from Thales to Euclid," to which we hope to refer again.

FINE ART.

George Jamesone, the Scottish Vandyke.
By John Bulloch. (Edinburgh: David Douglas.)

IN this handsome volume Mr. Bulloch has made a painstaking and praiseworthy effort to collect and systematise all that can be discovered regarding the life and productions of his great townsman, and to illustrate the painter's career by a view of the surroundings, social and political, which environed it. More than a hundred years after Jamesone's death Horace Walpole assigned to him a place in the *Anecdotes*, deriving the information embodied in his sketch from a certain "John Jamesone, wine merchant, in Leith," who seems to have claimed descent from the artist, though it should be remembered that

on the painter's death, in 1644, no son survived to carry his name into the succeeding century. Some seventy years after the publication of Walpole's book another important contribution was made to our knowledge of Jamesone by Allan Cunningham's article in the *Eminent British Painters*, which was prepared with the assistance of David Laing, an antiquary who possessed a knowledge of early Scottish art only less wide and accurate than his acquaintance with early Scottish literature.

It has, however, been reserved for Mr. Bulloch to devote an entire volume to the first of Scottish portrait-painters, to spend years in a search for every fragment of contemporary reference to his career, and to compile a systematic catalogue of his productions. Evidently the author has devoted the most unsparring labour to his subject. The Burgh Records of Aberdeen, council registers, Baillie Court books, Sasine registers, birth registers and burial registers, the Guild Records of Edinburgh, the poems of Johnston and Wedderburn, contemporary diaries like those of Alexander Jaffray and Sir Thomas Hope, and histories like Spalding's *Memorials*, have been subjected to the closest scrutiny, not without result. It must be confessed, however, that, when all is done, the personality of Jamesone still remains a very shadowy one; and we are forced to the conclusion that many even of the meagre particulars which have hitherto been accepted as the ascertained facts of his life are traditional and conjectural, rather than definitely historical and verifiable. But at least in closing Mr. Bulloch's volume we can feel satisfied that the whole subject has at length been fully investigated, and that little of the discoverable remains to be gleaned by future research. And, if the mist of the past still obscures the figure of the artist himself, his surroundings have received very complete exposition. The book might have been titled "George Jamesone and his Times." We are presented with a picture of the period in which he flourished; its political, social, religious, and artistic aspects are clearly set before us; we have biographies of his townsmen and neighbours, his friends and patrons, and are thus enabled to realise the *entourage* amid which he worked, and prepared for a keener interest in his portrayal of contemporary personalities.

The work opens with a chapter devoted to a *résumé* of the early history of painting in Scotland, indicating with sufficient clearness the claim of Jamesone to be regarded as practically the earliest not only of Scottish, but of native British portraitists. It should be noticed in passing that the "picture" of James III. and his Queen which Mr. Bulloch, following Pinkerton, states to be "at Kensington," is a portion of the altar-piece of Trinity College Church, Edinburgh, in which the king and Margaret of Denmark are represented on separate panels, and that this diptych was deposited nearly thirty years ago in Holyrood Palace. The remark, too, at pp. 16 and 17, that genuine portraits of Queen Mary Stuart "seem all to have been painted during her youth in France," is misleading; for we know, from her own letters, and those of Nau, her secretary, that in January, 1575, she ordered four portraits of herself to be

executed in France and sent to her, and that she sat to a painter while at Sheffield Castle, in August, 1577. (See Labanoff, *Recueil*, tome iv., pp. 256, 390.)

Passing to the biography of Jameson, we are met at the very outset by the uncertainty which hangs over his entire life. No documentary record of his birth has been discovered; but the present biographer shows good reason for assigning the event to 1588, instead of 1586, the date assumed by Walpole and adopted by Cunningham and Redgrave. The painter is believed to have studied in the Grammar School and Marischal College of Aberdeen, and the received tradition that he was the fellow-student of Vandyke in the studio of Rubens in Antwerp appears to rest upon no surer evidence than such as is afforded by the Flemish style of his productions. We trace him again in Scotland in 1621, for a portrait of the first Earl of Traquair, now in the possession of the Earl of Kintore, bears that date.*

Soon the artist had attained an excellent practice as a portrait-painter in Aberdeen, being employed by the burgesses of the city and by the nobility of the North. In 1624 we have record of his marriage to "Issobel toche"; and in 1629 the baptismal register affords proof of the assured social status of the painter by preserving the names of Provost Menzies, Baillie Jaffray, Prof. Strachan, and other worshipful and learned personages, who honoured the artist by standing godfather to his offspring. In 1633, along with Principal Adamson and Drummond the poet, he took an important part in the preparations for the reception of Charles I. in Edinburgh, on the occasion of his Scottish coronation, and he seems then to have been honoured by sittings from the king at Holyrood. Having returned to the north, the painter, in the autumn of the same year, again left Aberdeen, now in company with Alexander Jaffray, the diarist, and other friends; registered himself a burgess of Edinburgh as he passed through the Scottish capital; and, after residing for a time in London, proceeded to the Continent along with Sir Colin Campbell. This exceptionally cultured Highland gentleman, the Eighth Laird of Glenorchy, was one of Jameson's best patrons. For him the artist executed quite a gallery of portraits, of which many are preserved at Taymouth and Langton House, and some are more widely known through the engravings in Pinkerton. The painter's letters to Sir Colin, now in the charter-room at Taymouth, afford interesting glimpses of his way of work. In one he promises to reproduce sixteen portraits in eight weeks, "and my pryce shall be bot the ordinarie since the measure is just the ordinarie"—to wit, "twentie merkis" each, or, if framed, "twentie poundis" (Scots).

In May 1635 we find Jamesone acquiring

* Mr. Forbes-Robertson, indeed, in the *Art Journal* for 1884, pp. 392-3, states that the portrait of the Rev. John Livingstone, No. 91 of the present catalogue, a work which he accepts as authentic, is dated 1620; but the "Person of Ancrum" was born in 1603, while, according to Mr. Bulloch, the picture represents a man of fifty, is "a somewhat doubtful Jamesone," and has been largely repainted by a modern restorer, who has inscribed the work with the name of its subject, and to whom—one may suppose—the date also is due.

from the magistrates of Aberdeen, with a view to the erection of a country house, a plot of ground on the outskirts of the city, known as "the playfield," which had run to waste and suffered from the floods of the Denburn. This ground he engages to protect, cultivate and plant, on condition that he is to enjoy a life-rent of it, and that after his death it is to be devoted "to the public use and benefit of the hail toun in all tyme thair-effir." Three years later, in July 1638, we trace him, in the diary of Sir Thomas Hope, Lord-Advocate, practising his art in Edinburgh.

Meanwhile the politics of the country had been becoming more and more troubled; and the artist on one occasion, at least, was sucked into the turmoil—if he be, indeed, that same George Jamesone who, according to Spalding, was sent to Edinburgh in 1640, along with other Aberdeen lairds and burgesses, on trial for his refusal to sign the covenant, and who, with his townsman Ex-Dean of Guild "George Moresonne," seems with difficulty to have "wan frie and paid no fine." Walpole has preserved the fact that the artist's will, a document now lost, was drawn out in the following year. It provided for his wife and family, and also for a natural daughter, and bequeathed to Lord Rothes a full-length of the king and a picture of "Martha and Mary," and to William Murray a collection of medals. The painter seems to have been occupied to the last with his work, for a portrait at Yester bears the date of 1644. Towards the end of that year he died suddenly at Edinburgh; and on December 11, "Mary, Isobella and Marjorie Jamesone" were served heirs portioners in general to their father, his widow retaining a life interest in her late husband's property.

One of the most useful parts of the book is its annotated list of Jamesone's works, which are catalogued to the number of 186, exclusive of the religious subjects in the Scots College, Rome, upon the authenticity of which Mr. Bulloch does not venture to pronounce. Several, indeed, of the specified items are marked as doubtful, and not a few genuine works are stated to have suffered irremediably from the hands of the restorer. Much interest is given by the brief but helpful biographical notes on the subjects of the portraits. With very few exceptions all the collections whose treasures he describes have been personally visited by the author; indeed, many of them have been subjected to a second examination after the biography was well in progress. This final survey would appear occasionally to have modified the conclusions arrived at in the first—in such a case, for instance, as No. 80, "Mrs. Duff, of Muldavit," which, at page 99, is praised as "a choice specimen of Jamesone's skill," "one of the finest female heads he ever painted"; while in the catalogue we find the more cautious statements that, "although the restorer has been at work, the spirit of Jamesone has not been lost," and that "altogether one has little hesitation in accepting the portrait as one of the Jamesone Gallery." We notice a curious omission in the list of works possessed by Mr. Erskine-Murray. There is no reference to his bust-portrait of the Lord Treasurer Mar, a work undoubtedly by the same hand as No. 147, "Sir Alexander Erskine of

Cambuskenneth," in the same collection, which Mr. Bulloch assigns—we believe with justice—to Jamesone.

One cannot help feeling that greater completeness and higher value would have been given to this section of a work designed to be exhaustive and final on its subject by the adoption, in the catalogue, of a more methodical and closely differentiating system of description, which would have entailed little additional and no unwelcome labour upon so devoted a student as Mr. Bulloch. We should, at least, have been furnished with a uniform statement of the size of the works—bust, half, or whole-length. From the catalogue one cannot gather whether No. 47, "John, Earl of Mar," is a replica of No. 123, or a different rendering of the nobleman; and we should be in a similar uncertainty regarding Nos. 20 and 89, "Robert Gordon of Straloch," were it not for the note appended to both pictures that the work is engraved in Chambers's *Eminent Scotsmen*. From which of the two paintings, we are inclined to ask, was the print taken? It bears the inscription, "From the original picture in the possession of William Gordon Cumming, Esquire, of Pitburg and Dyce."

With regard to the style of the book, it would have been well if its proof-sheets had been subjected to a closer literary revision, which would have diminished the number of irritating little inelegancies and inaccuracies of expression which at present mar some of the pages of a work which represents much earnest labour, and will be welcome and useful to the students of our national portraiture.

J. M. GRAY.

OBITUARY.

PROF. WORSAAE.

THE name of Jens Jacob Asmussen Worsaae, who died suddenly on August 15, has so long been familiar to the English public as that of one of the fathers of the science of prehistoric archaeology, that it is not surprising that some of the newspaper notices of his death have spoken of his advanced age. As a matter of fact, he was only sixty-four, the date of his birth being March 14, 1821. He was a native of Vejle in North Jutland, and received his education, first at the Grammar School at Horsen, and afterwards at the "Borgersdydsskole" at Copenhagen, from which he proceeded to the university of that city in 1838. During his university course he was employed as an assistant in the Royal Museum of Northern Antiquities, and from 1842 to 1847 was sent by the Government on several archaeological missions to Sweden, Norway, Germany, and the British Isles. His earliest published work, *Danmarks Oldtiden*, appeared in 1843, when the author was only twenty-two years of age. The book attracted great attention, and the theories which it enunciated excited much controversy; but it may be said that, though in a considerably modified form, they are now generally accepted. An English version of the book, under the title of *The Primeval Antiquities of Denmark*, was published in 1849, translated (with additions) by Mr. W. J. Thoms, who, by a singular coincidence, died on the same day as the author whom he introduced to English readers. Another book of Worsaae's, *The Danes and Norwegians in England, Scotland, and Ireland*, which was published in Danish in 1851, and in English in the following year, still retains much of its value, though some of the writer's particular conclusions require correction. A later work,

partly covering the same ground, *Den Danske Erobring af England og Normandiet* ("The Danish Conquest of England and Normandy"), was published in 1863, and has not been translated into English. Although attractively written, it cannot be said to show that the author had bestowed much original research on the subject since the completion of his better-known volume. In October 1854 Worsaae received the title of Professor of the University of Copenhagen, where for several years he lectured on Northern Antiquities. He was in 1865 appointed Director of the Museum of Northern Antiquities, and of the Ethnographical Museum—these offices having become vacant by the death of his teacher, the eminent antiquary, Christian Jurgensen Thomsen. Prof. Worsaae's smaller writings are numerous, his two latest productions of any consequence being *Nordens Forhistorie efter samtidige Mindesmærker*, which was a recast of a course of lectures delivered to working men; and an illustrated book in English on *The Industrial Arts of Denmark*, which was prepared in connexion with the Scandinavian Loan Exhibition at South Kensington in 1882, and was published as a volume of the "South Kensington Art Handbooks." Prof. Worsaae was a Knight of the Dannebrog and other Danish orders, and for a short period he held the office of Minister of Education. He was a member of several English learned societies, and at one time contributed frequently to English periodicals.

H. B.

CORRESPONDENCE.

STONE CIRCLES.

Gonville and Caius College, Cambridge:
Aug. 24, 1885.

Mr. Bradley, in his review of Mr. Lukis's *Prehistoric Stone Monuments of Cornwall* (ACADEMY, August 22), quotes a passage respecting the original purpose of stone circles, which antiquaries have variously explained as temples, sepulchral enclosures, or protection walls for herds of cattle. This called to my mind a statement of Aristotle which (I speak with all the diffidence of an "outsider" on these subjects) has never been quoted in reference to this question. Aristotle (*Politics* iv., 1324^b, 18), after describing in what high esteem warlike prowess was held, and with what special honours the successful warrior was rewarded among the Scythians, Thracians, Persians, Kelts, Carthaginians, and Macedonians, adds, ἐν δὲ τοῖς Ἰσθραῖν, ἔθρει πολεμικῇ, τοσοῦτους τὸν ἀριθμὸν δολιχίσκους καταπληγνύουσι περὶ τὸν τάφον θύου ἂν διαφθεῖρῃ τῶν πολεμίων.

If the Ἰσθραῖν of Aristotle are the same dark-complexioned dolichocephalic race which some anthropologists hold to have once occupied all Western Europe until driven back or absorbed by stronger races, the fact that other nations remarked upon their customs of placing "obelisks" round the graves of their dead as a distinctively national characteristic may be worth some consideration in answering such questions as what was the purpose of stone circles, and by what race were they erected.

WILLIAM RIDGEWAY.

GREEK INSCRIPTION FROM EGYPT.

Seascale, Cumberland: Aug. 24, 1885.

Surely in verse 4, Prof. Sayce's ἔρμον should be πρόμον, and we should restore not αὐτ(δ) but αὐτ(δν). And in verse 1, the name of which only the first two letters (Ερ) are clearly distinguishable, should be of the metrical value of such a name as Ερμόνος, not of Hercules, if the line scanned—as we may reasonably presume it did.

E. B. NICHOLSON.

P.S.—The metre does not absolutely ne-

cessitate a four-syllable, or even a three-syllable, name: for instance, it would allow *"Epos est"*—but I am not suggesting that.

NOTES ON ART AND ARCHAEOLOGY.

A "SIR JOSHUA" hitherto unexhibited, and in an excellent state of preservation, a portrait of the Rev. Christopher Atkinson, Fellow and Tutor of Trinity Hall, Cambridge, now hangs in the dining-room of his grandson, the Rev. J. C. Atkinson, of Danby Parsonage, Gros-mont, York. The picture has never been out of the possession of the family.

THE Scottish Society of Water-Colour Painters will hold its eighth exhibition in October, in the rooms of the Glasgow Institute of the Fine Arts. For the first time, this exhibition will not be confined to the works of members of the society.

THE vicomte Henri Delaborde having resigned the keepership of the prints at the Bibliothèque Nationale, M. Georges Duplessis, who was before assistant keeper, had been appointed to succeed him.

THE catalogue of the valuable art collection bequeathed to the Louvre by the late Baron Charles Davillier has just been published. It is compiled by MM. Louis Courajod and Emile Molinier.

FOR some time past excavations have been carried on in Austria on the site of the Roman station of Cornutum on the Danube, where the Emperor Marcus Aurelius stayed for three years during his campaigns against the Quadi. Up to the present the discoveries comprise the *forum* of the camp, the remains of a temple to Mithras, a fine statue of Hercules, and a number of minor objects, such as arms, vases, ornaments, &c.

IN Langenthal, Canton Bern, near the railway station, the workmen who were ditching a meadow came upon traces of the foundation of a large building, evidently of Roman origin. There was doubtless a castrum on the spot, similar to those discovered at Herzogenbuchsee and Kirchberg. The Roman road from Aventicum to Vindonissa passed through this district. Arrangements have been made for further excavations.

M. PHILIPPE BURTY has printed in the *République française* a summary of M. Maspero's "Report on his latest Excavations in Egypt," which appeared in full in the ACADEMY.

MUSIC.

BIRMINGHAM MUSICAL FESTIVAL.

Birmingham: August 26, 1885.

It is not within the power of mortals to command success, but the Birmingham festival committee has certainly done all it could to ensure it. The first and most important task was to select the foreign composers to whom commissions should be offered to write novelties. The enthusiastic reception given to the "Redemption" three years ago has naturally led to a new work from the same pen. Then of course there could be no question as to the wisdom of applying to Herr Dvorak, composer of the already world-famed "Stabat Mater." To select from native composers was more difficult, for many names seemed worthy of a place in the programmes; but the difficulty was solved—though at some risk—by asking all the English composers who have specially distinguished themselves, whether at festivals or important London concerts, to contribute something. Never before has so much been done for English art at one festival. But besides fixing the programmes, the committee had to appoint a

conductor to fill the place so long held by the late Sir Michael Costa. The choice fell upon Herr Richter, and it is difficult to imagine a better one. It would have been pleasant to find that an English musician had been deemed equally worthy of the post, but in matters of art nationality must be set aside. Herr Richter's wonderful ability and experience as a conductor are well known, and we believe that he will be found to be the right man in the right place. Changes have been made in the constitution of the orchestra. The strings have been reduced from 108 to 86, and the balance between wind and strings is now more equal; but the performances of the first two days show a great falling off in the tone of the violins as compared with the last festival. It has neither the same strength nor brilliancy. A new conductor must be allowed to make any changes which he may think desirable, but he should see to it that the new men are as good or better than those who are dismissed. In other respects the orchestra is excellent; Mr. A. Burnet is leader. The usual London band rehearsals last week, and the full rehearsals last Saturday and Monday at Birmingham, were conducted with the utmost care and patience, and everything seems to point to a successful series of performances. The choir is excellent. We remark the same richness of quality in the tone, and combined with this greater brilliancy than in 1882.

On Tuesday morning a large audience assembled to hear Mendelssohn's "Elijah." There was considerable curiosity as to the performance. Many years ago Wagner was accused of openly showing his want of sympathy with, or even dislike to, Mendelssohn's music while conducting that master's Italian Symphony. Herr Richter belongs to the Wagner school, and perhaps Mendelssohn's masterpiece was considered in rather dangerous hands. After the National Anthem had been sung, Mr. Santley commenced the well-known recitative, and from that moment to the end of the oratorio everyone listened with rapt attention. Some of the audience may quite possibly have seen Mendelssohn conduct it in 1846, but, with that exception, we doubt whether a finer rendering has ever been given at Birmingham. Herr Richter entered thoroughly into the spirit of the music, and, whatever his likes or dislikes, did full justice to it. Specially noticeable was the delicacy of the orchestral accompaniments in the solos. The violin passage near the close of the "Thanks be to God," and that of the second part of the first Baal chorus, showed prominently the one defect in the orchestra mentioned above. The principal vocalists were Madame Albani, Miss Anna Williams, Mesdames Patey and Trebelli, and Messrs. Lloyd and Santley. The double quartet, "For He shall give His angels," was admirably given by Mesdames Anna Williams, Hutchinson, Trebelli, and Patey, and Messrs. Lloyd, Wade, King, and Watkin Mills. It is seldom that it is entrusted to such competent artists. The singing of the choir throughout was extremely fine, although in one or two high notes the soprani showed signs of fatigue, the natural result of two days' rehearsal.

There was an interesting concert in the evening. Mr. F. Cowen's new cantata, "The Sleeping Beauty," was performed under the composer's direction. The poem has been written by Mr. Francis Hueffer, and the story is well arranged for musical purposes. A daughter is born to a mighty king, and good fays enter the christening chamber and bestow on the little maiden beauty, wealth, and happiness. But a wicked fay enters unbidden, and announces that ere she has attained the age of twenty the maiden will die. In the second scene, as her twentieth birthday is being celebrated, and when danger seems past, the wicked fay casts into a trance king, maiden,

and courtiers. So in magic slumber they remain for a hundred years, when a prince, guided by the good fays, rushes into the castle hall, and breaks down the thicket of roses surrounding the sleepers. All are restored to life, and then all begin to while away the hours with dance and song. The music throughout is extremely light, graceful, and pleasing. Mr. Cowen makes considerable use of *leit motive*, and he handles them at times in a very felicitous manner. He has a charming love *motiv* which forms the main theme of an instrumental movement entitled "Maidenhood," and in the last scene he ingeniously uses the phrase in the horn signal given by the prince when he enters the enchanted hall. This love theme, as might be expected, plays an important part throughout the cantata. All his themes are characteristic, and they are well developed in the true Wagnerian sense. But we are not, at this moment, writing an analysis of the work, or could give many an apt illustration in support of our statement. The whole cantata is good, but specially worthy of mention are the solos and choruses, "At dawn of day" and "Pure as thy heart," and the duet between the prince and princess just before the close. The performance of the work was exceedingly good—it will be sufficient to name the solo vocalists, Mrs. Hutchinson, Madame Trebelli, Messrs. Lloyd and King. At the close the composer received well-deserved applause.

The second part of the concert included a scena for tenor, "Love lost on Earth," composed expressly for the festival by Mr. A. Mackenzie. It is a very pleasing and showy composition, though, to our taste, a little too much in the French style. It was sung by Mr. Lloyd, conducted by the composer, and well received. Señor Sarasate played Mendelssohn's violin concerto, besides an introduction and rondo capriccioso, and, it is scarcely necessary to add, with immense success. The concert concluded with Wagner's overture to *Tannhäuser*. There was a very good attendance, both morning and evening.

On Wednesday morning Gounod's "Mors et Vita" was performed. The work contains many beautiful and many powerful passages. In the "Introit et Kyrie," the quiet and sombre tones of the voices contrast well with the restless orchestra, giving out the theme of "sorrow and tears." The Kyrie section is short, but highly impressive. The following movement, a double chorus *a capella*, "A custodia matutina," is a skilful and effective piece of writing. In the quiet passages the rich and beautiful quality of tone of the Birmingham choir was heard to great advantage. In the first part of the "Dies Irae," the rhythm of the accompaniment is certainly monotonous; but this effect was probably intentional on the composer's part. The loud passage, describing the trumpet ringing through earth's sepulchres, with its chromatic harmonies, its rugged modulations, and its effective orchestrations, is one of the most striking pages of the "Requiem." The "Justice" theme in the last few bars of this movement is heard combined with itself in inverted form, and produces one of those exaggerated effects of which the composer seems so fond. The "Quid sum miser," for *soli* and chorus, is a very fine movement; the themes, now soft and plaintive, now loud and passionate, carry away the listener, and make him forget for the time that the material so skilfully worked up is by no means new. The tenor solo, "Inter oves," is specially noticeable for its varied and effective accompaniment. The "Quam olim Abraham" words of course suggest a fugue: our composer sets them to a solid theme, and appears about to give us a specimen of his scholastic powers; but after the exposition comes a short stretto, followed by an ordinary cadence. There is much the same sort

of thing—a head and tail without body—at the end of the trilogy, so that with respect to fugal writing “Mors et Vita” is about as disappointing as “The Redemption.” The “Agnus Dei” contains a fine *cantabile* phrase for soprano solo, and of this phrase considerable use is made in the third section of the work. The “Requiem” concludes with an instrumental movement entitled “Epilogus,” in which the “Justice” and “Sorrow” themes are much used. In our notice last week of the work we spoke about the unsatisfactory character of the three orchestral movements at the commencement of the second part. A composer courts failure when he attempts to describe things which eye hath not seen nor ear heard. As abstract music, the “Tubæ ad ultimum iudicium” is meaningless; and the augmented triad blare of the trumpets perfectly distressing to the ear. The brevity of the “Resurrectio Mortuorum” constitutes its chief merit. In the third part there are two movements which call for special notice: one is the beautiful baritone solo, “Jerusalem coelestis,” with its tender Schubert-like harmonies and rhythm, the gem perhaps of the whole work; and a “Sanctus,” effective both for voices and for instruments.

And now to speak of the trilogy as a whole. It has two grave faults, both of which may, however, be remedied. The first is the long succession of movements in the “Requiem” in slow time, and all, with two exceptions, in common time, which produces a decidedly wearisome effect. The “Requiem,” which takes in performance nearly two hours, could easily be reduced in length by the omission of one or more movements. The other fault is the setting of the music to Latin words only. Perhaps one of the chief causes of the great success of “The Redemption” was the solemn story of the death, passion and resurrection of Christ, told in familiar English words. There are, besides, three of the composer’s mannerisms, which, to some extent, spoil one’s enjoyment in listening to the work: the first is his habit of repeating short vocal phrases in sequence—three, four times, and even oftener, as in the “Ingenisco tanquam reus”; the second, the continual, and at times very harsh, chromatics; and the third, the perpetual breaking up of the musical interest of a movement by the introduction of full closes. And now, having pointed out very frankly what we consider to be the shortcomings of the work, let us acknowledge the extreme beauty and pathos of some of the pages, the power and brilliancy of others, and throughout the splendid clearness and vivid colouring of the orchestration. With regard to the performance of the work, we have to speak in the highest terms. Herr Richter, owing to the absence of the composer, naturally felt the responsibility of his position, and both in preparation and in performance did his best to ensure as perfect as possible a rendering of the work. The soloists were Madame Albani, Madame Patey, Messrs. Lloyd and Santley. If the applause at the close was feeble in comparison with that bestowed on “The Redemption” three years ago, it must be remembered that the composer was not present.

Respecting Wednesday evening’s concert, we must reserve details until next week; but we will mention that Mr. Anderton’s “Yule Tide” was admirably performed; that Mr. E. Prout received quite an ovation at the close of his symphony in F (op. 22), composed expressly for the festival, which he conducted himself, and without score; and that Mr. A. Mackenzie’s new violin concerto, a work of great earnestness and ability, was magnificently interpreted by Señor Sarasate. Herr Richter very wisely resisted the temptation offered to him of repeating Liszt’s “Rhapsodie hongroise” (no. 1).

LITERATURE.

Scep sis Scientifica; or, Confess Ignorance the Way to Science. By Joseph Glanvill. Edited, with Introductory Essay, by John Owen. (Kegan Paul, Trench & Co.)

NEARLY half a century has elapsed since Hallam pronounced on Glanvill's *Scep sis Scientifica* that "few books were more deserving of being reprinted." At the present day we have perhaps a tendency to be dominated by a desire as much for what is old for the mere sake of its antiquity as for something new for the sake of its novelty, and Shakspeare's curse might fairly be applied to some disturbers of the bones of authors whom time has consigned to a peaceful oblivion. But the present re-issue is safe beyond reach of the anathema. The *Scep sis Scientifica* is not only, as Hallam called it, "a remarkable work," but it is also one of deep interest both for its historical associations and for its substantial importance. Every one knows in a more or less vague way the civil history of the middle of the seventeenth century, but it is astonishing how little we are generally acquainted with the prose works through which the civil, social, and religious ideas of the country found expression. This is partly due to the antiquated form into which the works are cast; but even the antique style has a charm which little of our modern hasty writing can provide. We seem to come nearer nature when we go to one of those old seventeenth century men—a man like Fuller, or Harrington, or Selden—and hear his quaint similes, his ringing metaphors, his picturesque allusions, his homely pithy phrases. Glanvill's writing has all these characteristics. It is marked, indeed, by a scholarship (familiar in seventeenth century prose) sometimes amounting to pedantry, but it is as concrete and analogical as that of Bacon himself, and it is enlivened by a vivacity unknown to Bacon. His style, like his thought, is brusque, buoyant, and intrepid, conveying the impression of a free lance of literature. "How fond are men of a bundle of opinions that are no better than a bag of cherry-stones!" "Opinions are the rattles of immature intellects;" "If their dam be the judge, the young apes are the most beautiful things in nature;" "We reverence grey-headed doctrines." Were it only for Glanvill's way of putting things, the book is worthy even of a popular reading; and both editor and publishers may be congratulated as well upon the task they have undertaken, as upon the manner in which they have executed it.

The *Scep sis Scientifica*, which is more widely known through the "Scholar-Gipsy" under its earlier title *The Vanity of Dogmatising*, may be generally described as one of

those books that plead for the faith that lives in honest doubt. This imparts to it a certain perennial interest apart from the historical, and in a sense causes the present reprint to appear almost in the light of an original essay. In its historical aspect it is the outcome of that great and multifarious movement towards liberation through which England passed about the middle of the seventeenth century. Mr. Owen, in his Introduction, gives a remarkably clear and succinct account of Glanvill's position with regard to his own times. With a somewhat pardonable partiality, however, he is inclined perhaps too strongly to emphasise his author's importance. Glanvill was, indeed, esteemed highly by his contemporaries, and by some of them spoken of in terms of extravagant praise. Evelyn, for example, addresses him in a spirit of the briskest admiration of his *Plus Ultra*: "Now let the moon-dogs bark till their throats are dry." In other places we find the present work mentioned as "Art's Encyclopaedia," "the epitome of all learning," "the universal panoply." Even Anthony à Wood cannot conceal his admiration under his habitual sneer. The fact remains, however, that Glanvill has been all but forgotten, and even Mr. Owen, I think, will confess the main reason of this to be that in his lifetime Glanvill achieved nothing positive. His faculty lay in assimilating the influences of the new movement into which he was born, and in reproducing these. His talent was that of a representative, not that of a leader and teacher. Hence his memory has dropped from among the memories of other men like Baxter, who, if they were less fine, were more positive.

This, however, is a peculiar merit of Glanvill, and Mr. Owen well draws attention to his excellence as an exponent of the various movements of thought that stirred the middle of the seventeenth century. But while according the editor all praise for his neat, lucid, and scholarly exposition, one may be pardoned if one sees in its very clear-cut outlines something suggestive of ingenious expository dove-tailing. He says, for example, that Glanvill "exemplifies the reaction against philosophical and religious dogmatism, which, though not caused, was materially aided, by the collapse of the Puritan régime." Against the first part of this statement there can be no objection, but the second is too precise. It defines the limits of the reaction too closely. It makes that an intellectual movement, and Glanvill a thinker too much of the Restoration epoch. The reaction doubtless leapt to a certain crisis at the Restoration, but it had been growing slowly but ever stronger from the time that Puritanism first became an appreciable force, a point before the close of the sixteenth century which may be marked by the Marprelate controversy or the publication of Nicholas Bound's book on the Sabbath. Indeed, the term "reaction" is itself somewhat misleading, for the Puritans themselves were the first reactionaries. On their negative side they abjured the secular life and disowned the liberal culture of the Renaissance; on their positive they emphasised a fiercely argumentative doctrine, and instituted a discipline that was appalling. The result was that they awakened protest on every side. They

generated contempt on the one hand and counter-argument on the other. The lighter element of the heirs of the Renaissance revolted from their discipline and flouted them; the more serious recoiled from their hard dialectic and tried to reason with them. Thus English life became as it were split in two, and what appears later on as a reaction against religious dogmatism is at first only the older forces asserting themselves in protest. Not to speak of the protest as it appears in the drama and poetry, or in the counter-dogmatism of Laud and the high churchmen, we find a more acceptable form of the same protest in the rationalising tendency of the theologians, represented at Oxford by Chillingworth,* and at Cambridge by Henry More and the Platonist School, and clothing itself once more in the purple raiment of the Renaissance in the discourses of Jeremy Taylor. Varied forms of the same reactionary impulse appear in the *Political Discourses* of Sidney, in the *Areopagitica* of Milton, in the so-called scepticism of Sir Kenelm Digby, and particularly in Hobbes, whose entire writings may be regarded as a dogmatic protest, in politics and psychology as well as in religion, against the dogmatic assumptions of Puritanism. Into this complicated and extensive reaction Glanvill entered just about the time of the Restoration, and Mr. Owens explains his position at that epoch with a fine simplicity. But the fact that Glanvill was at this time the inheritor of a reaction that had been in process for over half a century previous seems to be regarded by his editor with scarcely sufficient distinctness.

I have spoken only of religious dogmatism; there is another point. Glanvill describes his book as "levied against dogmatism and attempting against a daring enemy, confidence in opinions." What, precisely, is this "daring enemy," this dogmatism? One reads the book, and in almost every page one sees the "daring enemy" bayoneted in the person of Aristotle. This was the false wizard in whose name the Schoolmen had reared "stately pleasure-domes" of syllogism, and whose method was still dominant even where the Peripatetic system had been rejected. But Glanvill's own words on the matter are that "the now adorers of that philosophy are few, and such narrow souls that know no other." Aristotle's influence was still greater than these words would suggest, but it seems strange that Glanvill should have been at such pains to assail a philosophy of which he could speak in such contemptuous terms as that its adorers were only a few narrow souls that knew no better. Some light may be thrown on this apparent inconsistency if we revert to the origin of Glanvill's work. Bred as an Oxford Puritan, Glanvill fell under the influence of the Cambridge Platonism, and while under that influence wrote a tract on the immortality of the soul. As a counteractive to mystic enthusiasm, like that prevalent among Puritan sects, he designed a preface to it upon the use of reason in religion; and this preface, growing beyond bulk, he enlarged into a separate treatise, which was accordingly published in

* Chillingworth's saying, that "confidence in opinions is a sure way to know false opinions by," might almost serve as a motto for Glanvill's book.

1661 under its title *The Vanity of Dogmatizing*, the first edition of the present work, and the book from which Mr. Arnold gathered the story of the "Scholar-Gipsy." The work therefore sprang from a religious root, and was the work of one who had revolted against the dogmatics of Puritan theology. When we recollect that Calvinism was essentially scholastic in its method, and keenly antipathetic to the innovations of the New Philosophy, we perceive a new ground for Glanvill's reiterated assaults upon Aristotelianism, and are able to attach a more definite significance to his term "dogmatism." Not that we should limit that significance to Puritan dogmatics, for Glanvill was fighting in the cause of science as well as religion; he was fighting not only for a liberal church but for a free philosophy. But we perceive that the dogmatism he was combating was the dogmatism he encountered in force around him, not so much that of the superannuated Schoolman as that of the Puritan sectary, and that his attack is less an attack upon Burgersdicius and Smiglecius than upon the illiberal and meddlesome dogmatism of such men as Calamy and Twisse and the "humble and heavenly-minded" Richard Sibbes. This is more apparent in the earlier form of the work than in the *Scopis Scientifica*, which is far less antagonistic and bears more distinctly the impress of the Royal Society; but this is the kernel from which both alike sprang.

There is another part of Mr. Owen's excellent Preface that seems to call for some remark—that in which he speaks of the extent to which Glanvill was moulded by continental influences. In the first place, his statement of the facts of the case regarding the reflux of foreign humanism at the Restoration is admirably explicit but rather too much so; the lines are drawn too hard. The humanism of Erasmus and More, once planted in England, grew there as it did abroad, and though largely perverted by the spread of Puritanism was never cut away. We see its perversion in the drama and to some extent in the cavalier poetry; we see it still alive with health in the full humanities of the company that gathered round Falkland, in the Elizabethan luxuriance of Jeremy Taylor, in the broad sagacity of Selden. Mr. Owen disregards this home growth and writes as if humanism in England stopped short at the Civil War, and began again with Charles II. The Restoration widened the facilities of intercourse between England and the Continent, and an increased intercommunication then took place; but the imported humanism chiefly characteristic of that epoch was the humanism of Rochester and Nell Gwynne. Glanvill, like others of his time, drew considerably from continental sources; but both he and they drew from these sources even while the Puritan régime was in full sway, and long before Comus and his rabble appeared to give license in the name of liberty.

But with regard even to such names as Descartes, Gassendi and Charron, it is possible to overrate their influence on Glanvill's mind. In spite of his incessant reference to Descartes, and the somewhat blatant praise with which he shouts out his name, I cannot think he was too well acquainted with "the miraculous Descartes"; or, indeed, that this

beating of the big Cartesian drum was much more than an accompaniment to the European popularity of Descartes' name. The affinity of his mind lay less with Descartes than with Bacon. His organon, like that of Descartes, is doubtful. But Descartes doubted that he might fall back on consciousness and build a constructive philosophy out of that. He doubted that he might find a limit to his doubt, and in finding his limit he lost contact with the world of matter. Glanvill only employed doubt as a weapon of offence against dogmatism, and straightway fell back upon science. The purely physical systems that formed the material of Bacon and of the Royal Society were beyond the scope of Descartes' speculation, just as Descartes' metaphysic was beyond Glanvill's intellectual range. The bent of his mind was essentially scientific and concrete. The bulwark upon which he always rests is experimental science; the true philosophy is "to seek truth in the great book of Nature"; and when he ventures upon metaphysical speculation of his own he becomes trivial and impotent. He comparatively seldom mentions Bacon by name, but his chapters upon the reasons for our want of knowledge are substantially one with the Baconian *Idola*. Even his objection to the Peripatetic system is that it "knows little of the practical and experimental." He says adoringly that the Cartesian method "hath shown the world the way to be happy," a phrase beside which it is curious to set that of Bacon himself, that the true end of philosophy is "the relief of man's estate." But he owns his truer masters in the dedication to the Royal Society, and shows that among all his borrowings his deepest debt is to the England of his own and the preceding age.

JOHN G. DOW.

Essays and Miscellaneous Writings. By Vere Henry, Lord Hobart. With a Biographical Sketch. Edited by Mary Lady Hobart. In 2 vols. (Macmillan.)

THE late Lord Hobart, through his connection with Lords Grey and Ripon, obtained subordinate political employment in his youth, was a man of strong and extreme opinions of the Cobden school, wrote letters in the *Times*, and occasionally articles for monthly magazines, had a good appointment in Turkey, and was finally appointed Governor of Madras in succession to Lord Napier, where he evinced some higher qualities than his previous character would have led men to anticipate, and was unhappily carried off in the middle of his not unsuccessful labours by typhus fever. The writings here collected are above the average of magazine articles and letters to the *Times*, but one cannot but feel that they might have been left to serve the temporary purpose for which they were written, and that Lord Hobart would never himself have thought them worth collecting into two octavo volumes. Lady Hobart's biography is full of uninteresting scraps of private and newspaper correspondence, but as a wife's work is beyond the pale of criticism, and the ardour of her admiration is a proof of the private goodness of the man.

An essay on Modern English Literature supplies evidence that Lord Hobart had true taste on literary subjects, and another essay

called "Points of View" is singularly broad and liberal, in the true sense, for a man, whose political writings in general prove him to have been a sentimental *doctrinaire* of the school of cosmopolitan thought, who regarded Mr. Cobden as the apostle of a Manchester millennium.

The political essays which fill the first half of the second volume exhibit Lord Hobart as a fair exponent of the principles which he embraced, and they are not disfigured by conscious misrepresentation of opponents, as such writings too often are. He was a student of Bentham and Mill, and the essay on the Bank Charter Act of 1844, an argument in favour of absolute freedom for banking, is perhaps the best in the collection, while some of these political essays are of sufficient interest to justify their reprint, even so many years after the subjects to which they refer took place.

The letters and minutes on Indian subjects, with which the collection closes, are not of sufficient interest to have warranted their reproduction. As an old Madras civilian, the local colour, the memory of old times and duties, enabled me to read upwards of two hundred and fifty closely printed pages of official correspondence on subjects mostly dull and uninteresting; but it is certainly to be hoped that this experiment at publishing the minutes of deceased Governors of Madras may not find imitators. Sir Thomas Munro, the father of the Madras Ryotwar, is an exception even in this matter; but it will be hard on future critics, to say nothing about the public, who have the remedy in their own hands, if the official minutes of all the Madras Governors between him and Lord Hobart are to appear in octavo volumes. Lord Hobart's official writing is probably neither better nor worse than that of his many predecessors, and the majority of the subjects touched upon are absolutely devoid of general interest. His private letters to Lord Northbrook on the subject of the salt tax are an exception. On this matter Lord Hobart did his duty manfully to the people committed to his charge, and for this, if for nothing else, his memory will be preserved as one faithful to his trust. A man practically acquainted with the real needs of the Madras Presidency cannot but smile at the doctrinaire obstinacy of the same Governor, who was prepared to overrule the opinion of his experienced council, and ruin the material prosperity of the country under his charge, by diverting the funds required to keep up the roads throughout the country, to the elementary education of the Ryots!

JAMES INNES MINCHIN.

Modern Science and Modern Thought. By S. Laing. (Chapman & Hall.)

THE material universe consists of enormous masses distributed over boundless spaces, and made up of particles inconceivably minute. Its present conformation is the result of changes extending back through countless ages. Everywhere it is composed of the same elementary substances. Everywhere and always it is governed by the same invariable laws, and presents no appearance of having ever been interfered with from without. The first origin of life remains undiscovered; but the various species of

plants and animals seem to have been produced from less complex forms by the known laws of evolution, and without any supernatural assistance. The human race is certainly of immense antiquity, and may possibly have already existed for more than a million years. It has risen slowly from very rude beginnings, and every step in advance has been achieved by its own unaided efforts. Such are what Mr. Laing regards as the principal results of modern science. By modern thought he understands their application to popular Christianity. While the antecedent improbability of all miracles has been enormously increased, the evidence of their actual occurrence has been diminished in something like an equal proportion. Inconsistencies have been discovered in the Biblical narrative which destroy its claim to supernatural inspiration. The best-attested miracle of all, which is the resurrection of Jesus Christ, rests on such late, uncertain and conflicting depositions as to deserve no belief. Christian theology, with its dogmas of the Creation, the Fall, and the Atonement, as set forth by St. Paul, is opposed to the theory of evolution, as well as to ordinary morality, and must likewise be abandoned. The belief in God and the belief in a future life remain open questions, about which science has nothing to say, either one way or the other. The Christian principles of charity and humility are very valuable elements in our civilisation; but, consistently followed out, they would develop a very worthless type of character, and need to be corrected by the Northern habits of thrift and self-assertion. Such is a brief but sufficient abstract of what Mr. Laing has to tell us on the subject of modern thought. It is prefaced by a few desultory references to the literature of the past generation, and followed by a few desultory observations on practical life.

As will have been seen, there is nothing new about Mr. Laing's opinions, nor is any novelty claimed for them. The new thing is that a Scotch politician and man of business turned seventy should employ his leisure moments in compiling and publishing a popular handbook of Agnosticism. Perhaps this phenomenon goes to prove that Agnosticism as a speculative system is nearly played out, especially when taken in company with another significant symptom, namely, that Mr. Herbert Spencer's philosophy is coming into high favour with Christian theologians.

It cannot be said that the creed in question gains much by the advocacy of its latest exponent. Mr. Laing is, in fact, rather slenderly equipped for the enterprise he has undertaken—an enterprise that would task the resources of any among the ablest thinkers now living. Partly perhaps as an ex-finance minister, he seems to be exclusively attracted by those branches of science which deal with big sums, while failing to grasp the higher conceptions even of merely physical science. Thus, like many others, he quite misapprehends the true scope of the Darwinian theory, which has nothing to do with the origin of life, and teaches not development in general, but a particular method of development (p. 97). We can understand why the new chemistry should be passed over in silence: it has no immediate bearing on religion; but surely modern investigations into the structure and

functions of the nerve-centres, modern psychology, modern speculations about the relations between mind and brain, deserved some notice in a work like the present. Of the speculative systems in which modern thought is embodied, Mr. Laing seems to be acquainted at first hand with only one—that of Mr. Herbert Spencer. Mr. Matthew Arnold, a far more modern-minded poet than the author's favourite Tennyson, is entirely ignored. Pessimism is summarily characterised as the gospel of feebleness and failure. Schopenhauer does not exactly strike one as feeble, or Hartmann as a failure. Comte's Religion of Humanity is described as "love and admiration for the abstract idea of the human race," and as something quite outside the family affections which, according to Comte, were at once its source and its focus (p. 227).

The public will, however, be more interested in Mr. Laing's own religion than in his criticisms on rival systems. He talks about "the scientific idea of a first cause inscrutable and past finding out" (p. 222); and tells us that the scientific world has substituted for "the idea of separate special creations" "the idea of an original creation (whatever creation may mean, and behind which [*sic*] we cannot go) of ultimate atoms or germs" (p. 96). Now "whatever creation may mean," it certainly implies the bringing into existence of what did not exist before, and, if so, the scientific world is pledged to no such belief. For all it knows, the atoms of which the material universe is composed may have existed from all eternity. But according to Mr. Laing such a hypothesis is absolutely inadmissible. His words are:

"There is one conception of which we may certainly say that it is not true—that is Atheism. No one with the least knowledge of science can maintain that it can ever be demonstrated that everything in the universe exists of itself and never had a Creator" (p. 71).

Our author seems to think that an indemonstrable proposition must necessarily be false. Let us apply this principle to his own negations. Has he demonstrated that miracles and revelations are impossible? By no means. He has only shown that they are inconsistent with the analogies of experience, and not supported by sufficient evidence. Again, in reference to the alleged phenomena of thought transference, he states, "that impressions can be made on the brain, or that one mind can communicate with another without some physical means of connexion between object and subject, is absolutely unproved, and remains altogether incredible" (p. 238). Surely it is playing fast and loose with logic to deny to the Atheist that latitude of unbelief which is here arrogated as against the Society for Psychical Research.

But the possibilities of Agnosticism as understood by Mr. Laing are not yet exhausted:

"There is nothing in Agnosticism to negative the possibility of a future state of existence. Behind the veil there may be anything, and no one can say that individual consciousness may not remain or be restored after death, and that our condition may not be in some way better or worse according to the use we have made of the opportunities of life" (p. 225).

It would be an interesting exercise to work

out some of the more obvious possibilities here suggested. Since there may be anything behind the veil, there may be universal felicity or universal misery awaiting mankind, or our future destinies may be distributed by lot, or the good may be punished and the bad rewarded—an arrangement which, according to some cynics, would at least have the merit of securing the greatest happiness of the greatest number. Mr. Laing talks about the "larger hope" opened up by modern thought. He might with as good reason have talked of the larger fear. Like the hero of a famous story, we do not know whether the door of the amphitheatre will admit us into the presence of a famished tiger or of a beautiful bride. Our guide, however, conveniently ignores the tiger. He tells us that

"We may well be grateful to anything which, however vaguely, helps and cheers us on the way; and from this point of view the ideas of God and of a future life taught by the Christian religion, accepted by so many good men, and hallowed by so many venerable traditions and sacred associations, should be cherished, as far as it is possible to do so without shutting our eyes to facts, and indulging in conscious insincerity" (p. 296).

The saving clause acquires a painful significance in view of the following very frank statement—a statement which might have been made very much stronger had our author devoted as much attention to physiology as he has to geology:

"The essence of all spiritual existence, so far as we know anything of it, is personal consciousness. This clearly depends on, or is indissolubly associated with, a certain condition of a material organ—the brain. With a less active condition of this organ, as in sleep, personal consciousness is suspended. In the case of a man recovered from drowning by artificial means, it is gone, and the man is to all intents and purposes dead for perhaps a quarter of an hour, and would remain dead if warm blankets and artificial respiration did not recall him to life. Where and what was he during this interval? and if his personal identity and conscious existence were gone for that quarter of an hour, why and when did they return? and, if the Humane Society's men had been less prompt, would they ever have returned?" (p. 292).

It may be also observed that this negation of a purely spiritual existence is not less inconsistent with the notion of a personal Creator than with the notion of human immortality. But we may well be thankful for a logical inconsistency that has perhaps spared us the scandalous spectacle of Mr. Samuel Laing claiming exemption from the Parliamentary oath, Mr. Samuel Laing claiming to have the oath administered to him, Mr. Samuel Laing administering the oath to himself.

It cannot be expected that a practical politician and man of business, doubtless inured to habits of compromise, should push his principles to their necessary logical consequences, especially when he is liable to be called to account for them by the presumably not very advanced constituency of Orkney and Shetland. Still an experienced man of the world might at least be expected to tell us in what relation his opinions stand to such burning questions as Disestablishment, religious *versus* secular education, divorce, the recognition of a moral law by the state, and

so forth, and what results he anticipates from the spread of those opinions among women and among the masses. But anyone turning over the leaves of *Modern Science and Modern Thought* with such expectations will find himself signally disappointed. He will find nothing beyond a feeble caution to the effect that "we shall do well to be tender with the forms and creeds of this religion [Christianity] even when they appear to be getting obsolete, and their strict and literal interpretation no longer consistent with known truths" (p. 296). If the scathing chapter on "Miracles" is a specimen of Mr. Laing's tender mercies, we should like to know what he would call severe treatment.

It would be unjust to conclude without acknowledging that Mr. Laing is always candid and generally accurate, that he writes a clear and vigorous style, and that he has brought together a number of facts and arguments which will be studied with interest both by those who go farther than he does, and by those who do not go so far.

ALFRED W. BENN.

George Eliot's Poetry, and other Studies. By Rose Elizabeth Cleveland. (Hodder & Stoughton.)

A VOLUME coming from the White House is, in the United States, sure to have the same kind of success which has been achieved in England by certain volumes issued from royal palaces. It is, of course, a factitious success, but it owes its existence to natural and universal human impulses, and only those people who are troubled with the superficial cynicism of youth will think it worth while to indulge in the cheap sneer which is too easy to be tempting. True criticism seldom indulges in sneers cheap or otherwise; but then, on the other hand, it takes no heed of either White Houses or palaces, and judges work according to its quality, not according to its origin. An estimate of these essays, formed in this disinterested fashion, is hardly likely to be a very high one. Every page in this volume bears witness to the fact that the sister of President Cleveland is an intelligent, cultivated, and well-informed woman; but no page bears witness to anything more, and the book accordingly fails in the impressiveness which belongs either to striking thought or memorable expression. This failure, like most failures of the same kind, is owing to defects partly of matter, partly of manner. A critic who has not space for illustrative quotations shrinks from hard sayings which he cannot justify by evidence; but, in spite of his shrinking, he feels bound to tell what seems to him the truth, and what seems to me the truth concerning Miss Cleveland's matter is this—that it is, for the most part, either obvious or extravagant. Take the first essay which gives a title to the book, and to which, therefore, one may fairly suppose the writer attaches special importance. It is devoted to a proof of the utterly sterile proposition that George Eliot as a poet ranks below Mrs. Browning—a proposition which it may safely be affirmed is doubted by no sane reader. It is, unfortunately, difficult to discover whether Miss Cleveland absolutely denies that George Eliot is a poet at all. Such a denial would reopen an interest-

ing controversy concerning the *differentia* of poetry, in which I, for one, should join issue with the critic; but, as her depreciation is not positive, but comparative, there is really nothing to discuss. Nothing, that is, in her conclusions; the grounds on which those conclusions are arrived at are debateable enough, or rather they would be debateable did they not consist of unproved and really unprovable assertions. Poetry of the highest kind is produced without effort; George Eliot's poetry is characterised by continuous effort: therefore George Eliot's poetry is not of the highest kind. Such is the syllogism to the expansion of which the first part of Miss Cleveland's essay is devoted. Here we have a major and a minor premiss, both of which are in the highest degree disputable; and, as Miss Cleveland makes no real attempt to establish either of them, what becomes of her conclusion? I do not say that within certain limitations it may not be sound. Miss Cleveland is, as I have said, undoubtedly right in awarding supremacy to Mrs. Browning; but the question she raises has nothing to do with mere degrees of rank, but with the essential nature of poetry; and that the best poetry is effortless would be denied by every great poet who ever lived. It may seem effortless, but that is a very different thing, and Miss Cleveland constantly vitiates her argument by confounding seeming with being.

But the critic has more to say than this. Passing from form to substance, she goes on to declare that George Eliot could not be a great poet because she was an Agnostic thinker; for the essence of true poetry is what the writer chooses to call the "antipode of Agnosticism." Miss Cleveland writes very rhetorically, and I cannot always be quite certain that I catch her exact meaning; but what I understand her to say is this—that poetry may be the expression either of firm belief or unhesitating denial, but cannot be the expression of oscillation, dubiety, or suspense. If this were true, it could only affect the subjective poetry, which gives scope to affirmation or denial, and of such poetry George Eliot gives us comparatively little, so it is difficult to see the application of the proposition to the main body of her work. But is it true? That is the "previous question," which must be answered, and, if it be answered in the affirmative, the result will be the setting aside of some of the most widely accepted verdicts of the world. Competent judges, for example, have long ago decided that Arthur Clough is a true poet, that Mr. Matthew Arnold is a great poet, that Shakspeare is a supreme poet; but Clough is always a questioning spirit, many of Mr. Arnold's most characteristic poems are poems of doubt, and what is probably the most popular passage in Shakspeare, the "to be or not to be" soliloquy is, like the character in whose mouth it is put, an embodiment of the most absolute scepticism. It will not do. I write without the smallest leaning towards the Agnostic position; but it is clear to me, as it is to most other people, that poetry is not conditioned by belief or disbelief or doubt, but by the possession of something which is independent of all three—imaginative vision and the power of rendering it.

I have been tempted, and I have fallen.

It was my bounden duty to give my impression of Miss Cleveland's book as a whole, and I have occupied nearly all the space that can be allotted to me in discussing a single essay. There is, perhaps, one excuse—that this essay, in spite of all defects of matter and manner, is the most individual and characteristic thing in the volume. There are good things in the essays on "Reciprocity," "Altruistic Faith," and "History"; but they are, after all, nothing but exceedingly clever and sympathetic imitations of Emerson by a writer who has assimilated not alone her master's manner, but something of his very cast of thought. It is Emerson diluted, but even in the dilution we catch the unmistakable Emersonian flavour. I open the book at random and read this:

"Ah me! what does our tasteless babble need so much as the savour of high thought? What do we need so much to see as that which is sacred? Who of us cannot recall the magic transmutation that took place when, sometime in the midst of idle talk, a brave soul threw down a golden thought amid all the clattering rubbish, some gleam from the life of the spirit, some sacred jewel of inner life? How it hushed the clatter! How grateful, if rebuked, we felt! How encouraged ourselves to utter that which we had not dared to speak when all utterance was so different from it! How much more this brave spirituality of our friend has helped us than any words that came to us from priest or from poet, from pulpit or from book!"

The "Ah, me!" and the notes of interjection strike a feminine and therefore a false note, for Emerson is essentially a masculine writer; but apart from these things the passage might easily be mistaken for an excerpt from the *Essays* or the *Conduct of Life*. And it is so throughout; for Miss Cleveland has loved the sage of Concord "not wisely but too well." I say not wisely, because Emerson has preached, above all things, the gospel of the preservation of individuality, and the writer of the essays we have named has suffered her individuality to be absorbed. The five historical studies are also imitative, but they are Carlylesque rather than Emersonian. They have gleams of insight, but the prevailing impression is that of a mist of rhetorical expatiation. It is, probably, these essays which are referred to in the brief dedication as having been "originally prepared for use in schools and colleges"; but they are eminently unfit for educational purposes, except in so far as they may tend to fire students with the writer's own fervid and evidently genuine sympathy with the life of the past. One thing may be truly said in Miss Cleveland's favour: that she has a true and fine feeling for the continuity of history; that she does recognise in the story of the dead centuries the action of the passions and forces that are at work to-day; and though this feeling is happily less rare than it was, it is not so common as to count for nothing. I will only add that accuracy, even in trifles, is a matter of some consequence, especially in writings prepared for use in schools and colleges, and Miss Cleveland's reputation for accuracy cannot but be clouded by such misquotations as "fresh fields and pastures new," and, worse still, "All the world's a stage, and men and women are the actors." This will never do.

JAMES ASHCROFT NOBLE.

Memorials of a Dissenting Chapel, its Foundation and Worthies; being a Sketch of the Rise of Nonconformity in Manchester, and of the Erection of the Chapel in Cross-street, with Notices of its Ministers and Trustees. By Sir Thomas Baker. (Simpkin, Marshall, & Co.)

SIR THOMAS BAKER has produced a book which, within self-imposed limitations, is an important contribution to local history. Manchester men will value it for the information it gives as to many bygone worthies of the cotton city, but it has a wider interest as a typical example of the genesis and development of Nonconformity. The Cross-street Chapel in Manchester is nearly two centuries old. Indeed, the congregation which assemble there may rightly date their origin from the refusal of their predecessors to acquiesce in the Act of Uniformity of 1662. That was a dark year for the English Church, when rampant bigotry drained it of some of its best blood and brains. In the Manchester district the Presbyterian form of church government had been generally established during the Commonwealth. The Rev. Henry Newcome, M.A., a man of earnest and sincere piety, beloved by the people, learned and useful, was then one of the ministers of the parish church. In 1660 he preached a rejoicing sermon on the restoration of Charles II. In 1662 he found himself a minister without a flock, for the charter of the dissolved or suspended "Collegiate" church was renewed, and on account of his Presbyterian ordination, his place was given to another. Three years later the Five Mile Act exiled him from Manchester, but he returned in 1670, and after suffering fines and ill-will, was allowed to preach in his own house, and afterwards in a barn. It was not until 1687 that the Dissenters ventured to have their meetings at the same time as the services of the Established Church. In 1693 the central portion of the present chapel building was erected, but it was wrecked by a mob, inspired by zeal for the Church, and a strong desire for the restoration of the Stuarts. Since then the congregation have been free from persecution and at liberty to work out their own destiny. Their freedom was not even hampered by any doctrinal trust. They are, and always have been, a society of Protestant Dissenters, unfettered by any creed. Newcome was a Puritan, and his immediate successors were of the orthodox school. There may have been some Unitarian element in the congregation, even in its earliest days, for the literature of that school of thought was circulated in the district before the building of the chapel. There was no revolt in the pews when the Rev. John Seddon, M.A., who was appointed in 1739, began to teach the unity of God.

"It is very certain" he said "that so long as a zeal for the Trinity doctrine continues among Christians, true Christianity cannot flourish: the entirely banishing it from the minds of Christians would be rendering a signal service to the Gospel."

From that time until the present day a succession of ministers have maintained the twofold tradition of culture and liberal theology. When Clive was a boy, he was taken by relations to the services of the chapel, and he wrote from Madras that Manchester was the centre of all his wishes.

The congregation were steady supporters of the Hanoverian government, and when the hopes of the Stuarts were extinguished, constant friends of national progress. The Dissenters, excluded from the national universities, organised institutions for the training both of laymen and of candidates for the ministry. The Cross-street congregation have taken their share in the work of the locality, and there are few, if any, educational or philanthropic agencies in Manchester which do not owe something to their help. They have taken an active share in the municipal affairs, and Manchester, for nearly one-third of its civic existence, has been governed by chief magistrates from the Cross Street Chapel. The congregation has also produced legislators who have sought a broader sphere, and several notable men of letters and of science. In this connection the most interesting association is that which links the memory of the gifted authoress of *Mary Barton* with the chapel of which her husband was the minister for more than half-a-century.

Sir Thomas Baker has an unrivalled acquaintance with the annals of the chapel, and has made good use of his materials.

WILLIAM E. A. AXON.

La Conquista di Roma. By Matilde Serao. (Barbera.)

THE appearance of a novel by Matilde Serao, if not the leading feature of the literary year in Italy, cannot fail to be the principal event in its world of fiction. This gifted author belongs to a small group of *novellieri* who have grafted successfully on the simple, national realism of Manzoni the more modern and complex realism of the French school. While Manzoni applied his excellent system of observation to historical subjects, the young Italian school applies it, in a more developed form, to different phases of modern life. Some, like Verga and D'Annunzio, are principally occupied with pictures of the peasantry; others, like Capuana and Matilde Serao, have given themselves entirely to the study of the higher classes, both the aristocracy and the *bourgeoisie*. To the first set of stories the usual background is the country village or the small provincial town; to the second, Rome, Naples, Milan, or any other of the large centres of commercial and social life. Signora Serao is, without contest, the cleverest writer of this latter group. She has in her much of the stuff necessary to form a first-class novelist. And she would almost reach perfection were it not at times for a lack of conscientious perseverance in the drawing of her characters, whereby much acute psychological observation is all but effaced by hurry and *laissez-aller*; were it not at other times that she sacrifices this insufficiently developed soul-reading power of hers in order to concentrate all her forces on the analysis of the physiological side of her characters, or else on a minute study of external surroundings, executed in a masterly fashion, but too often useless.

All this will seem a serious blemish to the foreign reader. But a new nation such as ours, when judging a form of literature new to it, cannot criticise too severely, nor exact too rapid a progress from its pioneers in fiction. For it is idle to accuse us, as some

foreign critics have done, of having broken with our traditions. A country which opens its literary chapter with such a realistic and modern romancer as Chaucer can speak of far-reaching connecting links between ancient and contemporary fiction; not we. Our classical *novellieri* of the Middle Ages and Renaissance have taught us even less than the *conteurs* of the Langue d'Oïl. We have, perhaps, learnt from them how to tell old-fashioned stories of intrigue, good nowadays for comediettas and farces; but, as to what concerns the study of character, we have learnt very little, and, as to the deep observation of moral or material surroundings, nothing at all.

The oldest novelist with whom the new school can connect itself is Manzoni, and even his influence may be overrated. Abroad one is apt to consider him, often from hearsay, rather as a sort of George Eliot than as an Italian Walter Scott, and therefore one is led to expect from him certain qualities which in his time and with his surroundings it was difficult for him to possess, far more to transmit to a younger generation.

This will explain, I hope, the indulgence with which Italian critics, however well informed on the progress of foreign literature, judge of their native literary products. It is from a relative point of view, rather than from an absolute one, that they consider them. Thus, Italians can pass over Signora Serao's unequal insight into character and often feeble dramatic interest in consideration of the many powerful and clever qualities, both technical and artistic, which she has introduced into our contemporary fiction. No one can equal her, either in the spirited rendering of an absolutely modern society, or in the realistic descriptions of town life. What the French school calls "le sentiment de la modernité" she possesses to a considerable degree. Thereby she has been the first to reveal to us, in an objective light, the most characteristic aspects of our own public and private life. In fact, the most striking and original portion of her work are these New Italy pictures, which, executed with much skill, contain a great deal of serious observation, and are written in a fluent, coloured style, not easily to be found in other writers. The convent, the agricultural meeting, the ladies' committee of her powerful novel *Fantasia*, the fashionable Neapolitan society, the telegraph office, and the girl school of her charming novelettes, are followed up in her last volume by an equally admirable series of purely Italian scenes. Thus, the opening of parliament, the ball at the Quirinal, the duel, the *veglione*, more especially the different phases of political and social life, the wonderful drawing of the newest quarters of the capital, in a word, all that, morally or materially, can be summed up in the Rome of 1885 is shown in a masterly fashion, certainly unrivalled in Italy, and approaching, for insight of external things, the best work of the leaders of the French realistic school.

As to the story, it has almost a secondary importance. It is a mere thread of romance, woven in and out (and too often out), among a crowd of descriptions, of which those I have just quoted are only a small part. This was not the case with Signora Serao's earlier and very remarkable novel, *Fantasia*, in which

considerable psychological study and several strong dramatic situations balanced the amount of purely descriptive pages. *La Conquista di Roma* tells us the sketchy experiences of an essentially modern man—Sangiorgio, a young Neapolitan M.P., as ambitious as uninteresting, who arrives in the capital with a firm resolution of conquering it; that is to say, of passing from the relative obscurity in which he has lived to a foremost place in its mixed world of politics, fashion, and *haute-finance*. In fact, he makes a most promising *début* in Parliament. He is not only looked upon as a rising personality in public life, but is beginning to be courted in society. His short love affair with a capricious woman of fashion, Donna Elena, is a delightful episode, charmingly told. From a literary point of view, it is infinitely superior to the principal episode of the book—his violent passion for Donna Angelica, the pretty wife of a minister, and as uninteresting a character as himself. Sangiorgio is not conquered by Rome, as the author wishes us to believe, but by this woman, who, though incapable of loving, reduces him from an energetic and ambitious man to a lazy and tearful lover, who abandons politics and spends his whole days at home, sighing for the visits which Donna Angelica but rarely and coldly pays him.

The critics have generally discussed the foolishness of the novel's title, not to say the foolishness of the tale; and among the number the most original *chameur* of our criticism, Sig. Enrico Nencioni, in a deep and witty article of our leading review, *L'Antologia*. Sig. Nencioni has justly compared *La Conquista di Roma* with *Transformation*—the latter as a picture of Papal Rome in the Sixties, the former as that of new-Italian Rome in the Eighties. In either work he recognises but small importance as novels, and much value as documents, in word-painting, of modern Roman life. To foreign eyes, however, Hawthorne has given a more exact and unprejudiced idea of our capital as it was in his days than Matilde Serao, for he has rendered its physiognomy in all its aspects, ancient and new; while, to quote again Sig. Nencioni,

"classical, Renaissance and Papal Rome have almost disappeared in the volume. The authoress, like her hero, seems to avoid, instinctively and purposely, all the great memories of the Eternal City. She is more at home in the glove shop (a first-rate realistic scene of our days) than in the piazza San Pietro or at the Thermæ of Caracalla."

To conclude, we can quarrel with Signora Serao for not having given us a sufficiently developed novel. We can find fault with her exclusively modern point of view, but we cannot deny the excellence of the book, taking it as the author intends it—viz., as a picture of Rome in the present day. The course of high-class fiction must needs pass, in its first stages, through a deep study of external surroundings and manners before it gets to its necessary completion—to an equally conscientious study of psychological character. Signora Serao, if nought else, has paved the way for the Italian George Eliot of the future, and we cannot thank her enough for this. But we expect more from her; and, as she is still young, we do not despair that she may herself one day realise this ideal. It will be time then for our criticism to alter its

way of regarding the development of novel-writing in our country; and, when reviewing the maturer work of Matilde Serao, we shall not be obliged any longer to judge it from a relative Italian standard, but from an absolute, cosmopolitan one.

CARLO PLACCI.

SOME SCOTCH BOOKS.

Old Church Life in Scotland. By the Rev. A. Edgar. (Alexander Gardner.)

Memoirs of James Begg. By Thomas Smith. (Edinburgh: Gemmell.)

Aberdour and Inchcolm: being Historical Notices of the Parish and Monastery. In Twelve Lectures. By the Rev. Wm. Ross. (Edinburgh: David Douglas.)

Writings by the Way. By J. Campbell Smith. (Blackwood.)

Inverness before Railways. By Isabel Harriet Anderson. (Inverness: Mackenzie.)

MR. EDGAR, Minister of the Parish of Mauchline, has produced an excellent and interesting book, chiefly because he has been content to adopt an unambitious plan, and to work it out thoroughly. He has searched carefully the kirk session and other records of his own parish, and of others in Ayrshire, from about the middle of the seventeenth century down to the present time, and has published the results of his investigations. Scotch parishes were, and are, very much alike; and so the character and peculiarities of church life in Scotland, a century and two centuries ago, are faithfully represented by photographs of Mauchline at these times. This book took originally the form of lectures; and it is rather a pity that Mr. Edgar has not included in it his lectures on "The Church's Provision for the Poor," "The Church's Work in providing Education for the People," and "Marriages Regular and Irregular." It is not, however, a matter for regret that Mr. Edgar passes lightly over what he terms "the higher forms and aspects of church life," for he would have spoiled his book by reviving in it dreary theological and ecclesiastical controversies. He writes very pleasantly and very simply of churches, manse, churchyards, public worship, communion services, and, above all, church discipline. To most English folks the last subject suggests illegitimacy, and perhaps, also, Burns standing about a hundred years ago on the "cutty stool" of repentance—as a matter of fact he never stood on it—and being admonished for what was in reality his irregular marriage with Jean Armour by "Daddy Auld," one of Mr. Edgar's predecessors in the pastorate of Mauchline. But the old Scotch kirk sessions were, in reality, as Mr. Edgar shows, local authorities dealing with drunkenness, quarrelling, heresy, slander, theft, and occasionally even murder. As local authorities they were for a time by no means inefficient. If they were absurdly severe, as in censuring or "delating" a man for taking some meal to his mother on Sunday, they were no respecters of persons, and probably did a great deal of social good. From what Mr. Edgar says, communion services in Scotland must frequently have been little better than great "claret sheds." In 1598 there were used at one "Lord's Supper" in Edinburgh twenty-six gallons of wine, costing £41 12s.; and in 1636 the generous corporation of Glasgow spent £160 in the same fashion. Mauchline is redolent of the memories of Burns and the Armours, of Gavin Hamilton and Holy Willie, of the somewhat mythical Mary Morrison, and the eminently questionable Poesie Nancy; and, in consequence, there is a good deal that is personally interesting in Mr. Edgar's volume. It is

hardly possible after reading it not to come to the conclusion that "Daddy Auld" was an honest, though narrow-minded, minister, and that poor William Fisher was driven to drink by Burns's satire. Mr. Edgar has not found in the Mauchline records anything to justify Burns's charge against Fisher of stealing the alms of the poor.

Although the first volume only of Dr. Thomas Smith's memoir of Dr. Begg has been published, it is evident that the work will be a failure, whether it be considered as a biography or as a contribution to the social history of Scotland. Dr. Begg was—alight to vary Mr. Lealie Stephen's description of John Wesley—an ecclesiastical game-cock, who loved an agitation or a controversy much as an American journalist loves a "boom." But he was in his life time regarded as a burly example of the "Carritch and Parritch" type of Scotchman, and, since his death he has become the patron saint of Scotch "patriots" of the sentimental, if not parochial, school. If Dr. Smith had had the capacity or the inclination, he might have made Dr. Begg the central figure of a good Scotch picture. But he takes simply the ecclesiastical game-cock view of his friend; and so we have him here studying, preaching, "visiting," agitating, but, doing nothing very notable from the mundane or human point of view. The most readable portion of the volume consists of some short chapters of autobiography, in which Dr. Begg tells the story of his earlier life. They are written with Scotch heartiness and vigour; and though they give us disappointingly little of the author's personal life, they contain several "good stories" of the kind that are popular at Scotch clerical dinner tables. Here is one of an eccentric clergyman of the name of Oliphant:

"He is said on one occasion to have borrowed half-a-crown from one of his elders before he entered the pulpit, and returned it immediately after the service was over. The elder expressed astonishment at the transaction, and asked what it meant. Mr. Oliphant said confidentially, 'I think a man aye speaks baulder when he has siller in his pooch.'"

In previous publications Dr. Ross has shown his capacity for dealing with early ecclesiastical life in Scotland, and this book, on the whole, is a very good one. Aberdour is, indeed, celebrated for little except its rural beauty, and Inchcolm is not particularly famous among monasteries. But regarding both of these Dr. Ross has been able to give many interesting details, and to make their history contribute to the illustration of the general history of the kingdom. In a general glance at Aberdour and its neighbourhood there is, of course, something, however little, that affords room for attractive allusion. The town of Dunfermline, to which the parish is quite near, was the seat of ancient Scottish royalty; and the two have been immortalised together in the "grand old ballad" of Sir Patrick Spens. In Dunfermline it was that the king sat "drinking the bluid-red wine," and Aberdour is generally conjectured to have been the harbour of the ill-fated knight. The noble families of Murray and Morton, who played such an important part in the most stirring period of the country's annals, possessed lands in the neighbourhood. And Inchcolm derives a certain interest from its shadowy association with Columba. About the early ecclesiastical condition of the district Dr. Ross has little of consequence to say. More interesting is his discussion of the character and work of Regent Murray, of whom he is a hearty admirer. Of Earl Morton Dr. Ross does not speak in very favourable terms, although he is comparatively charitable to him. He says nothing of Morton's dalliance with the Tulchan episcopacy, of his refusal to counten-

ance the assemblies, or of his unqualified hatred of preachers. At the same time he dwells on the fact that the stern Regent confiscated the Church's benefices to his own treasury, and attacked even the spiritual liberties of the Church. In the concluding lectures we have glimpses of church life in Aberdour from the fifteenth till the end of the eighteenth century. Of the ecclesiastical politics of the important period thus covered Dr. Ross speaks with accuracy and intelligence, albeit his tone is occasionally rather bitter. Of the ordinary round of church life among the people we get some noteworthy incidents. Two of the elders went through the village during church hours to look after those who were unnecessarily absent from worship. A certain Henry Tyrie is spoken of as "comparing" to a summons for default on this head, and only escaped punishment on promising that he would not do it again. Hugh Bailzie, an elder, brought up a pipe of wine to his hostelry on the Sabbath day, and no doubt considered himself fortunate in escaping with an admonition. Robert Young was reckless enough to give it as his opinion "that it was never a good world since there were so many sessions." He was naturally "rebooked shairply." Education in the district was, as elsewhere in the country, in a bad plight. The schoolmaster had little learning to convey, and few there were that wanted it. A good deal is said here concerning the facts of witchcraft. Many poor creatures suffered death in Aberdour, on accusations of this kind. Dr. Ross closes with a lecture on sessions affairs in the parish towards the close of the last century. His remarks on patronage and on Broad Church opinion show a somewhat unseasonable warmth of feeling, which is partly explained by the fact that these lectures were written more than twenty years ago. Dr. Ross's occasional witticisms are seldom good, and his moralisings might well have been omitted. The author, by the way, should get rid of the notion that the author of "Hardyknute" perhaps also wrote "Sir Patrick Spens."

It is in virtue mainly of the biographical section of it that *Writings by the Way* is entitled to a place in this column. Fully half of the book—consisting of essays on such subjects as Carlyle, Newton, the True and the False in History, the Doings and Drifts of the Age, and Realism, Idealism, and Positivism—is in a much higher latitude, and is essentially Scotch only in its humour, its imagination, and the metaphysical bias of the undoubted erudition it displays. There is, too, in the essay on Positivism, a fine vein of sturdy Scotch opinionativeness, of what to critics unfamiliar with northern characteristics may seem intellectual arrogance. Since *Writings by the Way* were published, its author has been appointed sheriff of the important and busy city of Dundee. It is to be hoped that no witness or defendant will have the temerity to admit to Sheriff Smith that he holds Positivist opinions, for what meroy is such an unfortunate likely to have at the hands of a judge who says, in a spirit worthy of Braxfield himself, that if Comte had been put into a Scotch lunatic asylum he would never have been allowed to leave it? The biographical sketches, already alluded to, deal mostly with eminent Scotch lawyers who figured in the earlier part of the present century, such as Lords Neaves, Ardmillan, Hope, Murray, and Colonsay, and Henry Glassford Bell, although Mr. Smith also photographs other Edinburgh and Scotch celebrities, like Mrs. Stirling of the "Mystifications," and Prof. Ferrier. These sketches, many of which are illustrated with enjoyable anecdotes, are written with perfect taste, indicate great insight into character, and deserve the careful attention of all who desire to know what Scotch

life, society, and character are—or have been. To return for a moment to the larger essays included in this volume, Mr. Smith has, in his paper on Carlyle, come nearer the truth about Mrs. Carlyle than any other writer since the appearance of the Froude "revelations," with the single, and (considering the extent of his personal knowledge of the subject) the inevitable exception of Mr. Venables.

Miss Anderson tells the story of Inverness as it was thirty years ago, very unassumingly, but in what we imagine to be a very faithful way. Much of what she records is of purely local interest; but a rather vivid sense of humour enables her to relate an occasional good story pleasantly, and to give a bright account of the "characters" who adorned old Inverness. Her book will no doubt be esteemed by those who may have a familiar knowledge of the persons and incidents she describes.

NOTES AND NEWS.

MR. REGINALD L. POOLE intends to edit Wyclif's *De Dominio Divino* for the Wyclif Society before he brings out vol. ii., containing Book II. of the *De Civili Dominio*, of which the first volume or book is ready for issue. This course is rendered advisable by Wyclif's treatment of his subject.

MESSRS. SEELEY & Co. will publish this month *A Short History of Napoleon I.*, by Prof. J. R. Seeley.

MR. C. M. DOUGHTY, of Gonville and Caius College, has in the press a volume of *Travels in Northern Arabia* in 1876 and 1877. It will be published by the Cambridge University Press, and will contain illustrations and a map.

THE REV. J. H. OVERTON has in the press a work on *Life in the English Church, 1660-1714*. As the title implies, it does not deal with the controversies or the ecclesiastical politics of the period, but shows how the clergy lived and worked; how the laity were affected by their influence; how the services of the Church were conducted, and what was the special character of her preaching and of her religious literature; and what was the relation of the Church to the social life of the period, and to other Christian communities at home and abroad.

BARON A. E. VON NORDENSKIÖLD will publish this season, through Messrs. Macmillan, a new work on *Greenland*, with illustrations.

A NEW edition of Thornton's *Gazetteer of India* is announced by Messrs. W. H. Allen & Co. The work is to be reduced in size by the omission of many of the less important details, while at the same time there will be given many hundred names of places not included in any former edition. The areas and populations have been revised in accordance with the Census Report of 1881. The book will be edited by Mr. Roper Lethbridge and Mr. A. N. Wolleston, and will form one volume of about 1,000 pages octavo.

A *Life of W. Stanley Jevons*, by his Wife, will be published shortly by Messrs. Macmillan, who will also publish Mr. Jevons's fragment on *Principles of Economics*.

MR. T. L. KINGSTON-OLIPHANT's work on *The New English*—a sequel to his well-known book on *The Old and Middle English*—is to be published this season.

PROF. CHURCH has in preparation a new historical tale of the period of the Great Rebellion, which will be entitled *With the King at Oxford*. It will be illustrated in a similar style to the *Chantry Priest of Barnet*, and will probably appear in October.

MESSRS. MACMILLAN's announcements include three novels: Mr. Wm. Black's *White Heather*, in 3 vols.; *Nuttie's Father*, by Miss C. M. Yonge, in 2 vols.; and *Voices crying in the Wilderness*, by Miss F. Levien.

MR. GRANT ALLEN's volume on *Darwin*, which begins Messrs. Longman's series of biographies under the title of "English Worthies," is to appear very shortly; and the second volume, *Marlborough*, by Mr. G. Saintsbury, will be published in the autumn. Among the succeeding volumes are *Steele*, by Mr. Austin Dobson; *Sir T. More*, by Mr. J. Cotter Morison; *Wellington*, by Mr. R. L. Stevenson; *Lord Peterborough*, by Mr. Walter Besant; *Claverhouse*, by Mr. Mowbray Morris; *Latimer*, by Canon Creighton; *Shaftesbury*, by Mr. H. D. Traill; *Garrick*, by Mr. W. H. Pollock; *Raleigh*, by Mr. Edmund Gosse; *Ben Jonson*, by Mr. J. A. Symonds; *Isaac Walton*, by Mr. A. Lang; and *Canning*, by Mr. F. H. Hill. The series will be edited by Mr. A. Lang.

THE Cambridge University Press announces as nearly ready *The Diplomatic Correspondence of Earl Gower, English Ambassador at the Court of Versailles from June 1790 to August 1792*. The letters are edited from the originals in the Record Office, by Mr. Oscar Browning, who will furnish an Introduction and Notes.

Reminiscences of Sport in India is the title of a new work by Gen. G. F. Burton, which will be published shortly by Messrs. W. H. Allen & Co.

THE volume on *Hunting*, by the Duke of Beaufort and Mr. Mowbray Morris, which commences Messrs. Longmans' "Badminster Library of Sports and Pastimes," already announced in the ACADEMY, will be ready in October. It will contain contributions from the Earl of Suffolk and Berkshire, the Rev. E. W. L. Davies, Mr. Digby Collins, and Mr. A. E. T. Watson. In addition to the books which we have previously mentioned, the series will include *Racing*, by the Earl of Suffolk and Messrs. W. G. Craven, A. Coventry, and A. E. T. Watson; and *Riding and Driving*, by Mr. R. Weir and Major Dixon.

MESSRS. GINN & Co., of Boston, announce that the revised edition of *Beowulf and The Fight at Finnsburgh*, with text and glossary, edited by Prof. James A. Harrison, of Washington Lee University, and Prof. Robert Sharp, of the University of Louisiana, is now ready. A number of corrections have been made, and an appendix of recent readings has been added, based on late criticisms and essays of Sievers, Kluge, Cosijn, Holder, and Walker.

MESSRS. W. H. ALLEN & Co. announce for early publication a *Life of General Francis Rawdon Chesney*, edited by Mr. Stanley Lane-Poole.

THE Rev. John Brown, Minister of the Bunyan Meeting, Bedford, has in preparation a book on *The Life and Times of John Bunyan*. It will be published by Messrs. Isbister.

THE October number of the *English Illustrated Magazine*, which will be the first number of a new volume, will contain the opening numbers of a new serial story by Mr. D. Christie Murray, entitled "Aunt Rachel."

THE Rev. Canon Basil Wilberforce is announced to contribute a series of articles to the *Christian Commonwealth* on "Topics of the Time; or, some Sins of the Day."

MESSRS. LONGMANS will publish in October a new work entitled *The Fall of Constantinople*, being the story of the Fourth Crusade, by Mr. Edwin Pears, late President of the European Bar at Constantinople.

At the Johns Hopkins University in Baltimore they are looking forward to their opening

address being delivered by an English visitor, Archdeacon Farrar.

MR. THOMAS HUGHES'S *Life and Times of Peter Cooper* is to be published this autumn.

MESSRS. CASSELL & COMPANY have in preparation a series of new and original works of romance and adventure, which will be issued under the general title of "Cassell's Rainbow Series." The first book, which will be published simultaneously in England and America on Monday next, is entitled *As it was Written*, by S. Luska.

TOMO V. of the excellent *Historia del Ampurdan*, by Don José Pella y Forgas, has just appeared. The illustrations are quite equal in beauty and utility to those of the former volumes. The architectural drawings and photographs are valuable and well chosen. We would draw especial attention to the rudely-carved "Majestat," or crucifix of Cruilles, so different from the ordinary type, and which well represents the dignity of the "Rex tremendae Majestatis," even on the Cross. The text deals with the beginnings of feudalism, and with the influence of monasticism from the tenth to the twelfth century. The work fully bears out its sub-title of "A Study of Civilisation in North-Eastern Catalonia," and is of equal importance to the historian and sociologist as to the student of art and architecture.

WITH reference to the speech of M. Renan given in last week's ACADEMY, a correspondent sends the following extract from a diocesan journal of the South of France. It well represents the bitterness of party spirit in France:

"M. Renan, celui qui un jour arracha à N. S. J. O. son divin diadème, est aujourd'hui devenu un personnage fort important. On lui a offert à Tréguier 'un dîner celtique' et tandis qu'il buvait, frais, souriant de ce rire gai et insouciant qui épouvante, la Bretagne catholique répétait le long des grèves et dans les campagnes, des malédictions contre l'apostat."

"Cette triste et fière mélodie commence par ces vers de Brizeux:

"Nous avons un cœur franc pour détester les traîtres,

Nous adorons Jésus le Dieu de nos ancêtres."

Et à la fin des strophes, rétentit ce refrain vengeur et méprisant: 'Pleure terre de Gradlon et de Corentin! Prairies et bruyères bretonnes, pleurez, car le pied de l'apostat a foulé le sol de granit!'"

ORIGINAL VERSE.

WEARIHEAD.

DEAR Nature, hide me in thy inmost heart
Safe from the pangs of doubt and strife of will,
Mine own and others: I would fain lie still,
Bathed in thy silence, of thy life a part.
Unconscious and unerring as thou art,
Bear me as mothers bear their babes, until
Of thy pure strength my weakness takes its fill,
And I may dare on some new course to start.
Find me some quiet grave wherein my soul
May lie as bodies lie when life is fled,
Freed from the madness of its own control,
By Wisdom's self through unknown changes sped
In sleep unvexed of dream of end or goal,
And, living still, be all as good as dead.

EMILY PRIFTER.

OBITUARY.

To the unusually long list of persons of literary eminence who have died during the past month is to be added the name of Dr. M. M. Kalisch, one of our ablest Hebrew scholars. Dr. Kalisch died at the Baslow Hydropathic Establishment, Derbyshire, on August 23, at the age of 57. He was born of Israelitish parents in Pomerania, and was educated at the University of Berlin. In 1848 he came to this country as a political

refugee, and found employment as a tutor in the Rothschild family, by whose assistance he was enabled to devote himself to literature. He was one of the few Hebraists of Jewish birth and education who have displayed a thorough comprehension of, and sympathy with, the modern scientific methods in philology. His *Hebrew Grammar* and his unfinished *Commentary on the Pentateuch* are works of a very high order of merit. Another book by Dr. Kalisch, entitled *Path and Goal*, appeared in 1880, and is a discussion of the old problems of the "highest good," and the final aim of human conduct—in form a sort of Platonic dialogue between representatives of the various schools of modern philosophic thought. The work attracted some attention at the time, on account of its literary power and the singular fairness and insight with which opposing views were stated. Perhaps it would have attained a more marked success if it had been published anonymously, as the author's reputation had been gained by qualities very different from those in which the merit of the book consisted. Dr. Kalisch, during the latter years of his life, suffered from constant ill-health.

We regret to record the death, in Norway, of the Rev. Frederick Metcalfe, one of the senior fellows of Lincoln College, Oxford, and vicar of St. Michael's in the same city—this being one of the two Oxford livings which a fellow of Lincoln, even though married, can hold with his fellowship. Mr. Metcalfe took his degree at Cambridge so long ago as 1838. He is best known for his two books of Norwegian travel, published in 1856 and 1858, when the Scandinavian peninsula was almost unknown to English tourists. Another book of travel, *The Oxonian in Iceland*, appeared in 1861. In 1858 he published a *History of German Literature*, and in 1880 a volume entitled *The Englishman and the Scandinavian*, a comparison of the national character of the two peoples as shown in their early literature and institutions. In 1882 he edited for the Clarendon Press the Latin legend of St. Olaf, from a MS. in the library of Corpus Christi College, Oxford. His only works relating to other than Scandinavian subjects are his translations of Becker's *Charicles* and *Gallus*, of which improved editions were subsequently brought out by the Rev. Isaac Taylor.

THE PROPOSED UNIVERSITY FOR LONDON.

THE public has now before it the two schemes prepared respectively by the Committee of Convocation and the Committee of the Association for Promoting a Teaching University for London. These two schemes are practically identical. "Subject to the reservation for further consideration of some matters of detail," the Association Committee "is of opinion that the proposals contained in the report of the Committee of Convocation should receive the support of the Association." In other words, we have now before us the highest ideal it has been possible for the leaders of this movement to form of the function of a local university in London. The London public does not occupy itself very much with educational matters; but we trust that on this occasion at least it will study the proposed scheme, viewing it in relation both to university life elsewhere, especially in other European capitals, and to the possibilities which exist here. Such study, we feel convinced, can but lead to one conclusion—a determination that London *shall* have a university, but a determination that the present scheme must be rejected entirely. Let us have no teaching university for ten years, for twenty years, but let us not hamper the future with such an institution as this. To call this *omnium gatherum* of everything, from a night school to the British Museum, a "Teaching University" is merely to caricature the aims, the means,

and the strength of university life. If this is all that is possible, then let London starve intellectually rather than accept such stones as these in the place of bread!

We can only imagine one scheme which could equal this in its incongruity, and that would raise the laughter of all Europe. Suppose a French reformer were to step forward as conjuror: "Here, gentleman, are some dozen very useful institutions: for example, the Ecole Normale, the Ecole des Mines, the Ecole des Ponts et Chaussées, the Ecole Polytechnique, the Ecole d'Application du Génie, &c. I have also taken some half-dozen Commissions pour l'examen des candidats in different subjects, a bit of the Institut, and another of the Bibliothèque Nationale, besides a few other odds and ends. You see I just pass over them this report drawn up by twelve of their most distinguished members, and *eh presto* you have a harmonious whole—the new University of Paris! If I have left out anything of importance, you will find no difficulty in sticking it on anywhere hereafter."

A similar attempt at sleight of hand seems to us to have been made by the Association Committee; but we fail to see why they should not have been still more catholic in their selection of bricks for this new temple of intellect. Why should the Academy of Music and the Pharmaceutical Society, why should the Royal Naval College, why should the National School of Cookery, be left out in the cold? Are there not also Queen's College and Bedford College, whose students listen to the same or like teachers as those of University College? Surely they have as great a claim to be of "university rank" as the various Nonconformist colleges, or shall we say the Birkbeck Institute?

But let us examine a little more in earnest the proposed scheme; and in order to do so, let us endeavour to arrive at some idea of what the functions of a local teaching university should be. It is, perhaps, easier to begin the definition of a university from the negative side; and we believe most of our readers will agree with us in holding that a university is neither a school, nor a complex of schools, for providing men with practical training, or with professional knowledge. These are essentially the missions of technical schools and professional corporations. Here it is that the Association scheme goes most hopelessly astray. The institutions which are to be brought into connection with the proposed university are, in several cases, technical colleges and professional examining bodies which have no relation whatever to university life. Let us consider some examples. The Council of Legal Education can hardly be considered even local. It is the general examining body for the grade of barrister in this country, and as such, is recognised by the state. It is localised in London, because London is the capital, and this localisation will grow more anomalous as the resident bar in the leading provincial towns becomes more numerous. It cannot enter into closer relations with a local London university than with any other university in the country. All it can do is to demand a certain intellectual, apart from professional, training from those who wish to be called to the bar, and to recognise certain examinations as a sufficient test. But in this matter it certainly will give no preference to London over Oxford or Cambridge. That the Inns of Court pay for certain professors who teach law in London arises rather from a past fear of parliamentary enquiry into their expenditure than from a desire to found a local legal school. These professors also, in so far as their lectures are attended, prepare for a professional examination and do not give the intellectual training which we must demand even from the faculty of laws in a university. Much the same remarks apply to

the Incorporated Law Society and the Royal Colleges of Physicians and Surgeons. These bodies are national, are professional, and cannot enter into close relations with one university in preference to another. When we turn to the technical colleges we find the committee have adopted the same narrow view of university purpose. We want technical colleges in England—all we can get—if we can only drive young people into them; but to teach brewing, carriage-making, and carpentry, is not the function of a university. To drag these colleges into the scheme is like an attempt to affiliate the Karlsruhe Polytechnicum with the Hochschule in Heidelberg—both serve equally important but quite distinct purposes. Similar reasoning applies to the school founded by the state at South Kensington, with a definite, undoubtedly useful, but non-academic aim. As to "colleges which are intended to aid the evening studies of persons engaged in business," their inclusion in the scheme would be laughable, were it not seriously meant. Perhaps under this heading we may also include mechanics' institutes, and the Sunday lectures at working men's clubs; for a scheme sufficiently broad to contain the London University Extension, the British Museum, the Inns of Court, and other centres of lucidity must certainly find room for these! A university exists in order to advance the mental life of the country by giving intellectual training to its younger, and by exciting and assisting original work among its older members. If it gives only professional training to any of its students, it so far fails in its purpose. It prepares the mind to receive such training; it does not give it. If the training given by any faculty has taught the student a definite method of earning his living, and not how to use his intellect, that faculty is most certainly not accomplishing what we understand by university work. We are aware that these remarks may, in a certain sense, be applied to the medical faculty which is now recognised as an essential part of every university. But apart from the purely theoretical side of medical studies, we believe every medical teacher would agree with us in emphasising the importance of a previous general scientific training. The increasing importance of the Cambridge Medical School may, to a great extent, be attributed to the fact that the majority of its members have first graduated in either arts or science, while those acquainted with the London hospitals could doubtless give evidence of the superiority of those students who have previously received an academic training.

We think then, that the first vital failure of the proposed scheme arises from this misconception of the object of a university. The aim of such a body is to develop the intellectual life, to increase, in the broadest sense, the theoretical and scientific knowledge of its students and members. To place a local university in special relation to state and national institutions on the one hand, and on the other to incorporate in it schools giving professional or technical education, is to show a lamentable ignorance, not only of the nature of existing universities, but of the academic ideal in itself. Cumbersome faculties formed from every sort and grade of teacher, composed of men not daily working side by side to a common end, will hardly elect boards of studies capable of producing anything but compromises. If it becomes a question whether a certain branch of learning shall be a necessary subject of examination, what hope is there of a decision when it is judged, not from its intellectual value, but for its professional or technical profit? Is it not clear that the technical schools, whose business is not to prepare students for graduation, will either be diverted from the purpose for which the nation with some sacrifice is founding them,

or else that the academic teaching in London will fall even below the level of the present university examinations? This will be founding a "teaching university" indeed, wherein it will not be the recognised teachers who examine their own students, but examinations twisted so as somehow to suit a dozen absolutely divergent bodies which will drag these teachers after them. We cannot conceive what the great London colleges have to gain from such proposals.

More fatal still to the success of the scheme, if possible, is the patchwork by which this new university is to be tacked on to the old. The old university is essentially a state and non-local examining body; the majority of its students are drawn from the various "county colleges," both in this country and the colonies. These colleges are at present something less than universities, and more than schools. They do very much the same work as the higher classes in a first-rate German gymnasium. To these colleges the present London university must adapt its examinations, and it would be highly unjust to them if it were to change its standard. Yet this is precisely what the teachers of London demand. They want something quite different from the standard which rules at Burlington House. They want to regulate the examination of their own students, and so endeavour to preserve some originality, some freedom in the lecture-room. This can never exist unless teachers are brought personally in contact, and have at least an equally high standard. How can this possibly be under the new scheme? Is it to commit a great injustice to the affiliated colleges, or are the London teachers to submit to the old yoke under a new name? Under the third paragraph, "Constituent Colleges," we read—"The constituent colleges to consist of the following bodies in or near London;" under the fourth paragraph—"Each faculty shall consist of the representatives of the constituent colleges;" and, finally, under the seventh—"Candidates to be admitted to matriculation and all degrees other than degrees in the medical faculty without regard to the place of education." The first sentence we have cited, taken in conjunction with the second, makes the faculties and boards of study local, but the last throws open the examinations, presided over by a local teaching body, to the whole world. Is this, we ask in astonishment, the spirit we imagined connoted in the adjective *teaching* attached to the name of the new university? Is it fair to the affiliated colleges of the present university that the London teachers should direct examinations wherein their own students are to compete with this enormous advantage against those of the county colleges? We think every reader must agree with us in holding this utterly contrary to the ideas implied in a *teaching* university. But there may be an escape from this dilemma. We have looked carefully through the report of the Committee of Convocation, and we find no reference whatever to the *appointment of examiners*. So far as we can discover, the boards of study will not have the right to suggest, still less to elect examiners. In fact, their power in the matter of examinations at all, as well as that of the faculties, seems merely consultative. What, then, if the examiners remain completely independent of the teachers, and are instructed to bear in mind the past standard of the present university and the interests of the "county colleges"! That would be a solution of the difficulty indeed! but one hardly likely to meet with the approval of the London teachers. How far the present scheme may be said in general to have that approval would be perhaps difficult to determine. In the conferences held by the sub-committee with various

groups of teachers, it is certain that divergent views were often expressed; but we have reason to believe that no votes were ever taken. The scheme as it stands, then, represents rather the opinion of the sub-committee than that of the Association at large definitely expressed.

Probably the warmest advocates of the present scheme would admit the necessity of its being thoroughly criticised; and if we have not hesitated to draw attention to what seems to us fatal errors, it arises from our desire that, if we are to have a London university at all, it may be something of which Londoners may not be ashamed. Whatever happens let us not block the way with another unwieldy institution, which can never be that which it lays claim to be—a genuine university. The past has hampered us with one such, let us save the future a second.

That criticism is far easier than creation is trite enough and true enough, and our readers may naturally ask what better suggestions we ourselves have to make. To enter into them on the present occasion at any length is impossible, but we hope to do so later elsewhere. Suffice it here to say, that we hold the only possibility, at present, for a genuine teaching university consists in the foundation of a "local side" to the present university. Such side to be quite independent of the examinations and regulations of the present university, which will continue to exercise the functions it has always possessed. The official heads of the present university may be those of the new side; but so far as teaching and examining are concerned, these must be in the hands neither of the old senate nor of Convocation, but of bodies chosen by the teachers of the new "local side." For the formation of this new "local side" we see no bodies in London beyond the medical schools and University and King's Colleges, which offer really academic elements. These could provide a medical faculty unrivalled in the country, and the beginnings of by no means despicable arts and science faculties. With such beginnings these faculties might appeal to the public purse, and draw to themselves and to the London University those teachers who, far more suited to academic functions, are at present endeavouring to draw normal schools and technical colleges out of their natural course into that university sphere to which they do not properly belong. We stand behind none in our desire for a genuine university to stir up the intellectual life of our great city, and to fill its teachers and researchers with a much-needed *esprit de corps*, but we do protest against its place being usurped by a second corporation which in no way tallies with the true ideal of an academic body.

CORRESPONDENCE.

THE "MEMORIE INUTILI" OF CARLO GOZZI.
 Manchester: Aug. 31, 1885.

I should like to be allowed to correct in one particular the pleasant and appreciative notice of Masi's edition of the *Fiabe* of Carlo Gozzi, which appears in the current number of the ACADEMY, p. 133. In the haste of the moment the writer has been led into an inaccuracy which, though trifling, should, I think, be set right at once.

The *Memorie Inutili* have not remained unpublished. They were printed during the lifetime and under the direct care of the wayward and pre-eminently gifted Count Carlo, under a title which is highly characteristic of their author, and runs as follows:—"Memorie Inutili della Vita di Carlo Gozzi, scritte da lui Medesimo, e pubblicate per Umiltà—volumi tre—In Venezia, Stamperia Palese 1797."

The work is now sufficiently rare to justify a re-issue, because the matter is, as your reviewer declares it to be, of extraordinary interest. Readers of all kinds find the romance of real life meeting them there at every turn, in a quite unexpected and very bewitching manner, to be equalled only in the *Fiabe* themselves.

In addition to the quotations given from these memoirs by Ernesto Masi, in the work under review in the ACADEMY, copious extracts will be found in the very clever and attractive Essay upon Carlo Gozzi, by Giovanni Battista Magrini, published in Italy in 1876. English readers, however, may turn, with the certainty of finding pleasure and profit, to Vernon Lee's delightful work, *Italy in the Eighteenth Century*, which contains by far the best account of Gozzi to be found out of Italian literature, told, too, in a manner well befitting the seductive story.

A translation into English of these *Memorie Inutili*, published per Umiltà, carefully edited, with some judicious excisions of matter which, at the time had only a restricted, and so to speak, polemic interest, would be as interesting and as instructive historically as the autobiography of Benvenuto Cellini, and would not fail to find a ready and wide acceptance among all English-speaking communities.

E. H. WESTBOURNE.

"PRIMER" OR "PRIMER."

Kilburn: Aug. 29, 1885.

It is to be hoped that Mr. A. J. Ellis is teaching us the right pronunciation of this word when it means "an A B C book." He might have strengthened his argument as to the ordinary usage nowadays in London by saying that Nuttall, the recognised authority for the now defunct "spelling-bees," gives *primer* alone. But some of his strictures on the "Cambridge M.A." would have been spared if he had consulted Bailey's *Dictionary* (my edition is the sixteenth, 1755). There I find the word under three headings, viz., a *primer*, one who primes a gun; *primer* (no pronunciation is given), a letter of a certain size; and the word whose pronunciation is certainly not quite fixed yet. This is given as both *primer* and *primmer*, as if it were sometimes spelt with a double m to

mark the pronunciation. Bailey derives it from "*primus*, q. d. *primus liber*," and says it is "a little Book, in which Children are first taught to read; also a sort of Popish Prayer-Book." This second meaning seems to show a possible derivation from *primus* direct, and not thorough *primarius*, as Mr. Ellis would have it, from its use at the canonical hour of prime. The two pronunciations noted in Chambers point to an idea which I have—I know not how truly—that Scotch people generally say *prīmer*.

Mr. Ellis appears to argue too much from analogy, the bane of English orthoepists. Everybody will grant him *primrose* and *primitive*; but can he persuade us to alter our pronunciation of *primary*, *primæte*, *primæval*, *primordial*, or *primogeniture*, though they all "are ultimately *primus*"?

HENRY T. WHARTON.

London: Aug. 29, 1885.

Mr. Ellis quotes his own book, *Speech in Song*, stating that *primer* is not from the verb to prime; and then at the end of his interesting paper he says *primer* is one who *primes*.

The small paper Prayer-book in which children were taught to read was so named from the *Liber primarius*, "an office of the B. Virgin," the Romish book of devotions, and then it was extended to any book of instruction. Webster says that it is contracted from the Low Latin *primæ liber*, a book read at *prime*, or the first hour.

Although Mr. Ellis cites Webster, he says that the printer's use of the word he does not meet with in dictionaries; but Webster gives it, and even accompanies his definition with a specimen of *great primer type*.

Perhaps the Cambridge M.A. does not study English pronunciation, which may excuse him from knowing the pronunciation of *prim*, *primrose*, &c.; but he could resort on Mr. Ellis for not pronouncing *primary* as *primary*.

I think that it would be far better to pronounce it *prīmer*, because, unless the m be doubled, that is the more natural mode. I used formerly to hear it oftener pronounced *primmer* than *primer*, but for printing type I have heard it called *prīmer*. I certainly think there is nothing absolute about it. In Crabb's *Tech. Dict.* the only pronunciation shown for all these meanings is *prīmer*. *Prīmage* I have heard pronounced *primmage*. In fact, there must be no dogmatism on these topics. I suspect that in a land of free speech free pronunciation must be included very often.

C. A. WARD.

"RUSSIA UNDER THE TZARS."

Loughton: August 31, 1885.

It is no doubt under a misapprehension that you describe *Russia under the Tzars* as consisting mainly of a reprint of articles from *The Times*, for this is very far from being the case. The whole of the first volume and several chapters of the second are entirely new, while those (on Education, the Zemstvo, and the Press) which originally appeared in *The Times* were in great part rewritten and recast and enriched with many fresh facts. As I translated both the articles and the book (except the concluding chapter), revised the whole, and read the proofs, I speak with knowledge, and as the statement in so influential a journal as the ACADEMY that the work is a reprint may impair its reputation, and not improbably check its sale, I trust you will kindly insert this rectification in your forthcoming issue.

WILLIAM WESTALL.

A VISIT TO SYRACUSE.

Combe Vicarage, near Woodstock: Aug. 19, 1885.

On May 13 I came to Syracuse from Catania. I chanced (θεῶν τύχη) to reach the door of the

museum simultaneously with Comm. Ing. Francesco Saverio Cavallari, V. Direttore degli Scavi e dei Musei del Regno, Syracuse—to quote the words on his card—one of the three joint authors of *Topografia archeologica di Siracusa* (Palermo, 1883). I have seen the twenty-two Doric columns which (all that remain of thirty-six) project, with their capitals, from the sides of the cathedral—thirteen on the north, nine on the south. The temple they belonged to has been spoken of as the Temple of Minerva; but that mentioned in Cicero's *Verrine Orations* has been placed at the south-eastern end of Ortygia (the site of modern Syracuse), while these remains are in the middle of it. The columns may have belonged to a temple of Artemis, the Fount of Arethusa not being far off. Pindar's words (*Nem. i. 1*) are as follows:

Ἀμπεῖονα σὺνδὸν Ἀλφεοῦ
 κλεινὰν Συρακοσσῶν θέλος, Ὀρτυγία,
 δέμοντι Ἀρτέμιδος.

Signor Cavallari took me to what is called the Temple of Diana (Artemis), and showed me a very old Greek inscription that has been brought to light recently, and that records a dedication to Apollo. He then took me to the Fount of Arethusa. He told me that the phenomenon spoken of by Brydson does not exist now.

J. HOSKYNs-ABRAHAM.

"OFFPRINTS" OR "AFTERPRINTS."

Beechcroft, Bishopston, Glasgow: Aug. 25, 1885.

In the case of many "offprints" or "afterprints" there are two notable omissions which I have found the cause of much trouble. These are the number of the volume from which the paper is extracted and the original paging of the paper. By reason of these omissions it often happens that, on preparing to give the proper reference to a memoir in one's own possession, it is found impossible to do so.

THOMAS MUIR.

SCIENCE.

Harbours and Docks. By Leveson Francis Vernon Harcourt. In 2 vols. (Oxford: Clarendon Press.)

In these two handsome volumes the physical features, history, construction, equipment, and maintenance of harbours and docks, with statistics as to their commercial development, are treated in a somewhat similar manner to that adopted by the author in his previous work on rivers and canals, in the hope that the two books together may "furnish a fairly complete exposition of the principles and practice of hydraulic engineering as applied to navigation and commerce, both inland and marine." The limits necessarily imposed in dealing with so large a subject in a single volume of text—the second volume contains plates alone—have not allowed the author to enter into very detailed accounts of the various works described, or even to allude to all the principal ports of the world. But he has successfully brought out the prominent features of the examples selected, and has thus presented a comprehensive view of this important and difficult branch of engineering, which will be of real value to students and civil engineers. Shipowners and merchants will also find a good deal of useful information concerning the appliances and arrangements at various ports; and the appendices give details as to tides, and dimensions of locks and entrances, with tables of tonnage and trade statistics.

Besides embodying in this work the results of personal observation, experience, and practice, the author has freely sought the co-operation of his professional brethren, some of whom furnished specially written particulars of their respective ports, and the assistance thus received is duly acknowledged in the preface and notes. Valuable information has also been gleaned from the libraries of the Institution of Civil Engineers and the Ecole des Ponts et Chaussées at Paris. In this way a mass of useful material has been brought together in a very interesting and accessible form, and the method of arrangement is admirably simple and convenient. Harbours and docks are separately dealt with in two distinct parts, and in each case a ready comprehension of general principles, methods of construction, and accessory works, is aided by clear and concise descriptions of the most important existing examples at home and abroad. The first three chapters deal with the pressure and influence of the wind in relation to the construction and maintenance of harbours; the generation and motion of waves, and their force, as shown by damages at lighthouses, beacons, and breakwaters; and the phenomena of tides, currents, and changes in coasts. In chap. iv. the forms of harbours are classified under five heads, so that comparisons may be readily instituted between the separate groups, the different systems of construction contrasted, and the causes of the success or failure of special examples investigated. The next thirteen chapters deal with jetties and breakwaters; breakwaters formed of a mound and superstructure; upright wall breakwaters; jetty harbours with parallel jetties; harbours with converging jetties; harbours protected by rubble mound breakwaters; harbours protected by rubble and concrete-block mound breakwaters; Mediterranean harbours protected by sorted rubble and concrete-block mounds with slight superstructures; harbours protected by a rubble mound, and a superstructure founded at low water; harbours protected by sorted rubble and concrete-block mounds, with superstructure founded at low water; harbours protected by a rubble mound, and a superstructure founded below low water; harbours sheltered by upright-wall breakwaters; and harbours on sandy coasts. And, in order that nothing relating to the subject may be left untouched, Part I. is appropriately completed by a comprehensive chapter on lighthouses, beacons, buoys, and removal of sunken rocks.

Docks do not admit of the same distinct classification as artificial harbours, although a broad distinction can be drawn between tidal and tideless ports, and between national dockyards and commercial docks. But the sections and composition of dock and quay walls; the arrangements of quays, jetties, and wharfing; the dimensions and details of entrances and locks, dock gates, caissons, graving docks, and movable bridges; and the various works and appliances for facilitating trade, afford ample scope for comparison; and all these matters, with descriptions of home and foreign docks, government dockyards, and river quays, are discussed in the ten chapters which form Part II.

The volume specially devoted to illustrations contains sixteen plates, which are

admirably lithographed by Thomas Kell and Son, and add greatly to the value and completeness of the work. They are as conveniently arranged as it is possible for folded plates to be; and in most cases the various figures in each plate are drawn to the same scale, so that they can be compared at a glance. The scales also are given definite proportions, and the relation between them is thus at once perceived. The volume of text is further illustrated by twenty-seven woodcuts.

It is only natural that Mr. Vernon Harcourt should be more at home with the engineering than with the commercial problems connected with harbours and docks, and though the trade statistics given are instructive and useful, the deductions drawn from them are not in all cases to be implicitly relied upon. For instance, the "Remarks on the Docks of London," which are naturally of the first importance, convey a by no means correct impression as to their position and prospects. No one who appreciates the true significance of the vast strides which are being made in the development of other ports at home, and still more on the continent, entertains any doubt that the London docks must sooner or later be united under the control of a single board or trust, and that failing this the position and trade of the port will be seriously affected. Whether amalgamation will be brought about by adversity, as in the old days of railway competition, or otherwise, must depend largely on the dock companies themselves, but union there must be if the port of London is to maintain even its present position in the commercial world, much more if it is to regain its old prosperity. At present, while Manchester proposes to spend millions to bring the shipping to its doors, we have the curious spectacle of one of the London companies assuming a heavy burden of additional capital to provide fresh dock accommodation at such a distance from the centre of trade that all the advantages of site remain with the rivals which it is seeking to outstrip. A full description is given of these new docks, which will at least add to our geological knowledge of Tilbury, but no mention is made of the important work which is being carried out at the Royal Albert Dock. Hitherto this dock has laboured under the disadvantage that opposite its entrance in Gallion's Reach there were no moorings, so that ships which failed from any cause to be docked had to return to Long Reach. This defect is now being remedied by the dock company providing a wharf between 1,100 and 1,200 feet in length, alongside of which the largest steamers will be able to lie at any time of the tide, discharge or embark passengers, and take in coal or cargo. This wharf, which will be in communication with London, and consequently with all parts of the United Kingdom, by trains running five times an hour, stretches down the river, parallel to the shore, from the lower horn of a new entrance now also in course of construction below the existing entrance. The new entrance lock will be 550 feet long, and 80 feet wide, and its sills will be 36 feet below T.H.W. The Royal Albert Dock will thus have two noble entrances nearly contiguous, and as the only shoal of any importance between Gallion's

Reach and Gravesend has been removed by the Thames Conservancy, it will doubtless maintain the foremost position which it now holds on the Thames. The defects which have been indicated will no doubt be remedied in future editions, where also it would be well to make some reference to the Blue-books on the subject of harbour accommodation; but such omissions as these do not seriously detract from the permanent value of a very important and interesting work.

GEORGE T. TEMPLE.

CORRESPONDENCE.

INDIA FROM CHINA.

University College, London: Aug. 31, 1885.

About 122 B.C. the Chinese government wanted to establish communications with Ta-hia (Bactria?) through a shorter and more convenient road than the northern one hitherto followed. For that purpose they sent from Central West Szechuan some explorers in various directions—north-west, west, and south-west. Those sent in the latter course were stopped by the Kuen-ming, tribes of warlike herdsmen which were occupying the region between Yunnan and Ta-li in Western Yunnan. There they heard of an elephant-riding country (*Kuoh*), named Tien-yueh (*Tzen-viet*), situated at about a thousand *li* or more westwards.

In a previous communication, "Tin-Yüt not India" (ACADEMY, May 2, 1885), I ventured to show (contrarily to Mr. T. W. Kingsmill's "Intercourse of China with Eastern Turkestan" in the *Journal of the Royal Asiatic Society*, 1882, vol. xiv., p. 83) that Tien-yueh was not a name applied to north-eastern India generally, and still less that of the celebrated *Sthānēśvara* (surviving in the modern *Thanesvar*) near Delhi. The distance of the latter region from the north of the Kuen-ming would be some five thousand *li* or more. I remarked that Tien-yueh meant the country beyond the state of Tien, then paramount in Yunnan, and that to identify it we ought to look in the direction of Burma. I have seen since that Baron F. von Richtofen has expressed (*China*, i. 453) the same view.

Mr. T. W. Kingsmill (ACADEMY, August 22, 1885), notwithstanding, upholds his identification on philological and other grounds, which I think untenable. Mr. Kingsmill wants to make "Tien-yueh" or "Tin-viet" the transcription and partial translation of "*Sthānēśvara*." *Tien* being formerly pronounced *Tzen*, and standing for *stana* in "*Kustana*" (Sanskrit), (the "*Issedon*" of Hecataeus, Herodotus, &c., the modern *Khotan*) might as well represent *Sthān*- of *Sthānēśvara* without connexion of meaning; but when Mr. Kingsmill wants to find "the analogue and possibly the etymological representative of the Sanscrit *varaha*, "a region," in the Chinese *yueh*, I demur altogether for two decisive reasons. Firstly, *varaha* is not found in *Sthānēśvara*, usually derived from *Sthāna*-*Iswara* or *Sthānu*-*Iswara*. Secondly, *yueh*, anciently *viet*, does not mean, and has never meant, a region or a country. It means *trans*-, beyond, overpassing, overpassed, outside, &c., in the ten cases or about where it occurs in ancient Chinese geography. For instance, *Yueh Sui* (not "Sui yut," as Mr. Kingsmill puts it) was the country to be passed over to go to the Sui, the latter being near *Lü-Kiang* fu, while the feudatory *Kiun* of *Yueh*-*Sui* was east, extending southwards within the great bow of the *Kinsha Kiang* in South Szechuan (not in Kuangsi, as Mr. Kingsmill puts it). It was then new, since it was made only in 136 B.C., on the proposition of *Szema Siang-ju*, because the *Kiung* and *Tso* tribes had consented to recognise the Chinese protectorate.

Teng-yueh, for Mr. Kingsmill, means "district of the Tengs or Tiams"; but this cannot be, since *yueh* does not mean district, and there are no such tribes as Tengs or Tiams, so far as I know; I should like to hear from Mr. Kingsmill who they are. On the other hand, the name of Teng-yueh (Momien), which I had suggested as a possible identification, could be simply the survival of an older name, the present town existing only since about A.D. 1300, and I am not aware that Teng was at that time, or before, ever pronounced Tiam. As a matter of fact, an old name of the region of Teng-yueh was Yueh-T'an, or better, Viet-Tam, so called after Tam tribes (Ta-shi Tam, Kien-sin Tam, Ta Tam, &c.), which were removed by Kolo-feng, King of Nantchao, about A.D. 774, from their former seats placed south-west of the lake of Yunnan. The name of Viet-Tam is posterior to their exile, and we know not if any name like Tien-yueh or Teng-yueh was or not that of the region of modern Teng-yueh.

Teng-yueh has never been a *Kuoh*, says Mr. Kingsmill, surely it has always been "a country or region," which is the meaning of that now; and Mr. Kingsmill is well aware that since the accession of Liu-pang, founder of the Han dynasty in 206 B.C., the word *pang*, for region or small state, was tabooed, and *Kuoh* used in its stead. Another objection is, that Teng-yueh could not be described as an elephant-riding country, because elephants are never used there nowadays. What is done at Momien in the present time has nothing to do with the matter, as we speak of the region and not of the town alone. Elephants were known formerly much more northwards than now, and we know from the *Tso tchuen* (Ting Kung, 4th year) that elephants were used in Central China (*Hupei*) in 505 B.C. Dr. Anderson, in 1868 (*Expedition to Western Yunan*, p. 271), at Ponsee, not far from Teng-yueh, was informed by the Kakhyens that elephants occasionally visit the hills there. We do not know how far the region generally called Tien-yueh extended to the south, and it is not unlikely that the latter name was connected with that of Thindue or Tzindue, old appellation of the region of Old Pagan and Tagaung, the early capitals of Burma.

Mr. Kingsmill informs me of his supposed fact that Tchhang K'ien was very particular in calling Scinde *Shentu*. I am not sure of that; and I think the contrary is the case. *Shentu*, in the region where Tchhang K'ien learned it, is a philological impossibility; it is curious that nobody seems to have thought that, for the same reason that the Greeks taught in the west the name of India and not Sindia, the Chinese general could not have heard Sindhu. The old Persian-speaking population of the region, from whom Tchhang K'ien as well as the Greeks learned the name, pronounced an *s* initial as an *h* (Max Müller's *Lectures*, 1st ser., 6th lect.). In fact, the reading *Shen* in *Shentu* of Tchhang K'ien is more than doubtful. Glosses on the word state that instead of *Shen* another symbol is sometimes read, and then indicate two symbols read *hit* and *kit* which have in common the right-hand component part of *Kien* or *Ken*, which symbol is said in a gloss of the Tsien Han Shu to be the original one of Tchhang K'ien's own text (*She-ki*, R. 116, f. 4, edit. 1806). The uncertainty of the primitive reading, with the remark derived evidently from oral tradition, that *Shen* in that case must be read with the sound *Kien*, is for us a sufficient indication that such was the original transcription used. The symbol *Shen* was evidently written under some indication derived from Buddhist monks of India proper. As to the last questions of Mr. Kingsmill concerning the assimilations of the characters on the seal found at Harapa with the writing of Shu, I may refer him to my paper "On a Lolo MS.

written on Satin" (*Journal of the Royal Asiatic Society*, 1882, vol. xiv.).

May I inform Mr. Kingsmill that the *Mang* tribes were located in the N.W. corner of Szetchuen and consequently are not interesting as on the road passed by Margary through Yunnan; that in his paper (*J. R. A. S. loc. cit.*) the first paragraph is mistranslated, the author speaking of the extension possible of the Chinese Empire (*cf.* Tsien Han Shu, R. 61, Tchhang K'ien) and not of the area of foreign states; that Szema-Tsien speaks of the *Szé Hai*, the Four Seas, a name for the Chinese Empire and not of the *Si hai* or Western Sea; that the Kiung-pak and Tai-tsok or Kiung pih and Titso (in ACADEMY, l. c.) are not two names, but four names, of different populations or tribes: Kiung, Pak, Ti, and Tso, all well known in the ethnology of China; that Szema-Tsien speaks afterwards of the Chinese communicating with the "Tien Kuoh" and not with T'in Yut, &c.

I hope that my former communication and the present remarks will make clear that the Tien-yueh Kuoh of the Chinese records has nothing to do with Sthânê'svara as proposed by Mr. Kingsmill, and must be identified with the region of Northern Burma, between Momien and Old Pagan.

TERRIEN DE LACOUPERIE.

A NEW VERSION OF AS'OKA'S ROCK-EDICTS.

Lucerne: August 25, 1885.

In the course of the last working season Gen. A. Cunningham has been fortunate enough to discover a new version of As'oka's Rock-Edicts—the seventh which has turned up. The place where it has been found is the town of Mänsara, in the Hazāra district, which occupies the north-west corner of the Punjab, between the Indus and Kas'mir. As might be expected, the new version shows the so-called Bactrian or Ariano-Pali characters. It contains only nine edicts—I-VIII. on one rock, and XII. on another. Two photographs of the first part, taken from a paper-pulp cast, which I owe to the kindness of the discoverer, appear, though they are trying for the eyes, sufficiently good to make out the text correctly. The portion which I have read hitherto (Edicts VII. and VIII.) agrees in every respect closely with the version of *Shahbazgarhi*; but, of course, shows none of the inexplicable readings of the latter, which, one and all, are owing to the faultiness of the facsimiles. The beginning of Edict VIII. runs as follows:—*Atikantam amtarām devanāṃ pri[ya] vi[hara]yatām nikramishu*. The reading *devanāṃ priya*, i.e., *devānām priyā*, is found also in the *Shahbazgarhi* version, where Mr. Senart was compelled by his facsimile to give *javarajaya*. G. BÜHLER.

SCIENCE NOTES.

At the Aberdeen meeting of the British Association it is understood that Mr. A. T. Aitchison is to be proposed as successor to Prof. Bonney, who will retire from the office of secretary.

The *Times* of September 1 contains an intimation that Mr. Trelawney Saunders, the Geographical Assistant at the India Office, is about to retire from the post which he has held since July 1869. The announcement will be read with regret by all who know the value of the services which, in the discharge of his official duties, Mr. Saunders has rendered to the country and to geographical science. It was through his efforts, before he became connected with the department, that the attention of the India Office authorities was called to the importance of the geographical material in their possession, and to the need for making it available to the public; and the catalogues of the maps and

geographical memoirs at the India Office are largely his work. The re-establishment of the Indian marine surveys was also due in great measure to his exertions. It is, however, his work as a cartographer that is most extensively known and valued. Without making any reference to the circumstances which are presumed to have occasioned Mr. Saunders's retirement, we may echo the remark of the writer in the *Times*, that it is "an official loss which it may be difficult fully to repair."

MESSRS. LONGMANS have just issued a second edition of the late Dr. H. Schellen's standard work on *Spectrum Analysis*, translated by Jane and Caroline Lassell, and edited by Capt. Abney. The translation is made from the third German edition, into which Dr. Schellen had himself incorporated the notes made by Dr. Huggins to the first English edition, as well as all the most recent discoveries at that time. Capt. Abney has not only carried the revision down to the present day, but has also remodelled the whole work so as to bring it within the compass of a single volume.

FROM the same publishers we have also received the eighth edition of Mr. R. S. Culley's *Handbook of Practical Telegraphy*.

MESSRS. MACMILLAN & Co. will publish shortly a *Student's Manual of Geology*, for the use of colleges and schools, by Mr. Archibald Geikie, Director-General of the Geological Survey of the United Kingdom.

THE same publishers announce as in preparation *The Elements of Thermal Chemistry*, by Messrs. M. M. Pattison Muir and David Muir Wilson; *Compounds of Carbon*, an Introduction to the Study of Organic Chemistry, by Prof. Ira Remsen; and *A Constructive Treatise on Plane Curves*, by Mr. T. H. Eagles.

PHILOLOGY NOTES.

MR. A. N. WOLLASTON'S *Complete English-Persian Dictionary* is now in an advanced state of preparation. The Secretary of State for India in Council has made a grant in aid of the expense of the work; but it is anticipated that even with this assistance the proceeds of the sale will fall far short of defraying the total cost of production. The publishers therefore appeal for aid to the Oriental societies and to private individuals interested in Persian studies. The book is to appear in one volume, royal quarto, of about one thousand pages.

THE current number of the *Journal of the Royal Asiatic Society* (Vol. XVII., part iii.) contains, besides original papers, the annual report, consisting of 170 pages, which would have been more conveniently issued as a separate number. This report has a melancholy interest, as being almost entirely the work of the late Mr. Vaux, and the last work upon which he was engaged at the time of his sudden death. We understand that the paragraph dealing with epigraphy was dictated by him on the very day before he died. It consists, as usual, of obituary notices and of a bibliography of the work done in oriental subjects during the past year. Among the obituary notices we would especially mention those of Sir Bartle Frere and Charles Philip Brown, the Telugu scholar. The original papers are five in number. Prof. de Harlez, of Louvain, writes on "The Age of the Avesta." In opposition to the published opinions of Dr. Geiger and Prof. Geldner, he contends that the epoch of Zoroastrianism cannot be earlier than 700 B.C., and is probably later. Mr. H. F. W. Holt gives an account of the Chinese game of chess, which he thinks is not derived from the Indian game, but from a common source. Incidentally, he suggests a derivation of the word "mandarin" (which is unknown to the Chinese themselves) from the

piece called *mantri* or minister. Mr. C. R. J. de Mesurier writes upon "Customs and Superstitions connected with the Cultivation of Rice in the Southern Province of Ceylon;" and Mr. T. H. Thornton upon "The Vernacular Literature and Folklore of the Panjáb." Finally, we have Prof. de La Couperie's paper on "Beginnings of Writing in and around Tibet," to which we hope to return hereafter. It must be sufficient to say now that it contains much more than the title promises. The substance of it is an account of the hieroglyphic writing of the Mo-so; but an introduction discusses the general question of the origin of all writing and the various kinds of signs adopted, while we are incidentally told that the much disputed inscriptions of Easter Island are written in a South Indian character.

HERR TEUBNER has in the press a work, by Dr. Otto Gruppe, entitled *Die griechischen Culte und Mythen in ihren Beziehungen zu den orientalischen Religionen*, in which he endeavours to supply a handbook to the entire range of mythological science, and to lay a firm foundation for future research. Dr. Gruppe is a fervent opponent of what he calls "die gewöhnlich als vergleichende Mythologie bezeichnete Kuhn-Müllersche Hypothese." The work will be in four volumes, of which the first is to appear very shortly. Mr. D. Nutt is the London agent.

THE same publisher announces a new edition of *Athenaeus*, in three volumes, edited by Dr. G. Kaibel.

HERR MORRIS JASTROW sends us an able and careful monograph—a graduation thesis for the degree of Ph.D. at Leipzig—entitled *Abu Zakarija Jahja ben Dawūd Hajjāj und seine zwei Grammatischen Schriften* (Giessen: Keller). Hayyūj, who belongs to the middle of the tenth century, may be regarded as the founder of scientific Hebrew grammar. The two treatises by him which are the subject of this essay relate to the phenomena of the two classes of apparently biliteral verbs, viz., those with medial *vav* or *yod* and those with a doubled radical. They are still unpublished, although several MSS. exist. Herr Jastrow prints a chapter of the original Arabic text of the former of these works from two MSS. at Oxford, with a German translation, and discusses certain questions relating to the author's life. He seems to have made out a good case for rejecting the ordinary view that Hayyūj was a pupil of Menahem ben Sarūq, and adduces some ingenious reasons for believing that he was the master of Ibn Janāh.

M. B. PETRICEICU HASDEU, of Bucharest, has just published the first part of an *Etymologicum magnum Romaniae*, with the sub-title "Dictionarul limbei istorice si poporane a Romanilor."

MR. N. DARNELL DAVIS has put forth a derivation of the word *rum*, which gives the only probable history of it. It came from Barbados, where the planters first distilled it, somewhere between 1640 and 1645. A MS. "Description of Barbados," in Trinity College, Dublin, written about 1651, says: "The chief fudling they make in the Island is *Rumbullion*, alias *Kill-Devil*, and this is made of sugar-canes distilled, a hot, hellish, and terrible liquor." G. Warren's *Description of Surinam*, 1661, shows the word in its present short form: "*Rum* is a spirit extracted from the juice of sugar-canes, . . . called *Kill-Devil* in New England!" "*Rumbullion*" is a Devonshire word, meaning "a great tumult," and may have been adopted from some of the Devonshire settlers in Barbados; at any rate, little doubt can exist that it has given rise to our word *rum*, and the longer name *rumbolling*, which sailors give to their grog.

FINE ART.

GREAT SALE of PICTURES, at reduced prices (Engravings, Chromos, and Oleographs), handsomely framed. Everyone about to purchase pictures should pay a visit. Very suitable for wedding and Christmas presents.—GEO. HARRIS, 115, Strand, near Waterloo-bridge.

THE ART MAGAZINES.

IN *Jahrbuch der Königlich Preussischen Kunstsammlungen* (vol. 6, part 3) Julius Meyer has an admirable paper on the famous portrait of Hieronymus Holzschuher, by Albrecht Dürer, recently acquired by the Berlin Museum. It is illustrated by a fine heliogravure of the picture. A study of Giotto, learned and exhaustive in character, is commenced by Karl Frey; and Hermann Grimm continues his study on Raphael. Another fine heliogravure accompanies the latter paper. It is after that portrait at Munich which, according to some, is a portrait of Bindo Altoviti, according to others of Raphael. Herr Grimm is of the latter opinion, which he supports by new and important evidence.

M. PAUL MANTZ's valuable study of Rubens, illuminated by hitherto unprinted documents, is nearing its close in the pages of the *Gazette des Beaux Arts* (August), and another work, likely to be soon reproduced in book form, the journal kept by M. de Chantelou of the journey of the Cavalier Bernini in France, edited and annotated by M. Ludovic Lalanne, comes to an end. Some unpublished and melancholy documents relating to Prud'hon are the subject of an article by M. Charles Gueulette; and M. Edmond Bonnaffé finds a congenial subject in French furniture of the 16th century. M. Louis Gonze's second paper on Adolphe Menzel is illustrated by facsimiles of some of his life-like sketches.

THE *Art Journal* for this month is unusually interesting. Mr. Austin Dobson writes on the Gray Memorial at Cambridge; Mr. F. Wedmore on Moreau; and Mr. F. G. Stephens on Hammersmith and Chiswick (second paper), while some account of the art of the Benedictine Monastery of Beuron, a sincere modern revival of the spirit of Fra Angelico, is given by Elphege G. Cody, O.S.B. The steel engraving is by A. Willmore, after a landscape by Leader.

IN the *Portfolio* Mr. Loftie still continues his pleasant papers on Windsor. That for this month is illustrated by an etching by F. Slocombe. The difficulties of full foliage are bravely grappled with by the etcher; but the subject is not so well suited to the needle as the fresh and sharp lights and shades of the sunlit beach of Hastings, which were etched by Mr. Stephen Parrish in the preceding number. Mrs. Pennell's papers on "Stones of Rome" (August) and "Down by the River" (September) supply texts for some of her husband's brilliant pen sketches; and Mr. W. M. Conway's article on "The Influence of Mediaeval Orders upon the Revival of Art" are full of interest.

"ON CALAIS SANDS," one of Mr. Andrew Lang's neatest and saddest ballads is vigorously illustrated by Mr. Seymour Lucas in the *Magazine of Art* for August, and this number is remarkable for the first article we remember in an English periodical on the German illustrator of the eighteenth century, Daniel Chodowiecki. This artist is sometimes called the English Hogarth, and could scarcely have found a more fitting introducer to the English public than Mr. Austin Dobson. A living German artist (Arnold Böcklin), scarcely more known in this country, although the reputation of his weird imagination is otherwise European, is sympathetically treated by Mr. Claude Phillips in the current part of the same magazine. Both these articles are well illustrated. Among other good matter this month may be noticed Mr. David Hannay's paper on "Granada," and the fourth section of

the vivid survey of "Current Art," with its trenchant criticism and well-chosen illustrations. The woodcuts by Mr. J. M. Johnstone, after Mr. Napier Hemy's fine water color at the Institute ("Pilchard Fishing"), and by Mr. O. L. Lacour, after Mr. Whistler's celebrated portrait of Señor Pablo Sarasate, at the Society of British Artists, are much to be praised.

IN *L'Art* (August) a fine portrait group at Munich, doubtfully assigned to Franz Hals, is the subject of discussion by M. E. Michel; Mr. Charles Diehl contributes papers on Ravenna; M. P. Leroi upon the Ceramic Museum at Rouen; and M. Maurice Albert one upon modern French engraved medals. The latter is illustrated by examples of the work of MM. Chaplain and Oscar Roty; but MM. Degeorge, Dubois, Dupuis, and others, come in for their fair share of praise. The etchings are by M. A. Mongin, after Mr. Alma Tadema's "Love's Missile," and by F. Leenhoff, after Decamps's "Pierrot portant son déjeuner." There is also a reproduction of a sketch by M. F. de Uhde from his remarkable picture in this year's Salon called "Laissez venir à moi les petits enfants," in which the artist has had the courage to adopt the costume of the present day.

NOTES ON ART AND ARCHAEOLOGY.

THE North of England is rich in antiquities and in societies interested in them. Last week the Archaeological Society of Durham and Northumberland found an ample field for its labours at Alnwick, where it had the advantage of Mr. F. R. Wilson's local knowledge and experience. The parish church, elaborately "restored" at the expense of the late and present Duke of Northumberland, has not lost in the process its characteristic features—the Percy pillar, in the chancel, richly carved with crescents and lozenges, and the curious angle turret which, it was suggested, may have been employed in troublous times as a signal station. But the special feature in the excursion programme was the examination of the remains recently exhumed on the site of Alnwick Abbey. The gateway is the only part of the original building still standing; but the foundations and bases of the columns and walls, now uncovered, enable one to trace, with accuracy, the position of the church, chapter-house, refectory, cloisters, and other buildings. At the bottom of an open grave a stone coffin was visible, and it is probable that further discoveries of an interesting nature may be made. Within a short distance are the far more considerable ruins of Hulne Priory, which, however, was an establishment inferior in importance and also in size to Alnwick Abbey. Perhaps nowhere else in England, within so small a compass, can there be found two monastic buildings and a mediaeval castle of the first magnitude.

A SECOND and revised edition of Mr. Andrew Tuer's monograph on Bartolozzi is published to-day. It is in one volume, bound in vellum, and the issue is to be limited to 500 signed and numbered copies. Like the original edition, it is dedicated, by permission, to the Queen, and in accepting a copy Her Majesty has forwarded to the author copies of *Leaves from the Journal of our Life in the Highlands* and its sequel.

A NUMBER of bas-reliefs representing allegorical figures, supposed to be of the twelfth century, have been discovered at Paris in the course of excavations made at the Ecole de Médecine. The stones bear Latin inscriptions, and are believed to have belonged to the chapel of the Cordeliers.

AT the Zwingli festival in Zurich, on August 26, Natter's statue of Zwingli was unveiled.

A performance of Charlotte Birch-Pfeiffer's tragedy, "Ulrich Zwingli's Tod," was given in the theatre. Historical and archaeological fidelity was studied to the extremest detail. In the scene of the reformer's departure to the field of battle, the "Kappellied" written and composed by Zwingli himself, was sung behind the stage.

A Breisacher Bauhütte Verein has been founded at Altbreisach, on the model of the societies at Cologne, Ulm, and other cities, for the completion of the splendid Münster. The archiepiscopal surveyor reckons the cost of finishing the tower at 35,000 marks. The church is one of the oldest and most instructive ecclesiastical buildings in Germany, as it unites under its roof striking art work of many periods, Roman, Byzantine, and Gothic. The Gothic portions, including the unfinished great tower at the west end, were executed between 1473 and 1494. The completion of the tower was stopped by the succession of sieges to which Altbreisach was exposed as the chief fortress through Southern Germany. After the siege of 1633-1638, which was compared by its contemporaries to the siege of Jerusalem, the population sunk from 15,000 to 3,000. The municipality has spent 25,000 marks upon the church during the last four years, and 43,000 marks have been contributed by private persons during the same period.

THE STAGE.

"AS YOU LIKE IT" AT STRATFORD-ON-AVON.

LAST Saturday's performance of "As You Like It," at Stratford-on-Avon, was memorable in many ways. It is a matter of common knowledge that the educated Englishman often falls behind the educated American in his veneration for Shakspeare's native place; but even among Americans there is seldom witnessed so eminently practical a display of enthusiasm for Stratford as that made by Miss Mary Anderson last Saturday. Miss Anderson resolved not only to take her last farewell of a great part of the English public in the Shakspeare Memorial Theatre at Stratford, but to appear there for the first time in a new Shaksperian character—in the fascinating rôle of Rosalind. The whole proceeds of the performance she offered to the trustees of the Memorial Buildings. A "first night" of any widespread interest is rare in the provinces; but that of Saturday was sufficiently attractive to draw a crowd of visitors to Stratford from all parts of England. Miss Anderson's generosity appreciably benefited the fund for the completion of the Shakspeare Memorial Buildings. These buildings, which include a dramatic library and a picture gallery, besides a theatre, still await fitting decoration and furniture. They owe most of their recent embellishments to the unaided munificence of Mr. C. E. Flower, of Stratford; but, it is to be hoped that Miss Anderson's example will not be lost upon English actors, nor upon those English playgoers who still revere Shakspeare's memory.

The selection of "As You Like It" for representation on the occasion was a happy one. No far-fetched argument—so dear to the professed Shaksperian commentator—is necessary to trace in the comedy a Stratford, or, at any rate, a Warwickshire colouring. The Forest of Arden, whence the family of Shakspeare's mother derived its name, is not the Ardennes of Luxemburg: it was the title long borne by the stretch of woodland which once shaded the heart of Warwickshire. Little of the forest now survives, except in the names of villages like Henley-in-Arden; but, in Shakspeare's time, it was a wild enough country in which to "live like the old Robin Hood of England." To be quite accurate, let us admit that in the novel of *Rosalynde*, whence Shakspeare drew much material for his play,

Lodge makes Rosalynde and her cousin Alinda (Shakspeare's Celia) together with Rosader (Shakspeare's Orlando) and his servant, Adam Spencer, escape to a French forest of Arden. But when one compares Lodge's artificial Montanus, Coridon, and Phoebe with Shakspeare's perfectly true Silvius, Corin, and Phoebe, and when one duly appraises Shakspeare's own creations of Audrey and William, no doubt remains that in "As You Like It" Shakspeare is depicting pastoral life as he knew it in South Warwickshire, and that he owes nothing in this regard to Lodge's French mock-pastoral.

The performance itself on Saturday proved, it must be confessed, less attractive than the attendant circumstances. But "As You Like It" is one of those plays which the lover of Shakspeare always feels a new pleasure in witnessing on the stage, and although the most difficult of all comedies to cast really adequately, its inherent freshness rarely fails to lend some interest to its representation, even at the hands of second or third-rate actors. Of Miss Anderson's supporters, only Mr. J. G. Taylor can claim to be criticised as an actor evincing ability of the first rank. Mr. Taylor's Touchstone was a true and unaffected reading of the part. His features suit the character, and his elocution gave full effect to the jester's dry, sententious wit. It would be unfair to attribute to him the feeble interest excited by his interviews with Audrey. As Audrey, Mrs. Billington looked so painfully aged and played with so little animation that the charming episode of pure comedy, which entirely depends on Audrey's exertions, was well-nigh ruined. Miss Anderson's Rosalind deserves much praise. She looked and did her best. In appearance she nearly realised Lodge's glowing description of his Rosalynde: "all in general applauded the admirable riches that Nature bestowed on her face." When she was disguised in buff jerkin and hose as Ganyমেদে, it was impossible to do other than commend Phoebe's fickleness. Miss Anderson's faults are well-known, and many of them were still present. Her pathos in the early scenes sounded artificial. The proud scorn with which she replied to Duke Frederick's accusation of treason was the only speech in the first act which she delivered with any approach to real feeling. In the forest scenes she appeared to far better advantage. In her interviews with Orlando she proved herself in sympathy with the spirit of the comedy: full of youthful vivacity, she kept well within the limits of womanly reserve. She bantered Phoebe with the cruellest ease; but her manner as the mocking censor of the rustic coquette was quite free from the touches of anxiety which she sought—often successfully—to impart to her railery of her lover. Miss Anderson delivered the epilogue with great naturalness and spirit, and dismissed her audience in the best of humours. Of the other actors, Mr. Sydney Hayes played Duke Frederick very intelligently, and Miss Tilbury was very graceful as Celia. But Mr. Macklin as Jaques was an ineffective substitute for Mr. Hermann Vezin. He spoke in a subdued tone that failed to indicate much of Jaques's "most humorous sadness," and we listened in vain for the cynical accents without which Jaques talks the merest platitudes. Mr. Macklin's task was rendered the more difficult by the transference to Jaques of the First Lord's famous speech about the "poor sequestered stag." Jaques's remarks, as reported there by the First Lord, are humorously sad and cynical enough; but their setting is full of sincere sentiment, and as soon as Jaques is made responsible for expressions of sincere sentiment his individuality is destroyed. It is, we know, a very common practice to transfer the speech to Jaques, but it is wholly without rational justification, and ought to be abandoned forthwith. The exiled duke was coarsely played by Mr. Henry Vernon, and Mr. Kenneth

Black's Adam was a very amateurish piece of acting. Mr. Forbes Robertson as Orlando, although he looked the character, was very formal in manner and speech. But the exceptional character of the performance deprived these regrettable defects of most of their malign influence.

The scenery, which was painted for the Memorial Theatre by Mr. O'Connor some years ago, satisfied all requirements. The text underwent some revision other than that we have already condemned. Words and phrases were far too freely omitted in the so-called interests of modesty. A cursory glance at Mr. C. E. Flower's acting version of the play seemed to prove that Miss Anderson would have been better advised had she adopted that as her text.

SIDNEY L. LEE.

CORRESPONDENCE.

"HOODMAN BLIND" AT THE PRINCESS'S.

London: Sept. 2, 1885.

Having seen this admirably constructed and written play acted last night, and witnessed how it roused the whole audience to enthusiasm at some points, and drew roars of laughter from them at others, I cannot but express my surprise at the very inadequate and grudging notices of the drama that fell under my eyes in the few papers that reached me on the Yorkshire moors. I ask leave to declare my opinion that "Hoodman Blind" is one of the very best plays of its class that I have ever seen—one of the most pathetic as well as one of the most humorous. It is capably mounted, excellently played, and must be a great success, unless the theatre-going public has lost its heart and its wits. As a whole, I think "Hoodman Blind" is a better play than even "The Silver King"; and I do trust that everyone will go and see it for himself before he accepts any adverse opinion about it.

One strong objection which has been brought against the play—that it imitates "Othello"—seems to me ridiculous. As a Shakspeare student, I have always longed to see the motives of Shakspeare's best plays re-worked in and for our own Victorian time. How often have I asked myself "When is any dramatist going to give us a Victorian Hamlet on the stage?" Scores of them exist in every stratum of society now; men with tasks committed to them which their unfit natures cannot bear, and which bring them to their death in the effort to work out. Who will put the typical new Hamlet on the boards for us? Now Mr. Jones and Mr. Barrett give us a Victorian Othello. They rightly make him, in this our democratic age, a poor English farmer, not a Moorish general of the Venetian republic. They make plain and emphasise their Iago's motive, they show their Othello's repeated and indignant rejections of his wife's accusers, till, under the evidence of his own eyes, her double (or sister) in her cloak, convinces him of her guilt. The deception of him, a passionate though reformed drinker, is inevitable. The process of his enlightenment is most skilfully worked out, and his dragging from Iago the confession of his guilt is one of the strongest and best scenes that the modern stage has seen. Yet, say some critics, because Shakspeare has once used this motive of a husband roused to jealousy by false accusations of his wife, and a mistaking sight of an article of her clothing, no modern dramatist must use it, however he varies the details and circumstances of the deception. Pooh! The objectors might just as well say that no dramatist may make a man and girl fall in love with one another at first sight because Shakspeare made Romeo and Juliet do so. See how Shakspeare continually repeated himself, using up his characters in "Love's Labour Lost," the

"Two Gentlemen," &c., in later plays. See how he borrowed from every one who had anything to lend which suited him. Would he be likely to grumble at any later writer borrowing from him? I trow not. The one question to be asked is, has the new writer put fresh life, the new life of his own time, into his borrowing? If he has, then the borrowing is more than justified; and no one in his senses can deny that Mr. Jones has put this fresh life into his play. It is admirably varied too, and Mr. Jones shows again, in that gorgeous footman scene, his special power of making a vivid incident out of a chance trifle which he did in the third-class passenger in the "Silver King." The only false note in the play is the despairing farmer's address to the Sphinx on the Thames Embankment. It is pitched in too high a key for the character. As a whole, "Hoodman Blind" is a most effective, wholesome, excellent play, and cannot be too highly praised.

F. J. FURNIVALL.

MUSIC.

BIRMINGHAM MUSICAL FESTIVAL.

LAST week we were only able to announce the success of the three novelties at the Wednesday evening's concert. Mr. Anderton's cantata, "Yule Tide," came somewhat as a relief after the heavy music of the morning; but, though it contains pleasing melody and sprightly choruses, is not of sufficient importance for a festival novelty. The preface to the libretto, written by Miss Julia Goddard, informs us that there is "no developed dramatic design or continuous story." Such a book could scarcely bring forth rich musical fruit. It was, perhaps, wise of the composer not to be too ambitious, and, in its way, his music is by no means bad; but it certainly will not stand comparison for constructive power or charm of melody with any of the other English novelties. Mr. Anderton is a local man, and the committee may have thought him best deserving of notice. But the Birmingham Festival is not a local meeting. What is done at Birmingham is noised throughout the world. Abroad musicians naturally judge of English art by the works put forward. They do not and cannot admit extenuating circumstances. The best in the English musical mart should be chosen, and the sound judgment displayed in selecting all the other native composers seems to show that, in this one instance, the committee allowed the shade of favouritism to cover the bright lamp of its understanding.

Mr. E. Prout's third symphony in F (op. 22) is a work of which the composer may well be proud, for it is certainly one of his best. By the help of chromatic notes, cloudy rhythms, and general cacophony it is possible for a time to give an impression of learning and depth of thought, and even to deceive trained ears. All who know Mr. Prout are well aware how easily he could, if so minded, have filled his score with complications of all kinds; but he expresses his thoughts in the simplest and clearest language, and therefore succeeds. It is easy after performance to look through the symphony and complain that the composer has, after all, only followed, as the saying is, the lines of the old masters. True—but what difficult lines to follow! Anyone who can write in the Haydn-Mozart style without producing either bald imitation or dull stuff deserves more than ordinary praise. The clearness of the music is its great charm and highest merit. The symphony has the usual four movements, a very graceful Intermezzo à l'Espagnol taking the place of the ordinary minuet or scherzo. The larghetto is charming, and the first and last movements are exceedingly bright and spirited. The scoring throughout is excellent. Nowhere does Mr. Prout's orchestra give an uncertain sound.

The third novelty of the evening was Mr. A. Mackenzie's violin concerto (op. 32). In style and treatment it offers a marked contrast to the work just noticed. Mr. Mackenzie's sympathies are more with the modern school of thought. The number of good violin concertos is not legion, and we believe a very valuable addition has been made to the list. The marked character of the themes of the opening movement and the elaborate developments of the same, show how thoroughly the composer was in earnest, and that very earnestness has rendered his music extremely difficult to follow; but, at the close, one feels that it demands and deserves repeated hearing. We praised Mr. Prout's symphony for its clearness and cannot, therefore, without inconsistency, praise the allegro of the concerto for its abstruseness. Mr. Mackenzie, however, writes as he feels inspired, and further acquaintance with his work will probably render clear what now seems obscure, and also reveal fresh beauties. He seems at times mastered by, rather than master of, his thoughts. The slow movement is very original and full of beauty. The finale, though lighter in character than the rest of the work, nowhere descends to the commonplace. The skill with which the solo part is written is striking. It is full of showy and brilliant passages, and yet, as in the Mendelssohn concerto, it is part of the music, and not mere ornament for ornament's sake. Mr. Mackenzie was indeed fortunate in having Señor Sarasate to interpret his new work.

On Thursday morning the "Messiah" was given. No festival is considered complete without this oratorio, and, as a rule, the mere record of its performance is quite sufficient. But Robert Franz's additional accompaniments and Herr Richter's conductorship imparted special interest to the occasion. The arrangement of Franz follows very closely that of Mozart. Here and there wind and string parts are added to fill up bare places, or, as in "He trusted in God," to give greater support to the voices. The solo, "Who may abide," has been restored to the bass voice, and this change is decidedly an improvement. We cannot, however, say the same of the alteration in "He shall feed his flock." It was sung all in the key of B flat, and of course by soprano (Miss Anna Williams). It is certainly thus written in the autograph score, but already in the Dublin MS. we find the version commonly used with the first part in F, and the second in B flat. The recitatives were accompanied by sustained chords on the strings; but though much pleasanter to the ears than the usual violoncello scrape, it interfered with the effect of Handel's "Thy rebuke" recitative. Soft chords on the organ, or even the pianoforte, would be more in keeping with the composer's intention. The performance was a very fine one. Some of the slow movements were taken a shade faster and some of the fast ones slower than usual, and, in most cases, the altered *tempi* were to our taste. Herr Richter has now shown us that Handel and Mendelssohn are as safe in his hands as Beethoven and Wagner. Miss Anna Williams, Mrs. Hutchinson, and Madame Albani divided the soprano music; the other vocalists were Madame Patey and Messrs. Maas and Foli. Comment is unnecessary.

On Thursday evening Herr Dvorák conducted his new cantata, "The Spectre's Bride." The poem by K. J. Erben, a noted Bohemian writer of the first half of this century, has been translated into English by the Rev. Dr. Troutbeck. A maiden prays to the Virgin for the restoration of her absent lover. The latter suddenly appears, and entreats her to follow him to his home: that home is the churchyard. Terrible sights and sounds are seen and heard by the maiden. She prays to the Virgin, who at last delivers her from the powers of hell. Such is a very brief *résumé* of this ghastly Bohemian tale, and our account of the music must also be brief. We cannot, in words, give any idea of the singular charm and

freshness of the melodies, of the variety, richness and boldness of the harmonies, or of the marvellous orchestration. It may not be the proper province of music to describe spectres, howling dogs, screech-owls, croaking frogs, or churchyards with all their midnight horrors; but Herr Dvorák forces us, while under the spell of his music, to listen, not to criticise, and to receive with admiration this fresh manifestation of his genius. He carries you along with him. You seem to see everything; and in the journey to the churchyard you almost forget you are listening to music. The whole is terribly true, and yet the composer never lets the real dominate over the ideal; hence the power, and, even in its direst moments, the charm of the music. The two soprano solos (first and second prayers to the Virgin) are as simple and melodious as any by Mozart or Rossini, and their natural beauty is enhanced by accompaniments teeming with life and colour. The two duets (soprano and tenor), "Ah, dearest child" and "Now, when the night," are exquisitely tender and romantic. The chorus has little to do but by repetition to emphasise the narrative phrases of the baritone solo in the description of the memorable journey and in the churchyard scene. The effect is peculiar, but very striking. The extraordinary incident of the spectre bridegroom awakening the dead man is as fantastic as anything we can recall in programme music. Dvorák makes use of representative themes. The principal one is distantly related to Wagner's Flying Dutchman's theme. The music in some of the recitative passages and in the second prayer also strongly reminds one of Wagner. This is indeed natural. It is quite impossible for a man so gifted not to have caught something of the spirit, and with the spirit the manner of his illustrious predecessors. Next to Wagner, Schubert is a name which the music calls up. The "Spectre's Bride" is a work which equals, and, in some respects, surpasses Mendelssohn's "Walpurgis Night"; while for its masterly orchestration it occupies a place of honour close to Berlioz's "Faust."

The work was admirably performed. The vocalists were Madame Albani, Mr. Maas and Mr. Santley. The immense applause after many of the numbers, and the shouts, cheers and recalls at the close, of course mean that Herr Dvorák will be asked to write a work for the next festival.

The second part of the concert included a hymn for solo (Mr. F. King), chorus, organ and orchestra, by Dr. Bridge, organist of Westminster Abbey. The Latin Version, by Mr. Gladstone, of Toplady's celebrated hymn, "Rock of Ages," is set to music in a simple yet exceedingly skilful and effective manner. The concluding fugue is bright and clever. Dr. Bridge conducted his work, and was recalled at the close. The work will certainly prove a success whenever and wherever it is given. Space prevents us saying more about it for the present. The programme included a Wagner selection, Beethoven's "Leonora" (no. 3), and some vocal music by Madame Albani and Mr. Maas.

On Friday morning, the last day of the festival, Mr. C. V. Stanford's new oratorio, "The Three Holy Children," was performed. The children are those Jews who would not worship the image set up by King Nebuchadnezzar. The words are taken from the book of Daniel, the Psalms, and also from the Apocrypha. The opening chorus, "By the waters of Babylon," is extremely fine, and the following march of the Assyrians is bold, and brilliantly scored. There are some excellent effects of contrast when the Assyrians with loud and scornful voices call upon the Jewish women to sing one of the songs of Sion, and when the latter reply in plaintive tones that they cannot do so in a strange land. All the numbers of the first part are interesting, and it closes with a magnificent chorus, "The heathen shall fear thy name." The writing shows ability of the

highest order. Mr. Stanford has made use of scientific devices of various kinds, but there is nothing forced or dry in the music. The interest is well sustained throughout, and the close is of great power. The audience applauded loudly, and would not be satisfied until the composer had left his seat in the gallery and bowed his acknowledgments from the platform. The second part of the work is, on the whole, less interesting than the first. The fault lies partly with the composer, and partly with the story. There is no prominent character to attract notice, as for example in "Elijah." The three holy children are not equal to one solid hero or heroine. The double chorus, "Benedicite Omnia Opera," contains some noble writing, but it is less exciting than the chorus ending the first part. Besides there is an uninteresting tenor solo, and some not very attractive music for the "Children." The best numbers are the instrumental interlude and chorus, "Bel, great is thy name," and a clever chorus with ground bass, "And the king's servants." The work was conducted by Herr Richter with great care, and greatly applauded at the close. The vocalists were Miss Anna Williams and Messrs. Maas, King and Foli, who all sang remarkably well. The choral singing in the two finales was very grand.

The concert came to an end with Beethoven's "Choral Symphony," and, as we need say nothing about the instrumental part, we have only to add that the choir did itself full justice. In the evening "Mors et Vita" was given for the second time. The performance was very fine.

Though the festival has not been so great a financial success as that of three years ago, we can congratulate the managers on the splendid artistic results. The "Spectre's Bride" alone would make the festival ever memorable; but, in addition, the English novelties, which, in most instances, have surpassed the highest expectations, have added to its reputation. For the grand choral singing we have, in great measure, to thank the chorus master, Mr. Stockley. Also, we must mention Mr. Stimpson, the organist, who gave valuable assistance throughout the week. To Herr Richter, as conductor, it is scarcely possible to award too high praise.

LITERATURE.

Calendar of Letters from the Mayor and Corporation of the City of London, circa A.D. 1350-1370, enrolled and preserved among the Archives of the Corporation at the Guildhall. Edited (with an Introduction) by Reginald B. Sharpe. Printed by order of the Corporation. (J. C. Francis.)

THE discovery of the collection of letters from the Mayor and Corporation of London, which has now been calendared and edited under the direction of the Guildhall Library Committee, should stimulate the city authorities and their learned and untiring Records Clerk to a further search for treasure. No one can say how many rolls of a similar character may be lying undisturbed in the mass of uncalendared documents remaining in the Town Clerk's office at the Guildhall. It is true that many of the records of the Mayor's Court, in which the letters now before us were enrolled, either perished in the "dismal fire" of 1666, or were lost in the utter confusion into which all city matters fell under the stress of that great calamity; and it was for a long time feared that many more of the same archives had been destroyed in the disastrous conflagration at the Royal Exchange in 1838; but an examination of the "charred remains" of the documents burned on the latter occasion, and various searches from time to time carried on in the Town Clerk's office, have made it probable that a great number of the early records of the Court are still in existence. The varied and interesting character of the letters which are now for the first time edited will whet the appetite of the public for more secrets of the "book-house" which may serve to throw fresh light on the history of mediæval London.

The letters, of which copies or enrolments are summarised in this volume, were written in the latter half of the fourteenth century. They are chiefly concerned with disputes arising between the Corporation of London and other chartered boroughs with reference to the detention of runaway apprentices who had been duly bound and enrolled before the City Chamberlain, to the seizure of Londoners' goods by the bailiffs of country towns on suspicion of their being unlawfully acquired, or to the constant grievance of the citizens, the imposition of tolls and duties contrary to the great charter of Henry I., whereby they were "quit of all manner of custom throughout the king's dominions, as well beyond the sea as on this side thereof, and in the isles of the sea as in the realm of England." The request for redress concluded in most cases with a notice, more or less courteously veiled, that reprisals would follow in case of failure, "as they would wish their own folk to be treated in the like case or weightier." Thus the

Mayor of Bristol is several times reminded that nothing has been done about Andrew Aubrey's wool seized to satisfy a loan due to Nicholas Dobbesene and Thomas Rostelegh, burgesses of Bristol, and that unless the Bristolians take this matter to heart "necessity would certainly arise for annoying their folk coming to London." When Aubrey became Lord Mayor in 1351 he caused many letters of the same kind to be sent to provincial mayors and the "Good Folk" of Croydon, Canterbury, and various other towns; and it is observable that these comminatory letters were sent as freely to foreign states and municipalities as to provincial boroughs in England over which certain rights of reprisal were exerciseable by law or usage. The Lord Mayor Walter Turk, for example, writes in the year of the Black Death threatening what practically amounted to private war against the "Priors of the Arts and the Standard-bearer and Commonalty of the City of Florence."

Private negotiations of the same kind were conducted in cases of piracy by Bretons or "ships of Flanders," which infested the narrow seas and made it necessary for the merchants to go in huge fleets to carry the wool to the Flemish stores, or to fetch the Gascon wine from Bordeaux. In 1364, immediately after peace had been concluded with France, the Lord Mayor writes to the High Admiral and the authorities of the chief towns in Normandy, complaining that a ship laden with tin had been captured off Portland Race by the pirates who were then known as "Billecokes" and "Claybakes." In another case the Lord Mayor and sheriffs certify that a citizen is lying in captivity at St. Valery as a prisoner of "the Claybakes," and call on all true men to aid and assist him in his necessity.

Mr. Sharpe reminds us that the seat of the wool trade was changed by Edward III. from Bruges to Bristol and ten other towns in England as early as the twenty-seventh year of his reign. But, notwithstanding this blow at the commercial supremacy of the continental mart, we find among the letters now published, "a larger proportion addressed to the municipal authorities of Bruges than of any other town either at home or abroad." This is a sign of the difficulty of altering the "tide of trade" by means of arbitrary legislation. But these letters show that the difficulty was neither recognised nor suspected in the fourteenth century. The foreign merchants who managed the whole carrying trade, and in fact almost all our external trade at that time, were treated with the bitterest jealousy and suspicion. They were heavily taxed in the first place for venturing to trade with London at all, and their whole business was fenced in with such complicated restrictions that it was surprising to see them dealing with us at all. They were compelled to deal in gross, and to sell all their stock within forty days; and, during the period with which we are dealing, merchant strangers were allowed to lodge only with freemen of the city. Soon afterwards it was explicitly enacted that no foreigner should buy or sell with any other foreigner within the liberties of the city. The country was jealous of their profits, whether paid for in coin or by means of exports, and

this ill-feeling rose to such a pitch that it became necessary during this period to forbid, under severe penalties, the infliction of injury upon the merchants of Lombardy and Flanders.

Several of the letters contain certificates as to the customs and privileges of London, addressed to the mayors of provincial boroughs which, by their charters, were entitled to exactly the same rights as the men of London had gained by their great civic revolution in the reign of Richard I. It was a common practice to grant these civic liberties by reference to well-known precedents, and Mr. Sharpe has collected several instances of the practice. The customs of Hereford, which were as ancient as the Norman Conquest, were adopted in this manner as the standard for the grants of privilege to the towns in the Marches of Wales. In the same way Exeter and more than a score of other cities and boroughs were allowed the same municipal rights as the Londoners:

"It is noteworthy that the charter granted to the burgesses of Oxford by Henry III., unlike those granted to the other towns just mentioned, expressly declared that whenever any dispute or doubt should arise in any judgment as to what they ought to do, they should send messengers to London, and that what the citizens of London should decide thereon should be held firm and established."

The instances here collected are not only useful as showing the fragmentary and haphazard fashion in which our local liberties were acquired, but are valuable in themselves as statements of the exact nature of the mediæval customs of London. The reader may be especially referred to a letter written to the Burgomasters of Bruges with reference to the division of the estate of Geoffrey Boner, a "paternoster," or maker of rosaries, among his orphan daughters. One of them had been "advanced" upon her marriage with lands purchased for 40 marks and a "hanap of mazer"; and the Lord Mayor points out that by the custom of Bruges, which appeared to be the same as the London custom of orphanage, the child so favoured could not claim a further share without throwing the whole into "hotchpot."

If one were asked what was the material of the "hanap," or double-handled mazer-bowl, the answer would be somewhat doubtful. Mr. Riley thought that the term referred to "cups of maslin, or mixed metal"; other authorities hold that "mazer" was maple-wood, and cite the analogous case of "hanaps de plane," which seems to have been made from the wood of the plane tree. The latter explanation certainly appears to be the best; and it is supported by a well-known passage in one of the early sagas about the discovery of America by the Norsemen, who are said to have brought from the New World a log of a valuable wood called "massur."

These letters are full of quaint information about people whose very names have, in many cases, been long forgotten. A "Hurer" alleges that his apprentice has left the business of making rough hairy caps, and has taken refuge in the Abbey of Westminster, whereby a dangerous example is set to other apprentices in times to come. A "Pessoner," or fishmonger, brings an action for a great sum of lamb-florins, or *moutons-d'or*, which he

has earned in France or Flanders. The "Fuisters," who were workers in wood for saddles, complain to the justices set over the labourers of St. Albans that they are disturbed in their craft, without which neither the great folk of the land nor the common people can be served. A "Phelipier" desires to enforce a bond against the Dean of the Curriers of Bruges. The "Chapeler" has a grievance concerning his trade in hats; and Friar Benet, "the pardoner at the platform," gets into trouble about a horse which he had hired for his ecclesiastical circuit. John Baudac, "styling himself the son of the King of Judaea," has his chestnut horse seized for debt by the mayor and bailiffs of Cambridge; and the Bishop of Bethlehem is intreated by the mayor not to proceed further with a certain lease of the "simple and poor hospital of Bedlam without Bishopsgate, in the suburbs of the City of London."

Perhaps, before closing this review of a very entertaining book, I may be permitted to make one correction in which I am personally interested. Mr. Sharpe adopts the view that the Phœnicians carried on a trade in tin with Cornwall and the "Cassiterides," which he identifies with the Scilly Islands, and he quotes the old authorities in relation to a case in which one Tidman, of Limburgh, was shown to have a monopoly of all the tin in Cornwall. With respect to the ancient tin district, he adds, that "the name is said still to be preserved in Cassiter Street, in Bodmin: Mr. Elton, on the other hand, unhesitatingly declares that 'the island Cassitera must, of course, have been in the Straits of Malacca, the source of our modern supplies.'" Now this remark seems to be just when applied to the Indian "Cassitira," to which the Phœnicians are supposed to have sailed in very early times; but it has nothing to do with the Western Cassiterides, whether they formed part of the Cornish Peninsula, or whether, as many have supposed, they were the tin islands off the coast of Spain, which the Carthaginians discovered, and which were conquered by Publius Crassus long before Julius Caesar ever thought of invading the four kingdoms of Kent.

CHARLES ELTON.

Ballads and Poems. By Members of the Glasgow Ballad Club. (Blackwood.)

After this, let immortal Paisley, the city of twenty thousand weavers, every one of whom is a poet, yield up the laurel to her smoky sister, Glasgow! Here, in this literary pie of singing blackbirds, is a wonderful sample of what the Glasgow Muse can do. Here are a round dozen full-fledged local poets, with not one callow cheeper among them, forming the daintiest of dishes to set before St. Mungo the King. And these are only a few singers out of an immense musical choir! Well may we exclaim, with the Dominie, "Prodigious!"

Seriously, a quite remarkable little book, edited with great cunning, so as to show the local song-loving circle at its best. There is really no mistake about its literary quality, and though few of the pieces read like inspirations, none of them sink to the level of the poetaster. The writers are, for the most part, "newspaper men." Stoddart is the editor of the *Glasgow Daily Herald*, Freeland

occupies an important post on the same journal, Canton edits the *Weekly Herald*, and the other members of the ballad club are, I believe, closely connected with journalism. It is positively refreshing, in these anti-poetical days, to find a nest of toilers amusing itself so innocently under the wings of the merry Muses; touching harmless notes of tenderness and pathos, and quite unaffected by the predominant literary vices of the period. The keynote of the whole business is sounded in William Freeland's delightful verses on "The Peeseweeep Inn," which narrate how the balladists meet from time to time o'er the moor among the heather, and fleet the time carelessly, with whiskey, oatmeal bannocks, and scraps of song. Freeland is, in fact, the king of the little company. Many of my readers will remember him as the faithful friend who stood by the sick-bed of David Gray. A year or two ago he published his first and only volume of verse, *A Birth-Song, and other Poems*; a book strong, simple, and true, which met, I fear, with but scant appreciation from the world, yet pleased the leal lover of song with sundry pieces which passed right on into literature. No one can become acquainted with Freeland's poems without loving the man, and admiring his sweet yet sententious style, in which every word hits the mark, and not a syllable is thrown in for the sake of mere ornamentation. His "Birth-Song" is a lovely piece of work; soft as summer wind and innocent as a naked baby. In several of his contributions to the present volume he is seen at his very best. What can be better in its way, for instance, than this closely wrought bit of "morality," worthy of Sir Henry Wotton?

"A FALLING BLOW."

"The blow is falling! Let it fall,—
Even death were no calamity:
God wot, why should we whine or call?
It cannot hurt our souls at all,
Since we are free.

"A little less of earthly things,
Less favour of the world have we:
What then, proud man? The rede still rings—
'Tis not the crown that maketh kings,
But being free.

"Then let the blow fall! What if it
Should lay us prone, both you and me?
O Lord of wings, give us the wit
To soar heaven-high, though low we sit,
Content and free.

"To toil, to suffer, live unknown,—
What matter, if brave men we be?
Why, we can live and make no moan,
And, dying, feel the grave a throne,
Divinely free."

And here is a song with a refrain which haunts the memory like soft chimes heard over a green upland dell:

"THE RING."

"O blythesome ring, O winsome ring,
That Willie gied to me,
As down thy glen, dear Monymore,
We wandered to the sea.
For we had come by Drumodune,
The rills o' Toranree,
That croon among the green breckan
And the blaeberry.

"And saft and couthis were the words
He coo'd into my ear,
Like wafts o' heavenly wind that blaw
When nane but love can hear.
And sweet and sweeter grew the kiss
For miles he gied to me,
As we gae'd through the green breckan
And the blaeberry.

"Then in the Glen o' Monymore,
Where the brown waters sing,
He took my hand, and fondly bound
My finger wi' a ring.
O bonnie ring, O faithfu' ring,
O ring that trysted me,
As we gae'd through the green breckan
And the blaeberry!

"I wear the ring, my Willie's ring;
It clasps me like his arms;
His heart beats in it warm and sweet,
And keeps my life frae harms.
And still it shines, and sae I ken
That he'll come hame to me,
And kiss me 'mang the green breckan
And the blaeberry."

More effluence and verbal facility, more of the tricks of modern style, are to be found in the contributions of William Canton, a young poet whose fine poem, "Through the Ages" (reprinted here), won, some few years ago, an enthusiastic article from the editor of the *Examiner*. Canton has a larger reach, if a less self-contained manner, than his friend Freeland; he is more conscious of literary form, and more susceptible to meretricious influences; but he is a lively and a vigorous singer for all that, and climbs now and then far higher than any of his compeers. His "Kozma the Smith" is a first-rate performance, at once pathetic and picturesque. I note, moreover, as a sample of this writer's cunning in workmanship, the pretty verses to "The Robin," where unrhymed stanzas are so cleverly woven together as quite to disguise at a first reading the fact that rhyme is absent—

"THE ROBIN."

"When ice is black upon the pond,
And woods and lanes are choked with snow
The robin flutters in!
The little maids, with wide glad eyes,
Stand spellbound, lest a breath or sign
Shall scare him from his crums.

"Oft when the fire is keen with frost,
And blinds are drawn and candles lit—
(O robin, flutter in!)
They sit around the cosie hearth,
And hear with wondering love and awe,
How robin's breast grew red.

"Fond little maids! each fancies now
That somewhere in the great white snow—
(O robin, flutter in!)
That somewhere, lost in wastes of snow,
An icy cross forsaken stands,
And Christ hangs pale and dead!

"A childish fancy! Be it so,
And let me ever be a child,
With robin fluttering in,
Than grow into the man who sees
In wintry wastes of unbelief
A phantom cross and Christ."

Strong, simple, and manly are the contributions of Mr. Stoddart; naively quaint and humorous his stanzas about the Devil. He is the author of an anonymous poem published a short while ago, and entitled "The Village Life," the happy touches of character and frank simplicity in which would have delighted Thomas Aird. Among those who sing habitually in the good broad Doric, David Wingate is pre-eminent; his manner pleasantly recalls *Whistle-Binkie*, that charming collection of the minor minstrelsy of the Scottish Lowlands; but quite as good as anything of the sort in the present collection is, despite certain verbal infelicities, William Allan's bright little brooklet of melody, "The Burn."

"THE BURN."

"Dreepin', creepin'
 Frae the hills;
 Joinin', twinin'
 Into rills;
 Loupin', coupin'
 Owre the linn;
 Purlin', curlin'
 'Mang the whins;
 Lauchin', daffin',
 Dimplin', wimplin',
 'Tumblin', wumblin',
 Rattlin', prattlin'
 Wi' a bairnie's glee.
 "Meetin', greetin'
 Ither streams;
 Swellin', tellin'
 Lovers' dreams.
 Hissin', kissin',
 Fu' o' pranks;
 Toddlin', cuddlin'
 'Tween the banks;
 Twirlin', swirlin',
 Glancin', dancin',
 Blinkin', jinkin',
 Ringin', singin',
 Wanton, blythe, an' free.
 "Roamin', foamin'
 On its way;
 Turnin', spurnin'
 Bank and brae;
 Length'nin', strength'nin'
 Proud an' bauld,
 Bippin', cripplin',
 Growin' auld;
 Nearin', fearin',
 Ocean hearin',
 Sighin', dyin',
 Ever lyin'
 In the silent sea."

Even after my *ad captandum* quotations, no one will require to be told that the book contains, not merely clever verses, but absolute poetry. As I write, I see that it is described contemptuously in a contemporary (the critical vagaries of which are past praying for) as a collection of poetical essays by Scottish *antiquarians*! I can imagine how such a description will amuse the genial ballad-singers, when they next gather to compare notes at the Peesweep Inn; for in truth, the only "antiquarian" quality about their work is its simple manliness, heartiness, and independence of silly and ephemeral modern fashions. The Glasgow ballad-book is an honour to Glasgow, and well worthy of the district which has long been famous as a nesting-place of sweet and kindly singers.

ROBERT BUCHANAN.

Bits of Old China. By William C. Hunter. (Kegan Paul, Trench & Co.)

If we were to take seriously all the eulogies poured in the present work on the state of foreign affairs which existed in Canton before treaty days we should be compelled to believe that the lives and treasure expended in the wars of 1842 and 1860 were dissipated in vain, and that the objects we fought for were empty shadows. Why, if Mr. Hunter's idyllic pictures were true to the life, need we have desired any change in our relations with China? With the mandarins suave and benevolent, the native merchants strictly upright and even generous, the people kindly and trade flourishing, what more was there to be desired? Was it, after all, true then that, as the Emperor Heen-fung said, we were "uncontrollably fierce and unruly," and that we fought because it was "our nature to." We should be inclined to answer this last

question in the affirmative if we did not know that memory, as a rule, does not serve up old recollections in an *olla podrida*, but presents to the appetite only those events which are pleasant to the eye and taste, relegating those suggestive of indigestion and nausea to the oblivion they deserve. This is eminently the case with Mr. Hunter's reminiscences. He persistently calls upon us to look with him on the golden side of the shield, and refuses to acknowledge that there is another and a less attractive metal on the other face.

But the circumstances of the time must not unfrequently have put his optimism sorely to the test. According to the letter of the law, every foreigner was bound to leave Canton at the close of every tea season, and while in residence was only allowed to wander about three times in a month, and never without a linguist. The sale of opium was strictly prohibited, and the presentation by foreigners of petitions at the city gates was sternly forbidden. All these restrictions are laughed at by Mr. Hunter, who looks back with delight to the way in which they were one and all, in the main, disregarded. But still, there they were, and were liable at any time to be enforced. Resistance to them would, at the moment, have been impossible, as, in the absence of any fleet in the Chinese seas powerful enough to combat the mandarins, the power on the spot rested entirely in their hands. The fact, too, that foreigners were allowed to deal only with those Hong-merchants who were especially licensed by the Peking government for the purpose was a galling restriction to trade, and one to which none but those who had been long nurtured in a sense of privation, would ever have willingly submitted. The enormous fortunes also which these middle-men made were tantalising witnesses to the foreign merchants of the losses inflicted on them by the presence of these intermediaries between themselves and the native markets. No wonder the Hong-merchants were willing to pay enormous fees for the privileges bestowed upon them, even though their office entailed the responsibility of controlling the foreigners, and of guaranteeing their obedience to the law. But this being so, it was plainly to their interest that things should go smoothly; and when personal advantage favours the indulgence of placid good humour, Chinamen can be very agreeable.

So Mr. Hunter found them to be; and he relates several incidents which fully bear out his estimate of their good qualities. Their irreproachable honesty and the confidence they placed in the honour of their foreign clients were certainly remarkable. Under the changed condition of open markets, and large foreign commercial communities, these characteristics have naturally become less marked, and the same complete trust on both sides can no longer exist in its entirety. The old order of things doubtless constituted an item in favour of the ante-treaty period over the present time; and in other ways life at Canton was unquestionably more interesting then than it is now. In their complete contempt for foreigners, and ignorance of their habits, the Chinese "gang'd their ain gait" and pursued their own methods in entire disregard of alien opinion, and thus

allowed the "Fan-kwae" an insight into their modes of thought which is now forbidden to the inhabitants of the treaty ports. At this time of day it would, for example, be impossible that such an incident as that which Mr. Hunter tells us happened to Capt. Harry Eyres, of H.M.S. *Modeste*, should occur. During the first Chinese war that officer was preparing to attack the Swallow's Nest fort, near Canton, when towards dark "a small China boat was reported pulling for the ship. . . . It was allowed to come alongside, when a Chinaman (the commandant of the fort) getting on deck asked to see 'Miss-ee Kaptan,' who appeared; but as his visitor preferred to see him alone, Eyres led him down to the cabin. . . . Once in the cabin he [the Chinaman] made known the object of his visit, which was, that inasmuch as Eyres and he were not enemies, he saw no reason—in fact, considered it madness—for them to shoot at one another. . . . 'My show you. My long you No. 1 good fien. What for fightee? Large Man-ta-le makee fightee, he please; s'pose to-molla [to-morrow] have got fightee, you no puttee plum [i.e., shot] your gun, my no puttee plum my gun; puttee fire physic [powder] can do very well, makee plenty noise, makee plenty smoke. My no spilum [spoil] you, you no spilum my.' " It is needless to say that this ingenuous offer was not accepted, and when the bombardment began among the first persons whom Capt. Eyres saw taking to the open was his "No. 1 good fien."

Mr. Hunter has a number of such stories to tell, and he has, altogether, succeeded in reviving many amusing reminiscences of life at Canton in the old days.

ROBERT K. DOUGLAS.

Turenno. By H. M. Hozier. (Chapman & Hall.)

This little book is the third part of the series of lives of great warriors being published by Messrs. Chapman & Hall. We have not read Col. Malleon's *Loudon*; but Col. Hozier's account of Turenne deserves, we think, little more praise than Col. Brackenbury's imperfect attempt to describe the exploits of Frederick the Great reviewed by us a few months ago. Col. Hozier, indeed, has studied his subject; he has got up his authorities well; and he is less shallow than his predecessor, and commands a stronger and more lucid style. But, like Col. Brackenbury's, the present work makes excursions into the domain of history, quite out of place in a sketch of the kind; and, while it is overloaded with minute details, which often perplex and fatigue the reader, and it has a strong flavour of the pedantry of the camp, after the tedious and heavy German model, it fails to convey a vivid impression of the characteristics of Turenne's genius, of his position among the masters of war, and even of the condition of the military art, in the second half of the seventeenth century—a subject which the author imagines he has placed in its fulness before the student. The book, in a word, abounds in irrelevance, and is wanting in judgment, insight, and skill; and, even for an epitome, it falls short of what it might have been made by a competent writer. We are constrained to notice, with

grave censure, a practice followed by Col. Hozier, without compunction, throughout these pages. Col. Brackenbury ventured to describe the life and military career of Frederick the Great without, it would seem, being even aware that Napoleon has left us a precious fragment on the principal campaigns of the Prussian king. Col. Hozier has not been equally careless. He has read the *Précis* of the wars of Turenne; but he has borrowed largely from Napoleon's commentaries, without dropping a hint as to the true authorship. The same filching from the thoughts of others appears flagrantly in another instance: Col. Hozier has transferred to his text whole pages from the elaborate volume of M. Roy (the latest eulogist of Turenne), and has not vouchsafed a word of acknowledgment, and we feel bound to let the public know this palpable breach of literary good faith.

Turenne, born in 1611, belonged, on his father's side, to the great noblesse of France, and, on his mother's, was of the blood of Nassau, the most illustrious house of the seventeenth century. Like Luxembourg and William III., the future commander was a sickly child; but he inured himself to fatigue from boyhood; and he devoted days and nights to the earnest study of the art of war as it was then understood. A Calvinist, too, of the strict type, he scorned the dissolute life of the youth of the time; and, even in his teens, he gave many proofs of the calm self-control, the power of reflection, and the faculty of ruling the wills of others, which were marked features of the character of the man. While still a boy he passed under the care of his uncle, Henry Frederick of Nassau; and, serving first as a private soldier, but rapidly attaining the grade of officer, he witnessed the contest of the States with Spinola, and distinguished himself at several sieges for steady courage and professional skill. The experience he acquired in youth, in the ranks, he was wont to say was of great value. It made him familiar with the details of the military life and habits of the day, and it may have been due to this that the great future strategist was singularly chary of the blood of his men, and very attentive to their daily needs; and besides, possessed, in a high degree, skill in organising and preparing troops for the field. Turenne entered the service of Louis XIII. at the age of nineteen, and obtained a regiment; and it was soon observed that his corps was noted for its discipline, for its good evolutions, and for its confidence in its youthful commander. During the next thirteen years Turenne constantly served in the numerous campaigns of the Thirty Years' War. He had Weimar, La Valette, and Harcourt as chiefs, and he has left it on record that he owed much of his future success to these able superiors. In this period of probation for command he proved himself a thoroughly capable officer—energetic, skilful, versed in his calling, and learned beyond his fellows in the camp; and on two occasions, at least, at Casale and Trino, he exhibited the fine strategic art—the faculty of combining large operations—which is the most distinctive mark of his genius. At the age of thirty-two he was made a marshal of France, having gained his *bâton* by sheer merit, in spite of

obstacles of many kinds; and for the next thirty years he was, beyond comparison, the most eminent leader of armies in Europe. Col. Hozier properly devotes a chapter to examining the state of the art of war and of military arrangements at this period, when Turenne's powers were in their full development; but he has borrowed largely from other writers, and his views are not very clear or able. It is a mistake to suppose that the French commander is the true parent of modern strategy: Parma had shown before what could be achieved by combinations on an extensive scale; and no move of Turenne, in his many campaigns, surpasses one or two of the great King of Sweden. But of Turenne it may be justly said that he developed this branch of the military art to a point of perfection before unknown, since the fall, at least, of the Roman empire. He proved, by many notable exploits, how inferior campaigns of sieges are to campaigns of ably-devised movements; and, more distinctly than had been seen before, he demonstrated how strategic skill, by bringing upon a given theatre a superior force to bear on the foe, may be decisive of the results of the contest. In fact, strategy, in its proper sense, made no real progress between his time and that when Napoleon appeared on the scene; and though his well-conceived and judicious plans are seldom marked by the dazzling splendour and originality of those of the modern Hannibal, they exhibit rare ability, and often great daring. For the rest, everyone knows that the state of the theatres in which wars were waged in those days necessarily made strategy less rapid and brilliant than it has been in the nineteenth century; and the small and ill-appointed armies of the time were not comparable, for operations in the field, with the immense and perfectly-organised hosts at the disposition of the generals of this age. But military capacity could make itself felt as palpably in the days of Turenne as in those of Napoleon and Von Moltke, though its instruments were of an inferior order; and as the defects in contending armies were, on both sides, of the same kind, the result was not that there was less room for skill in a leader then than now, but that campaigns were much less decisive and wars were much more protracted and bloody.

We cannot review the campaigns of Turenne, described fairly by Col. Hozier, but without distinctness and breadth of view. As we have said, strategy was his peculiar excellence. He manifested his superiority in this respect from the moment when he assumed command. As a strategist, no doubt, he might have done greater things, for he was somewhat wanting in rapid decision. He should have marched on Brussels after the battle of the Dunes; he ought to have insisted on seizing Amsterdam in the memorable campaign of 1672; and Napoleon has shown that his masterly movement behind the Vosges, in 1674, might have been productive of larger results. Once, too, he was foiled and out-generalled by Montecuculi, his well-known rival; and though he more than atoned for this in his admirable manoeuvres in 1675, the discomfiture was not the less decisive. But, taken altogether, the strategy of Turenne attained all but the highest degree of excellence. It displays deep reflection,

exact calculation, the skilful adaptation of means to ends, and sometimes execution of extreme merit; and, as might have been expected from that thoughtful genius, it distinctly improved with the growth of experience. Thus, in the closing scenes of the Thirty Years' War, it was Turenne who rectified the faulty plan of the allied operations before adopted, and concentrated the Swedish and French forces; and his remarkable march up and down the Rhine, the brilliant manoeuvres by which, more than once, he interposed between divided enemies, and the fine movements which drove the Archduke, completely baffled, beyond the Inn, are notable specimens of the highest generalship. We pass over the Marshal's deeds in the Fronde, though some of these illustrate his powers, and hasten to the last part of his career, when his genius is seen in its mature splendour. The plan of the great campaign of 1672 is almost wholly the work of Turenne, and in its conception is without a fault; and, had he not somewhat timidly yielded to Louvois, and failed to seize the dykes at the decisive moment, its execution would have been perfect, and the United Provinces must have been conquered. Not less admirable, though of a different kind, were Turenne's operations in 1672-73 in preventing the junction of the allied armies; and, though he was baffled in these at last, the celebrated movement which saved Alsace, and the fine campaign of 1675—the last of this illustrious chief—remain models of strategic skill. As a tactician Turenne was less eminent. He usually avoided pitched battles, and more than once was completely defeated; and, though he was trusted and loved by his troops, he did not possess the wonderful insight and inspiration of Condé on the field or in the heat and din of the conflict. Yet, in what we may call the greater tactics, that is, the arrangements before engaging, Turenne exhibited the greatest skill; and the manner in which he discomfited Condé, near Gien, on the Loire, in the war of the Fronde, has obtained from Napoleon the highest praise. Turenne, too, like other great soldiers, was more than a consummate chief and director of the operations of war. Profoundly versed in the details of his art, possessing rich gifts of experience and thought, and with a patient, studious, and ever-growing genius, it is not surprising that Turenne was a military reformer of the highest order; and to him, more than, perhaps, to Louvois, were due most of the great improvements which almost transformed the armies of France in the first part of the reign of Louis XIV., and made them the admiration and terror of Europe.

Turenne commanded armies for thirty years, before he met a soldier's death on the Salsbach: what is his true place among the masters of war? Col. Hozier compares him to the Duke of Wellington; but the comparison strikes us as not felicitous. The two men, indeed, had some points in common; both were thoroughly versed in the details of war; both were singularly sparing of the lives of their troops; both were eminently safe and sagacious leaders; in both judgment and strength of will were in the highest degree conspicuous. But Turenne was a consummate strategist, while strategy was the weak point of Wellington; Turenne was

not a tactician of the first order, whereas Wellington, in defensive tactics, has not been excelled by any chief. Turenne was in advance of the ideas of his day in all that concerns the military art; and this cannot be said of our great countryman. We would rather compare the French marshal to two well-known commanders of this century, though the resemblance is very far from perfect. In the appreciation of strategic science, of "the sublime side of the art," in Napoleon's phrase, Turenne may stand by the Archduke Charles. He improved, too, like the German chief, as the circle of his experience widened; but he was more fortunate than the Austrian prince, opposed to the greatest of modern warriors; and his campaigns are more plainly marked by genius. The illustrious Frenchman may be, also, compared to Von Moltke in some respects; both executed admirably well-laid plans, elaborate rather than of dazzling excellence; but Von Moltke has never displayed the fertility of resource of Turenne, and his high qualities in difficult crises. On the whole, we are disposed to consider Turenne as the first commander of the seventeenth century; inferior, doubtless, to Marlborough in the field, but probably superior in the great moves of war; in genius, perhaps, not before Gustavus, but surpassing him in the results of his exploits; and certainly the most illustrious name among the famous soldiers of the old French monarchy.

WILLIAM O'CONNOR MORRIS.

Fernshawe. Sketches in Prose and Verse.
By A. Patchett Martin. (Griffith, Farran & Co.)

MR. A. PATCHETT MARTIN is one of the small band of literary men whose lives have from childhood onward been spent in Australia. The founder, or part-originator, and for a long time co-editor in the management of the *Melbourne Review*, and with an indirect connexion with various journals and magazines throughout Victoria and New South Wales, he naturally came in contact with the greater number of those few penmen who in a land of manual labour preferred the desk to the settler's axe, the squatter's stock-whip, or the gold-seeker's sieve. It is, therefore, to be regretted, from an English reader's point of view, that he has not told us more concerning some of those men of pen and pencil whose names have a more than local, a more than purely colonial reputation. There is but a passing reference, for example, to the late Marcus Clarke; none whatever to Henry Kendall, a Queenslander and one of the most genuine of Australian poets, notwithstanding that he is too often a mere echo of Swinburne; there are but single allusions to the artists Buvelôt and John Gully, and there is none to Nicholas Chevalier. On the other hand, two of the most interesting papers in the collection are devoted to colonial men of mark—one to the poets Adam Lindsay Gordon and J. Brunton Stephens, and the other to the unfortunate Percy Oswald Tanner.

In his address to the English reader Mr. Martin states that the essays and short papers comprised in his volume are "the work of one bred and educated in the colony of Victoria, who, with the temerity fostered by that exhilarating clime, essayed to assert his critical

views almost exclusively on English subjects, without ever having lived—at least to his knowledge—in the Mother Country." The tone throughout the Preface is at once so modest and independent as to win over the reviewer, notwithstanding his first feeling of prejudice in taking up this curiously-bound book, with its red-line margins and eccentricities in the way of printers' ornamentations. It is as a "colonial reflex," indeed, that the book is in great part interesting, but at the same time there are few readers who might not learn something new, see something in a novel light, if they read the volume through. Mr. Martin is always sincere, and, therefore, he is worth listening to. Of catholic tastes, neither his preferences nor his judgments are provincial or colonial, while at least one or two of his essays show a critical and sympathetic insight very decidedly above the average. As a writer of verses he is certainly inferior to many an anonymous contributor to "poet's corners," though now and again, as in the pleasant song, "My Love and I," he shows genuine feeling in alliance with fitting words. Curiously enough neither the scenery nor the stirring pioneer life of the colonies seem to have impressed him very strongly. There is nothing either in his prose or verse of that Austral passion to be found in the writings of Marcus Clarke, of Gordon, and of Henry Kendall. Readers caring for short critical dissertations will enjoy the pleasant papers on Béranger, Card. Newman, Tolstoi's *Cossacks*, Carlyle's *Reminiscences*, *Feminine Fiction*, Fielding, Ruskin and Modern England, R. L. Stevenson, the Drama as a Fine Art, and so forth; while those more especially interested in things Australian will turn to the two short articles already referred to.

What Mr. Martin says concerning the late Adam Lindsay Gordon is eminently sympathetic, and, in the main, just. When, however, he remarks that, "in the whole range of English literature there have been few poets possessed of a finer lyrical faculty than Adam Lindsay Gordon," one is inclined to call to mind Trollope's advice, "Don't blow, Victorians!" The account of Mr. Brunton Stephen's writings is interesting mainly because the poet in question is practically unknown on this side of the world. Parody seems to be the forte of the writer in question, and undoubtedly there is much cleverness in the Darwinian love story entitled the "Power of Science," wherein a scientific lover wins his mistress by singing to her the theory of evolution:

"I sang the very dawn of life,
Cleared at a bound the infinite chasm
That sunders inorganic dust,
From sly-born protoplasm"—

or in the "Address to a Black Gin" where the poet exclaims:—

"Eve's daughter! with that skull! and that complexion?"

What principle of 'natural selection'
Gave thee with Eve the most remote connexion?"

In point of romantic interest there is nothing in this volume to equal the account headed "A Literary Waif," a brief narrative of the main incidents in the life of Percy O. Tanner, at one time the mainstay, both with pen and pencil, of the *Sydney Punch*. An evil fortune pursued this brilliantly accomplished man, the

record of whose short life—he was only twenty-eight at the time of his death—is as sad and almost as tragical as that of Poe, or as that of the late James Thomson. In youth he moved in an aristocratic and recklessly extravagant circle in London and Paris; a year or two later, impoverished and friendless, he was a digger at the gold fields; then "a half-starved wandering wretch"; then the fairly well remunerated and much-sought-after caricaturist of the *Sydney Punch*. Later, broken in health, but not in spirit, we hear of him as the editor of an up-country paper boasting the title of the *Murrumbidgee Times*; in January of 1872 as one of the adventurous band of men who started from Port Jackson in the brig *Maria* on the ill-starred "New Guinea colonisation" expedition; next as a suffering castaway on board one of the rafts upon which the survivors, after the wreck of the *Maria* on the Bramble reef, sought to save themselves; and, finally, there is recorded of him, "death in the surging, angry waves, after terrible exposure."

If for nothing else than for the record of this unfortunate life, Mr. Martin's volume is well worthy of perusal.

WILLIAM SHARP.

NEW NOVELS.

A Prince of Darkness. By Florence Warden.
In 3 vols. (Ward & Downey.)

What's His Offence? By the Author of
"The Two Miss Flemings," &c. (Hurst & Blackett.)

Hearts or Diamonds? By Iza Duffus Hardy.
In 2 vols. (White.)

A Lost Son and the Glover's Daughter. By
M. Linskill. (Fisher Unwin.)

Duke of Kandos and Two Duchesses. By A.
Mathey. Translated from the French by
Frank Pinckney Clark. (Maxwell.)

The Record of Ruth. By the Author of "A
Modern Minister." (Elliot Stock.)

WE have heard that "The Prince of Darkness" is a gentleman," but Miss Warden's own peculiar Prince of Darkness is two gentlemen, or rather he is one gentleman with two personalities and environments, and he, or they, is occasionally personated by a third gentleman who, in his normal condition, is known as Mr. Smith, while the genuine and only Prince of Darkness is sometimes the dashing M. de Breteuil, the Frenchman about town, and sometimes the feeble paralytic Mr. Beresford, the sober English man of business. I know that this looks confusing; but then if a thing *be* confusing, it is only proper that it should look what it is; and for the confusion Miss Warden and not her present critic must take the responsibility. The Prince, *alias* M. de Breteuil, *alias* Mr. Beresford, is really the Hon. Mr. Corrie, son of Lord Kingscliffe, who has a mansion in Paris, and moves in Parisian society, though his own father is ignorant that he is still in the flesh. He is not only a swindler, a murderer, a well-known man of fashion in the metropolis, and an active member of a firm whose place of business is near Calais, but he is also a highway robber, and is assisted in his robberies by a large and savage wolf-hound which pounces upon his victims and which, by an

unfortunate mistake, finally pounces upon the prince himself, so bringing to an end the lively but bewildering career—or careers—of Messrs. Corrie, De Breteuil, and Beresford. These complications are in themselves sufficiently trying, but, as a matter of course, they bring others in their train. The Beresford half of the Prince of Darkness has a daughter, and this daughter loves and is loved by a certain Gerald Staunton—a young man whom her father has befriended and taken into his employ. This young man devotes his life to avenging the death of his own father, who has been robbed and murdered by some unknown scoundrel, and discovers at last, to his horror, that the murderer is M. de Breteuil, and that De Breteuil is one with Mr. Beresford, his benefactor and the parent of the girl whom he has taken to be his wife. Something ought to be said about the part in the story played by the mysterious Mr. Smith, but “that way madness lies.” Suffice it to remark, that when De Breteuil, a tall thin man, is compelled to leave Paris in order to transform himself into Mr. Beresford at Calais, he arranges to be personated in Paris by Mr. Smith, who, though he is a stout fat man, “makes up” so successfully, that even De Breteuil’s mistress is deceived and takes him to be her lover. In improbabilities, Miss Warden, since the days of *The House on the Marsh*, has always been strong; but mere improbability has clearly become too tame for her: she must now have downright impossibility, and plenty of it. Still, even impossibilities may be made tolerable by skilled and coherent arrangement; but in this, *A Prince of Darkness*, is recklessly deficient. Characters are introduced without any apparent object, and occasionally there are evidences that the writer has either changed her mind during the process of the story, or formed some cunning plan, and then forgotten to carry it out. When, for example, special stress is laid on a likeness between the unknown highwayman—whose face has been seen—and a highly respectable young Calais manufacturer, we think that another complication is being prepared, but we wait and wait, and nothing comes. The disappointment is not great, but still one cannot help thinking that, seeing Miss Warden had no need of it, M. Victor Fournier’s suspicious countenance might have been spared him.

There are a few minor absurdities in *What’s His Offence?* the most noteworthy of them being the title, to which, even with the help of the explanatory quotation, I find myself quite unable to attach any meaning. It is, however, very much superior in all respects to *A Prince of Darkness*, its main defect being that the plot only holds together in virtue of the prolonged and utterly imbecile misunderstandings which are so dear to a certain class of novelists—especially feminine novelists—but so completely impossible in real life. The alienations of Sir Philip Trevor from Olive Lindsay, and of Greville Estcourt from Eve Hamlyn, are only explicable on the hypothesis that they are all idiots, and as their general conduct is the reverse of idiotic, the four lapses from sweet reasonableness are irritatingly incredible. Olive’s lapses may, perhaps, be condoned, for the simplicity with which Sir Philip accepted a bogus letter as a proof of

her faithlessness might almost suffice to make her believe herself the victim of a heartless desertion, but the other three are really inexcusable. Indeed, there are various ways in which the construction of the story is decidedly faulty—the ghost episode, for example, is a very clumsily managed piece of business; but faults of this kind are inevitable when a writer whose true *métier* is light character sketching persists in taking upon herself the responsibilities of a rather intricate plot. Nothing could well be prettier or more delicately truthful than the opening chapters, which deal with the Hamlyn family, and with the early days of Eve’s love story before she and Greville Estcourt had begun to make each other needlessly miserable. The simple-minded vicar, confused rather than elated by his unexpected promotion, is a very happily conceived character, the two sets of twins are charming, and brother Joel, “the false prophet,” though rather too priggish and self-assertive to be charming, has, at any rate, a sharply-cut individuality which makes him live for us. The Legard family—in which must be included Betty Legard’s adventurous school friend, Judith Frith—are equally good in their way; and, indeed, the author is so successful in all her subsidiary characters that one is tempted to advise her to try her hand at a novel without a hero, without a heroine, and—most important of all—without a plot.

I am working up to a climax, and shall then have to work down again. From *A Prince of Darkness* to *What’s His Offence?* was one step upward; from *What’s His Offence?* to *Hearts or Diamonds?* is another, and the latter step is a tolerably high one. Miss Hardy’s novel is not ambitious, but within the limits she has assigned herself her workmanship is perfect. The first part of the action of the story is laid in one of the sparsely settled districts of California, in and around the “rancho house” of Mr. Josiah P. Jones, of Jonesville; the second in the ball-rooms and drawing-rooms of New York during the press of the season. It is in the Californian portion of the story that we find the author’s most winning and captivating work—there are some love scenes the grace and tenderness and truthfulness of which I have never seen surpassed; but it is only when we reach the middle of the second volume, which is the record of the heroine’s New York triumphs, that we become acquainted with the full resources of Miss Hardy’s power in the region of true tragedy. Clara Seyton, in her play with the heart of the chivalrous Coriolanus, is almost, but not quite, a Clara Vere de Vere; and in the wonderful skill with which the writer differentiates the almost from the quite, she manifests a penetrative subtlety of insight which rises to genius. The general reader will, however, be more profoundly impressed—as indeed it is natural he should be—by the terrible chapter in which Coriolanus and Sir George Lydiarde play their last game of cards together with nothing less than a life for the stake. The situation is one which, in the hands of ninety-nine novelists out of a hundred, would be irretrievably spoiled either by naked weakness or by the extravagance which is only weakness in disguise; but Miss Hardy rises to a great opportunity, and her touch has such mastery

that no one who reads this chapter and those which succeed it is likely soon to forget them. The plot of *Hearts or Diamonds?*—if plot it can be called—is a very simple one, which it would be easy to summarise; but it would be unfair to undertake the task, for though the interest centres itself in persons rather than in events, the events have an interest of their own, and I will not minimise the reader’s pleasure by disclosing them. The novel is one which, in itself, suffices to brighten the dull season in the publishing world; for it has freshness of conception, strong grasp of character, triumphant handling of strong or delicate situation, and unfailing felicity of literary workmanship.

Miss Linskill’s two stories are creditable examples of the journey-work of a capable writer; but most readers of that very attractive story, *Between the Heather and the Northern Sea*, will, I think, find them a little disappointing. Some novelists can only do their best when they have a large canvas to work upon, and to this class Miss Linskill probably belongs. Both *A Lost Son* and *The Glover’s Daughter* are deficient in body, and they lack the compensating quality which sometimes atones so sufficiently for the deficiency. The natural consequence is that the stories fail to take strong hold of our interest. They are fairly well constructed, and the writing is good throughout; but, as Sir Joshua Reynolds said, when he snapped his fingers before a vaguely unsatisfying picture, “they want *that*.” It should be added that the landscape in the latter story is admirably painted in; but Miss Linskill can do, and has done, better work than this.

I have bracketed the *Duke of Kandos* and *Two Duchesses*, because, though nominally two stories, they are really one; and the latter will be unintelligible save to those who have read the former. M. Mathew has evidently devoted his days and nights to the alternate study of Gaboriau and Dumas père, and has produced a romance in what may be described as the combined manner of these popular writers. His stories have no literary value, but he has considerable power of plot construction, and those readers who become absorbed in the first few chapters of the *Duke of Kandos* will in all probability read on until they reach the last page of *Two Duchesses*.

The only thing to be said in favour of *The Record of Ruth* is that it is very short. It tells the story of how Ruth, the daughter of a linen-seller of Jerusalem, betrothed to Judas Iscariot, conceived a passion for Iscariot’s divine Master, and of how her lover, “for the sake of the jealousy which consumed him, did betray the Nazarene unto his enemies.” The writing is simply wretched, being a most incapable travesty of the style of Dr. Abbott’s *Philochristus*; but, were it as good as it is bad, its goodness would not atone for so gross a violation of good feeling and good taste.

JAMES ASHCROFT NOBLE.

CURRENT LITERATURE.

The World of London. By Count Paul Vasili. (Sampson Low.) It cannot be doubted that the interest of this book has been largely forestalled by a smart stroke of business on the part of a rival author and publisher. The

effect was the more decisive in that the other book also purported to be written by a foreigner. Whatever may be the truth in that case, no one will ever suggest that Count Paul Vasili is an Englishman. His sketches of English society are exceedingly superficial, and present views both of persons and of politics which could only suggest themselves to a foreigner. Now and then we find a sarcastic touch which goes home, especially in the first few chapters; but the greater part of the book is made up of mere catalogues of names and of the commonest platitudes. In a note to the preface, it is admitted that the author has made use of well-known materials; and in another note the publishers state that they have felt bound to expurgate the original work. Rarely, therefore, can a book of this sort have appeared under less favourable circumstances. But after all, the principal reason why it reads so flat is that no foreigner can have much to tell us about the world of London that the society papers and other gossip-mongers have not already made public.

Introduction of the Art of Printing into Scotland. By Robert Dickson. (Aberdeen: Edmond & Spark.) This handsome volume issues from the same local press as the scholarly work on *The Aberdeen Printers*, which was noticed in the *ACADEMY* just a year ago (September 27, 1884). Its subject, also, has some connexion with Aberdeen, for the introduction of printing into Scotland is associated with William Elphinstone, Bishop of Aberdeen, whose name appears in the royal patent of 1507, and whose *Breviarium Aberdonense* (1509) was once thought to be the first Scotch printed book. The title page of that breviary has the words "in Edinburgensi oppido Walteri Chepman mercatoris impensis impressa." But it is now well known, from a collection of black letter tracts which first came to light in 1788 (confirmed by the above-mentioned patent of 1507), that Andro Myllar was from the beginning associated with Walter Chepman, and that their first book bears date 1508. Of Walter Chepman, it is enough to say that he was a wealthy citizen of Edinburgh, who evidently found the capital for the enterprise. Concerning Andro Myllar, nothing was ascertained until 1869, when M. Claudin, of Paris, noticed his device and name in an *Expositio Sequentiarum* (1506), probably printed at Rouen. The book was forthwith bought for the British Museum. About nine years later M. Claudin was fortunate enough again to discover Andro Myllar's name, this time as the printer of a book dated 1505 (also probably printed at Rouen), and now in the Bibliothèque Nationale. Such is the evidence for the assertion, now beyond dispute, that not Chepman, but Myllar, deserves the honour of being called the earliest Scotch printer. All who are interested in the early history of printing will be grateful to Mr. Dickson for having for the first time collected in the present volume the entire body of materials for the interesting story, and especially for having added a valuable series of facsimile reproductions of title-pages, colophons, devices, &c., no less than twenty-seven in number. The spirit of the work may be seen from the fact that it is dedicated to M. Claudin, himself a Scotchman on the mother's side.

Tigers at Large. Tales and Sketches. By Phil Robinson. (Sampson Low.) This is the second volume of a collection of the author's miscellaneous contributions to the periodical press, dignified by the name of the "Indian Garden" series. Like the first volume, it takes its title from one of the minor papers, which is not even printed first. We need say no more than that it is brought out in very attractive form, and makes excellent reading for the seaside.

The Fighting of the Future. By Capt. Ian Hamilton. (Kegan Paul, Trench, & Co.) Though bound in cloth, this is in substance a pamphlet, written to enforce the lesson of the Boer war—that the modern soldier is above all things a rifleman, and that all his training should be devoted to this single object. What the author says seems deserving of attention; but we incline to think that the recent experience of the Sudan proves that he has not made sufficient allowance for the necessity of the old-fashioned discipline in order to produce all-round soldiers.

How we did without Lodgings at the Seaside. By the author of "How we did without Servants." (Griffith, Farran & Co.) The answer to the conundrum implied in the title is not, as we had fondly hoped, "Hire a Tent"; but is involved in the title of the previous work of the same writer. The secret simply is to take a furnished house and get your women folk to supply the service. The natural result will probably follow—that the amateur servants will do after their kind and find a young man apiece.

Our Colonies and India: how we got them, and why we keep them. By Cyril Ransome. (Cassell.) The author, who is professor of history at the Yorkshire College, here takes up the parable of Prof. Seeley, and expounds the material aspects of the "Expansion of England" to an audience of working men. Just at present, the current is setting in favour of drawing a closer bond of some sort between the mother country and the colonies, as a reaction against the old Whig policy of preparing for a kindly separation in the not remote future, an able expression of which may be found in Sir Henry Taylor's recent autobiography. Prof. Ransome's contribution to the question is twofold. He seeks to show from history that both the colonies and India were founded or acquired by England as part of a consistent (if not deliberate) policy of expansion, herein following the arguments of Prof. Seeley; and he goes on to argue that that policy has been justified, both in the past and in the present, by its material results. Our own children are our best customers, and will prove our best allies in time of need. While admitting that Prof. Ransome has put his case with admirable clearness, we do not feel convinced that the last word has been said on this interesting question. It is not difficult to imagine that fifty years hence India will supply herself with her own cotton goods, and that Australia will be equally self sufficient. If so, where will then be the trade with England; and what material tie will there be, except possibly that of lender and borrower? It is equally easy to conceive the rise of rival interests which would render impossible a common policy between England and—say, Canada. In short, we do not believe that history affords any safe ground for speculation with regard to the future of the British Empire. The one thing to be deprecated is the use of language likely to stir bad blood on either side; and this caution is meant to extend not least as regards the natives of India.

The Life and Times of Colonel Fred. Burnaby. By J. Redding Ware and R. K. Mann. (Field & Tuer.) From the time of his ride to Khiva in 1875 to his death the other day in the Sudan, the name of Burnaby has been much before the public. In physical prowess, in love of adventure, and also in certain intellectual qualities, he was eminently fitted to become a popular hero, though not (we venture to think) a leader of the people. The chief facts of his life are sufficiently known to everybody. Most of them have already been recorded by himself in print. The joint authors of the present book, whom we take to be young Conservative journalists, have industriously gleaned all that is to be learnt about him from every source; and by

means of copious quotations from his books, speeches, &c., have been able to manufacture a stout volume of 362 pages. It would be ungracious to criticise it as if it were intended to be a work of literature. We will content ourselves with protesting against the dictum that Burnaby's *Ride across the Channel* "will end by being put on the same familiar shelf with *Robinson Crusoe* and *The Pilgrim's Progress*" (p. 219).

MESSRS. SIMPKIN, MARSHALL, & Co., have sent us, as the first volume of an oddly named series of "Travellers' Joy Books," an abridged version of *Don Quixote*, with some seven of the well-known illustrations by Gustave Doré. A short life of Cervantes is appended, which we cannot think well adapted for popular reading. The binding of stiff glazed paper is the best that could be adopted, except that the stitching is too tight.

MR. G. BLACKER MORGAN has privately circulated, in a limited edition of 200 copies, a reprint in the original blackletter of the rare tract giving a contemporary account of the burning of Old St. Paul's in 1561. The full title is "The True Report of the burning of the Steple and Churche of Poules in London." The reprint forms vol. iii. of a series called *Genealogica Curiosa*, and has been entrusted to Messrs. Hazell, Watson, and Viney, of Aylesbury.

NOTES AND NEWS.

WE are authorised by Messrs. Longmans to say that there is no truth in the statement, which has been made in several journals, that the *Edinburgh Review* will shortly cease to appear in its present form. No change whatever is contemplated.

MR. BRANDER MATTHEWS, the author of "French Dramatists of the Nineteenth Century" and the "Theatres of Paris," has been in London for the past few months, and his new story, *The Last Meeting*, a novel in one volume, which Mr. T. Fisher Unwin will publish shortly, will have copyright in this country.

THE report that Dr. Schliemann intends to go to Florida for his health is, we hear, unfounded.

IN the series of "Popular County Histories," which Mr. Elliot Stock has recently announced, the volume on *Derbyshire* will be written by Mr. John Pendleton of the *Yorkshire Post*.

MR. FITZGERALD MOLLOY has a new work in the press entitled *Royalty Restored*; or, London under Charles II., which will be published, by Messrs. Ward & Downey, towards the end of the month. In his preface Mr. Fitzgerald Molloy says the materials for his book have been taken, "as far as possible, from rare, and invariably from authentic, sources." It will be in two volumes, and will contain an etching of Charles II. and ten other portraits.

DR. ANNANDALE, editor of the new edition of Ogilvie's "Imperial Dictionary," has completed a new dictionary on the basis of the "Imperial," which will be published in October by Blackie & Son, under the title of *A Concise Dictionary of the English Language, Literary, Scientific, Etymological, and Pronouncing*. A great amount of matter is compressed into a moderate compass, and special attention is paid to the definition and explanation of the numerous words and terms that are apt to puzzle readers in the literature of the day.

PROF. N. HEINEMANN has finished a small volume of *Collections of Extracts from Modern German Works*, for translation at sight. The book is meant for advanced students and candidates preparing for examinations. Its characteristic features are, first that the extracts

are exclusively taken from works published since 1870, in order to acquaint the student with the current language of modern Germany, and secondly, the selections pertain to books belonging to various branches of science, literature and history, so as to enable the reader to become familiar with words and expressions of practical usefulness.

MESSRS. WARD & DOWNEY will publish next week, in three volumes, a new novel by Lady Duffus Hardy. It is entitled *In Sight of Land*. The same publishers will issue in a few days a new one-volume story by the author of "Once for All," the title of which is *Hunted Down*.

PROF. CHURCH has completed a new work entitled, *Two Thousand Years Ago*; or, *The Adventures of a Roman Boy*, in which he has sought to revivify that most interesting period—the last days of the Roman Republic. The work will be illustrated by Adrian Marie of Paris, and will be issued shortly by Blackie & Son.

A NEW volume is announced, entitled, *Pictures and Emblems*, by the Rev. Dr. Alexander Mac-laren, consisting of extracts from his writings. It will be published on October 1, at the office of the *Christian Commonwealth*.

WE learn that Dean Plumptre's translation of Dante's *Divina Commedia* in triple rhyme, on which he has been engaged for some years past, and of which some samples were printed in 1883, is now completed, and will appear in the course of next year in two volumes. The work will also include the Canzoniere, or minor poems of Dante, in metres corresponding to the original, and will be illustrated by critical and historical notes. It will be published by Messrs. Isbister.

SOME of the Italian papers have been asserting that when the Libri collection of MSS., bought at the Ashburnham sale for the Italian government, was examined on arrival, it was found that there were wanting thirty-nine codices which had been understood to have been included in the sale. Among these was stated to be a MS. of the fifth century containing the books of Leviticus and Numbers. It was added that the government was about to make a demand for a return of part of the purchase-money proportionate to this deficiency. The Florence *Nazione* points out, however, that the Leviticus and Numbers, at all events, though found in the catalogue of the Libri collection, cannot be supposed to have been comprised in the purchase, as it was notorious that Lord Ashburnham had given it up to the French government in 1880, having become convinced that it had been stolen from the Lyons museum. With regard to the other alleged deficiencies, the *Nazione* shows that the agreement made was simply for the purchase of such of the MSS. of the Libri collection as still remained in the possession of Lord Ashburnham, it being distinctly understood that some of the MSS. enumerated in the catalogue of 1853 had subsequently passed into other hands.

ON September 26 Messrs. Cassell & Company will publish the first volume of their "Miniature Library of the Poets," commencing with *Wordsworth*. The books will be issued in two bindings—in cloth with marbled sides, and in vegetable parchment with uncut edges.

THE Religious Tract Society have in the press, and will shortly publish, the following works: *Norwegian Pictures*, drawn with Pen and Pencil, with a glance at Sweden and the Gotha Canal, by Richard Lovett, with a map and 127 illustrations, engraved by E. Whymper, R. and E. Taylor, and others; *The King's Windows*; or, *Glimpses of the Wonderful Works of God*, by Rev. E. Paxton Hood, with illustrations; *The Life of Jesus Christ the Saviour*, by Mrs.

Watson, with engravings; *The Life of Jesus*; or, the Story of Jesus of Nazareth in its Earliest Form, by Rev. W. S. Lewis; *In Southern India: a Visit to some of the Chief Mission Stations in the Madras Presidency*, by Mrs. Murray Mitchell, with map and illustrations; *Jottings from the Pacific*, by the Rev. W. Wyatt Gill, illustrated; *Everyday Life in China*; or, Scenes along River and Road in the Celestial Empire, by Edwin Joshua Dukes, with illustrations from the author's sketches, engraved by E. Whymper; *Everyday Life in South India*; or, the Story of Coopooswamey, an autobiography, with engravings, by E. Whymper; *Outlines of Hinduism*, by Dr. J. D. Murray Mitchell; *The Life and Times of Chrysostom*, by Rev. R. Wheler Bush; *Anselm's Cur Deus Homo*, translated into English by Rev. E. S. Prout; *Assyria: its Princes, Priests, and People*, by A. H. Sayce, illustrated; *The Dwellers on the Nile: Chapters on the Life, Literature, History, and Customs of Ancient Egypt*, by E. A. Wallis Budge, illustrated; *Our Anniversaries: a Text and a Verse for every Day in the Year*, selected and arranged by Alice Lang; *Watts' Divine and Moral Songs*, new Edition, with coloured illustrations by Robert Barnes, Gordon Browne, R. W. Maddox, and J. R. Lee.

AMONG illustrated story-books, the Religious Tract Society announce: *The King's Service: a Story of the Thirty Years' War*, by the Author of "The Spanish Brothers," &c.; *The Mistress of Lydgate Priory*; or, the Story of a Long Life, by Miss E. Everett Green; *One Day at a Time*; *Maddalena, the Waldensian Maiden*, and *Her People: a Tale of Waldensian Church Life*, rendered into English from the German by Julie Sutter; *Uncle Roger*; or, a Summer of Surprises, by Miss E. Everett Green; *Berthold the Goatherd*, by Mary Anne Filleul; *Fresh Diggings from an Old Mine*, by Mary E. Beck; *The Slippery Ford*, by M. C. Clarke; *Phil's Mother*, by Eglanton Thorne; *Dorothy Northbrooke*, by Miss E. S. Pratt; *Caroline Street*, by M. E. Ropes.

THE Ladies' Hall at the University College of South Wales and Monmouthshire is to be opened in October next, and the arrangements are being prosecuted with vigour. The necessary furniture is being purchased, and applications have already been received from candidates for admission. The subscriptions now amount to over £700. It is hoped that the total sum will soon be made up by those who are interested in the cause of female education in South Wales and the county of Monmouth.

MESSRS. CASSELL & Co. have arranged to publish immediately, under the title of "Cassell's National Library," a series of standard works in every branch of literature, including travel, biography, history, religion, science, adventure, fiction, belles-lettres, &c. The volumes will be printed from new type on paper specially manufactured. They will contain 192 pages, small octavo, in coloured wrapper, and will be issued weekly at threepence each. The series will be edited by Prof. Henry Morley.

THE third part of *The Manx Notebook* (Douglas: G. H. Johnson) fully maintains the promise of the previous numbers. The most important paper is a further instalment of Mr. Moore's treatise on Manx surnames, which is a model of painstaking investigation. The very peculiar surnames of the Isle of Man are traced historically from the year 1408 to the beginning of the present century, chiefly by means of the manorial rolls and the parish registers. Some of the results are very curious. Thus both Lewin and Gelling are shown to be contractions of Giolla Eoin (John's servant), while Kewin is the modern form of Mac Eoin or McEon (John's son). So again Kissack is Mac

Isaac, Killip is Mac Philip, and Costain is Mac Austeyn. Another paper of more than local interest is one on the birthplace of Bishop Wilson, containing a charming little sketch of the humble cottage in which his parents lived.

IN the Vienna Hofbibliothek there is a parchment MS., written between the years 1516 and 1519—the private prayer-book of the Emperor Charles V. It bears the traces of long use. In one place of the book, the spot where the emperor's spectacles used to lie is clearly marked, and in other places the names of some of his near relations are inscribed, as his Aunt Margaret, the Elector Joachim of Brandenburg, and others. It is adorned with beautiful miniatures by a Netherlandish artist. The book was formerly the property of the dissolved Jesuit College in Vienna Neustadt, where it had been kept since 1670.

TWO of Mr. George A. Henty's works for this season, which will be issued by Blackie & Son, are entitled *The Lion of the North*, and *Through the Fray*: the former deals with the period of Gustavus Adolphus, and the story of the latter is laid at the time of the Luddite Riots.

PROVOST CHRISTOPHER TEGNÉR, the eldest son of the famous Swedish poet, Esaias Tegnér, has just died in Lund at the age of seventy-eight. He was professor of Oriental languages at the University of Lund.

THE female element constitutes a tenth part of the entire "Studentschaft" of the University of Zürich during the present Semester. In the medical faculty there are twenty-nine ladies, in the philosophical fourteen, and two have inscribed themselves as students of its politico-economical sciences. Of these forty-five female students, fifteen are Swiss, and ten are Russian. Hitherto, Russia has supplied the largest contingent of female students at Zürich.

PROF. WÜLKER, of Leipzig, has just brought out the second and concluding part of his most valuable critical catalogue of Anglo-Saxon Literature, an indispensable handbook for all students of our oldest authors. Its title is *Grundriss zur Geschichte der Angelsächsischen Literatur, mit einer Übersicht der Angelsächsischen Sprachwissenschaft*, and its publishers are Veit & Co., Leipzig. It is somewhat saddening to an Englishman to see how very seldom an Englishman's name occurs in Prof. Wülker's pages compared with the number of German editors and commentators; but, as has been observed, "Anglo-Saxon is really too old for a nineteenth-century Englishman." We do trust that Prof. Wülker will continue his admirable and exhaustive work through the Early-English period. A critical list of its editions is sadly wanted, and there is little likelihood of any Englishman making it.

THE constitution of Manager Quince's company of interlude players—with Bottom, the weaver, as star, and Robin Starveling, the tailor, as Moonshine, which Shakspeare employed in his "Midsummer Night's Dream," receives illustration from some entries in the Rev. J. C. Atkinson's *Quarter Sessions Records* of the North Riding of Yorkshire. On January 9, 1615-16, the Pannell at Helmsley present a company of nine:

"Geo. White, weaver (26 years of age), John, Rich. and Outbert Simpson, cordiners (25, 24, and 18), all of Eyton and Recusants, Nich. Postgate, lab' (13), Edw. Concett, tailor (30), also of Eyton, Rob. Simpson, cordiner, of Staithes (7 and upwards), and Rob. Harbutt al' Cawdiner, lab', of Goteland (7 and upwards), as players of interludes, vagabonds, &c.; and Ralph Rookby, Esq., of Marake, for receiving them in his dwelling-house, giving them bread and drink, and suffering them to escape unpunished, &c." They submit themselves to the mercy of the

court, and are fined 10s. each. In like manner, at Thirske, on April 10, 1616, no less than twenty-seven persons are presented (and some fined 10s. each) for entertaining and supplying food to a company of seven men and boys—the boys doubtless playing women's parts—namely,

"Rich. Hudson, of Hutton Bushell, weaver, 49 years of age [pleads guilty, and is sentenced to be whipt in the town of Thirske], Will Hudson (12), Geo. Hudson (11), Chr. Hutchinson of the same (16), Edw. Lister of Allerston, weaver (46), Roger Lister of the same (7 and upwards), and Rob. Skelton of Wilton, near Pickering (7 and upwards), as players of Enterludes, vagabundes and sturdy beggars, &c."

Again, at Thirske, on April 7, 1619, the Pannell present another company of four weavers and three tailors:

"Edw. Lister, aged 52, of Allerston, Rog. Lister of Buttercrambe, Tho. and Luke Burdsall of Thornton in Pickering-lieth, all weavers; Marm. Paley and Rob. Marchand, both of Bridlington, tailors, all above the age of 7, together with Will. Dickonson of Bridlington, tailor, as common Players of Enterludes, &c., playing at New Malton and divers other places."

At Helmesley, on July 8, 1612, the Pannell present

"Rich. Dawson of Stokesley, tanner and Constable there, for knowingly suffering Rob. Simpson of Staythes, shomaker, Rich. Hudson of Hutton Bushell, weaver, Edw. Lister of Allerston, weaver, common players of Interludes, wandering up and downe, &c., to escape unpunished."

At Topcliffe, on October 2 or 3, 1610,

"Tho. Pant, apprentice to Chr. Simpson of Eyton, shoemaker, complains that he has not been employed in his occupation . . . but hath been trayned up for these three years in wandering in the country, and playing of Interludes,"

and gets his indenture of apprenticeship (March 4, 1607) cancelled. The operations of the Autolycus of the period are represented by the presentment at Richmond, on October 6, 1609, of

"Will. Whitelock of Baldersly, alehousekeeper, for that his wife bought a hatt, which was stolen, of a rogue, he having another capp on his head, and bought it for a tryfle; and Jeffery Rowles of the same, alehousekeeper, for that his wife bought a tablecloth of a rogue."

Sheets and "lesser linen" the Yorkshiremen did not seem able to manage without being found out. At Helmesley, on July 11, 1615,

"Rich. Longbones and Matth. Grainger are presented a third time, for stealing at Topcliffe [doubtless from some hedge where they were bleaching] one pair of linnen sheetes, value 12d., and two shirts, value 12d."

Full of interest these records of the life of the time are.

THE eighth annual meeting of the Literary Association of the United Kingdom will be held on Tuesday, September 15, and three following days, in the Western Law Courts, Plymouth. The association will be received at noon on Tuesday at a special meeting of the town council, and will afterwards proceed to business under the presidency of the Mayor of Plymouth. The papers to be read include the following: "The Libraries of the Three Towns (Plymouth, Stonehouse, and Devonport)," by Alderman Shelly; "Bibliography of Sir Walter Raleigh," by Dr. T. N. Brushfield; "Our Town Library, its Success, and its Failures," by Mr. James Yates, of Leeds; "Libraries for the Young," by Mr. T. P. Briscoe, Nottingham; "Our Boys: what do they read?" by Mr. W. H. K. Wright, Plymouth; "The Printing of Library Catalogues," by Mr. W. May, Birkenhead; "Extension of the Free Library System to Rural Districts," by Mr. Silvanus Trevail, Truro; "Classification," by Mr. W. Archer, Dublin; "On Classification

for Scientific and Medical Libraries," by Mr. T. B. Bailey; "Science and Art: a Theory of Library Classification," by Mr. T. Brownhill, Liverpool; "The Alpine Club Library," by Prof. F. Pollock; "Proposals for a Bibliography of National History," by Mr. H. R. Tedder; "Publishers' Subterfuges in the Eighteenth Century," by Mr. W. Roberts, Penzance; and "Free Libraries from a Bookseller's Point of View," by Mr. W. Downing, Birmingham. Other papers descriptive of the chief libraries of the West will be read by Mr. W. H. K. Wright, the Rev. Canon Moor, Mr. Edward Parfitt, Mr. John Taylor, and the Rev. W. S. Lach-Szyoma. Visits will be paid to various libraries and institutions, and to the seats of Earl Morley and the Earl of Mount Edgecumbe. The business of the meeting will be varied by a number of pleasant excursions, and the tastes of book-lovers will be delighted by an exhibition of books, bindings, and library appliances. A most successful and enjoyable meeting is anticipated. All communications should be addressed to the hon. sec., Mr. Ernest C. Thomas, Gray's Inn Square, W.C., or to the hon. local sec., Mr. W. H. K. Wright, Borough Librarian, Plymouth.

MR. HOSKYNs-ABRAHAM's letter ("A Visit to Syracuse") in the ACADEMY of September 5 contained a misprint (on p. 152, col. 3, l. 6): for "I have seen," read "I had seen."

A TRANSLATION.

THE BATTLE OF MALDON.

(L. 185 to end of what remains to us.)

(See ACADEMY, May 23, 1885.)

THEN those who lov'd not there to be did turn them from the fight;

The three, the sons of Odda, they were foremost in the fight.

'Twas Godric from the battle fled, forsook that noble one

Who gave him many a goodly steed full oft; he leapt upon

The horse in's trappings which his lord had own'd: it was not right;

And both his brethren ran with him, they cared not for the fight,

Godric and Godwig turn'd away from battle-rush and strife,

Fled to the shelter of the wood, to the fastness, for their life;

And with them more than had behov'd if these had thought upon

The gifts and goods so free bestow'd by him, their mighty one.

E'en so the words that Offa spake to them upon a day

When in the council-hall they talkt about the fight and fray,

How many a one did speak the word who would not do the deed,

And many valiant in the tongue, would fail in time of need.

Now fallen was the people's prince, Æthelraed's earl, that day,

And all his own hearth-comrades saw that low their leader lay.

Then went there forth proud thanes, brave men; they hasted eagerly,

One of two things their hearts' desire—to avenge their lord or die.

So Ælfric's son well hearten'd them, a warrior young in years,

Ælfric's spake, his words rang out in courage on their ears:

"Remember when we drank the mead, when at the board we rear'd

The boast aloft, heroes in hall, o' the sharp fight unafear'd.

Now be it proven who is brave; mine own good blood I'll shew;

Among the Mercian folk I come of lofty strain; I know;

The wise chief, Ealhhelm, strong and rich, my father's sire was he;

Thanes in that land shall twit me not that I go home to see

My own country now that my prince here lieth slain with sword—

Oh, ill of ills to me!—he was my kinsman and my lord."

Then went he forth, on vengeance bent; his weapon quickly found

A seaman there amid the host, and smote him to the ground.

He hearten'd well the men for fray, each gallant friend and fere—

Then Offa lifted up his voice, he shook the ash-wood spear—

"Lo Ælfric, thou hast made strong our hearts in this our need;

Now that our prince lies low o' the earth, behoves us all indeed

That each make strong his fellow's heart while spear and sword we wield,

For Godric, Odda's coward son, hath play'd us false in field:

Full many a man, because of him, deem'd, as he rode on steed,

As on the pridelful horse he rode, it was our lord, indeed.

Therefore the folk was scatter'd sore, the shield-burg broke in fight—

A curse upon his dastard deed that put our men to flight."

Then Leofsunu, he spake, aloft he held his buckler there,

He raised his linden-shield on high, and made him thus answer—

"I swear to thee I will not hence with ready foot in flight,

But will go on and will avenge my friend-lord in the fight:

Nor need the steadfast ones who dwell at Stur—mere twit me then

That, now my friend has fallen in fight, I homeward fare again,

Go, lordless, from the fight; but I shall weapons take to me,

The iron sword and spear." Then lo, he went forth eagerly,

His heart despis'd the thought of flight, and stubborn-soul'd fought he.

Then Dunnere spake; he shook his lance; he call'd with mighty breath,

The old man, upon every one to avenge his leader's death.

"He must not pause, nor for his life have any care," he spoke,

"Who thinketh to avenge his lord upon the heathen folk."

Forth went they, Byrhtnoth's body-men, no care for life had they,

Then gan they stark and strong to fight, those spearmen in the fray.

They lifted up a prayer to God that vengeance they might know

For their friend-lord, avenge him well, work death upon the foe.

It was the hostage then began to help them willingly;

Among the good Northumbrian folk of gallant kin came he:

Ecglaf, his sire, Æscferth his name, he stay'd not from the fight,

The game of war, but sent abroad full many a shaft in flight.

Now would his wounding smite a man, now would he strike a shield;

From time to time he dealt a wound, while weapons he might wield.

Edward the Long stood yet in front; ready and keen was he;

He spake in words of gallant vaunt, that never a foot he'd flee,

Nor turn his back while's Better there upon the ground lay low

He brake the wall of shields, he fought against the heathen foe,

Till worthy vengeance he had wreakt on the viking host that day,

For his lord, his giver of gold, ere yet upon the earth he lay.

So Ætheric, noble fere, likewise, full ready forth
to go,
All stoutly Sigebyrht's brother fought, and many
a man also.
Oh, keenly fought those fighters there; they clave
the hollow shield;
The shield-edge brake, the corslet sang a war-
song in the field.

Then in the fray did Offa smite the seaman that he
died;
And there to Offa, Gadde's son, himself, did death
betide.
Full soon he lay, forwounded sore, but well had
kept his word,
His vaunt unto his giver of gold, his promise to his
lord,
That both should safe come home and ride within
the city wall;
Or die i' the midst of foemen's host, i' the place
of slaughter fall.
Thanelike he lay beside his prince. Then were
the shields broken,
Then, fierce with battle-rage and heat, they went
those grim seamen;
Full often times the spear did pierce the doom'd
man's body then.

Then forth went Wigstan, Thurstan's son, against
those men he fought;
He was the slayer of three of them, ere's battle-
bed he sought.

'Twas a fell meeting there that day; in fight fast
stood the men;
Wearied with wounds the warriors sank: on earth
was slaughter then.
And all the while those warriors twain, Oswold
and Ealdwold, they
Hearten'd the men, begg'd the dear kin, that
these, at need, that day,
Should stand, endure, and use the sword, strong-
handed in the fray.

Then Byrhtwold spake, that comrade old, he rais'd
the shield on high,
He shook the ashwood spear, he taught the men
unfearingly:
"The braver must our spirit be, our hearts the
stronger far,
The greater must our courage wax, the fewer that
we are.
Here lies our prince all pierc'd and hewn, the good
one in the clay;
Aye! may he mourn who thinketh now to leave
this battle-play.
I am old in life, I will not hence, I think to lay
me here,
The rather by my chieftain's side, a man so lief
and dear."

So did the son of Æthelgar make bold the men in
heart,
Full oft did Godric send the spear a-flying, the
deadly dart,
Among the vikings, even as first amid the folk
went he,
And hew'd and fell'd till in the fight he lay full
low to see;
'Twas not that Godric who had turn'd his back
upon the fight

E. H. HICKEY.

MAGAZINES AND REVIEWS.

THE present number of the *Antiquary* is much
above the average. Miss Lucy Toulmin-Smith's
"On Two old Religious Plays," is a most excel-
lent account of dramas which were unknown to
almost every student. Mr. T. Forster gives an
account of the distemper paintings which have
recently been found in Fingringhoe Church,
Essex. It is often impossible to preserve works
of art of our ancestors such as these: exposure
to the light even, without the violence of man
in the shape of church restorers who wish to
make all things look neat, will often cause them
to fade away like the memory of a dream when
one awakes; it is therefore much to be desired

that an accurate account of every discovery of
this kind should be published. The name of
the saint in whose honour the church is
dedicated seems not to be certainly known. Mr.
Forster imagines that it was originally under
the patronage of Saint Mary and Saint Michael.
There was, it seems, until about thirty years
ago, a statue of the Blessed Virgin with the
Divine infant in her arms in a niche in the
porch, and one of the bells is inscribed, "Sancta
Maria ora pro nobis." His conjecture may
turn out to be right; but we cannot accept the
evidence on which it is based. The bell in-
scription is a common one all over England,
and those who are acquainted with the devo-
tions of the mediæval church are aware that
there was scarcely a church in the land that
had not within or without some representation
of "The Virgin Mother of the God-born Child."
Mr. W. Carew Hazlitt continues his paper on
"Manorial Customs." Some of them are very
curious. Hatfield Broad Oak, in Essex, was
granted out by one of the great house of Vere.
Instead of a seal, he attached to his charter a
black-hafted knife. We have some memory of
a charter similarly authenticated being now, or
having been, among the records belonging to
the see of Durham. Mr. Beaver's paper on
"Native Painters under James I." contains
much useful information.

WITH the September number *The English
Illustrated Magazine* completes a yearly volume.
The volume as a whole is very good, but the
contents of the present number are not of
special interest. In fiction there are the con-
cluding chapters of Mr. Fergus's novel, "A
Family Affair" (already reviewed in the
ACADEMY), and the second half of a short
story, "Beneath the Dark Shadow," which is
written in a rather bad imitation of Mr.
Fergus's worst manner. By an amusing piece
of carelessness, the last sentence of this tale
contradicts the first. For poetry we have
"Three Roundels," by D. F. B., which are
exceedingly nothing-particular, and the sixth
and final instalment (fifteen pages!) of Mr.
Walter Crane's illustrated poem, "The Sirens
Three." Two descriptive papers, "China-
making at Stoke-on-Trent," by Mr. B. H.
Becker, and "The Great Fen," by Mr. S. H.
Miller, are worth reading. On comparing the
earlier with the later numbers of the volume,
it is impossible not to perceive some falling
off in the finish of the illustrations.

THE *Expositor* for September contains the
conclusion of M. Godet's study on the First
Epistle to the Corinthians. Prof. Strack's paper
on the origin of the recent revision of Luther's
Bible, Dr. Cheyne's brief study on the Sodom
narrative in Gen. xviii.-xix., Prof. Massie's
exegetical study on 1 Cor. xi. 23, and Prof.
Driver's notes on the Revised Version of
Leviticus and Numbers (very full, and valuable
for the history of exegesis). Prof. Kirkpatrick
surveys, with an eye to the needs of the
genuine student, recent English literature on
the Old Testament; "E" notices the recent
translation of Schrader's famous "K. A. T.";
and two excellent specimens of that too abun-
dant, but necessary, article, "homiletical ex-
egesis," are given by Dr. Maclaren and Dr. A.
Whyte respectively.

THE *Theologisch Tijdschrift* for September
opens with a reply to Dr. König's *Offenbarungs-
begriff des A. Testaments*, by Dr. Kuenen; a
translation of the *Didaché*, with a collation of
various interpretations of difficult passages in
the notes, by Dr. Meyboom; a laudatory notice
of Schmidt on Thessalonians, by Dr. Prins;
and a review, by Dr. Scheffer, of a Dutch liberal
reading-book for well-educated children, by
Dr. Bruining.

CORRESPONDENCE.

THE "MEMOIRS OF DORA GREENWELL."

Buckhurst Hill, Essex: Sept. 2, 1885.

Will you allow me to make some explanations
with respect to Mr. Noble's review of my
book—*Memoirs of Dora Greenwell*? I venture
to say that I strove to be careful and accurate,
and twenty years' experience in journalism—in-
volving constant occupation as a reviewer—
should, in some measure, have preserved me from
the errors with which I am charged, if not, in-
deed, from the defects which Mr. Noble has
not done me the favour of pointing out in
detail.

My information concerning Golbourne was
derived from Mr. Alan Greenwell, and from a
lady who is a native of Lancashire; and who,
as I have said in my book, "still lives at
Golbourne." These were my authorities for the
spelling of the name.

The charge as to an "extraordinary error
made concerning a matter of simple fact," is a
piece of pure imagination on the part of your
reviewer. Mr. Greenwell was Rector of Gol-
bourne from 1849 to 1854. *Eleven years after
that time* he became (in 1865) Vicar of St.
James-the-Great, in Haydock, which position
he held until 1869. Mr. Noble will easily
believe that I have "an unpleasant impres-
sion" of his carelessness, which, I suppose, is
sufficient to account for his "extraordinary
error." A reference to the clerical directories
would have prevented it.

WILLIAM DORLING.

"THE MOST BEAUTIFIED OPHELIA."

London: September 7, 1885.

"To the celestial, and my soul's idol, the
most beautified Ophelia" ("Hamlet," Act ii.
Sc. 2, line 109). So runs the superscription of
Hamlet's letter, in which, notwithstanding
Polonius's remark, "That's an ill phrase, a
vile phrase, 'beautified' is a vile phrase," it
has been very commonly held, from the time of
Theobald, and probably earlier, that "beauti-
fied" was intended by Hamlet to represent
"beautiful." This meaning, it is alleged, was
quite in accordance with the usage of the time.
This, or something to the like effect, may be
found in a succession of commentaries and
dictionaries. But whether this be so or not,
and if "beautified" standing without adjuncts

was ever used to denote "beautiful," it may be safely asserted that evidence which has been adduced in proof altogether fails to establish the position. Thus the assertion is said to have originated with Steevens that an example is to be found in the Dedication prefixed to Nash's *Christ's Tears over Jerusalem*. This alleged example has been adduced again and again; and it is endorsed by the editors of the Clarendon Press "Hamlet," who explain the word "beautified," "endowed with beauty. Our author has used this ill and vile phrase again in 'Two Gentlemen of Verona,' iv. 1, 55. And, as Steevens remarks, Nash dedicated his *Christ's Tears over Jerusalem* (1594) 'to the most beautified lady, the lady Elizabeth Carey.'" I was induced very lately to inspect a copy of Nash's book in the British Museum, and I found that the dedication really was, "To the most honored and virtuous beautified lady, the Lady Elizabeth Carey." The insertion of the word "virtuous" makes a very great difference. This word is clearly used adverbially (cf. Abbott's *Shakespearean Grammar*, §§ 1, 23); and thus "virtuous beautified" has the meaning, "beautified" (or, as we should say, adorned) "with virtues." And this accords with what is stated in the Dedication—"The world hath renowned you for religion, bounty, modesty, and sobriety." Nares's *Glossary* (ed. 1859) gives another alleged example: "'To the most beautified lady, the lady Anne Glennham,' R. L. inscribes his *Diella*, consisting of poems and sonnets, 1596."* Here again a reference to the original gives us, "To the most worthily honoured, and virtuous beautified Lady, the Lady Anne Glennham," etc.; and the word "virtuous" agrees with what immediately follows, "Madam your many honourable virtues," &c. The place above cited from the "Two Gentleman of Verona," "Seeing you are beautified with goodly shape," is really not at all to the point, as "beautified" does not stand alone. And the same may be said of various other examples, in which a person is said to be "beautified," or made beautiful, by particular endowments. There can be no reasonable doubt that Polonius understands the word rightly as applied to his daughter. Hamlet meant that she was made beautiful externally, though within repulsive, on account of the moral corruption and putridity which, in Hamlet's view, characterised mankind. This extremely pessimistic view is in accordance with a good many other things in the play, and among them, notably, the words (Act ii., Sc. 2, line 180 seq.), "For if the sun breed maggots in a dead dog, being a good, kissing carrion,—Have you a daughter—Let her not walk i' the sun," &c. The fact is that, with regard to the character and condition of mankind, the play is throughout deeply pessimistic; and the word "beautified" is in accordance with this pessimism. This I endeavoured to show in an essay published more than ten years ago, *The Philosophy of "Hamlet"* (Lond. 1874).†

And here I may perhaps append a remark with respect to an article by Emile de Laveleye, in the August number of the *Contemporary Review*, entitled "Pessimism on the Stage.—'Hamlet.'" M. de Laveleye states that his article is intended "to explain Hamlet's character from a sociological standpoint." From such an introduction a novel view of the play might have been expected; but the main upshot of the whole is that the play is exceedingly pessimistic, with a "pessimism darker than Schopenhauer's." The ruling "sociological"

element is not easy to discern; and I fail to see that any real advance is made on my essay above mentioned. There is, indeed, a somewhat remarkable correspondence between a considerable part of the *Contemporary* article and what I had previously said. M. de Laveleye has not made any acknowledgment of indebtedness, though he had evidently been making researches into the literature of "Hamlet," and it may be reasonably supposed that he had some acquaintance with my essay, if not in its original form, at least in the full abstract of the first part of it given by Furness in his *Variorum "Hamlet."* As to the "sociology" of the article, I have omitted to state that M. de Laveleye does assert that Shakspeare would not have agreed with Mr. Herbert Spencer. This I can readily believe, for Shakspeare had far too deep an acquaintance with the world and mankind to expect any sort of millennium from "natural selection" and "leaving things alone."

THOMAS TYLER.

SITTING DHARNA.

London: Sept. 6, 1885.

One of the most curious practices in India is that still followed in Native states* by a Brahman creditor to compel payment of his debt, and called in Hindi *dharna* "detention," and in Sanskrit *ācharita* "customary proceeding," or *prāyopaveśana*, "sitting down to die by hunger." This procedure has long since been identified with the practice of "fasting upon" (*trosud for*) a debtor to God or man, which is so frequently mentioned in the Irish so-called Brehon Laws, and which seems to have been imitated by the Irish ecclesiastics. Thus, in the Tripartite Life, St. Patrick "fasts upon" the merciless chief Trián, to compel him to have pity on his slaves. So, according to the notes on Fiac's hymn in the Franciscan *Liber Hymnorum*, SS. Germanus and Patrick "fast upon" the citizens of Auxerre, when they were infected by the Pelagian heresy. So the same Germanus and the clerics of Britain fast for three days upon the sinful Gortigern (*Lebor na hUidre*, 4a). So, according to the same MS., fol. 116, Cúmmine of Inis Celtra "fasts upon" King Gúaire, who had outraged that saint.

As to what jurists call the "sanction" of this practice—that is, the evil probably incurred in case of disobedience to the command implied in it—the theory now current in India, and adopted by Sir Henry Maine, in his *Early History of Institutions*, is that the person fasted upon incurs divine displeasure if he lets the faster die. But in India, according to Lord Teignmouth (Maine, *ubi supra*, p. 299), "by the rigour of the etiquette, the unfortunate object of his [the Brahman's] arrest ought to fast also, and thus they both remain till the institutor of the *dharna* obtains satisfaction."

Now, in a MS. in the Bodleian, Rawl. B. 512, fol. 108., there is a Middle-Irish legend which tells how St. Patrick "fasted upon" Loegaire, the unbelieving overking of Ireland. Loegaire's pious queen declares that she will not eat anything while Patrick is fasting. Her son Enna seeks for food. "It is not fitting for thee," says his mother, "to eat food whilst Patrick is fasting upon you." The child persists in eating, is choked by a bit of a boiled wether, and is ultimately brought to life by the saint and the Archangel Michael.

It would seem, from this story, that in Ireland the wife and children of the debtor and, *a fortiori*, the debtor himself, had to fast so long as the creditor fasted.

It thus appears probable that in India, as well as in Ireland, the primeval "sanction" of

* It has been stopped in British India, since 1861, by a section of the Penal Code.

the practice in question was, not divine displeasure, but suicide by starvation.

WHITLEY STOKES.

STONE CIRCLES.

Bechlenia, Sare: Sept. 4, 1895.

The passage in Aristotle's *Politics* referred to by Prof. Ridgeway (*ACADEMY*, August 29) has been already cited by Sanpere y Miguel in a well-illustrated "Contribucion al Estudio de los Monumentos Ibéricos" in the *Revista de Ciencias Historicas*, p. 509, tomo ii., 1881. A pencilled note which I wrote at the time runs thus: *Politica Aristotelis*, Lib. vii. xi., εἰ δὲ ἐπὶ κατὰ τὴν χάριν εἶναι νεκρυνόμενα τὰ μὲν θεοῖς τὰ δὲ ἡρώεσσιν. I have no means of referring to the original here, and cannot remember the context; but I suppose I considered the passage in some way corroborative. The edition used would be that of Didot's *Bibliotheca Græca*.

WENTWORTH WEBSTER.

MR. J. CAMPBELL SMITH.

Tending Rectory, Colchester: Sept. 5, 1885.

In the *ACADEMY* for September 5, p. 149, I notice the statement that "its author (J. Campbell Smith) has been appointed sheriff of the important and busy city of Dundee." But, while in Scotland in July, I read an interesting obituary notice of Sheriff Smith in the *Scotsman*. His remarkable character and professional and literary life were well described.

T. K. CHEYNE.

SCIENCE.

Si-Yu-Ki; or, Buddhist Records of the Western World. Translated from the Chinese of Hiuen Tsiang (A.D. 629) by Samuel Beal. In 2 vols. (Trübner.)

THE silence of Indian writers on matters of history has often been commented upon, and not seldom in exaggerated terms. The fact really is that it is only a very few parts of the world of which we have any connected history at all; and that among even those exceptional cases India comes by no means at the bottom of the list in respect of the number and value of the historical data which its literature affords. The current error has arisen from the habit of looking too exclusively at the history of the strip of country bordering on the Mediterranean from Rome round to Alexandria—a strip of country which, with the occasional addition of the banks of the Euphrates, is so often referred to by not unlearned Western writers as "the world." Of that region only have we historical records which surpass, either in the duration of time which they cover or in exactitude of detail, the so much decried historical records of India. It is no doubt true that there is a want of dates in the Sanskrit portion of Indian literature. But arid lists of kings and dynasties do not make the history of a people; and in the history of India it is the data derived from Buddhist sources which are of especial importance. These are, for the most part, still buried in MSS., and neither our universities nor the Indian Government seem to consider Buddhist studies worthy of the slightest support or recognition. Meanwhile, however, foreign scholars, and a few Englishmen who happen to have some leisure hours at their command, have been gathering some goodly handfuls of the uncut harvest in that field. Mr. Beal especially,

* The dedication is, however, signed by the publisher, Henry Olney.

† That extremely pessimistic play, "Troilus and Cressida," which was probably written about the same time as "Hamlet," furnishes a remarkable illustration of the word "beautified" (Act v. Sc. 9), "Most putrefied core, so fair without."

with untiring self-sacrifice in the cause of research, has for many years devoted such time as he could snatch from other and more imperative duties to the study of one particular corner of the field, so remote and difficult of access that almost no one but himself has ventured into it.

Of the results of his work the present volumes will probably be found to be of the greatest permanent value. The travels of the Chinese Buddhist pilgrims refer to times for which we have no Buddhist information of a literary kind—at least as yet—from the Indian side, and they give us information of a kind that we are not likely to get from any source not Buddhist.

That information is chiefly of three kinds. In the first place we have described to us the many places of pilgrimage or special sanctity, not only in the Buddhist holy land, but throughout India and Ceylon. All this part of the account of the travels of the Chinese pilgrims is of the greatest archaeological value. It forms the basis of most of the best work that has been done towards a reconstruction of the ancient geography of India. Incidentally it throws considerable light on the political divisions and royal houses of the time. And a good deal—though not so much as one could wish—can be gathered as to the more important question of the social condition, the habits of life, and the modes of thought, of the great masses of the people.

In the second place we have a fairly complete account of the condition and distribution of the Buddhist order of mendicant brothers, with a number of details—varying in each locality in completeness and accuracy—as to the schools into which the order was divided, and the literature current among them. These details are, for the most part, confined to the names of the schools, the titles of books, and the names of some of the principal leaders or most famous authors. Very little, almost nothing, is told us of the opinions by which the various schools were divided one from the other, or of the contents of the books that are mentioned. We learn a number of facts as to the outward condition of the order: nothing, or next to nothing, of the Buddhism of the time, of the ethical or religious beliefs of the Buddhists then living in India.

In the third place we have a great number of the local legends or stories by which the sanctity of the various places of pilgrimage was supported. Most of these legends naturally relate to incidents, or supposed incidents, in the life of Gotama the Buddha, either in his last, or in one or other of his many previous births. They occupy, unfortunately, the greater portion of Hiuen Tsiang's work. They have, of course, no value as evidence of what did actually occur a thousand years or more before; but only of what the local Buddhists, at the time of Hiuen Tsiang's visit, supposed to have occurred. To point out so obvious a truism would seem unnecessary were it not clear, both from notes to the present translation and also from remarks made in the reports of the Archaeological Survey of India, that the truism has been frequently overlooked.

The historical criticism in the notes by which Mr. Beal elucidates his text is altogether of the oddest kind, and there is a

marked absence of what would be most useful—namely, references to the earlier authorities. A comparison of these would have saved the translator from several curious mistakes, and have assisted him in understanding obscure expressions. Thus, at vol. ii., p. 35, "a four years" ought to be "a four months' novitiate," as is clear from the *Book of the Great Decease*, v. 64. It is inconceivable that Hiuen Tsiang can have made so great a blunder in one of the best known rules of his order. Other mistakes of a similar kind are: *chief minister* (p. 21), the *two dragons* on p. 24, *Prabhāpāla* for *Jotipāla* (p. 48, see *Buddhist Birth Stories*, p. 12), *Mahā* for *Makhā* (p. 74, see *Buddhist Birth Stories*, p. 186), *Sāla* for *Sālha* (*ibid.*, see *Cullavagga*, xii., 2, 7). The doubt expressed in the note on p. 38 is solved by the *Book of the Great Decease*, vi. 20, and that expressed in the note on p. 193 by a reference to *Mahāvagga*, v. 13, 13, where the right reading, "Kajangala," occurs.

These instances are, perhaps, sufficient to show the importance, for the correct translation of Chinese Buddhist authors, of a comparison of those older records from which their Buddhism was derived. There are also several passages in the present translation where the meaning is so obscure that it seems scarcely possible that the version should be correct. Sometimes a knowledge of Buddhism will enable the reader to divine what is meant. But not unfrequently the puzzle must be left for future correction. Men "possessed of the three enlightenments" (vol. ii., p. 75) stands evidently for a Chinese equivalent to the Pali *Tevijjā*, "having the threefold knowledge." But what "Arahats of independent power" may mean it is impossible to guess. Independent of what? So at p. 162 we are told that the reason for holding the First Council, after the death of the Buddha was because the Arahats "were cleaving to (the idea of) their Nirvāna." What this means, or what it can have had to do with holding a council for the rehearsal of the canon, it is difficult to see. I can, however, suggest a solution. Hiuen Tsiang intends, no doubt, to refer to the feelings of the Arahats at the Buddha's death, as described in the *Book of the Great Decease*, vi. 19. That description recurs in the first section of the canonical account of the First Council (*Cullavagga*, xi. 1, 1), and would very appropriately be referred to by the learned Hiuen Tsiang at the commencement of his own account of it. But his words, as they appear in English, cannot be so understood.

Again, at p. 173 the version runs, "Persons afflicted with children's complaints, coming here and turning round religiously, are mostly healed." On the first clause of this odd sentence Mr. Beal has a note suggesting another rendering which would certainly give a more intelligible sense. But the second clause surely requires alteration also. Instead of "turning round religiously," the meaning must be "walking reverently round (the relic)," the Chinese expression being doubtless the equivalent of the Pali *padakkhinam katvā*.

If Mr. Beal had consulted the older account of Śāriputta's conversion he would have avoided another mistake. When Śāriputta came to the Buddha, and asked for admission

into the order, the reply was, "Welcome! O Bhikkhu." By thus addressing him as a Bhikkhu, the Buddha *ipso facto* recognised him as a member of the order. He was *thereby* ordained. It was this well-known tradition regarding the most famous of the first disciples which Hiuen Tsiang intends to repeat. But the English translation runs, "Having heard these words, he was forthwith ordained"—a rendering which just misses the very point of the narrative.

In a number of small details of this kind the present translation will require amendment in future editions. Even as it stands, however, it shows a considerable advance on Julien's French version, and is really indispensable to every student of Indian history. Its value is much enhanced by a very full and accurate Index, drawn up by Dr. Burgess; and we are glad to see that Mr. Beal contemplates the completion of the work by a translation of the Life of Hiuen Tsiang.

It is impossible to read afresh these records of Western countries without being struck by the evident sincerity and enthusiasm of these old Eastern scholars. "Never," says Mr. Beal in his Preface,

"did more devoted pilgrims leave their native country to encounter the perils of travel in foreign and distant lands: never did disciples more ardently desire to gaze on the sacred vestiges of their religion; never did men endure greater sufferings by desert, mountain, and sea than these simple-minded earnest Buddhist monks. And that such courage, religious devotion, and power of endurance should be exhibited by men so sluggish (as we think) in their very nature as the Chinese—this is very surprising, and may, perhaps, arouse some consideration."

T. W. REYS-DAVIDS.

CURRENT SCIENTIFIC LITERATURE.

The Science of Agriculture. By F. J. Lloyd. (Longmans.) It would be easy to quarrel with the title of this book; we have the more unpalatable task of objecting to its substance. A fair acquaintance with the principle of chemistry, and with the methods of chemical analysis does not suffice for the task which Mr. Lloyd has undertaken. The sciences which serve to explain the successes and the failures of the art of agriculture and to suggest improvements in its future practice are many. Geology and mineralogy, physics, and animal and vegetable physiology, are not the least of these. The time has gone by when a heterogeneous collection of observations and figures from old and well-known agricultural text-books can do duty for a treatise on the sciences underlying the cultivation of the land, and the rearing and feeding of stock. The experiments and arguments of Davy, De Saussure, and Liebig, as well as those of other early writers in the same department, will remain of value even when their figures are found to be inexact and their conclusions unsound. But in the presence of the vast accumulations of more accurate and more complete researches which have recently been made in Germany, in France, and even in England, no text-book following the same lines as Anderson's *Agricultural Chemistry*, or Johnston's corresponding volume can be regarded as an adequate exposition of our present knowledge. Wherever Mr. Lloyd has taken his materials from Lawes and Gilbert, from Charles Darwin, and from other sound and recent investigators, he has done well. But he has missed so much valuable information that he might have incorporated from the German Year-

book of Agricultural Chemistry, from the *Annales Agronomiques* of Dehérain, and from similar sources, that his book is a most imperfect one after all. His geology and vegetable physiology are, moreover, often at fault. Although writing for English farmers he gives analyses of soil-forming minerals (p. 20) which are without exception foreign, and which for the most part are not typical examples. He tells us (p. 64) that the interstitial air of soils contains from 30 to 60 per cent. of carbon dioxide, although in reality the minimum is frequently much lower than 30. On the same page he states the percentage of this gas in the normal atmosphere to be .4 when it should be given as .03. In the chapter on "the chemistry and physiology of plant-life," we find many loose and inaccurate statements. Is Mr. Lloyd quite sure (p. 216) that the yeast plant will flourish and multiply in water containing nothing but purely inorganic chemical compounds and carbonic acid? Is phosphorus (p. 223) an essential constituent of the albuminoids? Does starch ever occur (p. 220) in turnips? Is it possible to assert now-a-days that lignin (p. 221) is chemically almost the same as cellulose? What is meant by speaking (*loc. cit.*) of the living membrane of vegetable cells being cellulose? It is surprising to learn (p. 229) that "sugar, being soluble, can traverse the intercellular spaces" of a plant. We were not aware that plants having no chlorophyll "invariably live on the juices of some plant having chlorophyll—that is to say, they are parasites, e.g., mistletoe." But it is needless to cite further proofs of the erroneous teaching in this nice-looking but unsatisfactory volume. Mr. Lloyd called in the aid of an agricultural friend to help him in matters pertaining to practical farming. It would have been well for him to have secured the help of a sound botanist and a practised geologist. Finally, we must call attention to a statement in the author's Preface in which he announces that the analyses, which necessarily form the basis of much of the subject-matter, were, if not otherwise stated, made by himself. Mr. Lloyd is not sufficiently careful in giving his authorities, whether they be the authors of original memoirs or of such well-known textbooks as S. W. Johnson's *How Crops Grow and How Crops Feed*, or Dana's *Mineralogy*. But the omission to name Thaulow, Rose, Rammelsberg, and Smith and Brush as the analysts of the minerals tabulated on p. 20 is positively misleading in the presence of the prefatory statement which we have quoted above.

The Birds of Lancashire. By F. S. Mitchell. Illustrated by J. G. Keulemans, Victor Prout, &c. (J. Van Voorst.) Lancashire is fortunate in its faunist. This volume is a chapter in ornithology which wanted an expounder. Mr. Mitchell has herein shown how much advance in science may be made by careful observation even in an unpromising district. His remarks on each of the 256 species which are known, or have been said to occur, in his county (falsely, as we think, with regard to the swallow-tailed kite) are all worthy of record in ornithological literature. County faunas seldom deserve such praise. His chapter entitled "Introductory" will repay careful perusal, for in it he touches with a master's hand on many subjects which still require elucidation. If space allowed, we should like to quote several passages from it to substantiate our approval, and to advance thereby the general knowledge of bird life. No British ornithologist's library can afford to be without Mr. Mitchell's book: it gives so much information unattainable elsewhere. The diagram and description of clap-nets, for example, leave nothing to be desired. The accounts of duck-decoying, hackneyed though the subject is, find no parallel in literature, whether we regard the terse description or the beautiful illustrations. These latter are perfect

gems of wood-cutting. Two birds new to the British list, as hitherto accepted, namely, the black-throated wheatear and the wall-creeper, are portrayed by Mr. Keulemans in his inimitable manner, and in the most lifelike way, in coloured lithographs. One of the distinguishing features of the book is its careful identification and commemoration of the local names of birds, every one of which seems to find a place in the index. A map of the county familiarises strangers with the chief landmarks and characteristics of the locality. Indeed the whole work is a model of what a county fauna should be. As a contribution to ornithological literature, the book merits a cognisance far wider than its local scope would indicate.

The House Sparrow. (W. Wesley.) This little book contains an ornithologist's account of the sparrow, by Mr. J. H. Gurney, Jun.; an excellent history of the bird's habits, by "a friend of the farmers," Col. C. Russell; a short criticism of Prof. Newton's remarks in the last edition of *Yarrell*; a note on the bird from a culinary point of view; a reprint of Dr. Elliott Coues' arraignment of its ways in America, together with extracts from his bibliography of the subject; and an amusing *résumé* of its ethics by Olive Thorne Miller. It is hard for a lover of birds to approach "the sparrow question." Sparrows are found to do more harm than snakes or tigers. Nature's thieves and vagabonds they are. This is the verdict of the book before us, as it is of everyone who investigates the matter. They drive away birds which would do more good, and little, if any, harm; for every noxious insect they destroy, they consume more corn than one likes to calculate. A Cheshire farmer, indeed, estimates the loss to England due to the depredations of sparrows at £770,094 in a year, and this loss is on the increase. No amount of sensationalism can find any countervailing advantage. The careful and long-continued experiments of Col. Russell in Essex show that sparrows do unmitigated mischief; and the experience of our colonies and of the Americans, confirms the fact beyond cavil. There is really nothing left to be said for the sparrow. He carries destruction with him wherever he goes, and leaves devastation to mark his increase. From every point of view, he must be looked upon as the enemy of man. Either he must give way to us, or we to him; and just now his power is such that he seems in a fair way to become here, as he has already become in Australia, a factor in politics. The Colorado beetle can never commit such ravages as the sparrow is certain to do wherever he is allowed to go on unchecked. Love him as we may for his personality, he ought everywhere to be exterminated with the utmost rigour, for there is no limit—in the course of nature—either to his reproductiveness or to the mischief which he causes. We in England have little conception of the scourge he has proved to be wherever he has been naturalised in foreign lands. It is none too soon to have the question put before us so clearly as it is in the present volume, for every day its importance must become greater. Civilisation has a baneful bar to its progress in the apparently inevitable increase of the henceforth to be execrated "Philip Sparrow."

Sixth Report on the Migration of Birds. (West, Newman & Co.) Twice as thick as usual, and illustrated with a useful coloured map of the lighthouses round our islands, this Report bristles with facts not merely for the ornithologist, but also for every lover of birds. The observers at the different lighthouse stations are becoming more skilled year by year, while the committee which examines and tabulates their returns, and which was reappointed by the British Association for the Advancement of Science at Montreal last year, abates nothing

of its diligence. Many curious movements of birds, and much that is unexpected and wonderful in their partial migrations, have thus been tracked out, if the reasons of these journeys are as yet obscure and often apparently capricious. Mr. Harvie Brown, however, is able to connect the great accumulation of ice along the west coast of Spitzbergen in 1884 with the movement of the smaller forms of oceanic life known as "whale food" into more temperate seas. Vast shoals of fish pursued these organisms. Thus sprats (or "garvies") were very numerous along the east coasts of Scotland last year, and they in their turn were followed into our seas by enormous flocks of gulls and other sea-fowl. The stock-dove is found to be extending its range along the north-east of Scotland. Mr. Cordeaux points out the very large number of blackbirds which crossed from our coasts to the Continent, and *vice versa*, during the autumn of 1884. That rare bird, the Arctic bluethroat, came over to our English shores in considerable numbers between September 8 and 16, from eighty to a hundred having been seen at one locality on the Norfolk coast on the 12th. The bird which is rapidly losing its character with ornithologists, owing to its destructiveness to grain and fruits, the common sparrow, immigrated in large numbers from the Continent during October. A black redstart was seen at Pentland Skerries on March 31. A good deal of senseless shooting still goes on; and Mr. Harvie Brown very properly reprehends a man who actually sent some thirty or forty dead eider ducks and drakes to an Edinburgh bird-stuffer in February which had been shot by him in the Orkneys. A very suggestive history is given of a swallow taken at the Bell-Rock Lighthouse on March 13, and the lengthy sleep in which it indulged. This relation would have charmed Gilbert White, who was ever on the look out to support his theory of hibernation among the Hirundinidae. These facts, selected at random, show how valuable is the report of the migration committee. We cannot but wish success to these bearers of the latest news to us from Cloudeuckooland, only suggesting that here and there a little more condensing might be advantageous for the future.

Proceedings and Transactions of the Royal Society of Canada. Vol. I. (Montreal: Dawson Brothers.) Rather more than three years ago the Marquis of Lorne, who was then Governor-General of Canada, invited a few men of culture to meet in Montreal, with the view of founding an organisation for the promotion of literary and scientific studies throughout the dominion. From this beginning arose the society which has since become known as the "Royal Society of Canada." Its object is not simply to hold meetings at which papers may be read and discussed; but it aims also at establishing a National Museum of Natural History, in which all the provinces and territories of British North America shall be adequately represented. After the Society had been in existence for two sessions, a sufficient number of papers had accumulated to justify the selection of a series for publication. The young society is to be heartily congratulated on having started its publications with so imposing a volume as that which now lies before us. The early part of the volume, containing papers on French literature and history, is printed in French; while the rest is in English. Among the more generally interesting papers may be mentioned one by Dr. Daniel Wilson, in which he discusses in a masterly way the subject of Prehistoric Man in America. Of the various branches of science represented in this volume, geology appears to dominate; and among the contributors of geological papers we notice Sir J. W. Dawson, the first president of the society; Mr. Selwyn, the Director of the Geo-

logical Survey of Canada; and, more prolific than any other contributor, Dr. Sterry Hunt. In a paper on "The Geological History of Serpentine," Dr. Sterry Hunt develops views which are not likely to be generally accepted by geologists in this country, though we fully admit the ability with which he conducts his main argument, which is directed to prove the aqueous origin of serpentine—a subject which we may leave him to discuss with Prof. Bonney.

Einführung in die Gesteinslehre; ein Leitfaden für den akademischen Unterricht und zum Selbststudium. Von A. von Lasaulx. (Breslau: Trewendt.) Dr. Von Lasaulx, the distinguished professor of geology in the University of Bonn, having felt the need of an elementary textbook on petrology for the use of his own students, has been led to prepare the neat little volume which has just been issued from Breslau. The study of rocks has of late years undergone extraordinary development, especially in Germany; new methods of research have been introduced, and the old treatises have become almost useless. To meet the wants of the rising school of petrographers several textbooks have already appeared; and among them Prof. Von Lasaulx's work, though small, is entitled to an honourable place. It is a book intended for serious study, offering the student a wealth of information without waste of words. The characters of all the important rock-forming minerals and of the principal species and varieties of rocks are concisely described, while much attention is devoted to their microscopic structure. The microscope, indeed, occupies in the new petrology a position which is almost supreme; and no cautious petrologist nowadays ventures to name a specimen of rock until he has resolved it into its mineral constituents by means of this instrument. One of the most useful features in Von Lasaulx's book is a classified bibliography, which serves to guide the student to original sources of information on any special branch of petrology. It is rather a pity that the book is not furnished with illustrations; but the author probably intended that the student, instead of relying upon pictures, should be brought into direct contact with the actual minerals and rocks.

OBITUARY.

SELMAR SIEBERT, one of the best known map-engravers of our time, died a few days ago upon the steamship while returning home from America. The best official maps of the Union are from his hand, as are also the finest "Blätter" of the Prussian General-staff. His plan of Hamburg is reputed to be the largest of all extant plans of cities. It is a strange coincidence that his only brother, the painter, should have died on the very same day at Godesberg on the Rhine.

THE death of the Dutch African traveller, D. D. Beth, is reported from Mossamedes. For the last half-year he has been journeying in the southern part of the Portuguese possessions, in the neighbourhood of Benguela and Mossamedes. It was his intention to start upon an exploration of the Cumene, and then press forward in an easterly direction to the Zambesi.

CORRESPONDENCE.

ANCIENT UNITS OF LINEAR MEASURE.

III.

Pelasgic.—Dr. Schliemann, in his *Troja*, p. 56, speaking of the Acropolis of the second city at Hissarlik, says:

"These towers stood approximately at equal

distances of a little more than fifty metres (= 164 English feet); in which measure we must certainly recognise the number of 100 ancient Trojan cubits, though the precise length of the Trojan cubit is unknown to us [i.e., to Dr. Dörpfeld and himself]. From the analogy of the oriental and Egyptian cubit, it may, however, be fixed at a little more than 0.50 metres. I call particular attention to the fact that on this computation the gate RC and FM is exactly 10 cubits broad; and the *vestibulum* of the edifice A precisely 20 cubits both in length and breadth."

Dörpfeld gives one of the old Assyrian cubits as 0.50 metres = 19.7 inches, and Petrie an Eastern Mediterranean one as 19.96, so that either of these are here probably more applicable than the nearest Egyptian cubits, given by Petrie as 18.92 and 20.63.

I have collected about twenty-five of the best ancient Trojan measures I can obtain from Dr. Schliemann's works on Troy, and, having reduced them to English feet and inches, I have obtained a remarkably well-marked cubit of 19.85 inches; intermediate as between Dörpfeld's and Petrie's. It is interesting, however, that from thirteen measures of archaic tombs at Spata in Attica, as given by Dr. Schliemann in his *Troja*, p. 111, I also get, very satisfactorily, a cubit of precisely the same length as this old Trojan one; and from eight measures from Tiryns (see *Mycenae Tiryns*, chap. i.), also an exactly similar cubit! These buildings must date back from 800 to 1200 B.C., and are all more or less cyclopean in character; and may be all included in the term Pelasgic. Still more interesting would appear to be the fact that from an examination of nearly seventy of the best measures given by Dr. Schliemann, taken during his excavations at the ancient Acropolis of Mycenae, the precise same cubit of 19.85 again is clearly obtainable.

From an examination of the measures, some seventy in number, of Etruscan tombs, as given by Dennis in his *Cities and Cemeteries of Etruria*, it is very evident that this same cubit of 19.85 must also have been employed. It is, I believe, usual to include under Pelasgic a good deal of the archaic Etruscan architecture; and this remarkable persistency of the same unit of measure goes much to show an intimate connexion with ancient Greece and Asia Minor.

I have, as yet, not been able to obtain measures of Lycian and Lydian tombs to carry on the further examination of this part of the subject. This cubit of 19.85 must have had some connexion originally with the Assyrian. In my first letter to the ACADEMY I showed that the Hittite foot was probably = 12½ English inches, probably derived from an old Babylonian cubit of .533 metre = 21 inches, and also, very probably, connected with the Olympic foot of a similar derivation. This Pelasgic cubit was probably more nearly connected with the old Assyrian cubit of 19.7, first described by Dörpfeld.

As Mr. Petrie, however, in his *Inductive Metrology*, gives the Pelasgic and cyclopean unit of measure, especially as applied to Mycenae, Tiryns, and Etruscan tombs, to be a foot of about ¾ (see pp. 85, 89, and 93) = 11.60, "as most free from Roman influence, and the same as the ancient Greek foot of sixteen Egyptian digits," I here append in a short table some thirty-seven selected measures from the buildings of Troy, Spata, Tiryns, Mycenae, and Etruria, showing, I think, that the cubit unit of 19.85 inches is preferable to a foot unit of 11.60. These reductions are made by the slide-rule, with sufficient accuracy for all practical purposes. Some little allowance must generally be made in the exactitude of most given measures of ruined buildings; but generally an error of two or three per cent on either side will be sufficient.

No. of times repeated.	No. of English feet and inches.	Cubits of 19.85 inches.	No. of times repeated.	No. of English feet and inches.	Cubits of 19.85 inches.
2	3.4 5 6.6	2.0 3.0 3.9	2	23 25 30	14.0 15.0 18.0
4	8.8½	5.0	5	33-34	20.0
3	10-10½ 11.6	6.25 7.0	3	40 50	24.25 30.0
4	15 16.6 17	9.0 10.0 11.15		65.6 74 97	40.0 45.0 59.0
2	20	12.0		164	100.0
Inches.					
3	19.7	1.0	} Trojan buildings. Gold diadem, Mycenae.		
2	9.8	0.5			
	19.5	1.0?			

According to Mr. Petrie's Pelasgic unit of 11.6 inches:

3.4 = 3.5	feet.	23 = 24	feet.
5 = 5.2	"	25 = 26	"
6.6 = 6.7	"	30 = 31	"
8.16 = 8.5	"	33.6 = 32.5	"
10.25 = 10.65	"	40 = 41.5	"
11.6 = 11.1	"	50 = 52	"
15 = 15.5	"	97 = 100	"
16.6 = 17.1	"	164 = 170	"
20 = 21	"		

Phrygia.—From about a dozen measures only, given in the *Journal of Hellenic Studies*, I obtain a cubit of 19.6 inches—evidently the old Assyrian one of Dörpfeld—showing that the ancient Phrygians obtained their unit direct from Assyria, and probably not through either Pelasgic, Phoenician, or Hittite sources. But more measures would be here desirable if I could obtain them. From the tomb of Cnidus five measures give a probable cubit of 19.0 to 19.2, and, therefore, possibly = the Hittite unit.

Phoenicia.—From Perrot's and Chipiez's recent work on Phoenician art, &c., I have obtained a very probable cubit of 20.0 from only very archaic tombs and buildings in Phoenicia proper; but more measurements might be desirable. This is evidently Petrie's Eastern Mediterranean one, and probably, also, the Pelasgic one, showing how far-spread was Phoenician trading influence prior to 800 B.C., after which time Petrie's old Hellenic foot of 11.60 may have come into vogue. The curious result might seem very probable that the Phoenician cubit was one purposely averaged for convenience of a commercial and trading community like the Phoenicians from the old Assyrian cubit of 19.7 and the Egyptian royal ell of 20.5 inches, giving one almost precisely of 20 inches. Prof. Sayce suggested to me that the Pelasgic cubit might possibly be of Phoenician origin.

Oceania.—Capt. Cook describes a *morai*, or stone terraces on the island of (P) Obeera, as a series of prodigious piles of stones, 267×87 by 44 high, that would be = 300×100×50 of my prehistoric feet of 11 inches.

China.—A French writer, Remusat, also gives a Chinese foot = 12 English inches—a further confirmation of what I stated in my first letter.

Prehistoric.—I have alluded to this unit of 11.0 inches in my two previous letters. I might further add that Mr. Lukis gives 36½ feet English as the diameter of the smallest of the Cornish stone circles: this would make precisely forty prehistoric feet. The cap-stone of the rocking-stone at Pierre Martine, near Livernon, is given by Fergusson as 11×22 feet English.

In Sinai in Arabia Mr. Holland mentions circles of stone, probably in connexion with

tombs, some of the larger of which are 45 and 90 English feet in diameter. This proportion, 11 : 12, would here give 50 and 100.

It is not unlikely that the prehistoric foot unit of 11·0 inches has simply been derived, not from any cubit, but from the length of the human foot, which would also be about one-third of the military pace of 33 inches.

In my next communication I hope to say something more definite with regard to Central American and Peruvian units of measure, and which appear to present certain peculiarities and difficulties.

R. P. GREG.

SCIENCE NOTES.

SIR LYON PLAYFAIR'S address on Wednesday, as president of the British Association meeting at Aberdeen, deviated from the example of recent years in being neither a survey of the year's progress in scientific research generally, nor an exposition of the present state of some one particular branch of investigation. The address was devoted chiefly to a discussion of the place which science ought to hold in relation to other matters of human concern. Incidentally, Sir Lyon Playfair pleaded for increased state aid to research and to secondary education, and for a larger share of attention being given to science in our public schools and universities. In support of his contention that the indifference to science is rather on the part of the middle and upper classes than of working men, he referred to the evidence of working-class interest in the subject afforded by the selection of scientific men—Prof. Stuart, Roscoe, Maskelyne, and Rücker—as candidates for the next parliamentary election. In comparing the amount of state aid given to education in Great Britain and in foreign countries, he observed that Holland spends £136,000 annually on its four universities, while Scotland, with the same population and the same number of universities, has only £30,000 allotted by the state for this purpose, and by a special clause in the Scotch Universities' Bill the Government asked Parliament to declare that under no circumstances should the grant ever be increased above £40,000. "According to the views of the British Treasury," Sir Lyon remarks, "there is a finality in science and in expanding knowledge." The fact that London has no teaching university was referred to as an "amazing anomaly," which must ere long cease.

THE Birmingham meeting of the British Association next year is to have as its president Sir J. W. Dawson, of the University of Montreal.

PROF. EVERETT, Queen's College, Belfast, has just completed a small work entitled *Outlines of Natural Philosophy*. It is intended for those beginning to study the subject, and supplies the most essential information in a precise manner. Algebraic formulæ have been altogether excluded. The book will be published by Messrs. Blackie & Son.

DR. HOLZMÜLLER, of the Technical School at Hagen, will publish shortly a work on stereometric drawing, which will deal incidentally, to some extent, with the subjects of crystallography and cartography.

OUR readers will have learned from the daily journals that a new star, of about the eighth magnitude, has appeared in the middle of the Andromeda nebula. The fact is, of course, of great astronomical interest, but the newspapers seem to be a little premature in stating that it will throw important light on the constitution of the nebula, as it yet remains to be determined whether the connection of the star with the nebula is physical or merely optical.

PHILOLOGY NOTES.

THE Rev. Henry A. Redpath, of Holwell Rectory, near Sherborne, Dorset, has compiled a concordance to the proper names and other transliterated words in the Septuagint, showing the variations of the three chief MSS., which he would be glad to publish in as inexpensive form as may be if he received the names of a sufficient number of subscribers. The work would contribute considerably towards illustrating the relation of the three MSS. towards one another, and the pronunciation of the unpainted Hebrew text.

A DICTIONARY of Hungarian provincial dialects is in preparation, at the expense of the Academy of Sciences of Buda-Pest. The editor is Dr. Josef Szinnyei.

THE new part of the *Schweizerisches Idiotikon* (Heft. VIII. Frauenfeld: Huber; London: Williams & Norgate) begins at "Fas-Fus" and ends at "Fra-Fru." It contains much suggestive matter for the English philologist and archaeologist, and is full of indications of the remote common ancestry of the Switzer and the Englishman. We find that many of our popular proverbs are in circulation in "Bern-Dutch" or "Zuri-Dutch": for instance, "As sound as a fish"—"So g'sund wie ein Fisch"; "Neither fish nor fowl, neither half nor whole"—"Weder Vogel no' (noch) Fisch, weder Halbs no' Ganzes"; "As jolly as a fish in water"—"Es ist mir wohl wie-n-em Fisch ins Wasser." The white-bait dinners of English governmental officials may possibly be a survival of the "obrigkeitliches Fischessen," which seem to have been observed from immemorial time. The "Obrigkeit" is everywhere Conservative in such matters. In the Aargau a fish-banquet was once regarded as semi-pagan, because the fish out of the Aar, Limmat and Rhine were eaten at festivals in honour of Thor. The *Tussilago farfara*, the English "colt's-foot," is "foal's-foot" ("fülli-füss") in St. Gallen, Schwyz and Zürich. In Appenzel and Glarus the expression "on his own fist" ("Uf eign'i Füst") is in common use for an action undertaken without help or contrary to advice. To lend money without a pledge is to lend "Uf d'Füst." The folklore of the fist, finger, thumb and hand is richly illustrated in the present part. Illustrations will be found under the headings "Hand-festi," "Tümen-festi," "Füst," &c. The thumb-marks upon the red sealing-wax in the great charter of Glarus (Rechtbrief), which is carried in procession at the Näfelerfahrt, are believed by the people to be those of St. Fridolin, the patron saint of the little state. The articles "Faste" (Fasten) and "Fest," with their numerous sub-divisions, are full of old Schweizerdeutsch folklore and proverbs. As recently as 1818 the young girls in Canton Freiburg used to cut off their hair at the beginning of Lent as an act of penance. A writer in the *Schweizerbote* of that year maliciously adds that they generally had the prudence to sell it, in order to buy with the money "ein neues Ginge-Band" for Easter-day. The pages allotted to "Vater" and its long kindred of nouns, adjectives, and verbs are specially instructive. The parish churchwarden, in the communes about Winterthur, bears the suggestive title of "Chillevater" (which recalls the similar "Kirchenätti" of some Bavarian villages). The churchwarden (Kirchenpfleger) was a new title for an officer who existed before the Commune was Christian and possessed a Church to "ward" or *pflegen*. He, and not the parish priest (first the "Diener des Herrn," and then simply the "Herr," the gentleman, in many Swiss districts), was the original "father" of the parish. "Gemeinsvater" is still found in use as a title of the chief lay officer of a commune. The verbs formed from the names of foreign

nations are a curious study. Two such have been in formation lately under our eyes, e.g., "to Congo" the Nile, "to Sarawak" the Sudan. Swiss-German has plenty of them. The suggestive "verengländer" will, no doubt, appear in its place in the *Idiotikon*. The Venetians, the Flemings, the Hollanders, the French, and all the nations with whom the Swiss have traded, or in whose armies they have served as mercenaries, have been forced to contribute to the inexhaustible vocabulary of Schweizerdeutsch. "Zu flämänden," or "flämändere(n)," in Canton Glarus is to be boisterous, to bounce. The adjective "flämsch," on the contrary, in Basel and in the Entlibuch villages stands for anything, or anyone, soft, gentle and tender. It was suggested by the fine wool of the Flemish or Dutch sheep as distinguished from that of the Swiss or Swabian. It is considered a high compliment to say of a girl, "Schi ist a flämschi," or "a flämschi Meidja." A child who never keeps still, fidgets, is a "Fitsch" in Zürich. "Fitschen" and "pfitzen" are the Swiss-German for "to fidget" in Basel, Glarus and Luzern.

REFERRING to the Devonshire word, *rum-bullion*, "a great tumult," quoted in the ACADEMY of last week as the probable etymon of *rum*, the Rev. J. Hoskyns-Abrahall writes to say that on Dartmoor "*berummaged* is used in the sense of 'confused.'" A clergyman was said to be "a very gude sort of gentleman when he comes to see you in a cottage; but, when he gets up into the pulpit, he's that *berummaged* you can't tell what he says."

FINE ART.

TWO GERMAN BOOKS ON GREEK SCULPTURE.

Gipsabgüsse antiker Bildwerke. Bausteine zur Geschichte der Gr.-Rom. Plastik von Carl Friederichs, neu bearbeitet von Paul Wolters. (Berlin.)

Inschriften Griechischer Bildhauer. Von Emanuel Loewy. (Leipzig.)

THE purpose of Friederichs' "Bausteine" was to present a classification of the casts from ancient sculptures in the Berlin Museum according to certain generally accepted periods of artistic influence, to describe every piece or set of sculptures critically, and to add under each a summary of the literature that had grown up around it. This was in 1868. For a number of years the book was of great utility. But by degrees the acquisition of new casts from Olympia, Athens, and elsewhere had enlarged the Berlin collection far beyond the scope of the "Bausteine." With this increase of new material there came also a change in some of the views which Friederichs had maintained. It was necessary that these views should be modified, and that in all cases the results of recent criticism should be incorporated. Had Friederichs lived he would probably have met these deficiencies by repeated editions. As the matter stands, it is no small compliment to his memory that the authorities of the Berlin Museum have determined to preserve his book as nearly as possible in the form in which he left it, adding to it the new material and converting it into an official work. This difficult task was assigned to Dr. Paul Wolters, and the manner in which he has accomplished it reflects the utmost credit on his judgment and industry.

In one point it would perhaps have been well to depart from the arrangement of Friederichs. He had found it convenient to

introduce immediately after the archaic art those examples of really late sculpture which intentionally imitate the archaic, and which are known as archaistic. But these imitations can hardly be said to serve any useful purpose when put in connexion with the true archaic sculpture, and, on the other hand, the absence of them from among the illustrations of Graeco-Roman art is the absence of a marked characteristic of that art. It is often, no doubt, useful to take a late statue or bas-relief which can be proved to be a copy of an early masterpiece and use it as the only available illustration of that masterpiece. In doing so, a lesser purpose is made to subserve a greater. But in these archaistic instances there is not the same justification, and we are glad that Dr. Wolters has not sensibly increased the use of them, though he has followed the arrangement which he found in the "Bausteine." It may be noticed also that Friederichs occasionally employed a quite ordinary Graeco-Roman statue to illustrate, not a particular masterpiece of an earlier and greater age, but the general style of an early master. For example, he takes the figure of Aktaeon in the British Museum in connexion with the sculptor Myron. The proceeding seems to us worse than useless. Dr. Wolters might well have dispensed with it. Again, the head of Perikles in the British Museum retains, doubtless, something of the general form of sculpture in the Periklean age; but the affectation of archaism so transparent in it should relegate it at once to Roman times. It professes to be nothing but a work of those times, and if behind its professions we can trace some little of the Greek original from which it had at so long an interval been derived, we may be content to deal with that element in the question when we come to the art of Roman times, where so many similar questions await us.

In the introduction of new material Dr. Wolters has acted, as we have said, with great judgment. In modifying the old material he has been, in general, no less successful. There is, however, one point on which we desire to make an observation. Professor Brunn, in a short memoir which he devoted to the frieze of the Mausoleum, came to the conclusion that the slab obtained from Genoa by the British Museum could not be part of the frieze, notwithstanding that such has been the general opinion. He found, first, a marked difference of style, and secondly he stated that the architectural moulding on the lower edge of the Genoese slab differed from the moulding of the frieze. The question of style does not easily lend itself to discussion, but the statement as to the moulding is inaccurate, and Dr. Wolters is hardly justified in accepting it without verification. Had it really been as Professor Brunn affirmed, he would have been entitled to rely much on the fact. As it is, the moulding of the Genoese slab may now be quoted as an additional proof that the slab formed part of the Mausoleum frieze, if that, indeed, could be reasonably doubted.

Another testimony to the rapid increase of archaeological material in recent years may be seen by comparing this new work of Dr. Loewy's with the small book on the same interesting subject, published by Prof. G. Hirschfeld, in 1871. Hirschfeld's *Tituli Sta-*

tuariorum Sculptorumque contained between 200 and 300 inscriptions recording the names of ancient artists. Dr. Loewy's list reaches to 559, and is besides projected on a larger plan, each inscription being given in a carefully revised facsimile, whereas Prof. Hirschfeld had limited himself to a cursive version with some six plates of facsimiles. Not only has epigraphy been making great strides in the interval, but so much attention has been directed to this special class of inscriptions bearing the names of Greek sculptors that Dr. Loewy has had a most laborious task in bringing together and sifting the widely-scattered material. In some instances, we think, he has brought together much more than was necessary. An editor in such circumstances is entitled, is even bound, to brush away a good deal. Dr. Loewy's treatment of the Sigeian inscription (No. 4) is a case in point; the amount of conflicting opinion there carefully collected and with the utmost brevity expounded is, at least, excessive for students of ancient art. Much the same may be said of the vexed question of the inscription of Paeonios, found on the base of his Nike at Olympia. Half the space could hold all that was worth preserving on that subject.

In all other respects Dr. Loewy's book seems to us deserving of high recognition. Its accuracy and completeness will secure its utility for some time to come, and whatever accumulation of new inscriptions of this class may be in store, it is satisfactory to think that the plan of Dr. Loewy's work is such as to admit of their being incorporated in it.

A. S. MURRAY.

"THE GOOD SHEPHERD," BY FRED-ERIC SHIELDS, R.W.S.

THE attention of the readers of the ACADEMY has already been drawn to the rare quality of the designs made by Mr. Shields for the chapel of the Duke of Westminster, at Eaton Hall. This and other work of the same character and equally fine feeling has occupied the artist almost exclusively for some years; but with the exception of one or two of these designs, carried out in water-colour and exhibited at the Royal Society of Water-Colours, the public have had little opportunity of making acquaintance with his most imaginative work. It seems, therefore, good, not only for the artist, but for them, that at least one of his noblest designs should be reproduced faithfully in such a form that all who will may possess it.

For fidelity no process of reproduction can equal photography, and fortunately the autotype process adds permanency to this invaluable quality, and the facsimile recently published by the Autotype Company of Mr. Shields's monochrome drawing of "The Good Shepherd," is as satisfactory rendering of the original as even so fastidious an artist as Mr. Shields could desire. Christ, leading his sheep to the side of a stream, walks beneath the spreading boughs of a fig tree, holding in either arm a lamb. At his side a mother-sheep walks, raising her head wistfully towards her little ones, which, with a pretty echo of her own attitude, are nestling on the Shepherd's shoulder. Throughout the whole group reigns a sentiment of holy peace and tenderness; but its sweetness is without affectation or effeminacy. The figure of Christ has power as well as pathos, majesty as well as benevolence. That dependence on nature, which is one of the secrets of Mr. Shields's

strength in imaginative design, is as visible and potent in this as in his other sacred compositions. While the expression and the mien of Christ are something more than earthly, he holds the lambs as an earthly shepherd would. The sheep are drawn with the veracity of an animal painter, but they have also the conformity of an artist whose work is dominated by an idea. The freedom of one little creature, standing with the pretty awkwardness of lambs, relieves the stringency of the design and the stress of the sentiment.

COSMO MONKHOUSE.

THE EXPLORATION OF CAERLEON AND CAERWENT.

THE recent meeting of the Cambrian Archaeological Association at Newport has been a thoroughly pleasant and successful one, and has led to at least one practical result. This is a proposal to form a committee and a fund for carrying on systematic and scientific excavations on the sites of Caerleon and Caerwent. There are few Roman towns in Britain which can show so many important and well-preserved remains. Portions of the ancient walls are still standing in each place, and the local museum at Caerleon is full of valuable inscriptions which have been accidentally brought to light from time to time. But the chief importance of the two towns lies in the fact that their destruction was not due to the Saxons. We may, therefore, expect to find evidences in them of a long-continued existence after the departure of the Romans from the island, and this expectation is confirmed by the discovery on both sites not only of coins of Honorius, but also of minims coined after the withdrawal of the Roman legions. It is probable that the destroyers of the two cities were the Scots or Irish, who may have sailed up the Bristol Channel or have advanced by land from their settlements in Pembrokeshire. In any case the cities must have survived long into that dark period of British history, in which, nevertheless, the foundations both of the social life and of the nationalities of modern England were laid; and carefully-conducted excavations among their ruins cannot fail to throw a flood of light upon it. Caerwent especially, which has never been so much built over as its sister city of Caerleon, may be expected to yield results of the highest interest and importance to the historian. We may therefore hope that the fund, if once started, will be liberally supported not only in Wales and by the lovers of King Arthur, but also throughout England.

NOTES ON ART AND ARCHAEOLOGY.

It is the intention of the Dudley Gallery Art Society to open, on October 1, an exhibition of sketches and studies by members. This is the first exhibition of the kind held in the gallery, as the greater part of the drawings will be direct work from nature; it being the aim of the society to bring this branch of an artist's study more directly before the notice of the public.

THE announcement of the prizes at the Antwerp exhibition will be made on September 14, in the presence of the King and Queen of the Belgians. With regard to the art section of the exhibition, the *Courrier de l'Art* has a sarcastic article, in which it is observed that, "après avoir commencé—dans la ville de Rubens—par acclamer président du jury le peintre des infimement petits, M. Ernest Meissonier, on s'est livré à une orgie sans précédent de médailles d'honneur." The exhibition is to remain open until October 31.

THE Historisch-antiquarische Verein, of Schaffhausen, has undertaken the charge of

excavations of Beringen, where the traces of two large Roman buildings were lately discovered. The "finds" seem to indicate that the buildings date from the first or second century of the Christian era. They include vases of *terra sigillata*, and fragments of a painted wall, the colours of which are remarkably fresh and lively. But the most important and interesting objects brought to light are pieces of "Legionsziegel" clearly inscribed "Leg. XI. C P F" ("Legio XI. Claudia pia fidelis"). The Jura limestone seems to have been employed as building material—a stone which had a high repute with the Roman architects. The mortar, "which is richly and even wastefully used," as the report says, "according to the universal custom of the time, is prepared from carefully cleaned river-sand, with a great deal of lime, which rendered it extremely hard and durable."

THE STAGE.

MR. HENRY A. JONES, joint-author of "Hoodman Blind," "The Silver King," &c., is writing a three-act farce for the Vaudeville.

Judith Wynne and *Lady Lovelace*, novels by C. L. Pirkis, are, with the author's permission, being adapted for the stage; the former by the Hon. Stephen Coleridge, the latter by Mr. Lewis Clifton.

THE Odéon opened for this season with a revival of Rotrou's tragedy of "Venceslas." Rotrou is an author who holds the rank of a classic rather in virtue of the period at which he lives than of his intrinsic qualities. However, he was a playwright of some real merit, and two of his tragedies are not quite unknown to veteran playgoers. The performance at the Odéon was decidedly successful. M. Mounet took the part of Venceslas, M. Boulet de Monvel that of Ladislas, and Mlle. Méa acted Cassandra.

THE *Theatre* of this month has an article, by Mr. Austin Brereton, on "Theatrical Richmond," not, it would seem, a very promising subject, but the article abounds in good stories. Mr. Frederick Hawkins gives an account of the life of Adrienne Lecouvreur, and Mr. H. Savile Clark contributes a common-sense (but also, it must be said, common-place) article on the worn-out subject of "The Stage and Society." A spasmodically written article by C. S., on "Hoodman Blind," is better in its substance than in its style—which, indeed, could scarcely have been worse. Two articles of "recollections"—one relating to German, the other to English, theatres—are worth reading.

MUSIC.

THE HEREFORD MUSICAL FESTIVAL.

Hereford: Sept. 9, 1885.

THE Annual Musical Meeting of the three choirs was opened here on Tuesday. The weather has been unsettled; but the city is crowded and in gay mood, and the noble Norman cathedral was well filled at the performance of the "Elijah." As to orchestra and choir—which number less than half those heard at the Birmingham and the Leeds festivals; why, therefore, instance these in comparison, as some critics do?—the choir is at times over-balanced by the orchestra, and the latter is perhaps a little disproportionately strong in wind instruments; but though the orchestra numbers some sixty only, the result of picked performers and selected instruments is indeed excellent. Dr. Langdon Colborne, the cathedral organist, as usual, conducts. At last evening's concert was produced the first of the two works written for the festival: Dr. Joseph Smith's cantata of "S. Kevin." The presentation in dramatic

form of the legend as narrated in one Griffin's poem of fifty years back, the cantata has a subject capable of fine treatment, coupled with descriptive and passionate libretto. An ascetic, saintly youth is tempted by fair woman to break his monkish vows—to live the life of human passion, instead of that silent one of restraint; wherein, however, the emotions are not quite unministered to, for monks, before the altar, are ever in sympathy with the "dying Lord," and they pay devotion to "the Blessed Virgin." The opera has represented similar themes; does the present musical treatment, then, give us originality or adequateness? Wagnerian in using "leading themes," Dr. Smith has one to describe lovely desolate nature—the background of the drama; and another, portraying the struggle and the triumph of the ascetic spirit, is suitably repeated; finally, in the closing chorus of the saint's permanent triumph, more or less familiar melodies are introduced, and the level of originality is perhaps nowhere touched. Might not, for instance, a composer suggest dissent from the monkish ideal of life? An ideally righteous life in the world would surely more accord with modern feelings, and be perhaps truer to present-day humanity than S. Kevin's course. It must be said, then, that the work is inadequate and somewhat crude; the orchestration elementary, the melody lacking novelty, and the whole too long, or too much marked by sameness. But if Dr. Smith is an inexperienced writer to obtain the honour this festival has accorded him, he shows happy talent for part-writing, and is, to boot, young. The piece made a pleasing impression on the audience; and the composer, who conducted, was recalled at the close. The rapid, spirited movement of the best solo—no. ix. for soprano—was given with sympathetic expression by Miss Anna Williams. The Bradford choir was heard to advantage. The first and final choruses are the best. Mr. Harper Kearton's rendering as S. Kevin was a little sedate.

This morning the performance of Gounod's trilogy, "Redemption," in which Miss Anna Williams sang for the first time the first soprano part, completes its production at the three towns associated with these festivals. The "March to Calvary" and the "Apostles' Hymn" were taken by Dr. Colborne at quickened time. To say that Mme. Albani was, in the main, missed only in the highest solo notes is to award Miss Anna Williams high praise. After hearing "Mors et Vita" produced at Birmingham, it may be said the "Redemption" holds its own as a work for general acceptance. To-morrow evening the second and, though short, yet more important novelty—Mr. C. H. Lloyd's "Song of Balder"—is to be produced, as to which we may have a note in our next.

MUSIC NOTE.

MR. J. SPENCER CURWEN has nearly completed a second series of his "Studies in Worship Music," which will be published in the autumn. This volume will carry on the topics started in the first which was issued five years ago. There will be several descriptive chapters on music at the Chapel Royal, St. Paul's, Westminster Abbey, and the employment of music by the Russian Church, the Moravians, the Welsh Calvinists, the Salvation Army, &c., will be treated. An important section will deal with German Protestant Church music. In the preparation of this, Mr. Curwen has paid several visits to Germany. The St. Cecilia movement in the Roman Catholic Church will also be noticed, and there will be a chapter on the relation of music to Sunday-schools and another on its place in the curriculum of theological schools.

WARD & DOWNEY'S NEW BOOKS.

In two vols., large crown 8vo, with an Etching of Charles II., and Ten other Portraits of Celebrities of the Court of Charles II.

ROYALTY RESTORED; or, London under Charles II. By J. FITZGERALD MOLLOY, Author of "Court Life below Stairs; or, London Under the Georges." [On the 21st inst.

In 2 vols., demy 8vo, with Portraits and other Illustrations, 80s.

THE UNPOPULAR KING: the Life and Times of Richard III. By ALFRED O'LEGGIE, Author of "The Life of Pius IX." &c. [Next Week.

In 1 vol., crown 8vo, 3s. 6d.

PHILOSOPHY in the KITCHEN: General Hints on Foods and Drinks. By the AUTHOR of "THE REMINISCENCES of an OLD BOHEMIAN," &c.

"The most recommendable volume on cookery that has been published in English for many long days."

"A remarkable book, cleverly written, full of thought, and brimming over with original suggestions."

In 1 vol., crown 8vo, with an Engraved Portrait of Hugo.

VICTOR HUGO: his Life and Work. By G. BARNETT SMITH.

"Excellent..... Mr. Smith tells the story of a brilliant but chequered career in his easy manner and with sympathetic discrimination."—*Times*.

NEW NOVELS AT EVERY LIBRARY.

IN SIGHT of LAND. By Lady DUFFUS HARDY, Author of "Beryl Fortesque," &c. 3 vols. [Next week.

A PRINCE of DARKNESS. By FLORENCE WARDEN, Author of "The House on the Marsh," &c. 3 vols.

"Full of excitement, and bristles with telling surprises."—*Court Journal*.

THE SACRED NUGGET. Second Edition. By B. L. FARJEON, Author of "Great Porter Square," &c. 3 vols.

"It is rare to meet with so fresh and original a story, and one that is of such engrossing interest."

"The story is so interesting as to force one to turn over the pages with something like real excitement."

AS in a LOOKING-GLASS. By F. C. PHILIPS. 2 vols.

"Clever beyond any common standard of cleverness."

"Written with thorough knowledge and perfect frankness. It is remarkably clever, full of sustained interest, and beats Mrs. 'Archie Lovell' Edwards on her own ground. In the present dearth of amusing books it ought to be very widely read."—*World*.

COMEDIES from a COUNTRY-SIDE. By W. OUTRAM TRISTRAM, Author of "Julian Trevor." 1 vol.

"Both clever and amusing."—*Morning Post*.

"Pervaded with a spirit of pleasant humour."

Next week, in pictorial wrapper, price 1s.

HUNTED DOWN. By Max Hillary, Author of "Once for All," &c.

Next week, in boards, price 2s.

THE OUTLAW of ICELAND. By VICTOR HUGO. Translated by Sir GILBERT CAMPBELL.

Now ready, in picture wrapper, price 1s.

THE DARK HOUSE. Tenth Thousand. By G. MANVILLE FENN.

Now ready, in cloth, price 1s.

A CATECHISM of POLITICS for the USE of the NEW ELECTORATE. By FREDERICK A. HOFFMAN.

LONDON: WARD & DOWNEY,
12, YORK STREET, COVENT GARDEN.

CLARENDON PRESS

LIST OF NEW BOOKS.

Just ready, fcap. 8vo, ornamental vellum, 7s. 6d.; cloth, 5s.

STEELE.—SELECTIONS from the *TATLER*, *SPECTATOR*, and *GUARDIAN*. Edited, with Introduction and Notes, by AUSTIN DOBSON.

Just ready, crown 8vo, cloth, 4s. 6d.

LECTURES in ECCLESIASTES delivered in WESTMINSTER ABBEY. By the Very Rev. GEORGE GRANVILLE BRADLEY, D.D., Dean of Westminster.

In 2 vols., demy 8vo, with Plates and Maps, £1 16s.

ITALY and her INVADERS, 476-553. By THOMAS HODGKIN, Fellow of University College, London, Hon. D.C.L. of Durham University. Vol. III., Book IV.—THE OSTROGOTHIC INVASION. Vol. IV., Book V.—THE IMPERIAL RESTORATION. [In a few days.]

Demy 8vo, cloth, 10s. 6d.

STUDIA BIBLICA: Essays in Biblical Archaeology and Criticism and Kindred Subjects. By MEMBERS of the UNIVERSITY of OXFORD (including Professors DRIVER, WORDSWORTH, and SANDAY).

Demy 8vo, cloth, 10s. 6d.

ELECTROSTATICS. Being Vol. I. of the Mathematical Theory of Electricity and Magnetism. By H. W. WATSON, D.Sc., F.R.S., formerly Fellow of Trinity College, Cambridge; and S. H. BURLBY, M.A., formerly Fellow of St. John's College, Cambridge.

Second Edition, carefully Revised, extra fcap. 8vo, cloth, 9s.

SPECIMENS of EARLY ENGLISH. With Introductions, Notes, and Glossarial Index. Edited by the Rev. RICHARD MORRIS, LL.D. Part I.—From "Old English Homilies" to "King Horn," A.D. 1150-1300.

Demy 8vo, 12s. 6d.

ELEMENTS of PROJECTIVE GEOMETRY. By LUIGI CREMONA, formerly Member R.S. Lond., Professor of Mathematics in the University of Rome. Translated by CHARLES LEUDESDORF, M.A., Fellow of Pembroke College, Oxford.

London: HENRY FROWDE, Oxford University Press Warehouse, Amen Corner, E.C.

THE NINETEENTH CENTURY

For SEPTEMBER, 1885. 2s. 6d.

WHAT IS A MODERATE LIBERAL to DO? By the Right Hon. EARL COWPER.

THE RADICAL PROGRAMME for IRELAND. By EDWARD WILLIAM O'BRIEN.

AN EPISODE of the ARMADA. By the Right Hon. the EARL of DUCIE.

WAR HORSES. By Colonel RUSSELL.

THE CHOLERA-INOCULATION FALLACY. By EDWARD F. WILLOUGHBY.

THIBET. By CHARLES H. LEPPER.

WHY MEN will NOT be CLERGYMEN. By HUBERT HANDLEY.

THE ENCLOSURE of COMMONS. By H. R. GREENFELL.

VITIGNA COLONNA. By H. SCHUTZ WILSON.

RESERVATION of the SACRAMENT. By the Rev. Dr. BELCHER.

A REPLY to my CRITICS. By His Highness PRINCE HALIM PASHA of Egypt.

RECENT PROGRESS of DEMOCRACY in SWITZERLAND. By EMILE DE LAVELEYE.

London: KEGAN PAUL, TRENCH, & CO.

THIS DAY IS PUBLISHED.

THE REBY: a Novel.

By FAYR MADOC.

2 vols., post 8vo, 17s.

EDINBURGH AND LONDON: WILLIAM BLACKWOOD & SONS.

CAMILLA'S GIRLHOOD: a Novel. By Linda Villari, Author of

"On Tuscan Hills and Venetian Waters," &c. 2 vols., crown 8vo, 21s.

"She writes in a straightforward and unaffected style, which makes her story satisfactory reading."

"Madam Villari succeeds with a good deal of skill in getting into her pages pictures of very different scenes and kinds of life, all firmly though quietly painted, and all thoroughly lifelike."—*Academy*.

A LOST SON. By Mary Linskill, Author of "Hagar," "Between the Heather and the Northern Sea," &c. Crown 8vo, cloth, 4s. 6d., post-free.

"Her ready pen and fluency of language..... 'The Glover's Daughter' is like a breath of moorland air."

"We notice no traces of hurry or carelessness in its delightful pages, and in consequence of the writer's conscientious literary workmanship the reader's pleasure is much enhanced. It is the sort of book that appeals to a refined taste."—*Sheffield Independent*.

LONDON: T. FISHER UNWIN, 26, PATERNOSTER SQUARE, E.C.

J. & R. MAXWELL'S

ANNOUNCEMENTS.

NEW CHEAP UNIFORM EDITION of "RITA'S" NOVELS.

Price 2s., bds.; 2s. 6d., cl.; 3s. 6d., half-mor. (post 4d.).

FRAGOLETTA. By "Rita," Author of "Dame Durden," "Vivienne," "Corinna," &c.

"A fascinating story; full of interest throughout." *Saturday Review*.

CHEAP EDITION of Mrs. J. K. SPENDER'S NOVELS.

LIST.

DEDICATED TO LORD NORTHBROOK.

THE POPULAR AND IMPORTANT NEW WORK on the ROYAL NAVY.

At all Libraries and Bookstalls, in 2 vols., crown 8vo, 15s.

ENGLAND ON THE SEA; OR, THE STORY OF THE BRITISH NAVY.

By W. H. DAVENPORT ADAMS.

Author of "Celebrated Englishwomen of the Victorian Era," &c.
"A most entertaining book, comprising the detailed narrative of how, from the distant days of Nelson Alfred until the present year, Britain has won renown as a naval power. It is gratifying to peruse this brilliant record of ancient bravery, telling of the gallant deeds of long ago.... Mr. Adams's previous writings are all graphic, accurate, and graceful; but in this work he has surpassed himself. It is a book of engrossing interest, which once opened is not willing to be laid down till the final page is turned. It insures attention as a carefully compiled, statistical, and trustworthy history, while in style it is as amusing and eloquent as the most thrilling volume of fictitious adventure."—*Whitehall Review*.
"Mr. Adams is a most indefatigable compiler.... He has essayed to supply what is an acknowledged want in our literature, a really popular history of our navy."—*John Bull*.
"The merits of this latest contribution to the history of our war ships will be recognized to lie in the happy and lucid style in which Mr. Adams relates his facts."—*Daily Telegraph*.
"In the present work none of those delicate touches for which 'Celebrated Englishwomen' was remarkable, are absent.... The two volumes have been carefully compiled, and the stories of the various great battles and adventures have lost nothing by being told in comprehensive and flowing language."—*Public Opinion*.

POPULAR NEW WORK ON JAPAN.

At all Libraries and Bookstalls, 1 vol., cloth, 3s. 6d.

HISTORY of JAPAN. By Percy

THORPE.

"A work like that of Mr. Thorpe's, in which the chief events of Japanese history are described, and a general idea of the country and its inhabitants is clearly set forth, possesses considerable value.... Mr. Thorpe has provided an excellent work, easily comprehended, and likely to be of much use for educational purposes, as well as of interest to the reader who is supposed to have finished his education."—*Morning Post*.
"The events of the present century are recorded with great conciseness. The book is a handy précis of the more salient historical facts, given in the plain style of the annalist."—*Saturday Review*.

The Popular Novels at all Libraries.

IN A GRASS COUNTRY: a Story

of Love and Sport. By Mrs. LOVETT CAMERON, Author of "Deceivers Ever," "A North Country Maid," "A Dead Post," &c. 3 vols.

IN A LONDON SUBURB. By

W. HARTLEY. 3 vols.

HEARTS or DIAMONDS. By Iza

DUFFUS HARDY, Author of "The Love that He Passed By," "Kot Easily Jealous," "Love, Honour, and Obedience," &c. 3 vols.

"A clever love tale.... It owes much to Miss Hardy's vivid pictures, the gorgeous scenery of California, and her bright sketches of the manners of its inhabitants.... Miss Hardy's dialogue is also witty and sparkling as those of the best novelists of the French school."—*Morning Post*.

THE HEIR PRESUMPTIVE. By

FLORENCE MARKYAT, Author of "My Sister the Actress," "Facing the Footlights," "The Heart of Jane Warner," &c. 3 vols.

THE ILL-TEMPERED COUSIN.

By Mrs. FRANCES ELLIOT, Author of "The Red Cardinal," "The Diary of an Idle Woman in Spain," &c. 3 vols.

"Few writers are so original as Mrs. Elliot. The plot of her new novel is not only unacknowledged, but it is also treated in a novel manner as to lend additional interest to a subject that is itself of an unusually dramatic nature.... Is from first to last exciting, and will be read with avidity by those who appreciate a romance that is at once powerful and unconventional."—*Morning Post*.

A RICH MAN'S RELATIVES.

By H. CLELAND, Author of "Inchbracken," &c. 3 vols.

"From the excellence of the descriptive passages one is enabled to realise the summer and winter scenery which surrounds the actors.... Most of the dramatic persons are very well drawn."—*Athenaeum*.

"The novel furnishes some graphic glimpses of Canidia, life and life among the Indians, and the reader will be interested in pursuing the ramifications of a very entertaining story. Mr. Cleland evidently writes from full knowledge of the people and the scenes he describes."—*Academy*.

"The descriptive parts of this novel are remarkably good.... It contains much of good character drawing. There are many graphically painted scenes of men and manners."—*Morning Post*.

"The story is well constructed and full of excitement. Mr. Cleland has already distinguished himself as a writer."—*Whitehall Review*.

"In this story there will be found much to interest.... There is considerable merit both in the construction and planning of the various incidents."—*Public Opinion*.

ON GOLDEN HINGES. By Dora

RUSSELL, Author of "The Vicar's Governess," "Footprints in the Snow," "Out of Eden," &c. 3 vols.

LITERATURE.

The Spirit of Goethe's Faust. By William Chatterton Coupland. (Bell.)

THIS book is thus introduced by its author:

"The present volume consists of a course of popular lectures, and presupposes [in the reader] no previous knowledge of its subject. Description, therefore, naturally forms a large part of the contents. . . . The object I have in view is to excite an intelligent interest in Goethe's work as a whole, to stimulate, rather than to satisfy curiosity. The time, in my opinion, is not yet ripe in this country for a professedly critical work on *Faust*. What is most needed, in England at least, is more readers of *Faust*, not more critics. In Germany, owing to a special privilege, the case is somewhat different. I allude to the representation on the stage of the two parts of *Faust*. Scholars accordingly may always there be sure of a public when addressing themselves to points of detail, or in handling fundamental questions relating to the origin and minute structure of the work. . . . I make no pretence in this small volume to address the forum of trained investigators. It will not escape the eyes of the latter . . . that my own standpoint is eclectic or compromising. I frankly own that continued study has affected a strong early opinion of the integrity of the work. But while unable any longer to see with the enthusiastic eyes of a Hermann Grimm I cannot go the lengths of Wilhelm Scherer, and the disintegrating school. There is, I believe, sufficient evidence of singleness of purpose throughout; but in a production occupying so many years of life, the author's mind was open to fresh suggestions that led to obvious gaps and unmistakable inconsistencies."

The reader of this book is forced to conjecture that it was written in great haste. Only thus can we explain how a man of such culture and intelligence writes a style in general so very-careless, sometimes so positively bad. Only to haste can we ascribe a mistake of translation like that on p. 56. There, having quoted the lines—

"This companion purposely I give
Who stirs, excites, and must as devil work"—

a very faulty version from the original,

"Drum geb' ich gern ihm den Gesellen zu
Der reizt und wirkt und muss als Teufel
schaffen,"

the author proceeds: "Must as devil work. Mephistopheles is only *seeming* devil, not true malignancy." The true sense is, of course, rather, "Devil *though he be*, must exercise a creative activity." The composition of the book, moreover, betrays the haste of a writer compelled to prepare a popular lecture for a fixed date, and to fill it out so that its delivery shall occupy a fixed length of time. Sometimes one feels that the book is too much a mosaic of selections from critics and commentators, and sometimes an episodic dis-

cussion is introduced which is plainly not in harmony with the plan declared in the Preface. Take, for instance, those pages at the end of the second chapter about the name Mephistopheles and its origin. Their value in a popular lecture is well indicated by the sentence which concludes the chapter: "Goethe himself did not know the origin of the name." Popular lectures on *Faust* cannot aim at making the hearers better informed than Goethe himself! Then the steady narration in detail of the plot of a work of art, however skilfully done, is to a certain degree tedious perforce. But this tediousness is due to the origin in popular lectures, and Mr. Coupland has lessened it by his intelligence and sympathy.

For, with all its faults, his book is a very useful one. All good libraries should have it on their shelves, and it will be valued by all English students of Goethe. Its marks of haste indicate merely the haste due to the necessity of immediately composing, not the haste of rawness of acquaintance with the subject. It is the work of an earnest student, of an excellent critical intelligence. Not, I believe, that there is here much aesthetic criticism which Mr. Coupland would claim as original. So many labourers have already been at work that originality is difficult; and, moreover, the Preface implies a modest disclaimer of having had original criticism in view. The purpose of the book is to pioneer the way in England for original criticism, to aid beginners, to set forth, so far as may be done in a book for beginners, the chief results of the myriad studies of *Faust* already in existence. In the fulfilment of this task the author displays a sound good sense, which is particularly valuable in a student of commentaries on *Faust*. And, on the whole, what he needed for his purpose is selected and arranged with skill; though, as said before, one has sometimes in reading the work a sense of a mosaic composition, probably not felt by the audience as it came from the lips of the lecturer. It will be observed that free use has been made of the admirable notes of Bayard Taylor, whose translation with its notes remains the most important contribution to Goethe literature by an English writer since Mr. Lewes published the *Life*.

Chapter i. treats of the Faust legend, and gives a sketch of what is vaguely recorded of a real man named Faust, and of the rise of a myth concerning him. The myth at length found expression, and took more elaborate form in the celebrated *Volksbuch*, published at Frankfurt in 1587, whence Marlowe derived the plot of his *Faustus*. Marlowe's play, when brought to Germany by strolling English actors, begat a German "people's play" (*Volkschauspiel*), which, in the degenerate form of a puppet play, lasted on until late in the eighteenth century, and exercised, as we know by his own account, a powerful influence on the imagination of the young Goethe. The closing pages of this chapter, in which an attempt is made to divine the real story of the man Faust, are of considerable interest.

Chapter ii. treats of the legend dramatised—by Marlowe, by the "people's play," and by Lessing, in whose plan of a drama on the subject the thought of Faust's soul being saved is first found, though the method of salvation differs essentially from that of Goethe's con-

ceiving. Coming finally to Goethe's drama, we have a sketch of the history of its composition, insistence upon the unity of the whole work, consisting of first and second parts, and an account of the prelude at the theatre and of the prologue in heaven. The remaining eight chapters follow the course of the poem, narrative and quotations alternating with a kind of aesthetic and philosophical commentary.

It is a good characteristic of Mr. Coupland's book, that it treats the whole *Faust* as one work. Enough has been said in English criticism of the defects of the second part of *Faust*; it is now time that something should be said of its merits. Let it be granted that the faults of execution are great, that the tendency to symbolism is excessive and wearisome, that the author has tried to gather too much within the compass of his work, that a great deal is not inevitable—might be said in some other way, might be left out altogether. But how noble was that original conception of the erring human soul, cured by lapse of time and the loveliness of Nature, trained and developed by intercourse with the world, by the desire for Ideal Beauty, by activity for the good of others, by Love! How exquisite is much of the poetry! and even though poetry sometimes fail, the intellectual company of Goethe is the best that modern times can afford; the subjects which interest him are those of prime importance to civilised humanity.

One of the best passages in the book now under review is an explanation and defence of the symbolism of "Helena":

"Of all the puzzles offered us in *Faust*, that in this third act is the most serious, for in this act Faust is not only, as Goethe remarks in his prefatory notice, 'the man of the first part; acting on a wider stage,' he ceases to be *man* at all, and becomes an *historical era*, being no other than the age of chivalry. And yet, though Faust dissolves into this impersonality, the author quietly represents his position in the "Helena" as a natural development of the first part of the tragedy, with its thorough-going individualism. . . . If we retain our faith in the unity of the poem, relying on the author's express declaration to Wilhelm von Humboldt only a few days before his death: 'It is now sixty years since the conception of *Faust* in its whole extent stood clearly before my mind'—if we accept this unequivocal confession, this, however, must be plainly remembered, that *Faust* means three things: (1) The individual man, whose course from youth to the grave is described in outline, engaging our sympathies as only the concrete and personal can; (2) the generic man, as we may say, or man as a developing soul whose history is a discipline and a lustration. . . . (3) *Humanity as a whole*, the great ages of the world—a point of view wholly confined to the Second Part, and even there only occasional, but not to be ignored if we would enter into the full spirit of the author.

"Now, in the present act the first and primary aspect is insignificant. The individual drops more out of sight here, for the simple reason that the stage at which the man Faust has arrived is a stage of inward effort, and the outward action, had it been portrayed, would have interested us as little, say, as Faust's ten years of academic teaching. His outward activity was diversified and striking enough at the imperial court—it will be so again; but a period has occurred in his life when the progress is invisible to the outward eye, when he

is occupied in building up in his own bosom an inner world of beauty."

To present in a drama the inward life of man, the struggles of the soul for light in the great complex modern world, was Goethe's aim in the second part of *Faust*; what wonder if there be much that is difficult, much that is at first repellent in such an attempt! But when Goethe has undertaken to teach, it behoves any of us who profess to have undertaken self-culture to listen with reverence. The throng of idle ladies and gentlemen at the emperor's court composedly chatter foolish praise or foolish fault-finding when Helen, when Supreme Beauty, is presented to their gaze. But Faust is rapt with admiration, forgets that Beauty is an ideal, that she cannot be possessed; only feels that he *must* possess the highest good which he knows—*Wer sie erkennt der darf sie nicht entbehren*. The result of Faust's overhasty action is not immediate success, but he has really taken one more step in the difficult road to his goal, while the composed ladies and gentlemen remain behind.

In an appendix, Mr. Coupland gives the titles of thirty-one English translations of *Faust*, commenting briefly on the value of each of them. The best, in his opinion, are those by Bayard Taylor and Miss Swanwick, and he has high praise for the version of part i., by Charles T. Brooks. We should have been glad of a list of the more important annotated editions of *Faust* in the original, but Mr. Coupland has not supplied one. In notes to his lectures, however, he gives references to editions, commentaries, and essays in periodicals which, taken altogether, largely increase the value of the book. The writer of this notice ventures to advise beginners to get the edition of part i. by Turner and Morshead (Rivingtons, 1882), and the edition by K. J. Schröer (Heilbronn: Henninger, 1881).

T. W. LYSER.

BOOKS ON THE CENTRAL ASIAN QUESTION.

Russia in Central Asia. By Hugo Stumm. Translated by J. W. Ozanne and Capt. H. Sachs. (Harrison.)

Central Asian Questions. By Demetrius C. Boulger. (Fisher Unwin.)

The Coming Struggle for India. By Arminius Vambéry. (Cassell.)

Afghanistan and the Anglo-Russian Dispute. By Theo F. Rodenbough. (New York: Putman's.)

ALTHOUGH still far from its *dénouement* the great political drama now in progress in Central Asia has already given rise to a special literature of formidable proportions. Nor can we wonder at this when we reflect that in its issue are involved portentous consequences for all mankind. The first Napoleon somewhat rashly predicted that, before the close of the century, Europe would be either Cossack or a Commonwealth. It would be safer to say that, humanly speaking, before many generations the destinies of the world will be controlled either by Anglo-Saxon or Muscovite influences—that is, by the spirit of freedom or of a grinding military despotism. Gloomy forebodings as to the final issue can be harboured by pessimists

alone. Nevertheless, the element of uncertainty, as needs must be in all human affairs, is sufficiently present to endow the discussion of the subject with more than the interest usually attaching to academic exercises.

The four works on our list, written as they are by a German, an Englishman, a Hungarian, and an American, should certainly help the student in arriving at some definite conclusions on the merits of the questions involved. These group themselves naturally in two categories—the abstract question of right and wrong, and what some will think the more practical question as to the material strength of the contending powers. On the first point the American is silent, while the Hungarian and Englishman pronounce themselves emphatically on the side of England, and the German scarcely less so in favour of Russia. But Stumm, a captain of Hessian Hussars, who accompanied the Muscovite expedition to Khiva in 1873, not only contradicts himself, but betrays the rôle of the special pleader in the extravagant language with which he speaks of Russia's holy mission, disinterested motives, honest diplomacy, civilising influences, and straightforward dealings with the Khanates of Western Turkestan. Thus in one place it is "the cries of distress of the ill-treated Jews," treated with such overwhelming generosity in Russia itself, that

"served Gen. Kauffmann and induced him to check the increasing excitement by decisive measures; and the avalanche of Russian might rolled further and further to the south, to the splendid valley of the river Zerafshan, to Samarkand, the summer residence of the Emir of Bokhara, while Said Mosaffar sought to hold back the conquerors by means of crafty agents and deceitful promises."

The suspicion may here be at least permitted that the "avalanche" which swallowed up Bokhara was attracted quite as much by the "splendid" Zerafshan ("gold-dispensing") valley as by the "cries of distress of the ill-treated Jews." Elsewhere the Russians enter the country "not as harsh, vindictive conquerors, but as *gentle mediators* and true apostles of civilisation"; and although their campaigns were "sanguinary," the "unavoidable severities [wholesale butcheries of men, women, and children] and horrors of war were mitigated and ennobled by principles of humanity which made the Russian soldiers appear, to a certain extent, as the pioneers of science and culture in the heart of Central Asia." Again, we are told that the causes of the Khivan expedition "did not lie in the far-reaching and complicated designs of Russian politics," as "the occupation of Khiva had for centuries [*sic*] become a social and political necessity." A policy which "for centuries" could foresee such a "social and political necessity" as this will, nevertheless, to most minds probably appear sufficiently "far-reaching and complicated." And the impression will not be weakened when it is added by this blundering special pleader that "energetic action on the part of Khiva was temporarily paralysed by Kauffmann, who succeeded in raising disturbances within the Khanate itself." However, "the forbearance and long-sufferance of Russia had now come to an end." At the

same time, much of this "forbearance and long-sufferance" might have been dispensed with had Col. Markosoff, for instance, not been permitted two years previously, "on his own responsibility" (*l'appétit vient en mangeant*), to push his *reconnaisances* still further eastward on the Sara-Kamish road to Khiva." It is significantly added that

"although the instructions given to Markosoff in no wise officially prescribed an expedition to Khiva, it yet appears that Prince Mirsky specially impressed on him the necessity of penetrating as far as he could to the east. The limits, therefore, of his commission were not accurately defined, and the appearance of the Russian troops before the walls of the city was not directly forbidden. . . . The Russians would seem to have been desirous of first awaiting the result of Markosoff's expedition, whose energetic and circumspect [*sic*] conduct in the previous autumn promised very well for this year."

Here is the clue to the tangled web of Russian diplomacy or duplicity in Central Asia for the last fifty years; and if for Markosoff we substitute Komaroff, we shall see that the events preceding the fall of Khiva in 1873 were merely a rehearsal, *mutatis mutandis*, of the Penjdeh incident of the present year foreboding the approaching fall of Herat or Maimana, or both.

In other respects Stumm's work, the first of a series on Central Asiatic matters promised by the publishers, has a certain value so far as it goes, that is, down to the events immediately preceding the Khivan expedition. Here all information stops, and even the statistical data of population, revenue, industries, agricultural returns, and so forth, are allowed by the translators to remain at the year 1873. The work of translation has otherwise been indifferently executed. The style is often clumsy, unidiomatic and distinctly "German"; and when an attempt is made to break up involved periods, the connecting particles are at fault. German miles and square miles remain unreduced to the mystification of the reader, except in one place, where "one and a half German miles" are said to make "about ten English miles"! Of frequent occurrence are such expressions as "Middle Asian army"; "the fourth of the expeditions," meaning "the fourth expedition"; "Aral-Caspian plateau" and "Turanian tableland" for "Aralo-Caspian basin," or "depression," seeing that the region in question is an area of inland drainage, with a mean elevation of scarcely 300 feet, and falling at its deepest point some 70 or 80 feet below sea level; to all which must be added a chaotic orthography, which is simply maddening. Who, for instance, except a specialist, could guess that *Bajat-Chadshi* stands for *Bait-Haji* on the Attek? Here the curious form *Chadshi* is specially instructive, and may be commended to the attention of the Geographical Society now endeavouring to effect a reformation in the spelling of geographical names. The barbarous *dsh* represents a compromise between the German *dsh* and the French *dj* for the simple English *j*, while the *sh* (to be pronounced *kh*) is the normal Russian substitute for initial *h*, which never occurs in that language. Thus the Arabic *haji* becomes *Chadshi*, just as the English *Hayes* has become *Ave* in Italian, by suppression of initial *h*.

and final *s* supposed not to be pronounced, and by treating *y* as “una *v* codata,” a *v* with a tail! After this such forms as *tacheschme*, *Tschetschnez*, *Muchamed Rachim* (Muhammad Rahim), *Uest jurt* (Ust-urt), *Jermak* (Yermak), *Ritschtschoff*, will occasion no further surprise; only *Tschy-kischlar* and *Chikishlar* need not have occurred within three lines of each other on the same page, with a third alternative, *Chikishliar*, on the accompanying map. This “Map of Central Asia, 1885,” is a good specimen of Mr. Stanford’s cartographic work, although the Russo-Afghan frontier line, drawn from Old Sarakhs through Imam Baksh to Khojah-Saleh on the Oxus, is already out of date, so rapidly do events move in a region where commanding officers are encouraged to rectify frontiers “on their own responsibility.”

Mr. Boulger’s book, a reprint in convenient form of essays contributed at different dates to the *Times*, *Calcutta Review*, *National Review*, *Nineteenth Century*, and other leading periodicals, covers the whole field of Asiatic politics in recent times. These papers, written by a competent hand in a clear, vigorous style, were well worth reproducing at the present juncture, and are the more acceptable that special attention is paid in them to the Chinese element, an all-important factor in the ultimate solution of the Central Asian question too apt to be overlooked even by far-seeing statesmen. At times Mr. Boulger may seem to speak with a certain dogmatism; but his confident tone is fully justified not only by his exceptional knowledge of the matter in hand, but also by the remarkable way in which his forecastings have been repeatedly confirmed by the event. Thus, in the article entitled, “Murr! What Next?” of which he is naturally proud, all its statements having been verified almost to the letter within a twelvemonth of its appearance, he warns the Government that any attempt to settle the Afghan frontier by direct negotiation with Russia will end in failure, adding that “the only way to affect a satisfactory solution will be by an act of assertion on the part of the Amir’s lieutenant in Herat, and not by the abortive and lingering movements of an International Frontier Commission. I went on to name Ak Tepeh, or, better still, Sary Yaz, as the most suitable place where Abd-ur-Rahman could station a garrison. At the very moment that I was writing these lines the viceroy was addressing the Amir in complimentary terms upon the measures which he had taken to consolidate his position at Penjdeh. I do not think anyone will at this moment impugn the prudence of these recommendations or the accuracy of these predictions. The Government, however, reversed the mode of proceeding. They did not invite the Amir, and they did enter upon ‘direct negotiations with Russia.’ The consequences are now patent to everyone. The Frontier Commission can only end in the signing away of Afghan rights north of the Paropamisus, and in placing Russia in a position to take the fullest advantage of the first symptoms of disturbance in Herat” (p. xi.). These lines were penned on May 25, and the concluding “predictions” have again been verified with startling rapidity. On September 12 it was announced by the daily press that the Anglo-Russian Protocol or preliminary agreement had been concluded, practically “signing away Afghan rights north of the Paropamisus.” Simultaneously with

this came the news that “the Indo-Afghan frontier is in a very disturbed state, owing to the quarrels between the border tribes,” so that Russia is already “in a position to take the fullest advantage of disturbance in Herat,” from which she is now separated only by the undefended and indefensible Zulfikar Pass.

And to this pass have things been brought by what Prof. Vambéry stigmatises as

“the unheard of short-sightedness of British statesmen, which has handed over to her [Russia] the very keys with which she can now open, at her leisure, the gate of India; for she is in full possession of all the ways which can bring her to Herat in a comparatively short time, and without any difficulty whatever” (p. 99).

No doubt, in his brilliant essay on “The Coming Struggle,” Prof. Vambéry occasionally indulges in somewhat violent language, as when he says that “the public mind of England was swayed by her humanitarian swindling.” But some allowance may be made for an author whose voice has been like that of “one crying in the wilderness,” ever since his return, in 1864, from his memorable expedition to the Khanates of Western Turkestan. He opportunely recalls his interview in that very year with Lord Palmerston, who complacently reminded him that

“the Hungarians, like the Poles, had a hot brain, and that many generations must pass before Russia would be able to pull down the Tartar barrier and approach the country intervening between India and Bokhara.”

He recalls Mr. Gladstone’s equally complacent language of 1878: “I have no fear myself of the territorial extensions of Russia—no fear of them whatever; I think such fears are only old women’s fears,” such sentiments having, nevertheless, already cost the country some millions, besides imposing a permanent burden on the revenues of India, where Gen. Soboleff now tells us that “thousands of natives only await Russia’s crusade of deliverance.” Some indulgence, we say, must be granted to a man who has had to contend with the amazing stupidity of the “masterly inactivity” school of politicians, a stupidity against which “the gods themselves shall fight in vain.”

At the same time it is satisfactory to find such a competent judge looking hopefully to the issue, basing his confidence as much on the moral superiority, as on the boundless material resources of Great Britain.

“Why should we overlook,” he asks, “the enormous differences existing between military material recruited from a free country, and led by highly educated patriotic officers, on the one hand, and between the poor slave forcibly enlisted by officers, who, brought up in gambling, debauchery, and the indulgence in dissipation of every kind, can hardly be animated by the noble spirit of freemen. Indeed it is a bitter irony of fate to have to draw comparisons between the abilities of a nation standing at the top of our civilisation, the prototype of liberal institutions for the whole world, the luminous fountain of science and of many glorious achievements of mankind, and of a society noted for its abominable vices, where truth-speaking is an unheard-of occurrence, and where an emperor said that he was only safe with his palace built of granite, which could not be stolen by his dear subjects or his surroundings” (p. 137).

It is curious to find Gen. Rodenbough, after discussing the resources of the two empires, finally inclining to the side of England on the same moral grounds.

“On the other hand,” he remarks, “Great Britain can boast of an inexhaustible capital, not alone of the revenues which have been accumulating during the last quarter of a century, but of patriotism, physical strength, courage and endurance peculiar to a race of conquerors” (*Afghanistan*, &c., p. 103).

The author of this volume tells us that its purpose has been “to give as much reliable information upon the cause of the Anglo-Russian dispute, the nature of the probable theatre of operations in case of war, and of the armies of the Powers concerned as could be obtained and printed within a single fortnight.” It is surprising that writers, who may be supposed to have a reputation at stake, will accept commissions of this sort from publishers anxious to throw on the market any stuff likely to find a ready sale during moments of passing excitement. The result of this attempt at an impossible *tour de force* is to the last degree unsatisfactory. The “information” scraped together, not always from the most trustworthy sources, and printed “within a single fortnight,” so far from being “reliable,” teems with inaccuracies and mis-statements of the crudest description. Thus the area of Afghanistan is given at 12,000 square miles; mountains 15,000 feet high are placed in the Sufed-Koh range south of Jelalabad; the Herat river (Hari-rud) is sent with the Helmand to the Sistan swamps; the population of Afghanistan is raised “approximately” to 8,000,000, “the great part of Persian descent”; the Duranis and Ghilzais make an exchange of their respective geographical domains, the former being removed to Kandahar, the latter to Kabul and Jelalabad; the small Kizil-bash community at Kabul is said to “comprise 3,000,000 of Shiaks,” while the large Tajik element is reduced to 10,000; the “Kaffirs” (Shah-Posh Kafirs) are called “Hindus”; the peace-footing of the Russian land forces is given at 663,045 men, of whom 460,494 are “artillery,” and this professes to be “approximately from latest (1884-85) returns”; lastly, we have the usual mangling of foreign languages, as in the misquotation of the Roman maxim “inter armes [*sic*] silent leges.”

It is noteworthy that in the rather full “List of Authorities” the name of Charles Marvin is conspicuously absent, an omission all the more remarkable since use is evidently made of some of the data originally supplied by that indefatigable and always accurate writer.

Let us ask, in conclusion, is it fair to supply wares of this quality to a public seeking trustworthy information on a momentous question at a critical point, and label them “reliable,” although the price may only be “fifty cents”? A. H. KEANE.

A Literary and Biographical History, or Bibliographical Dictionary of the English Catholics, from the Breach with Rome in 1534 to the Present Time. By Joseph Gillow. Vol. I. (Burns & Oates.)

MR. GILLOW has undertaken a work of very great labour. To say that the portion already

printed is inaccurate in some respects, and that it errs both on the side of comprehension and of omission, does not seriously detract from the benefits which all who care for the theological history of the last three centuries and a half are likely to derive from it. We must frankly own that for our own part we set more store by the later biographies than by the earlier ones. Mr. Gillow has not fallen into the snare of using violent language, nor does he sin in the matter of fine writing; but the lives of the Catholic sufferers under the penal laws, so far as they have yet been recovered, are to be found in the works of Challoner, Dod, Mr. Foley, and other students of the same class; and, except for the purpose of handy reference, it does not seem that any great good has been attained by reproducing them. With the Catholics of more recent times the case is different. Many persons who do not belong to the religious body of which Mr. Gillow is a member are anxious for just the sort of information which his pages supply as to the humble and self-denying men of the last and the present centuries who ordered the affairs of the Roman Catholic Church from the time when it ceased to be a popular amusement to go to witness a popish priest hanged, drawn, and quartered, to the period when the Tractarian movement directed all eyes toward the small and hitherto despised Roman communion in this country. These latter lives, though short, are remarkably well written, all sorts of obscure sources of information have been examined; and, as a consequence, many names have been included which a less careful investigator would have overlooked. Of course, Mr. Gillow's book is not perfect. There must have been Roman Catholic writers whose existence has remained unknown to him. Men do not commonly put a declaration of their faith on the title-pages of their books, and during the reigns of the Georges there were many satisfactory reasons why authors should be unwilling to attract attention to the fact that they belonged to an unpopular religion. The Gordon riots, the spirit of which was by no means confined to London, were evidence that the property, and even the lives of those who clung to the faith of pre-Reformation days might, at any moment, be at the mercy of a godless rabble. As an instance in point, we wonder how many of our readers know that Mrs. Inchbald, a once popular novelist whose writings are as yet by no means forgotten, was a Roman Catholic. This has been proved by a writer in a recent number of *The Dublin Review*.

A careful examination of Mr. Gillow's volume, which includes the first three letters of the alphabet only, induces the belief that the names of but very few authors have been omitted. We at once turned to the names of W. G. M. Jones Barker, the author of *The Three Days of Wensleydale*, and Edward Francis Collins, who was for many years editor of *The Hull Advertiser*, whose only claim to bibliographical notice consists in a little book he wrote concerning the rosary. We were pretty confident of being able to point out omissions in these instances, but both of them are to be found in their right places.

The quarrels between the Jesuits and the secular priests in England, taking place

at a time of fierce persecution on the part of the state, brought lasting disgrace on all the parties concerned. It is not even now easy for an orthodox Roman Catholic to write upon the matter without giving offence. It is very much to Mr. Gillow's credit that when compelled to touch the outskirts of this very silly quarrel he does so without showing partizanship. Though we consider the latter biographies by far the more useful, we have read the earlier ones with much interest. They prove, when taken as a whole, some things that are not commonly believed. For example, it has been stated that, before the publication of the *Tracts for the Times*, the secession of clergymen of the English Church to the Roman communion was practically unknown, and from this assumed fact sundry conclusions—theological and philosophical—of a sufficiently absurd kind have been drawn. In the present volume we have encountered five or six examples of such change of view on the part of Anglican ecclesiastics of former days, and we are sure that the succeeding letters of the alphabet will disclose more of them.

As a specimen of Mr. Gillow's style, we would direct attention to the touching account he gives in the life of Robert Buckley of the manner in which the Benedictine order was continued in England. Buckley had been a monk at Westminster in the days of Mary. He lived on to 1607, and at the very end of his life handed on the rights and privileges of the old order to two young Englishmen who had become Benedictines in Italy. The act took place in the Gate house. Amid all the squalor and misery of that foul prison was enacted a solemn rite, which must appeal to the hearts of all, whatever be their conceptions as to faith and duty, who have any admiration for the nobility of self-sacrifice. Mr. Gillow's account of Roger Palmer, Earl of Castlemain, is worthy of notice; and he is especially to be admired for having the courage to include that peer's profligate wife (the Duchess of Cleveland) among those whom he considers worthy of a few lines in his catalogue. Contemporary satirists and the modern historians, who mistake their lampoons for history, have persistently ignored the fact that, although Barbara Villiers was despicably vile on some sides of her character, she had several good traits. She was, it would seem, a good mother; and this much is certain, she was kind to the poor and the needy. Mr. Gillow records her large benefactions to the house of the English Blue Nuns at Paris. He tells us also a fact which affords a striking picture of the state of moral sentiment at the time. The duchess was staying in Paris in 1681, and attended the church of the Blue Nuns. After one of the Lenten sermons preached there she herself made the collection, and on the following Sunday her little daughter followed her example. We cannot doubt that the results would be financially favourable to the English recluses.

Mr. Gillow has fallen into the error of saying that Gotham, the village of which the "Merry Tales" are told, is in Lincolnshire. The great Fen county must surrender that honour to the neighbouring county of Nottingham, though we believe there is another claimant in the field—a manor, not a parish,

in Sussex. Shelford House, the Royalist garrison, is also transferred without authority from Nottinghamshire to Lincolnshire. There are several reasons which make it almost impossible to receive the statement that Sir Arthur Aston ever offered his services to Sir Thomas Fairfax. He served the king at Edge Hill, and Sir Arthur was not the sort of man likely to have contemplated with complacency even the idea of changing sides.

EDWARD PEACOCK.

Souvenirs de Jeunesse. Par Francisque Sarcey. (Paris: Ollendorff.)

FRENCH novelists, especially if their reputation be at all of a noisy kind, win their literary way into England rapidly enough. French critics, even when their work is very admirable, win their way much more slowly. There are in Paris critics of fame who are not even names to the general reader in London. But M. Sarcey is an exception. We all remember, and with some pleasantness of recollection, how he accompanied the troupe of the Théâtre Français on the occasion of their first visit to the Gaiety Theatre, how he mirrored back to Paris the impression produced upon us by Sarah Bernhardt, Croisette, Got, Coquelin, Delaunay, and the rest of that delightful company; how he fraternised with the English critics, and how he wrote, pleasantly and with good temper, about the whole expedition and its accompaniments, enlightening thereby, as one may hope, the readers of his *feuilletons* in the *Temps* newspaper.

Now, however, it is not as a dramatic critic that he comes forward, not even in his less known, though still well-known, character as a political writer. Like many another author in this age of print, he has been tempted to publish his personal reminiscences, to take the world into his confidence. And so he tells us, but certainly in no weakly egotistical spirit, about his early training and struggles, which were never of the most crushing kind, and about the successive steps that led him to abandon schoolmastering and take to journalism.

These recollections are of very diverse interest and value. M. Sarcey does not possess that magician's wand which, in the hand of M. Daudet, for instance, will evoke the scenes and surroundings of the writer's childhood, and make us participants in its feelings and pathos. So it happens that we are not very much moved, one way or another, by his account of the various efforts made by his fond father to develop in him a taste for music. Nor does the figure of M. Chev , the enthusiast of a system for teaching to mankind the art of song, impress us as strongly as it might do, perhaps, if delineated by other hands. An artist, in the sense in which a great historian or novel-writer is an artist, M. Sarcey is not. He has not the life-giving faculty. Even when describing the various actors who have played their part with him in the drama of life, he remains more than half a dramatic critic.

Still, after making every deduction of the parts that are less interesting, there is, in this book, a great deal left that is very interesting indeed. M. Sarcey was one of that brilliant band of young students, all looking forward

to education as a profession, who met at the Normal School in Paris between the years 1848 and 1850. Never, perhaps, had the washings of competitive examination discovered so much intellectual gold in this human clay of ours. A very goodly proportion of the men who made themselves a name in literature during the Second Empire were there. The roll of the successful competitors who entered the school with M. Sarcey is particularly striking. M. Taine came out first at the examination, About second, M. Sarcey fourth. Paul Albert, the literary historian, was among the number. Of older students who were still in the school, we may name MM. Weiss, Assolant, Yung, Challemlacour, all thereafter to be variously known in literature or politics. Prevost-Paradol, whose dexterous and swift pen, at play with the difficulties of the censorship, was to be the torment of the Emperor's government, and whose career of promise was to be sadly cut short by his own act—Prevost-Paradol entered the following year. Sainte-Beuve, now many years ago, described the life at the school, in criticising M. Taine's *History of English Literature* (*Nouveaux Lundis*, vol. viii.). But Sainte-Beuve's was naturally only a sketch. M. Sarcey's is a picture, and on a larger scale, and by an eye-witness. Here the interest of his book culminates. There is a pleasure in watching these fine eager young fellows gambolling at the starting-post before they set off on the great race of life. And a pleasant time they seem to have had, as fine young fellows should. The regulations of the school allowed a large latitude of time and study, an intellectual freedom in some ways akin to that of our own universities. So debate ran riot. The clang of discussion was in the air. Argument resounded. But lightly, brightly, pleasantly, good temperedly—and interminably. "These conversations became almost our sole occupation," says M. Sarcey, speaking of the work—or play—of the third year.

"It was About who was the flame and soul of our section. I have since been in a position to hear most of those who in Paris have acquired a reputation as talkers; but nothing can shadow in my memory the recollection of that winged, sparkling talk of his, of that intellect in constant activity, of that coruscation of bright, true, and witty sayings; of that constant outflow of new ideas, unexpected juxtapositions, fantastic stories and student legends—legends in which his imagination played freely, gaily. . . . It seemed, whenever he came into a room, as if the temperature became suddenly higher by ten degrees."

The "section" here spoken of consisted of About, M. Sarcey and three other students, and their talk was incessant. The students of other sections used to come in for holiday. Paul Albert would arrive "asking for the hospitality of a conversation. 'They are a set of idle fellows in my section,' he would cry. 'They are always at work.'" M. Taine, too, would come, when he judged that the time of leisure had arrived, "for Taine did everything by rule and measure, and we knew him to be incapable of any act of folly unless he had reasoned it out beforehand, and could justify it to himself." M. Taine, indeed, was an exceptionally serious person among his lighter companions.

"Though we took a pleasure in sometimes teasing him," says M. Sarcey, "in reality we felt for him more than mere liking; our feeling for him was a mixture of admiration and respect. That incessant, passionate labour, which took away in nothing from the breadth of the intellect, the liveliness of the imagination, the amenity of the character, confounded us with astonishment. There was no branch of study that he had not pursued to its last confines. He was a living dictionary, whom we consulted incessantly—a dictionary that suffered us to turn over its pages with the largest and most friendly good nature. . . . He was not a talker of the same kind as About: he said no smart things. But when he expounded any matter, it was with a clearness, an abundance, and a choice of words altogether rare. He spoke gently, without any gesticulation, and in a monotonous and colourless tone. He had nothing of the orator. . . . Everything in his face and person bore testimony to a steady, undaunted tenacity of character. No one has ever willed more ardently and patiently than he."

M. Sarcey's professorial career can scarcely be pronounced happy. Successful as regards the instruction imparted to his pupils, it may have been; successful as regards his own position and advancement, it certainly was not. He quarrelled from the first with the "administration," and quarrelled with his superiors very often. Of course the "administration" was wrong. The "administration" always is. But then, unfortunately, it had the whip hand. So by the time M. Sarcey had preached startling novelties in a time of full reaction, had petitioned only too puntingly against an order from the ministry enjoining shaving on all the professorial staff, had presented himself before the board of examiners in a red striped shirt, had had a battle royal with an inspector-general, to say nothing of other minor acts of rebellion—when M. Sarcey had done all this, it was about time that he should leave government pedagogy. And so he did, and took to journalism, greatly to his own advantage and to the advantage of those among us who read and enjoy his dramatic *feuilletons*. The whole story may be found pleasantly and amusingly related in these Recollections.

And what is the main moral of the book?—for a book, like a fable, ought to have a moral. Not that clericalism is a noxious weed, though M. Sarcey is clearly of that opinion, in spite of the fact that the clericals, who water the weed, seem to have treated him with great courtesy and kindness. Nor yet that the "administration" is imbecile, for that would be too self-evident for a moral. Nor, again, that the members of the French magistracy are so tainted with hypocrisy and arrogance as to deserve social ostracism, though this, too, is a point on which M. Sarcey feels strongly. No, the moral is not here. It is not even an unconscious moral, as, for instance, that a very able man, for all his great ability, may have a lurking prejudice or so somewhere in his mind. All these are what may be called the minor morals of the book. Its greater moral is a better one, and M. Sarcey shall speak it in his own words:

"There is one lesson," he tells his daughter in a dedicatory epistle, "which I hope you will carry away after reading this book. I have worked a great deal, my child, and I still

work enormously. One must work in life. There is nothing but that of good and true in the world. . . . The secret of happiness is to be found in cultivating one's garden, . . . however small that garden may be."

French critics are fond of accusing us English of moralising over much. But they moralise in France too sometimes, and not badly.

FRANK T. MARZIALS.

NEW NOVELS.

Sisters-in-Law. By Lady Margaret Majendie. In 3 vols. (Bentley.)

As in a Looking-glass. By F. C. Philips. In 2 vols. (Ward & Downey.)

The Scarlet Cord. By Hamilton Seymour and Keith Robertson. (Edinburgh: Paterson.)

The Rise of Silas Lapham. By W. D. Howells. (Edinburgh: David Douglas.)

A Limb of the Law. By Edward Rae. (Wyman.)

Aulnay Tower. By Blanche Willis Howard. (Boston: Ticknor; London: Trübner.)

If there is nothing strikingly original in Lady Margaret Majendie's *Sisters-in-Law*, the story is at any rate much more readable than many with greater literary pretensions. It hangs a little, perhaps, in the first volume, but after that it is extremely entertaining, and marked by much freshness. There is a double love story running through the novel; and it is not often one meets with more thoroughly genuine and lovable characters than Jack Bevan and his wife Garda, and Lily Loughton and her lover Lord Carlton. If the peerage produced many specimens like this nobleman it might laugh at the cry for its abolition. He is thoroughly straight, generous, and open in all his relations; and the manly and yet tender part he acts towards the broken yeoman Will Curtis, is instrumental in saving more than one life, and restoring hope in those who had abandoned it. The devious and painful course of his lordship's wooing of the apparently thoughtless, but sterling and emotional Lily, will be traced by the reader with much interest. Now and again Lady Margaret Majendie rises to a good vein of description, as when she deals with the miseries of Curtis's household, and at a later period with a storm at sea. Altogether, this novel has been well conceived and excellently carried out, while its pleasant style induces no feeling of weariness on the part of the reader.

As in a Looking-Glass is an essentially bad book. I wish it had not been necessary to say this, as it is written with much sprightliness. But it is of the earth earthy, not to say of the devil devilish. If one could really believe that Lena Despard is a true representative of any section of London society, then that society is in even a more disgusting condition than its worst enemies believe. Mrs. Despard is a woman who has been twice married; and when asked whether her husbands are both dead by the husband of another woman, she remarks, "I longed to say no: they are both alive and kicking." The shameless intrigues in which this creature indulges furnish something new and original

even in the annals of infamy. She keeps a paramour in chambers at the Albany by means which are both low and disgusting; takes £500 from an old married baronet, whom she lures from his wife's affections and then casts off; and, finally, she inveigles a rich Scotch laird into marriage. Her previous career being all exposed to her husband, she kills herself under the disgrace, and we are asked to believe that she had a real affection for him! All the circumstances contradict this. The Ethiopian does not so readily change her skin, nor the leopardess (for such Lena Despard is) her spots. The novel is vulgar and disgusting, and, in some respects, worse than any of M. Zola's; but, in the present temper of the novel-reading public, it will probably be read all the more on that account.

The Scarlet Cord, described as a medical love-story, is sensational enough to satisfy the most exigent taste in this respect. The leading character, Dr. Francis Boyd, supplies something new in the tortuous paths of chicanery and villainy. He persuades a poor but beautiful girl in the north of England to leave her home, and, after a secret marriage, to proceed with him to London. He soon becomes known as a fashionable doctor, for he is both handsome and intellectual looking; and, becoming enamoured of Lady Millicent de Vere, he resolves to put his wife Madeline out of the way. He feels that he can rise still higher in the social scale if married to such a woman as Lady Millicent. Dr. Boyd discovers a system of "painless death"; and he puts it into practice upon his own father, a ticket-of-leave man, who returns to England at a very inopportune moment for the fashionable physician. The villain then abandons Madeline, and elopes with Lady Millicent, with whom he contracts a bigamous marriage in Scotland. They cross over to Paris; but at length the coils of fate begin to wind about him. His crimes and villainies are all discovered, and the shock acts disastrously upon Lady Millicent. When she can no longer withstand the evidence against him, she seeks him out at the roulette tables of Monte Carlo. She comes upon him as he is leaving that notorious gambling hell, having not only lost all his money, but his wife's jewels as well, which he had purloined with other property. The outraged wife plunges Boyd's own dagger into his heart; and when his body is discovered, the case is reported as another in that long list of suicides with which Monte Carlo is associated. Lady Millicent afterwards settles down in Paris as Madame de Vere, and with her enormous wealth founds a home for the rescue of lost girls, which goes by the name of "The Scarlet Cord." Of course, the book presents us, among other characters, with truly faithful lovers of both Madeline and Lady Millicent, but they are not in the running as against the handsome villain. The book is not particularly noticeable from the literary point of view, but it is quite as interesting as many of the "shilling dreadfuls" now so much in vogue.

Mr. Howells has achieved a triumph of character-drawing in his sketch of Silas Lapham. There may not seem much that is noble or romantic in the career of a mineral

paint manufacturer; but, notwithstanding the commonplace nature of his surroundings, there is a good deal in Lapham that reminds one of Abraham Lincoln. He is of the same straight, stern, honest type, a man quite incapable of a mean action in himself, or of taking advantage of the weakness or misfortune of others. He has also a shrewd native wit, and a considerable share of originality. Yet the drawing of Lapham by no means exhausts the merit or interest of the book. He has two daughters, and there is a touch of real tragedy in the love story in which they are both concerned. One is young and pretty, the other clever and somewhat plain, yet it is the latter whom Tom Corey loves, when everybody has credited him with an affection for her sister. Both sisters behave bravely on the discovery of the mistake. There is little need to praise Mr. Howells's style. He is one of the best living writers of American fiction; and this work sparkles with wit, while it is far from being destitute of those higher qualities which the author is known to possess.

A Limb of the Law treats of a set of sorry rascals whose deeds were not worth chronicling. The heroine, Miss Law, is supposed to have been brought up as a lady, yet on the very second occasion on which she meets "Captain" Daniel Carr, the chief of the band of scoundrels who live by preying on the community, she calls him "Dear Danny," and allows her head to recline upon his shoulder. If it were necessary one could point out numberless inconsistencies of character and defects in the working out of the story, but "the game is not worth the candle."

Aulnay Tower is a narrative of love and war, the scene being fixed in France during the time of the Franco-German War. We must leave the reader to trace the romance attaching to the history of a beautiful young French countess and a handsome lieutenant in the German army; but we may just say that the story ends as all such stories should. Miss Howard writes a very easy and graceful style, and this volume may be read with genuine interest. G. BARNETT SMITH.

BOOKS OF TRAVEL.

Wanderings in Distant Lands. By B. E. E. (Printed for private circulation by the Army and Navy Co-operative Society, Westminster.) Is it meet and justifiable to take note of unpublished literature? This is a nice question; but it admits of an answer. If unpublished books are worthless, they must be ignored; but if a privately printed work should contain good matter, record new facts, or be in any sort valuable and pleasant, it surely may, without prejudice, be reported to that outside world which otherwise could know nothing of its existence. Such a book has lately fallen in our way. It is the verbatim reproduction of a traveller's diary; and, as such, its artless familiarity of style and its entire freedom from "reading up" and "padding," make it very agreeable reading. The writer of this diary (she evidently would not care to call herself an "author") came home from Canada by way of round the globe, treading the same paths that have been trodden by many another tourist, and seeing the same sights which have been described by various professed travel-writers.

Mormonland and Salt-Lake City, "Frisco," the Sandwich Islands, Japan, China, Java, and Ceylon, were each visited in turn. In all this there may be nothing very new; but B. E. E.'s way of seeing and telling is keen and lively, and she had, moreover, the good fortune to witness at least one natural phenomenon of unusual splendour. The great volcano of Hawaii is famed for its tremendous eruption of 1880 and 1881, when the lava flowed for a distance of sixty miles—the first thirty miles being covered in ten hours, and the remaining thirty at the rate of three miles a month. Two years had elapsed since that event, and ferns were growing on the crusted stream, when B. E. E. and her husband walked over it on their way to Mauna Loa, the summit whereof towers some ten thousand feet above the two lower craters, or "fire-lakes," which were the object of their pilgrimage. Arriving overnight at Volcano House—apparently a sort of "Grands Mulets" shelter—they could see the ruddy glow from these lakes, two miles and a half distant, lighting the darkness "like the flames from a burning city." What the lakes were like on closer acquaintance must be told in B. E. E.'s own words. They went first to the farthest basin, which is surrounded on three sides by high, precipitous bluffs.

"The lake itself looks like a huge sheet of molten lead, and is of a blackish colour, and all over its surface are seen bright red fiery cracks, for ever changing their shape and position. As we sat watching, one of these cracks opened out into a blood-red pool, from which issued a fountain of fire, throwing up red-hot lava-spray to a height of fifteen or eighteen feet. Nearer to the bluffs there rose a smaller fountain, surrounded on all sides by brilliant red fissures. We were loath to leave the spot; but our guide, anxious to get us over the space intervening between the two lakes while daylight lasted, urged our departure. As we left, we passed a natural lava chimney, from which issued volumes of smoke, and presently we found that we were standing over a great lava-cavern, the interior of which was like an enormous furnace at white-heat, the roof being hung with red-hot stalactites of lava. Passing on, we soon reach the next lake, gathering by the way some specimens of Pele's hair, a fine hair-like substance, not unlike spun glass, which is, in reality, a lava-formation, and derives its name from Pele, the lava goddess. And now we seat ourselves on the top of the bluffs, feasting our eyes on this magnificent spectacle. . . . Daylight is fast dying, and the outline of the surrounding crater walls grow dim. The lake looks leaden, save from the innumerable red fissures by which it is traversed in all directions. In one moment the whole scene changes. A fierce bright light illumines the circuit with a ruddy glow, and simultaneously a fountain of fire bursts forth, throwing up showers of sparks. As the bright particles fall on the dark, moving surface, the flames greedily devour masses of black lava, which leave huge pools of liquid fire in their wake. Then, as suddenly as it burst forth, the whole burning mass dies out, and becomes coated with a black film, and night once more reigns. A few minutes later, and a still stranger phenomenon occurs. Dotted about the lake are three lava islands, which we supposed were solid upheavals from the base of the fire-lake; but, to our surprise, the middle one began to heave, and in a few seconds this huge lava-rock turned a complete summersault, so proving that what appeared to us as islands were floating bergs. It is difficult enough to imagine a berg of livid fire, and quite impossible to give an adequate description of it. The blaze of light was dazzling; and as if this abnormal upheaval had given a sudden impetus to the hundreds of cracks that starred the surface, the whole lake appeared in one moment as a sheet of flame."

B. E. E. concludes her diary by dedicating to her personal friends this her "first, last, and only literary effort." The above extract shows how well she can describe, and how much she has seen. With but little necessary pruning, the book might well be given to a wider circle

of readers, and give pleasure and instruction to thousands.

North France. By C. B. Black. (Edinburgh: Black.) Is this merely a new edition, or is it the first completion of the book, one half of which (North-West France) we have already seen and used? There is not a word of announcement or preface. On the whole, this guide would probably prove the best for the ordinary tourist. Joanne is no doubt of a much higher order, but lately we have become disgusted with his pernicious laudation of many stupid, commonplace spots, which traditional French taste admires. The rule should be—never trust a French guide for scenery or an English one for art or architecture. Baedeker, as all the tourists seem to admit, combines correctness, fullness, and brevity, but is in some districts scanty, and a little dry. Black's *North France* has several merits. The maps are numerous, and well selected. They are clear and sightly, but, as we have found, not always safe to walk by. Excellent and unmistakable directions are given for each place, which will meet every difficulty of the stranger; and this is after all the main use of a guide. Much of the book is naturally founded on former works, but much is original, and seems carefully done. The writer seldom commits himself to praise or run down any place or sight. Perhaps it is just as well. France is a vast country, with many deservedly, and also many most undeservedly, famous show-places, and also with simply innumerable bits of choice architecture and lovely scenery scattered about and passed over by the traveller who follows his blind guide. To compile a proper guide book would require the labours of several first-rate savants and artists, some years of time, and enormous expense. Till this is done, we must travel mainly on speculation; and for this we require no more than Mr. Black gives us, and, indeed, much less. While noting that he has honourably tried to abstain from the old-fashioned padding—gushing sentiment, poetry, historical rumination and twaddling legend—to the love of which the British tourist was trained by Murray in days of old, he indulges now and then (as in inserting King William's account of the Battle of Sedan), nor would it be difficult to abbreviate the book by a third, in pruning the sentences. The one serious failing of the author is his entire ignorance of architecture. From other sources he has very properly borrowed much, but, of course, nothing can supply the want of technical knowledge. Hence the student of architecture will find himself puzzled and worried at every town by the strange misuse of technical terms. For instance, at Peronne, we find "dungeons and casements, one of which is said to extend three miles underground," &c. The pitiful eighteenth-century spire at Treguier is "magnificent," while the cloisters are dismissed with bare mention. Yet, for un-restored perfection of loveliness they afford three or four pictures worth walking leagues to see. But they are so hidden away and hard to get at that surely Mr. Black never saw them, for he seldom fails to note what is really good. He may talk wildly at Laon of the "mullion work" at the top of the towers, and describe the "interior as a splendid pile of masonry lighted by three magnificent circular and four oblong windows," he may miscall the fine early west towers of St. Pol, "two Lichtfield-like spires," he may pass too quickly from the precious little city and chateau of Vitre to Mme de Sevigné's best parlour—but the British tourist will be little the worse for that. He will find all he really wants, expressed in words which he can understand; and more than all, when he wants to see anything, Mr. Black will tell him how to get at it.

Notes of a Tour from Brindisi to Yokohama, 1883-84. By Lord Ronald Gower. (Kegan Paul, Trench & Co.) About two years ago Lord Ronald followed the example of his elders by writing a volume of Reminiscences, which met with a success that was not undeserved. The style was lively, and the general public were introduced at first-hand authority to marble halls and the dwellers therein. We do not think that his "obliging publishers" will have furthered his literary reputation by the present booklet, of which the best that can be said is that it is charmingly printed. The author takes as his motto an anonymous statement that "voyager, c'est apprendre." He would have done better to read Bacon's essay on "Travel." The advice there given would have taught him that the profit of a foreign tour consists as much in what one brings as in what one finds. Egypt, India, Ceylon, and Japan are now such beaten ground that we expect from one who undertakes to describe them in print something more than commendation of hotels and body-servants. Of original reflections, here is a sample: "By 'Araby the Blest' did Milton refer to Ceylon? Probably, as before the Portuguese occupation it was under Arab rule." Lord Ronald expresses a very unfavourable opinion of Murray's Guide, written by the late E. B. Eastwick, whose orthography is no doubt "advanced." But Eastwick would have saved him from the assertion that "Hodson took prisoners the sons of the kings of Oude"; and from spelling "Chandui Chouk" and "Jumna-Musjid." Altogether we cannot recommend this book, despite its pocket size, to "travellers making a similar tour."

"THOROUGH GUIDE SERIES."—*Scotland.* Part I. Edinburgh, Glasgow, and the Highlands. By M. J. B. Baddeley. (Dulau.) This is in substance a new edition of the "Thorough Guide" to the Highlands by the same author, originally published in 1881. While the area has been slightly limited on the North, it has been extended on the South, so as to give fuller details about the Lowlands. At the same time, the number of maps and plans has been augmented from twenty-nine to thirty-seven; and the excellent system of tinting to show elevation has been carried out with additional clearness. A somewhat careful comparison of the two editions shows that almost every page has undergone revision where needed. The ascent of Ben Nevis is a good example, where we have been especially pleased to notice the excision of a most inappropriate misquotation from Virgil. We have also observed with satisfaction that Mr. Baddeley is not too proud to take the advice of his critics in the matter of pruning his own early luxuriance of flippancy.

NOTES AND NEWS.

LORD TENNYSON'S new volume will not, we understand, contain any piece of great length, but several small poems that have not yet been published.

A NEW and important poem by Mr. Robert Buchanan will be published in a few weeks by Messrs. Chatto & Windus. With the exception of the volume of reprinted pieces issued some three years ago, under the title of *Ballads of Life, Love, and Humour*, Mr. Buchanan has issued no poetical work since the anonymous publication, ten years ago, of *White Rose and Red*.

ON October 1 Sir John Lubbock will unveil a statue of Sir Josiah Mason at the Mason College, Birmingham. The college is now completely equipped with a faculty of arts, as well as the original faculty of science. The address on the re-opening of the college for the session

1885-6 will be delivered by Prof. Sonnenschein, the chairman of the Academic Board.

THE most interesting announcement hitherto made for the forthcoming season is *Alice's Adventures Underground*, by Lewis Carroll. It is a facsimile of the original MS. which was afterwards developed into *Alice in Wonderland*, with twenty-seven illustrations by the author. It will be published by Messrs. Macmillan.

MRS. MOLESWORTH'S book for this Christmas will be called *Us*: an old-fashioned story. Like the others, it will be illustrated by Mr. Walter Crane.

MR. AUSTIN DOBSON is writing an introduction to the facsimile of the *Vicar of Wakefield* which Mr. Elliot Stock will publish shortly. It will bring together much scattered information concerning the first publication of the book, and attempt the rectification of some hitherto doubtful points and dates. It will also be accompanied by a full bibliography.

THE second volume of Mr. Barry O'Brien's *Fifty Years of Concessions to Ireland* will be published by Messrs. Sampson, Low & Co., on October 1. The complete work is an account of the remedial measures passed by the British Parliament for Ireland between 1831 and 1881, with such reference to antecedent history as may serve to elucidate the main narrative. The subjects dealt with in the forthcoming volume are the Encumbered Estates Act, the Irish Reform Act of 1868, the Church Act, the Land Act of 1870, the Intermediate Education Act, the Royal University, and the Land Act of 1881. This volume also contains a general history of the agrarian war in Ireland from 1761 to 1881.

MR. GORDON BROWNE has designed over one hundred illustrations for a new edition of *Gulliver's Travels*, to be issued shortly by Messrs. Blackie & Son, as a companion volume to the *Robinson Crusoe* of last year.

A NOVEL by Mr. Grant Allen, entitled *Babylon*, will be published immediately by Messrs. Chatto & Windus. The title-page reveals that he was also the author of *Philistia*.

Sardinia and its Resources is the title of a work by Mr. Robert Tennant, late M.P. for Leeds, which will appear immediately. It is the result of a prolonged visit to the island, and contains a complete account of its physical, political, and social condition at the present time. The work, which has a map and a number of illustrations, will be issued by Mr. Stanford.

THE next number of the *Contemporary Review* promises to be one of more than ordinary interest. Cardinal Newman writes on "The Development of Religious Error," the Duke of Argyll on "The Land Question," Mr. G. Baden Powell on "English Money in South Africa," Mr. Stansfield on "The Liberal Programme," and Lady Brassey on "The Last Voyage of the *Sunbeam*."

PRINCIPAL TULLOCH will contribute a paper on "The Church of Scotland and the General Election" to the October number of the *Scottish Review*.

MR. W. CAREW HAZLITT has made many marginal notes to his edition of Brand's *Popular Antiquities*, chiefly from old plays and poems, and other out-of-the-way sources of information; and he will contribute to the next number of the *Antiquary* the first of several papers on this subject. Mr. J. H. Round will also write, in the same journal, a paper on the "Open Field System in Herefordshire."

THE October number of *Walford's Antiquarian* will contain a paper by the editor on "An Unknown Portrait of Shakspeare," alleged to have been painted while the poet was in his last illness. The portrait will be reproduced in facsimile by a new photographic process.

THE October number of the *Scottish Church* will contain papers on "The Church and the Elections," "The Highland Question," "Scotch Literature in the Stuart Period," "Among the Good Wesleyans," and "To Norraway over the Foam—a Summer Flight."

MR. G. MANVILLE FENN is writing a new serial story for *Cassell's Saturday Journal*. It is entitled "The Affair Next Door," and will be commenced in the first number of the new volume published early in October.

MESSRS. HURST & BLACKETT have in the press a new work by Mrs. Florence Caddy, entitled *Footsteps of Jeanne d'Arc: a Pilgrimage*. The same firm will publish, during October, *The Beauty of the World: a Story of this Generation*, by Mr. A. J. Duffield, in three volumes.

MESSRS. BICKERS & SON'S announcements include *Historic, Romantic, and Legendary Tales from Sir Walter Scott*, selected and arranged by W. T. Dodson, with twelve illustrations in permanent photography; and *Prose Masterpieces of Modern Essayists*, comprising twelve unabridged essays by Irving, Lamb, De Quincey, Emerson, Matthew Arnold, John Morley, Lowell, Carlyle, Macaulay, Froude, Freeman, and Gladstone, with twelve portraits in permanent photography.

MR. G. MANVILLE FENN has two books in the press, to be published by Blackie & Son. The one is entitled *Brownsmith's Boy*; or, *Romance in a Garden*, and the other, *Patience Wins*, which is a narrative of factory life in the Black Country. The same publishers will also issue *The Congo Rovers: a Tale of the Slave Squadron*, by Mr. Harry Collingwood.

MR. D. NUTT will publish immediately a new text of St. Anselm's *Cur Deus Homo*; Eadmer's *Vita S. Anselmi*, which has not been reprinted separately since the sixteenth century; Exercises to accompany Beyer's German Grammar for science students; and a Middle-Irish version of the Ulysses legend, edited for the first time from the Stowe MSS., with translation, introduction, and glossary, by Prof. K. Meyer.

MESSRS. T. & T. CLARK, of Edinburgh, announce: *History of the New Testament Times*, by Prof. E. Schürer Giessen, translated by Miss S. Taylor and the Rev. P. Christie; *Short Studies on Great Biblical Subjects*, for the Use of English Readers of the Bible, by the Rev. Dr. Charles H. H. Wright; *Nature and the Bible*, by Prof. F. H. Reusch, translated by Mrs. Lyttelton; *Commentary on the Acts of the Apostles*, second half, by Prof. T. M. Lindsay, of Glasgow; *System of Christian Ethics*, by Prof. J. A. Dorner; *Frank's System of Christian Evidences*, Lechler's *History of the Apostolic and Post-Apostolic Times*, and *Present-Day Theology*, by the Rev. Alfred Cave; *Commentary on St. Paul's Epistles to the Corinthians*, by Prof. F. Godet; and *A Treatise on the Law of Bankruptcy in Scotland*, by Henry Goudy.

MESSRS. MACMILLAN announce in their "Primary Series for Beginners," an illustrated edition of Hauff's *Die Karavane*, with notes, &c., by Dr. Herman Hager, of Owens College, Manchester.

WE are sorry to hear that the present Lord Chelmsford has been persuaded not to publish the collection of anecdotes which he has made about his father, the former Lord Chancellor. The world has not too many good sayings, and cannot afford to lose Thesiger's store. The following are reported as a sample. Some of the judges were at a dinner at which the Chief Baron was present, when one of them, looking for the pepper, said, "I can't think what's become of my castor." "Well, never mind, take Pollock's," answered Lord Chelmsford. He was once asking a Liberal elector for his

vote, and the man replied "I wouldn't give it you, even if the Old Gentleman himself was the other candidate." "But if the Old Gentleman shouldn't stand, sir, I do trust that you'll support me."

A NEW novel by M. Fortuné de Boisgobey, entitled *Violette Bleue*, is announced by M. Plon for immediate publication. The same publisher will shortly issue a new story by "Henry Gréville," called *Clairefontaine*.

M. ANDRÉ COCHUT, honorary director of the Mont de Piété of Paris, has communicated to the *Temps* some facts, hitherto unknown, relating to the life of Béranger, which he has discovered in the records of the establishment. It seems that the July government, being under obligations to Béranger, appointed him to the oddly inappropriate post of superintendent of the warehouses of the Mont-de-Piété, with a salary of 6,000 francs. After a few days' experience of the duties, the poet perceived that the place was not to his taste, and induced the government to appoint one of his friends, Benjamin Antier (also a song writer) in his stead.

WITH regard to the alleged deficiency in the collection of MSS. purchased by the Italian Government from Lord Ashburnham, the *Rassegna* of September 10 contains a long letter from Prof. Villari, who was the agent employed in the purchase. The explanation given is substantially the same as that which we quoted from the *Nazione* last week—viz., that the collection was bought *en bloc*, and that, although the Libri Catalogue was reprinted in order to give a general idea of the extent and character of the purchase, it was well understood not to be accurate in all details. Prof. Villari adds that although, if this catalogue be taken as the standard, there are thirty-nine codices missing, the deficiency is more than counterbalanced by the presence of ninety-four codices which were not catalogued.

THE literary society (Ucheno Drushtvo) of Belgrade intends, in co-operation with several scientific and artistic bodies, to celebrate, on September 20 and 21, the fiftieth anniversary of the beginning of the literary career of the Serbian poet and dramatist, Matija Ban (one of whose tragedies, "John Hus," was noticed in the ACADEMY of May 10, 1884) and also of the poet George Maletich. Invitations to the celebration have been sent to the following, as literary friends of the Serbs:—The Rev. W. Denton, Mr. A. L. Hardy, and the three Ilchester lecturers, Mr. W. R. Morfill, Mr. W. R. S. Ralston, and the Rev. A. H. Wratisslaw.

AMERICAN JOTTINGS.

THE Rev. H. R. Haweis will be in America in October, November, and December, on a visit to President White, of Cornell University, and Mr. Courtland Palmer, of New York. He will deliver two sermons before the University of Cornell. He will then, between October 18 and the end of the month, visit Canon Ellegood at Montreal; and he intends to lecture at Montreal and Quebec previous to his departure for Boston and Philadelphia, where he will deliver six lectures on "Music and Morals." On December 8 he will deliver a discourse before the Nineteenth Century Club, New York, at the special request of Mr. Courtland Palmer; and about December 17 he will return to England to conduct his annual series of Evenings for the People, at St. James's Church, Marylebone, London.

MESSRS. HOUGHTON, MIFFLIN, & Co., of Boston, U.S., announce a new edition of *Uncle Tom's Cabin*, with an introduction by Mrs. Stowe, stating the circumstances under which

the story was written, and a portrait of "Uncle Tom."

GEN. JOHN A. LOGAN's work on the causes which led to the rebellion of the Southern States will be published by Mr. Alexander R. Hart, of New York, about February 1. The title has not yet been decided on.

MR. D. C. HEATH, the retiring partner of the firm of Ginn, Heath & Co., Boston, has commenced business under the style of D. C. Heath & Co. Among the works announced by the new house for the coming season are a translation of Compayré's *History of Education*, by Prof. W. H. Payne, and three volumes of Prof. G. Stanley Hall's series of "Methods of Teaching and Studying"—viz., *Ancient Languages and Literature*, *English Language and Literature*, and *Natural Science*.

THE *Current*, of Chicago, a weekly journal of somewhat ambitious literary pretensions, has suspended publication after a life of about twelve months.

ANNOUNCEMENTS OF THE CLARENDON PRESS.

THE announcements of the Clarendon Press for the coming publishing season include the following works: Part II. of the *New English Dictionary*, edited by J. A. H. Murray (ANTA-BASYL, pp. 353-704); *Thesaurus Syriacus*, Part VII., edited by the Dean of Canterbury; the *Catalogue of the Hebrew MSS. in the Bodleian Library and in the College Libraries*, by Dr. A. Neubauer; *The Languages of Melanesia*, by the Rev. Dr. R. H. Codrington; *Fragmenta Herculaneusia: a descriptive Catalogue of the Oxford Copies of the Herculanean Rolls, together with the texts of several Papyri, accompanied by facsimiles*, edited by Prof. Walter Scott; *A Manual of Greek Numismatics*, by Barclay V. Head; *The Politics of Aristotle*, translated into English, with introductions, marginal analysis, &c., by the Rev. B. Jowett; Scherer's *History of German Literature*, translated into English, and edited by Prof. Max Müller, 2 vols.; *The German Classics from the Fourth to the Nineteenth Century*, by Prof. Max Müller, new edition, revised, enlarged, and adapted to Wilhelm Scherer's *History of German Literature*, by F. Lichtenstein; *Italy and her Invaders*, vols. iii. and iv., by T. Hodgkin; *The Governance of England*, by Sir John Fortescue, Kt., sometime Lord Chief Justice of the King's Bench, a revised text, edited, with introduction, critical and historical notes, glossary, &c., by the Rev. C. Plummer; *Geology, Theoretical and Practical*, by Prof. Joseph Prestwich, vol. i.; *Political Economy of Daily Life*, by J. T. Dawson; *Euclid revised and enlarged*, by C. J. Nixon, of the Royal Academical Institution, Belfast; *Hints and Helps for Latin Elegiacs*, by H. Lee-Warner; *Ovid, Tristia*, Book I., revised text, with introduction and notes, by S. G. Owen; *Terence, Andria*, edited, with introduction and notes, by C. E. Freeman, and A. Sloman; *Livy, Books xxi.-xxiii.*, edited by M. T. Tatham; *Xenophon, Anabasis*, Book I., edited by J. Marshall, of the Royal High School, Edinburgh; *Sainte-Beuve, Selections from the Causeries du Lundi*, edited by G. Saintsbury; *Modern German Reader*, Part II., by Dr. C. A. Buchheim; and *Heine's Harzreise*, with Notes, &c., by the same editor; *Byron's Child Harold*, edited by the Rev. H. F. Tozer; *Steele, Selected Essays from the Tatler, Spectator, and Guardian*, edited by Austin Dobson; "Old-English Reading Primers," edited by H. Sweet, (1) *Extracts from Alfred's Orosius*, (2) *Selected Homilies of Ælfric*, &c.

The following will be the next additions to the Series of "Sacred Books of the East," edited by Prof. Max Müller: *Manu*, translated by Prof. Georg Bühler; *The Satapatha-*

Brāhmana, translated by Prof. J. Eggeling, Part II.; *The Texts of Confucianism*, translated by Prof. Legge, Parts III. and IV.; *The Li Ki*, or Collection of Treatises on the Rules of Propriety, and of Ceremonial Usages; *The Grihya-sūtras*, Rules of Vedic Domestic Ceremonies, translated by Dr. H. Oldenberg, Parts I. and II.; *The Zend-Avesta*, Part III., the Yazna, Visparad, Afrigān, and Gāhs, translated by the Rev. L. H. Mills; and *Vedic Hymns*, translated by Prof. Max Müller, Part I.

The following are among the books in preparation for issue at an early date by the Clarendon Press: *An Anglo-Saxon Dictionary*, based on the MS. Collections of the late Prof. Joseph Bosworth, revised and enlarged by Prof. T. N. Toller, Part III.; *A Catalogue of the Greek MSS. in the Monastery of Mount Sinai*, by Prof. V. Gardthausen; *Scholia Græca in Iliadem*, vols. v and vi., edited by Dr. E. Maass, of Berlin; *The Politics of Aristotle*, edited, with introduction, notes, &c., by W. L. Newman, vols. i. and ii.; *Old-Latin Biblical Texts*, edited by J. Wordsworth, Bishop-Designate of Salisbury, Parts II. and III.; *A Commentary on the Lex Aquilia*, by Dr. Erwin Grueber; *The Book of the Bee*, the Syriac Text, edited with Translation, Notes, &c., by E. A. W. Budge; *The Travels of Fā-hien*, or Record of Buddhist Kingdoms, Chinese text, edited with translation and notes by Prof. Legge; *The Mathematical Papers &c. of the late Professor Henry J. S. Smith*; *A Treatise on Statics*, by Prof. G. M. Minchin, vol. ii.; *The Mathematical Theory of Electricity and Magnetism*, by the Rev. H. W. Watson, and S. H. Burbury, vol. ii.; authorised English translations of Sachs' *Vorlesungen über Pflanzenphysiologie*, of Goebel's *Grundzüge der systematik und speziellen Pflanzenmorphologie*, of various Foreign Biological Memoirs, and of Bluntschli's *Staatslehre*; Boswell's *Life of Johnson*, edited by Dr. G. Birkbeck Hill, in 4 vols.; *Piers the Plowman*, student's edition, by Prof. W. W. Skeat, in 2 vols.; Bunyan's *Holy War*, &c., edited by Canon Venables; *A Selection of Anglo-Saxon Documents*, edited by Prof. Earle, &c.

ANNOUNCEMENTS OF THE SOCIETY FOR PROMOTING CHRISTIAN KNOWLEDGE.

THE Society for Promoting Christian Knowledge have in the press three books associated with the name of the late Mrs. Ewing. One of these, entitled *Juliana Horatia Ewing and her Books*, is written by Miss Horatia K. F. Gatty, and will be illustrated with a portrait and facsimiles from Mrs. Ewing's own sketches; another will be a new edition of *Lob-lie-by-the-Fire*, with a new set of illustrations by Mr. Randolph Caldecott; the third is a series of six *Poems for Child Life and Country Life*, with coloured pictures by R. André.

In their "People's Library," the same society announce *The British Citizen: his Rights and Privileges*, by Prof. J. Thorold Rogers; and in their series of "Diocesan Histories" *Bath and Wells*, by the Rev. W. Hunt.

Their other forthcoming publications include *Three Martyrs of the Nineteenth Century: Studies from the Lives of Livingstone, Gordon, and Patteson*, by the Author of "Chronicles of the Schönberg-Cotta Family"; *Man and his Handiwork*, by the Rev. J. G. Wood; *The Likeness of our Lord*; being an Enquiry into the Verisimilitude of the received likeness of Jesus, by the late Thomas Heapy; *Architecture*, especially in relation to our Parish Churches, by the Rev. H. H. Bishop; *The Pilgrim at Home*, by E. Walford; *Perils of the Deep*, by the Rev. E. N. Hoare.

Among a great number of illustrated story-books, we have only room to mention the

following: *Carnforth and Sons*, by Helen Shipton; *Faithful*, by Annette Lyster; *The Fate of the Black Swan*; a Tale of New Guinea, by F. Frankfort Moore; *A Great Revenge*, by Sidney Mary Sitwell; *The Last Hope*, by Esmé Stuart; *A Nineteenth Century Hero*, by Laura M. Lane; *Broken Hearts are Still*, by Phoebe Allen; *The Mill in the Valley*, by C. E. M.; *A Woman of Business*, by M. Bramston; *Bound with a Chain*, by Crona Temple; *The Oliver Children*, by Mary Davison; *Tim Yardley's Year*, by F. Scarlett Potter; *Vexed*; or, *The Wife's Sister*, by Miss Layard; and *Foolish Dora*, by C. Selby Lowndes.

Their religious works include *The Apostle of the Gentiles*, by the Rev. C. R. Ball; *The True Vine*, by the author of the "Chronicles of the Schönberg-Cotta Family"; *Forget thine own People: an Appeal to the Home Church for Foreign Missions*, by Dean Vaughan; *Aids to Prayer*, by the Rev. Daniel Moore; *Ten School-room Addresses*, edited by Archdeacon Norris; and *The Official Year-Book of the Church of England for 1886*.

The society has also in the press new editions of versions of the Book of Common Prayer in the following languages: Arabic, Urdu, Malagasy, French, Secoana; and the following miscellaneous works in various languages: *Kamba Grammar*, *Kagura Grammar*, *Polyglotta Africana Orientalis*, *Niger Vocabulary*, *Nika Dictionary*, *Kafir Plain Words*, *Malagasy Lent Lectures*.

MESSRS. GRIFFITH, FARRAN, & CO.'S ANNOUNCEMENTS.

AMONG the books for boys to be published this autumn by Messrs. Griffith, Farran, & Co.—the successors to John Newbery—whose house at the corner of St. Paul's Churchyard is now being rebuilt, are: *Who was Philip?* by the Rev. H. C. Adams, illustrated by A. W. Cooper, a tale of boy life at a public school; *Master of his Fate: a Tale of Swedish Schoolboy Life*, by A. Blanche, translated by the Rev. M. R. Barnard, with eight illustrations by A. Foorde Hughes; *A Soldier Born*; or, *the Adventures of a Subaltern in the Crimea and Indian Mutiny*, by J. Percy Groves, illustrated by Alfred Pearce; *The Briny Deep*; or, *Olden Times in the Merchant Service*, a narrative of the life and adventures of the author, Capt. Tom, with eight full-page pictures by Capt. W. W. May; *The Cruise of the "Thesus"*, by Arthur Knight, with eight illustrations by Frank Feller; *Hugh's Sacrifice*, by Cecil Marryat Norris, daughter of the late Capt. Marryat, with fourteen illustrations by Harry Furniss; and *Fearless Frank*; or, *the Captain's Children*, by Mary E. Gellie, illustrated by A. H. Collins.

Two new volumes in the "Girls' Own Favourite Library" are promised, viz., *Through a Refiner's Fire*, by Eleanor Holmes; and *A Generous Friendship*; or, *the Happiness of a New England Summer*. Among other volumes which will possess a special interest for girls are *Queer Pets and their Doings*, by Olive Thorne Miller, illustrated by J. C. Beard; *A Bunch of Berries and the Diversions Thereof*, by Leader Scott, illustrated by C. Paterson; and *Girlhood Days*, by Mrs. Seymour, illustrated by A. H. Collins.

Among nursery books, the same firm announce *Little Chicks and Baby Tricks*, by Ida Waugh; a small edition of *First Christmas for our Dear Little Ones*, by Miss Rosa Mulholland, with fifteen pictures, painted by L. Dieffenbach, and richly executed by H. Knoeffler; *Fairy Folk*, by E. Lecky, illustrated by Isabel Berkley, printed in colours by Edmund Evans. The revival of interest in old-fashioned books for children, and a consequent demand for the once popular favourites, has led Messrs. Griffith, Farran, &

Co. to prepare new editions of *The Daisy*; or, "Cautionary Stories in Verse adapted to the Ideas of Children from Four to Eight Years Old," with thirty engravings by Samuel Williams; and *The Cousin*; or, "More Cautionary Stories in Verse," by the same author, with thirty engravings by Samuel Williams. They will be printed on Dutch hand-made paper, and bound in characteristic style, with an introduction by the editor of the facsimile reproduction of *Goody Two Shoes*. They are also re-issuing their popular "Tiny Natural History Series" and "Our Boys' and Our Girls' Little Libraries" in a fresh garb.

Among their new educational books are *True Stories of the Reign of Queen Victoria*, by C. Brown; and a complete series of freehand and geometry drawing-books entitled *Drawing-Books for the Standards*. The series consists of nine books of freehand and eleven books of geometry, embracing the whole of the syllabus of these subjects issued by the Education Department. Two additions to their series of books designed to aid the teacher in providing varied occupations for infants' schools are a continuation of Miss Rooper's collection of *Recitations for Infants' Schools*, and a collection of *Action Songs for Infants' Schools*, arranged by Wilhelmina L. Rooper. This contains nursery rhymes set to new and lively tunes, so as to carry out the quaint ideas of the words; easy songs, with words and ideas, suitable for the baby class; kindergarten games for the open floor or playground, action songs for the gallery and marches, calculated to exercise the muscles as well as the mental faculties of children; and songs without the accompaniment of actions, for the use of the elder children in the infant school; and groups of songs for infant school entertainment.

Among new theological books promised by this firm are *A Manual for Communicants' Classes*, by the Rev. W. Frank Shaw; *A Manual for Sick Visitation*, containing Prayers, Selections from Holy Scripture, Hymns, and Readings, adapted to the various stages of Human Infirmary, by the Rev. R. Adams; the musical edition of *The Altar Hymnal: a Book of Song for use at the Celebration of the Holy Eucharist*, with Tunes, compiled and arranged under the musical editorship of Arthur Henry Brown, with Preface by the Rev. H. W. Miller. *Rosebuds and Promises* contains appropriate texts for a month, and is printed in colours with various designs of rosebuds. *Lift up your Hearts*; or, *Helpful Thoughts for overcoming the World*, compiled and arranged by Rose Porter, contains Morning Blessings, Midday Strength, and Eventide Benediction; Thoughts for the Glad; Cheer for the Sorrowful; Counsel for Tempted; and Victory. *Watchwords for the Barrack-Room and Camp Fire*, compiled by Miss Cochrane, with an introduction by the Rev. J. C. Edghill; a second series of *Christmas Carols*, specially intended for children in church, at home, and in school, the words by Mrs. Hernaman, the music by Alfred Redhead.

Among the new editions of theological books announced by this firm are *The Book of the Church*, by Southey; *The Double Witness of the Church*, by Dr. William Ingraham Kip, Bishop of California, the twenty-third edition, revised by the author; and the only authorised and original edition of *Lectures on Preaching*, delivered before the Divinity School of Yale College in January and February, 1877, by the Rev. Phillips Brooks. Under the title of "The St. Paul's Devotional Library," they are issuing new editions of Jeremy Taylor's *Holy Living and Holy Dying*, Keble's *Christian Year*, and a Kempis's *Imitation of Christ*.

Among miscellaneous books are a magnificent edition of De la Motte Fouqué's *Undine*, translated by F. E. Bunnnett, and illustrated by

Julius Hoppner. No expense has been spared in its production; the cover is an attractive and artistic novelty; the illustrations, of which there are no less than ten, each measuring 18 by 14 inches, are masterpieces of the chromo-lithographer's art. *Reminiscences of Berlin during the Franco-German War of 1870-71*, by Shephard Thomas Taylor; *The Wanderings of the "Beetle,"* illustrated and written by E. Prioleau Warren and Charles F. M. Cleverly, an account of the summer cruise of a pair-oar from Liège to Rouen by water, up the Meuse and down the Aisne, the Oise, and the Seine; *A Bookseller of the Last Century*, being some account of the life of John Newbery, and of the books he published, with chapters on the later Newberys, by Charles Welsh; a new edition of Burns's *Tam o' Shanter*, illustrated by Cruikshank; *Child Pictures from Dickens*, an illustrated edition of Longfellow's *Village Blacksmith*; also a pamphlet on *Penny Dinners: their Use and Abuse*, with hints on method and management, and fifty approved recipes.

ORIGINAL VERSE.

THE TOWER OF GLASS.

[“ENSUITE vinrent trois fils de Milé d’Espagne avec trente vaisseaux contenant chacun trente hommes et autant d’épouses. Ils restèrent en Irlande un an, puis ils aperçurent au milieu de la mer une tour de verre, et ils voyaient sur la tour quelque chose qui ressemblait à des hommes. Ils adressaient la parole à ces gens-là sans jamais obtenir de réponse. Après s’être préparés pendant un an à l’attaque de la tour, ils partirent avec tous leurs navires et toutes leurs femmes, à l’exception d’un navire qui avait fait naufrage. Mais quand ils débarquèrent sur le rivage qui entourait la tour, la mer s’éleva au-dessus d’eux, et ils périrent dans les flots.”—d’Arbois de Jubainville, *Cycle Mythologique Irlandais*, p. 118 (from Nennius). The Tower is identified by d’A. de J. with Pindar’s “Tower of Kronos.”]

Milu’s warriors over the main
Sailed to Eiré out of Spain.
Near to their course arose the gleam
Of a Tower of Glass from the ocean stream;
And to and fro on the battlement
Shadowy shapes of men there went,
Who to their call made no reply.
Howbeit, wondering sailed they by;
And reaching Banba’s destined coast
Took triumph from the deathless host
Of Danann gods of magic power.
And then once more was the glassy tower
Remembered of them. From repose
Scarce tasted eagerly they rose,
And ten stout ships soon left the strand
Filled with a dauntless hero-band
Intent to storm the Tower of Glass;
But as the haven’s mouth they pass
One ship that would the rest out-sail
Struck shallows in the falling tide,
And there perforce must fast abide
Till the rising flood again prevail;
While onward to the open sea
Its comrades sailed exultingly.

For a day and a night, for a night and a day,
Through the rolling surge they ploughed their way;
But when the third night fled the sky,
Behold the Tower of Glass was nigh!
And strange though it had seemed before,
Now at its sight they marvelled more.
For though the great sea’s mountain swell
Round its margin rose and fell,
Fleck nor flake of foam was seen,
White on the waters eddying green,
And more silent than the grave
Rose and fell the muffled wave;
While to and fro on the battlement
Now as before the shadows went.

For an hour or more the warriors gazed
On the tower with eyes and souls amazed;
And then its shores they sailed around
Till fitting place to land was found.

Then dauntlessly their ships they ran
To shore and soon was every man
Upon the mystic beach disembarked;
But scarce a moment ere they marked
That round them rose full steadily
The waves of that unspeaking sea,
Wherein they found no force to swim;
Its touch took strength from every limb;
And once the wave closed o’er them, ne’er
Rose they again to light and air.

Over the sea the stranded crew,
The tide now risen, their friends pursue;
But when they come the tower anigh
What sight disastrous they descry!
Their empty comrades ships appear
Drifting deserted far and near;
And raising to the tower their eyes
What thing is this they recognise!
Among the shades that to and fro
On the tower as phantoms go
Shapes there are they surely know.
But names of friends in vain they call;
The voice seems dead from the tower to fall;
Speak nor heed the shades at all.
Then on every heart falls chill
Fear of unimagined ill.
Each sees the other’s blanching cheek,
But scarce above a breath can speak;
Though in their hearts they curse the hour
That showed them the shade-peopled tower,
Wherefrom in grief and fear they flee,
And silent till once more they see
The ever-moving circle hoar
Of whitening foam on waves that roar
Girdling the living shore.

ORMOND HOBAN.

MAGAZINES AND REVIEWS.

A USEFUL feature in *Mélusine* is the treatment of books which may interest the folklorist from time to time. The publications of our Indian antiquary, Capt. R. C. Temple, are embraced in a careful notice from M. Barth (May 20), which is especially called forth by his recent work, the *Legends of the Punjab*; and the French translation of Sir A. C. Lyall’s *Asiatic Studies* introduces this writer anew to French readers. The articles on the popular songs of Haute-Bretagne, founded on M. Decombe’s collection, are continued by M. Rolland from other sources (June 5, August 5), and may fitly be capped by the account of the interesting concert of popular French melodies given at the Cercle historique (St. Simon) on June 3 last, by MM. Tiersot and Gaston Paris, in which Basque, Alsatian, Breton, and other songs were introduced by a discourse from the editor of the charming volume of the *Société des anciens Textes*. In this connexion, may we not remind the editors of *Mélusine* of the splendid edition of English ballads and ballad lore now publishing by Prof. F. J. Child of Harvard, which surely claims their attention? For how long ancient legend lingers in the popular poetry they give us another example in “La prière de St. Marguerite,” from the Bouches du Rhone. Among other curious gleanings we note some children’s games (one of which resembles our game of “Post”), and an ingenious explanation of the old Lyonnais proverb, “J’aime autant que saye au loup qu’a l’aversin,” in which, the disputed word *aversin* meaning the devil (from “l’adversarius du moyen-âge”), the whole signifies “J’aime autant qu’il soit au loup qu’au diable,” i.e., “in any case the fellow is lost.” The section “Béotiana” gives, as we anticipated, some curious and amusing examples of that simplicity which amounts to folly, or the reputation for it, which neighbouring races love to attribute to one another by way of ridicule; as the story of the three Frenchmen going to England furnished with but one sentence of English apiece, which they misapply to their own detriment; another of the peasants who ask for a live crucifix (June 5); and the singular stories told

of the Jaguens de St. Jacut-de-la-Mer, “les gens les plus bêtes de la Bretagne,” by M. Paul Sébillot (September 5). In this last issue of *Mélusine*, M. Trichmann arrives at the Britannic Isles in the course of his historic researches on the subject of fascination.

THE *Revista Contemporanea* of August contains an interesting historical sketch of Don Rodrigo Calderón, secretary of Philip III., in explanation of the saying, “You are prouder than Don Rodrigo on the scaffold.” Becerro de Bengoa prints in advance one of his forthcoming *Incredible Histories*, “Vinos Minerales de Ara,” the humour of which seems somewhat forced and elaborate. Vilanova y Pizcueta begins a promising economical study on luxury and its disastrous consequences, but has hardly yet got well into his subject. Miguel Gutierrez gives two more chapters of his history of “the Ode,” dealing with sacred and warlike lyrics; and B. Antequerra concludes his study on the condition of the working classes, with a recommendation of moderate intervention by the state in social questions and in regulating the distribution of wealth.

LITERATURE OF ANCESTRAL WORSHIP IN CHINA.

Pekin, May 31, 1885.

THE first mention of this worship in Chinese literature is in B.C. 2300. The ancestral temple was then already an institution. Emperors were worshipped there after their death. Announcement was made there of succession to the throne, of resignation, and of the selection of new emperors. The idea was that the souls of the old emperors were there present; and a tablet represented them, on which a posthumous title was inscribed. On the days of sacrifice a bullock was offered to them, with other animals. All these details were not certain, but they may be deduced with reasonable probability from the recorded facts which have survived.

In the time of Tai kang (B.C. 2187), there is an allusion to the custom of clothing a son or grandson of a deceased parent in the costume of the dead. In after times this practice was very prevalent. The sacrifice was a banquet at which the deceased sat in the person of his representative. This practice continued in use down to the time of Confucius (B.C. [500]). The tablet was selected to express the actual character of the dead, and represented the deceased permanently in the chapel. The living representative or Shi, literally corpse, represented him in the hall of sacrifice.

So far, the worship of ancestors was in China in the house, or in a temple close to the house on the south-east, and not at the grave. In such temples the chapel was the sleeping apartment, or Tsin shi (Tim tat), and the hall of sacrifice was the banqueting hall. It was in this hall the representative sat, and he was usually the eldest son or grandson, and here it was that announcements were made of all great family events. On each occasion there was a banquet with music and dancing. The music consisted of a few notes with a very limited gamut, solemn and slow. No sound was heard but the voice of music and prayer. The prayer was rather adoration than supplication. The sentences were always rhymed, and did not exceed four words in each line. The whole took the character of an announcement of the dead. The Emperor adored seven generations of ancestors, barons five or three, common persons one.

The Emperor Chin shi hwang (B.C. 220) made a change. He had an elaborate service performed at a temple erected at the graves of his ancestors. This practice was followed by the Han emperors; and about A.D. 60 the whole court accompanied the emperor to the tomb of his father, founder of the After Han dynasty. Women were present,

and foreign envoys. Thus began the visiting of the tomb to weep. But this custom declined, and the old practice of the ancestral temple close to the home was reverted to. About the time of Confucius the Chinese began to have a distinct belief in immortality through the introduction of legends respecting the lands of the genii beyond the sea, and the mountain of the gods in the centre of the world. Ancestral worship in the language of its prayers adopted neither of these modes of speech definitely, but preferred to think of the souls of deceased emperors as ascending on high and being in the presence of God in heaven. Yet this thought was always so held as to be in harmony with the belief that at the sacrificial banquet the soul would be present when the prayer was offered.

A great change came in A.D. 732. Cremation had become prevalent among the Buddhist priests; and the burning of the body led to the burning of clothing and gifts. Buddhism with its hells and paradises made immortality more distinctly than ever a popular belief. Paper burning was introduced into ancestral worship. The paper was made to represent money, a house, a boat, a sedan chair, servants, clothing—anything a man might require. But the main thing was a visit to the tombs of ancestors on the Tsing ming day, April 4. This was made a permanent addition to the ordinary sacrifices in the ancestral temple.

In the eleventh century the Sung dynasty was established. The Tang dynasty, after having witnessed during three centuries the reign of poetry, Buddhism, and indifference to religious conviction, had passed away. The intellectual atmosphere of the country had changed with the accession of a new dynasty. Confucianism was studied over again with fresh zeal. A philosophy was evolved in which we see in many ways the effects of the prevalence of three religions among the people. In brief, its basis was a few moral intuitions, and its account of the universe was that it was produced by evolution under the control of dual principles, those of the Yi king, the Persian light and darkness. The worship of ancestors became modified. Sacrificing halls of a new kind were erected, called Tsz Tang, belonging to clans. Tablets to several generations of ancestors were kept there. The old limits of seven, five, or three generations, or of one generation, were entirely neglected. It became a worship of forefathers by clans. The great moral teachers of the time, Chu hi and others, encouraged this.

In the seventeenth century a new school sprang up, which strongly criticised the Sung methods and teaching. In regard to the worship of ancestors, for instance, great objection was taken to the new system. The clans in worshipping as many progenitors as the emperors did were guilty of presumption; but the scholars of the Sung dynasty who taught them to do so, were greater offenders.

At the present time the Sung ideas are still followed, but the critical scholars of the seventeenth century and their successors have facts on their side. The great writers of the eleventh and twelfth centuries founded a powerful system of education, and their views have spread amazingly. Now there is a revolution in opinion, but the school books and usages remain as they were. The best books during the last two centuries all belong to the new school, which is eloquent, logical, and unanimous.

Neither Mahomedanism nor Roman Catholic Christianity has meddled with this controversy between the regime of the Sung dynasty and the modern spirit of critical research. But the Protestant converts have taken up the subject. The reason of this is that village clans are angry with Christian converts who withdraw from the clan sacrifices to ancestors. There is much local persecution of converts, both Catholic and Protestant, on account of their declining to take

part in ancestral worship, and also in temple worship of Buddhist and Taoist divinities. Two years ago a short treatise against Christianity was published, basing its arguments entirely on the attitude adopted by Christians towards the worship of ancestors. In reply the Christians at Canton have made good use of the critics of the seventeenth century, and shown in a book published last year that the modern ancestral worship is not that of antiquity, and that Christians ought to be excused from following the present system on the ground that it is far from being that of Confucius and the other ancient sages. The book is called *Shi yi hwei pien* "collected papers for removing doubts."

In these circumstances it is easy to foresee that there must be more books yet on this subject, for the Chinese feel intensely about it. Their love of ancestral worship is just as decided as is their indifference to the tenets of Buddha and of Tau. There must, therefore, be books appearing in coming years in defence of the primitive, the Buddhist, and the modern phases of this worship. Such books will attack Christianity, and will be met by able replies. So long as the opponents of Christianity continue to have so much the advantage in wealth and numbers, local persecutions are nearly sure to recur.

The authors and works referred to are the *Shu king*, Tso chwen, Chow li, Li ki, Lun heng by Wang Chung (A.D. 100), *Maukiling* (A.D. 1700), Kuyenwu (do), Yenjo kü (do). Of these *Maukiling* is the most voluminous. He left 120 volumes. He criticises the Sung authors with refreshing severity. His style is elegant and luxuriantly fluent.

CORRESPONDENCE.

THE LONDON ASSOCIATION OF SCHOOL-MISTRESSES.

17 Cunningham Place, London, N.W.:
 Sept. 14, 1885.

May I ask for space in your columns for a very brief account of an association which, though much valued by its members, is probably unknown to some who might be glad to share its advantages and take part in its work.

The London Association of Schoolmistresses was formed to meet a desire on the part of schoolmistresses in London and the neighbourhood for some means of drawing together on common ground. It was formally constituted under its present name in 1867, and a body of rules was adopted, in the first of which the object of the association is stated to be "to promote the higher education of women." Two meetings are held during each school term for the reading and discussion of papers on subjects specially interesting to teachers. The association partakes of the nature of a club, and has occupied itself chiefly in the elucidation of questions having a direct practical bearing on school teaching and management; but membership is not limited to heads of schools or teachers, and there has been no lack of sympathy with public educational movements. The association has a library, consisting mainly of books of a more or less educational type. The students' library of the Women's Education Union was, on the dissolution of the union, presented to this association and incorporated with its own library, arrangements being made by which ladies who are not members of the association may, on certain conditions, become subscribers. The library is kept at the office of the Society for Promoting the Employment of Women, 22 Berners Street, where, also, the meetings of the association are held. Country members receive the papers issued by the association and share in the use of the library, books being sent to them on payment of carriage. If any of your readers should desire further information I shall be happy to give it.

EMILY DAVIES.

"THE MOST BEAUTIFIED OPHELIA."

Oxford and Cambridge Club: Sept. 16, 1885.

Will you allow me to offer a suggestion towards the elucidation of "the most beautified Ophelia." There is no reason why "beautified" should be an ill or vile phrase, and I would thus explain it. Greene, in his "Groatsworth of Wit bought with a Million of Repentance," had said of Shakspeare, he was "an upstart crow beautified by our feathers." What more natural than that Shakspeare, with the phrase and the rest of the passage ranking in his memory, yet with the natural good humour that never left him, should have introduced the word for the purpose of denouncing it and all that followed in strong language as ill and doubly vile? The actors and the audience would seize the meaning, which would be still fresh in their memory, this attack of Greene on their loved leader, "worthy friend, and fellow." In corroboration of the above interpretation of the passage and the word, it is almost needless to say that Shakspeare undertakes a defence of his theatre in the conversation of Hamlet with the players. There again occur animadversions on the rivals and enemies of his stage and his players, whom he twice says they call common. There are words and phrases which may convey allusions to the savage treatment of him by Greene, in quoting a passage from one of his plays, "Henry VI." i. 4, and saying he had "a tiger's heart wrapt in a player's hide." There is also the criticism of Polonius on a speech as too long; and on a word "mobled" praised as good—good when he had found

fault with "beautified." Hamlet's railery of his condemnation and his preferences might apply to Greene and his productions. More passages might be adduced in detail which would exemplify "beautified" and the relations of Shakspeare with Greene and other dramatists, but they would be too long for this letter and your pages. W. J. BIRCH.

London: Sept. 12, 1885.

Mr. Tyler is excellently learned about this phrase, and it is very charming, as a mental exercise, to see him pursuing his pessimistic Hamlet even to the dissection *ad vivum* of the lady he most loves and admires. Of course, beauty is but skin deep, and the bones that underlie it must some day, in the charnel house, emit most noisome odours ere that beauty can reincorporate with Nature's purities. But, be Hamlet as pessimistic as he may, we are not driven by the phrasing to adopt the explanation suggested by Mr. Tyler's almost too philosophic reading. When a lover styles a lady "celestial" and his "soul's idol," and appends to that that she is also "most beautified," I think we should not read into the expression a cynical irony unless it be forced upon us by the context. Reasoning that is too curious unseats Reason. In fact, logic generally blunders by method into more and worse errors than the unassisted reason will, by accident, if left to itself and to its own light.

To *beautify* means in ordinary English "to embellish." "There is charity and justice; and the one serves to heighten and *beautify* the other." This is appropriate expression in the clear English of Atterbury. But we do not expect that in Shakspeare. Half his successes are secured out of the felicitous barbarity with which he uses words. The language was still running from the furnace molten in his day, and words would take any mould he chose to run them into. But since Locke has be-pestered the human mind with his unspeakably valuable chapter upon "words," the words themselves have grown cold in definition and have set; they have encroached upon the soul's freedom so much that she cannot any longer express her more agile movements with them; and as to the passions, she has since stood, either silence-smitten and dumb-founded, or she has been forced into the other extreme of lawlessness, to violently blurt them out *à la* Byron as a Bedlamite, with all human temperance and proportion lost sight of in the utterance. Instead of commanding her words as an immortal thing should do, the words command her, while Priscians and Purists restrict her and define.

In the free speech then of the autocratic Tudor-time, why may not *beautified* signify "made beautiful, created most lovely." Just as *stupefied* is "made stupid," *fortified* is "made strong." I think there is only one word in the language that slightly militates against this rendering. To *verify* has two meanings, one of which is "to test or examine the truth of a thing"; but in the expression "*that* verifies my forecast," the word returns to its simplest structural meaning.

Myself I would rather believe that Hamlet, in wooing his lady love, could, for the moment, divest himself of his pessimism, and behave chivalrously in love's harness, than that he should be so unmanly and unmannerly (for are they not one?) as to pay her a seeming compliment to the ear, all the while that he is deliberately meditating on catacombs and her mortal dissolution, when she must offend the nostril of one so little exercised in delicacy as even a swineherd. Surely, where it is not forced upon us, such an interpretation is more shocking than philosophic! C. A. WARD.

"PRIMER."

London: Sept. 12, 1885.

Through accident, it was not until to-day that I read Mr. A. J. Ellis's letter in the ACADEMY on the pronunciation of the word "Primer." I now send evidence of what that was three centuries ago. The title-page of the Primer of Edward VI. runs thus:

"A Prymmer or boke of priuate prayer nedeful to be used of al faythfull Christianes, Whiche boke is auctorysed and set fourth by the Kinges maiestie, to be taughte, learned, redde and used of al hys louynge subiectes. Continue in prayer. Rom. 12. Londini ex officina Vvilhelmi Seres typographi. Cum priuilegio ad imprimendum solum, 1553."

RICHARD F. LITTLEDALE.

VOX POPULI, VOX DEI.

Wark Rectory, Northumberland.

Whilst engaged in tracing the points of agreement in the old myths of Persephoné and Sitâ, the one embodied by Homer in his Hymn to Ceres, the other by Vâlmiki in the Râmâyana, I was led to notice the probable origin of the epigram, "Vox populi, vox Dei."

I think there is some doubt whether this saying can be traced beyond the time of Archbishop Mepham.

But the counterpart between Dêmophôn and Iakchos, the human foster-child of Dêmêter and her divine foster-child (the latter the mystic *daimôn* of Strabo x., p. 463), surely suggest the origin of the parallelism, Δημοφών Δαιμόφω.

At any rate the Dionysiac character of Iakchos, and the fact that his name is derived from the joyous cries with which the procession of this young god was accompanied, suggests a natural connection with Dêmophôn, the glorious son of prudent Celeus, who grew up in Dêmêter's arms like unto a god, neither eating food nor sucking. SAM'L. BEAL.

BABYLONIAN ASTRONOMY.

North Berwick: Sept. 12, 1885.

With reference to the interesting notice by Prof. Sayce (ACADEMY, August 29, 1885) of Mr. Brown's *Aratos*, in which the Professor states that the Greek celestial configuration of the globe is a copy of the Babylonian of 2000 to 2500 B.C.—perhaps 2084, and certainly not earlier than 2500—I believe we may get nearer its true date through Porphyry. He wrote that Calisthenes brought the Babylonian standard work on astronomy to Greece 2000 years before the time of Alexander the Great, so that the configuration of the stars and zodiacal figures which Eudoxos, and afterwards Aratos and Hipparchus, manipulated, would be, at least, as old as 2350 B.C. I regret I have no books near me wherewith to follow up this subject. The Chinese date their astronomical cycle and zodiac from 2640 B.C.

J. G. R. FORLONG.

THE "MEMOIRS OF DORA GREENWELL."

Southport: Sept. 13, 1885.

I can only make a very brief reply to Mr. Dorling's letter, for I am confined to bed by illness, and writing is difficult to me. Many words, however, are not necessary, for it seems clear that, with regard to the more important of the two matters referred to by Mr. Dorling, he is altogether right and I altogether wrong; and I have therefore only to acknowledge my error, which I shall remember with all the more regret on account of the somewhat supercilious tone by which my mistaken criticism was characterised.

This is another warning never to rely exclusively upon what seems the most distinct

recollection. Golborne was for many generations the house of my maternal forefathers; I visited there constantly as a boy; I knew it well during the years when Mr. Greenwell seems to have been the rector; and yet, even now, I can remember no other rector than the late Mr. Quirk, who died a few weeks ago, and who, curiously enough, was declared by a usually well-informed Manchester paper to have held the rectory for forty years. I mention these things not in support of a statement which I have already unreservedly withdrawn, but because they provide some explanation of what must have seemed not merely an extraordinary but an inexplicable blunder. I hope Mr. Dorling will be good enough to accept a very hearty apology.

With regard to the little orthographical matter, I think it will be found that I am right; but this is a mere trifle.

JAMES ASHCROFT NOBLE.

MR. J. CAMPBELL-SMITH.

Edinburgh: Sept. 14, 1885.

In reply to the letter of the Rev. Dr. Cheyne, in last week's ACADEMY, I would beg to point out that the mistake he has made arose from failing to distinguish between two different individuals who happen to have the same surname.

Mr. J. C. Smith, the author of *Writings by the Way*, which was reviewed in the ACADEMY of the previous week, was lately appointed Sheriff of Dundee. The gentleman whose obituary notice appeared in the *Scotsman* of July 6 was Mr. D. MacLeod Smith, Sheriff of Nairn, who had reached the age of sixty-four when he died, and had held the appointment of sheriff for twenty-three years, while the new Sheriff of Dundee is still a comparatively young man. The two were alike in this—that they both showed a taste for literature.

DAVID ANDERSON.

SCIENCE.

European Butterflies. By W. F. de Vismes Kane. With plates. (Macmillan.)

THIS handy and well-timed little volume is the careful work of an enthusiastic butterfly-hunter, who, with a strong love of Nature and Nature's productions, truly says that it is a source of surprise to those who have collected abroad, that so few add this delightful pursuit to the pleasures of their holiday on the continent; although it so happens that

"some of the most favourite winter resorts in the Riviera, and the most frequented localities and routes in the Pyrenees and in Switzerland, are among the best entomological hunting grounds. Up the Rhone Valley to Zermatt, and thence to the Riffel, a stream of tourists passes each July; and few are aware that in the course of that short journey more than 100 species are to be taken, and that in passing from the subtropical heats of the Rhone Valley through the successive climatic zones which are to be met with before he reaches the perennial snows of the Gornier Grat, and the peaks overhanging the Riffel, a collection of insects may be made which represents in temperature a difference of latitude as great as from Italy to Scandinavia, and comprising, with their varieties, almost twice as many species of butterflies as are to be taken in the British Islands. The best known passes—the Simplon, St. Gothard, and Albula—are perfect treasures of insect beauty, and the astounding profusion in which they are met renders any fear of exhausting the supply by a greedy collector superfluous."

After a short description of the *Rhopaloceros*

(club-horned) *Lepidoptera* or butterflies in general, as distinguished from the *Heterocera* or moths, excellent directions are given as to the modes of capture and preservation of the former insects; and some judicious observations are made with reference to the curious questions of local variation, seasonal dimorphism, and sexual dimorphism, some of Prof. Weismann's views being partially objected to.

The work is illustrated by fifteen plates containing full-sized representations of 129 species of butterflies executed by photography; isochromatic plates, prepared by Messrs. Attout Tailfer and John Clayton, of Paris, having been most successfully employed, whereby the obscure patterns of some of the specimens figured here have been reproduced with matchless accuracy of detail, and their specific characteristics rendered to perfection.

The descriptive text of the different species is written on the plan of Mr. Stainton's well known "Manual," numerous contractions of technical terms being employed, so that a great saving of space is obtained. Under each genus a table is given of the different species, enabling the student to discover the name of a specimen with the least possible trouble; and under each species there is a short but sufficient specific character, with careful notes of the local varieties of each (which have often been described as distinct species), and also of the locality in which each kind is found. We notice that the name of *Papilio Podalirius* is changed to *P. Sinon* of Poda, but cannot understand why on the same principle that of *P. Machaon* has not been altered to *P. reginae*; of *Polyommatus*—restricted here to the Copper butterflies, for which we think the name of *Chrysophanus* ought to have been retained—the "great Copper" (*P. dispar*) is mentioned as "formerly found in Cambridgeshire but now extinct." This result has entirely been produced by the draining of the fens in Hunts and Cambridgeshire, where formerly this splendid butterfly was so numerous that we remember, at the first meeting of the British Association at Cambridge, the local collectors brought boxes full of them to the meeting, selling them at sixpence a specimen, the price now by auction generally reaching two pounds! Although extinct in England, the species is represented on the Continent by *P. rutulus* of Werneburg, which is described as "a smaller continental representative of the extinct type." Of *P. chryseis* of Hübner, &c., "formerly found in England," the name is altered to *P. Hippothoe* Linn. We may also mention that our English "brown Argus" (the *Agestis* of previous English writers) appears under the name of *Lycena Astrarche* of Pergsträsser and that the *Salmacis* of Stephens (the Durham Argus), and the *Artaxerxes* of Fabricius (the Scotch Argus) are given as varieties of *P. Astrarche*.

We are sure our British collectors will be happy to learn that both sexes of a new British species of blues (the tailed *P. Argiades*) have just been taken on the heath in Dorsetshire during the month of August.

The mode of preserving caterpillars is not given in the Introduction, the processes being complicated, and requiring both great skill and time to ensure success, which very few visitors on the Continent can command; for the same and other reasons no descriptions of

the caterpillars are given in the work, a want which we think it would be beneficial to supply in a future edition.

There is an excellent Index of names and localities at the end of the volume, from which however we notice that the name of the "great Copper" (*P. dispar*) has been omitted.

J. O. WESTWOOD.

SOME BOOKS ON FRENCH PHILOLOGY.

Etymologische Untersuchungen auf dem Gebiete der französischen Sprache. Von Prof. Heinrich August Schötenack. (Bonn: Emil Strauss.) This book of about six hundred pages, modestly called, in its fuller title, "a Contribution to a Scientific Basis for Etymological Inquiries into the French Language," may truly be described as a standard work. No specialist can henceforth omit consulting it. It shows all the careful, conscientious, and minute research we are accustomed to find in the works of men like Jacob Grimm. If the long sentences (for instance, the very first one with which chap. i. opens) were broken up, and the paragraphs made more frequent, the book would, so to say, be perfect. The mass of scientific material contained in it is of the highest value, and arranged, upon the whole, in a very convenient manner, in language as succinct as possible.

Dictionnaire Synoptique d'Etymologie française. Par Henri Stappers. (Brussels: Muquardt.) This little volume makes no claim to original research, being avowedly a mere compilation from Littré, Scheler, and Larousse. We observe a considerable number of errors; but, on the whole, it is not often that the work of "mere compilation" is so intelligently and so usefully done as in this instance. The book contains etymologies of (we should guess) about 20,000 French words, arranged in groups under the words from which they are derived, with an alphabetical index at the end. The latter includes, for the sake of completeness, a large number of words the etymology of which M. Stappers considers to be unknown, and which are distinguished by being followed by the letter D, instead of a number referring to a paragraph in the text. Etymologies regarded as doubtful are carefully marked as such. The least satisfactory parts of the work are the sections devoted to words derived from the Celtic and the Germanic languages. Here M. Stappers seems often to have followed inferior authorities. An occasional excess of caution is a very pardonable fault in an etymologist, but the author might have ventured to give Bugge's interesting and fairly established derivation of *matelot* from the Old-Norse *mötunautr*. Another word marked as of unknown origin is *goémon*, which is obviously identical with the Welsh *gwmon*. M. Stappers has apparently little or no knowledge of Greek, and the words quoted from that language are frequently disfigured. In some cases the errors are, perhaps, due to the printer, but this excuse cannot serve for the omission of the initial *h* in *orkos*, *orama*, *edra*, &c. *Alpée* is given both as *aireo* and as *haireo*. However, notwithstanding these faults, the book deserves very high praise for its convenient arrangement and fulness of information. We hope M. Stappers will bring out a second edition revised by some competent scholar.

UNDER the title *Beiträge zur französischen Syntax des XVI. Jahrhunderts* (Erlangen: Deichert), Dr. Selly Gräfenberg has published a valuable analysis of the syntax of Marot and four contemporary writers, confining himself to the points in which their usage differs from that of modern French. The results are of considerable interest. The magnitude of the change which took place in the idiom of the

French language between the age of Francis I. and that of Louis XIV, is seldom adequately appreciated, even by those who are not unacquainted with the writers of the sixteenth century. This change was largely due to the influence of the grammarians, in whose hands the language no doubt gained in precision and logical consistency, but at a great sacrifice of flexibility and picturesqueness. The author has not always been careful to note the instances in which the idioms quoted by him survived into the classical period; for instance, the charming phrase *chacun en sa chacunière* is found in M^{me}. de Sévigné, though it is unfortunately now obsolete.

CORRESPONDENCE.

AN IRISH-ICELANDIC PARALLEL.

London: Sept. 14, 1885.

In Icelandic the noun *efni* "material," is frequently added to another noun in the genitive to denote a person designate or elect; thus *konungs-efni*, literally "material of a king," is equivalent to our "crown-prince" or "heir-apparent," *biskups-efni* to "bishop elect." I remember, in the far-off schoolboy days when I first began to read Icelandic, being much struck by this idiom, which I felt (rightly or wrongly) to be un-Teutonic. Such a collocation as *cyninges antimber* instead of *æbeling* or *geong cyning* would certainly appear very strange in Old English. In Old Irish, on the other hand, we find an exact counterpart of the Icelandic idiom. The regular Old Irish word for "prince" is *rigdomna*, explained by O'Curry (see Windisch's glossary to his *Irische Texte*) as "the material for a king, a prince, royal heir." The origin of the idiom is well illustrated by a passage in the Irish Notes in the *Book of Armagh* (Goidelica², p. 86): "Álías Pátríoc Dubthach im damnæ n-epsceup di a descilib di Laigrib, idón fer soér, socheniúil," &c. (P. asked D. for the material of a bishop from his disciples of Leinster, namely, a man free, of good family, &c.).

It is, of course, possible that this idiom may have developed independently in the two languages; but such a coincidence would be improbable, and the supposition that the Icelandic idiom was borrowed from Irish cannot be summarily rejected. I do not mean to suggest that the Irish and Icelandic words are in any way connected etymologically; but it seems quite reasonable to suppose that the use of the Irish word for "material" in a special sense may have suggested to a bilingual Icclander a similar use of his own word *efni*. It is also possible that *domne* or *damne* may have directly suggested *efni* on purely formal grounds. To a foreigner, with an imperfect mastery of the language, the collocation *indamne*, "the material," would suggest the division *ind amne* (nom. fem. or acc. masc.) quite as easily as the actual *indamne*. As *mn* for *fn* appears even in the oldest Icelandic MSS. (cf. Swedish *ämne* = Icelandic *efni*), it is easy to see how **amne* would naturally lead to *efni*.

HENRY SWEET.

CORRECTIONS IN THE TRANSLATION OF THE "SUTTA NIPĀTA."

Wood Green, N.

I.

An excellent and carefully edited text of the *Sutta Nipāta* has just been issued by the Pāli Text Society amongst its publications for 1884.

All who take an interest in Pāli philology and Buddhist literature will hail the appearance of so old and valuable a text. We are now able to compare Prof. Fausbøll's translation of the *Sutta Nipāta* in the tenth volume of the "Sacred Books of the East" with the

original Pāli, and can duly estimate the difficulty of rendering this sacred book into English. Based upon five MSS., the text of the *Sutta Nipāta* seems remarkably free from errors; yet a curious misreading has obtained the sanction of the editor, the MSS. probably offering no means of correcting the blunder. It occurs on p. 391, v. 1,048:—

“*Samkhāya lokasmin parovarāni
yassa jītaṃ n’atthi kuhiñci loke
santo vidhūmo anigho nirāso
atāri so jātijaran ti brūmiti.*”

This verse occurs in the *Anguttara Nikāya*, from which Prof. Fausbøll gives Dr. Trenckner’s quotation. Here again the reading is inaccurate:—“*Samkhāya lokasmin parovarāni yassa jītaṃ (or yasminñjitaṃ) n’atthi,*” &c.

The translator of course deals with what he finds in his text, and renders the foregoing verse as follows:—

“Having considered everything in the world . . . he who is not defeated anywhere in the world, who is calm without the fume of passion, free from woe, free from desire, he crossed over birth and old age, so I say.”

The translator takes *yassa jītaṃ n’atthi* to mean, literally, “to whom there is no defeat,” *jītaṃ* being here used as a noun. But *jītaṃ*, I venture to think, is never employed in the sense of defeat—cf. *jītaṃ apajitaṃ kayirā*, &c., = *victorious* . . . *cladem facere potest (Dhammapada, v. 105)*. The usual term for defeat is *parājayo* in contradistinction to *jayo* and *viṃjayo* (*Jāt. iii. pp. 6, 7; Dham. v. 201*). *Yassa jītaṃ* is here plainly a scribal blunder (cf. *Dham. v. 179*).

The editor gives the variant reading *yassañhitam* probably for *yassa ingitam*, and this again for “*yass’ ingitam*,” which gives good sense.

It seems that the older copyists had some difficulty with this verse, for the Sinhalese MSS. of the *Anguttara Nikāya* (Devadūta-vagga III. 4. 2) that I have consulted read *yasamsi-jitam* (or *yasmsi-jitam*), whilst the Burmese (Phayre) MS. has *yassiñcitam*, from which it is not difficult to see that the true reading is *yass’ iñjitaṃ*. “*Iñjitaṃ*” or “*ingitam*” means “motion,” limited often to “evil affections” (see *Dhammapada, v. 255*, “*N’atthi Buddhāna iñjitaṃ*” = “*Non est Buddhārum motus*”—cf., *Thera-gāthā, v. 386; Sutta Nipāta, v. 1041; Samyutta-Nikāya, v. 5*).

A copy of the Commentary to the *Anguttara*, prepared for me by the learned Buddhist priest Subhūti, reads *yass’ iñjitaṃ*, and says that the *satta iñjitaṇi* by which an Arahāt is unmoved are *rāga, dosa, moha, māna, ditthi, kilesa, duccharita*. Buddhaghosa’s reading is of course the true one, and must be admitted into the text.

II.

The following passage occurs in the *Sutta Nipāta* (v. 210, p. 37):

“*Aññāya sabbāni nivesanāni
anikāmayam aññataram pi tesam
sa ve muni vitagedho agidho
nāyūhati parāgato hi hoti.*”

This is rendered as follows in the “*Sacred Books of the East*” (vol. x., p. 34):

“He who has penetrated all resting places (of the mind and) does not wish for any of them, such a Muni indeed free from covetousness and free from greediness does not gather up (resting places) for he has reached the other shore.”

Prof. Fausbøll has translated *nāyūhati* (not in Childers) as if it were *nāvvyūhati*. The word *āyūhati* does not mean “to gather up,” but to “strive,” “use exertion,” “endeavour.” In Buddhist phraseology he who has gone to the further shore has reached Nirvāna. An Arahāt is free from passion, and has no internal struggles (see *Sutta Nipāta, v. 177*).

In the *Samyutta Nikāya, I. i. i.*, Buddha, in

answer to the question how he crossed the stream, replies:

- (a) “*Appatittham khvāham āvuso anāyūham ogham atarin ti.*”
(b) “*Yadā svāham āvuso santitthāmi tadāssu samsidāmi yadā svāham āvuso dyūhāmi tadāssu nibbuyhāmi.*”*

I.e.: “I indeed, not (now) exerting myself, crossed the shoreless stream.” [The commentary explains *anāyūham* by *avāyamanto*.]

“When, sir, I remained quiet, then, in fact, I sank; (but) when I exerted myself, then, indeed, I reached the shore.”

This notion is referred to again in the *Samyutta Nikāya, II. i. 5*:

“*yāva gādham labhati
nadisu dyūhāti sabbagattehi jantu
gādhañ ca laddhāna thale thito so
nāyūhati parāgato hi so ti.*”

“Until a man gets a firm footing (on the land) he strives with all his might and maint in the stream; but, when he has gained a firm footing, and stands on terra firma, he no longer strives, for he has reached the further shore” (see *Samyutta Nikāya, ed. Feer, p. 53*).

The Pāli root *yūh* corresponds to Sanskrit *yūh*; cf. *viyūhati* (or *vyūhati*), “to dig or gather up sand or dust,” and see *Suttavibhaṅga, part i.*, p. 48: “*pamsu viyūhanto*,” Com. to *Ambavatthasutta*.

III.

“*muniṃ moneyyasampannam tādāsam yaññaṃ āgataṃ
bhakutim vinayitvāna pañjalikā namassatha*”

(Ver. 484, p. 85).

In the translation (p. 79) the phrase *bhakutim vinayitvāna* is altogether disregarded, and there is no note to inform the reader that anything is missing.

“The Muni who is endowed with wisdom, such a one who has resorted to offerings,† him you should worship.”

Bhakutim vineti is to be compared with *bhakutim karoti* in the *Jātaka* book and *bhākutika bhakutika* in the *Vinaya* texts (see “Notes and Queries” in the *Pāli Journal* for 1884, p. 90). *Bhakutim vineti* means to put away frowning, hence, to have a calm, unruffled countenance, to put on a smiling face.

R. MORRIS.

SCIENCE NOTES.

At a meeting of the General Committee of the British Association held last Monday, the meeting for next year at Birmingham was fixed for September 1, and the appointment of Sir William Dawson as president was confirmed. At the same time Manchester was chosen for the place of meeting in 1887. The proposal for the formation of an International Association, to meet every five years, was referred back to the council for further consideration.

MR. JOHN RYAN, of King’s College, Cambridge, and also of London University, has been appointed to the chair of physics and engineering at University College, Bristol.
